"On the Road to Kiptopeke"—The story of one of the country's great cooperative marketing organizations. Page 3.

For Your Flower or Vegetable Garden

Large, handsome vegetables and flowers fit for prize exhibits will fill your garden when you plant Burpee's Seeds and care for the growing things as directed in Burpee's Annual.

Burpee's Seeds are from the finest varieties of flowers and vegetables grown on our immense seed farms in Pennsylvania, New Jersey and California; tested on our great Fordhook proving grounds, and guaranteed to be full of healthy, vigorous life. They come to your garden fresh from the grower's fields.

Study Burpee's Annual and you can't go wrong. It describes all the plants in which you are interested together with four striking 1927 novelties—Burpee's new Sweet Corn, new Tomato, new Dahlias and new Sweet Peas, with special instructions for their planting and later care.

It Came Up to Expectations

Pennsylvania Hort Week an Outstanding Annual Event

THE Third Annual Horticulture Week at State College, December 7-10, was full of meat, altho the attendance was reduced somewhat by a heavy snow, which blocked the roads. The dates for next year are November 28-30th.

Conservatism was quite evident in the discussion of the question, "Is apple and peach planting overdone?" This was to be expected in view of the market situation of this season. Nevertheless, Pennsylvania is in a better position to meet continued hard competition than most states, and a moderate amount of well considered planting seems justified.

A large proportion of northwestern box apples is selling this year for little more than transportation charges. One car of Pacific Coast apples marketed in Pennsylvania, containing 756 boxes, returned the grower an f. o. b. price of $568; the railroad got $658 for bringing it here. No industry can stand this very long.

Truck Coming Into Its Own

The truck is being used more and more in marketing fruit, especially in selling peaches. This year peaches were hauled over 100 miles, from Baltimore, to local markets in Pennsylvania. Peach growers in southern and southeastern Pennsylvania are developing a truck trade to the mining and industrial towns in the central part of the state.

NURSERY STOCK.—Discussion on nursery stock showed that nurserymen are beginning to take a keen interest in keeping their stock true to name, as a matter of self interest. The past summer one Pennsylvania nursery was found which had four rows of supposedly one-year-old Northern Spy, but there were five different varieties in one row. When the nurseryman's attention was directed to this, he promptly cut the whole row back, and rebudded them all. This is the kind of nurseryman to patronize.

It is comparatively easy to distinguish between the common varieties of apples, pears, plums and cherries in the nursery row, and between yellow and white peaches, but not as to the variety of peach.

Some fruit growers are unjustly prejudiced against trees that are dug in the fall and stored in the nursery cellar over winter. They are kept moist, at a low, even temperature, but with no soil around their roots. If properly cared for, they are as safe for planting as spring-dug plants.

J. E. Runk, of Huntingdon, expressed a preference for southern nursery stock. He says it is much larger and more vigorous than northern-grown stock of the same age, because of the longer growing season. Also it is likely to be cheaper. The disadvantage, of course, is the danger of drying out in transit. Many carloads of southern-grown stock are shipped to northern nurserymen, some of whom sell them as their own trees.

NEW VARIETIES — No new varieties of apples have appeared recently that are likely to challenge the standard sorts. Golden Delicious was pronounced disappointing by several growers. It russets and shrivels badly, especially if picked a little early. Perhaps this is due to a lack of the protective waxy coating, as grown in Pennsylvania. The tree is vigorous, and the fruit is of good size, but not as high in quality as Grimes. The Red Delicious apparently is gaining in favor, especially for local markets, more particularly in the southeastern part of the state.

F. S. Reiter, of Mars, reported that he had retailed his Delicious at a roadside market for $2.50 a bushel, while Northern Spy and Stayman of equal grade brought only $1.75. The chief usefulness of this variety in Pennsylvania, apparently, is in local markets; it has not been particularly successful as a wholesale variety in the East.

The Starking, a solid red Delicious, looks promising. Several other solid red sports of Delicious have appeared recently in different parts of the country. It is possible that many Starking trees will revert to the present type.

The much-heralded Courtland, a cross of McIntosh and Ben Davis, has not made a favorable impression. It hangs on the tree well, and will stand commercial handling better than McIntosh, but is indifferent in quality and color, fades in storage, and comes on the market with better sorts like Jonathan and Stayman.

Insects Have Their Day

In the northern part of the state the Stark is valued for its late keeping, but is poor in color. The Red Stark, as grown by Dickenshied and Weinburger, at Zionsville, Pa., is a distinct improvement in this respect.

"Insect and Disease Day" included a report by W. S. Krout on the progress of the effort to secure a supply of raspberry plants that are free from mosaic, leaf curl and other degenerative diseases. Several Pennsylvania raspberry fields have been pronounced disease free. Plants from these are sold for $25 a thousand, as compared with $50 to $80 a thousand charged by some nurserymen. It is best to get tips from one-year-old plants; they are stronger.

Layer black raspberry tips in the middle, not close to the plants; then

On the Road to Kiptopeke

The Eastern Shore Produce Exchange Solves Its Members' Marketing Problems

By C. L. WHITE

A FEW weeks ago we related on this page some of our experiences and observations on a trip down the Del-Mar-Va Eastern Shore Peninsula, "From Philadelphia to Kiptopeke." Among other things, we told about that narrow strip of land between lower Chesapeake Bay and the Atlantic Ocean which comprises the southern extremity of the Eastern Shore.

The two Virginia counties of the Peninsula—Accomac and Northampton,—occupy this narrow tip-end of Delmarvia. The remainder of the Peninsula is divided among the nine Eastern Shore counties of Maryland and the three counties of Delaware.

These two southern counties seem very small when compared with some of our rangy Pennsylvania counties. Measure both of them as they lie end to end on the map and you will find that they are only ten or fifteen miles wide by about sixty miles long. They are little in size but they are big in the ways that really count.

They produced in 1924, the last year for which we have the figures, more than 13,000,000

The Produce Exchange headquarters at Onley, Virginia.

bushels of white potatoes, nearly half as many as were grown in the whole state of Pennsylvania that year. And it should be remembered that these were all early potatoes that reached the market when prices were high. The mild climate of the Eastern Shore always gives the Delmarvia grower an immense advantage. Besides the Irish potatoes there were nearly three million bushels of "sweets" that year, and several other large vegetable and fruit crops.

The farmers of these counties cultivate every foot of cleared land; they use good seed; they fertilize heavily; finally, they market their crops in an orderly manner. That is the point of this story,—the way they market their crops.

One of the Oldest Organizations of Its Kind

The majority of the farmers in this section belong to one large marketing organization, the Eastern Shore of Virginia Produce Exchange. That name isn't strange to those who are familiar with the more successful of the country's large farm marketing associations.

The Exchange is an old organization, as farmers' selling associations go. It was incorporated January 6, 1900, and has been a thriving, successful concern for so long that it is almost taken for granted. Knowing of its 5500 members and its transactions running as high as $20,000,000 a year, it is easy to forget that this famous institution has been subjected to the same strains and stresses that have caused so many other farm organizations to collapse.

Why has the Exchange been so successful? We put that question up to Mr. C. R. Waters, the sales manager, the day we visited him in his office. His reason was, "Wide distribution and a uniform product."

That answer is brief, but it covers a lot of ground. It takes in the whole organization back of that uniform product widely distributed. In an effort to get a good idea of the Exchange and the way it works we made what proved to be a pleasant and profitable call on the President and General Counsel, Mr. Ben. T. Gunter, at his office in the courthouse at Accomac. Then we visited the headquarters of the organization at Onley, Accomac County, a few miles farther down the Peninsula.

Where the Work Goes On

The headquarters building is a modern two-story structure built to meet the needs of the Exchange. As we stepped thru the front door we passed from the main street of a sleepy little Virginia town into a group of offices where more business is transacted in a year than in many an elaborate office suite in the skyscrapers of lower Manhattan. Outside we heard only the rattle of a wagon and the drawl of a human voice as a negro went by talking to his lazy mule. Inside was the sound of clicking telegraph instruments, the rattle of typewriters, the intermittent clatter of an adding machine.

From the entrance hall we stepped into the nearest office. At a large desk in the center of the room a man was looking over a handful of telegrams, giving brief directions to a girl who took notes as he spoke. We interrupted to ask a question.

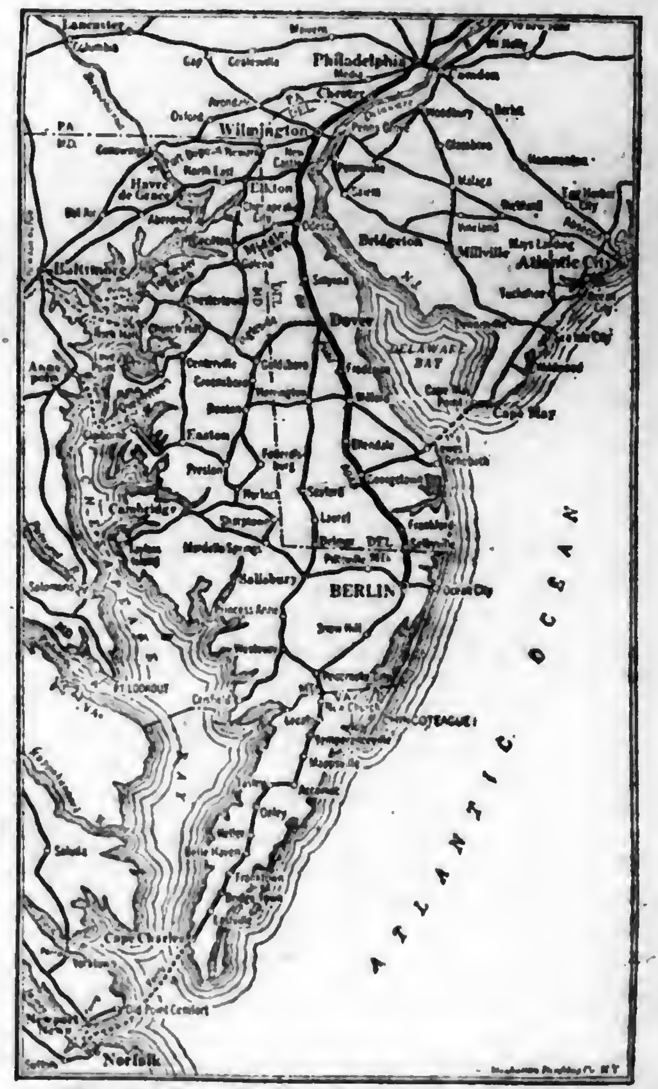
Yes, Mr. Waters was the man we wanted to see. Would we come this way, please? He left his sheaf of yellow papers and guided us up to the second floor. We entered a very large room with three desks ranged along one wall. Crossing to the middle desk we were introduced to Mr. Waters.

His telephone rang almost immediately so we had an opportunity to look around while he attended to business. Our first impression was that we had gotten into a stock broker's office, for across the room from the row of desks was a big blackboard some thirty feet long. There were no stock quotations chalked up there, however, but there were small white cards scattered all over it in groups of two or three or four.

Curiosity Satisfied

Our curiosity was aroused, so we started asking questions of Mr. Waters as soon as he turned from the telephone.

What do the cards mean, and the names under which they are grouped? The names painted on the board are the railroad shipping stations of the Eastern Shore of Virginia Produce Exchange, we were told. There are about fifty of them. A white card under one of the names means that a carload of potatoes has just been loaded at that shipping station and is standing on the track waiting to be sold.



The Del-Mar-Va Eastern Shore Peninsula.

The Technique of the Card System

A young man sits at a telephone in front of the board. When a car is filled at the loading station he is given the car number and initial, the number of barrels and the grade. These data are jotted down on a card and posted on the board. The card stays there until Mr. Waters and his men find someone to buy the potatoes it represents. When the car is sold the card comes down.

(to page 22)

Potato fields and loblolly pine— common sights in Delmarvia.

Before I resolve to do one thing or the other, I must gain my confidence in my own ability to keep my resolves when they are made.—Abraham Lincoln.

Watch Corn in Feeding

THERE is especial need for close examination of the corn as it is fed this year. A great deal of corn was not fully mature when it was cut, and the wet weather prevented thoro drying. Added to this were the many very warm spells which occurred and made ideal conditions for developing mold in newly husked corn. Moldy corn is not fit to feed anything. Digestive troubles are almost sure to result from feeding grain that has become musty. Even chickens are subject to a disease called aspergillosis when fed moldy corn, or even when musty straw is used for bedding. This disease attacks the windpipe and as it develops causes the hen to lose weight and present the appearance of having tuberculosis.

Will We Have Tax Reform?

WE ARE in sympathy with nearly all the pronouncements made by the Pennsylvania State Grange at its recent session concerning taxation. However, there is one sentence which seems to us not to be in keeping with the general demand for economy and equalization. That statement is the demand that "the assessment and collection of taxes be left, as now, to local officials, locally elected." We are perfectly aware that this idea is popular with rural people, at least with those who usually speak for rural people. We received a couple of rather severe criticisms after publishing our belief that there should be a change in the present system, but we still hold to the idea.

We admit that there are many localities where the present system of tax collecting is as economical as could be desired, but there are many others where the fees of the collector are extortionate and burdensome. A few instances in the state are reported where the tax collector receives more than the governor of the state. Also, investigations show that the present system of making assessments is a farce and so unfair in many places as to impose a burden on others in the county. There is no question but that the Pennsylvania system of assessing and collecting taxes needs thoro revision, and it may be attempted at the coming session of the Legislature. But if anything is to be accomplished there must be a willingness on the part of all parties to cooperate with others.

Can the Overhead Be Reduced?

A FARMER made the remark in our hearing the other day to the effect that his gross income seemed to be pretty large, but that his net income was small or negligible. In other words, his operating expenses almost equaled his income. There are many others who could say the same.

This is a good time of year to go over the farming system carefully and see where the "overhead" might be lowered. How can the same work be done with less labor? Is the equipment what it should be? Are the present methods of fitting land for seed, harvesting, filling silo, cutting wood, doing the milking, conveying to market, etc., the cheapest and quickest methods that can be employed? The production of more produce is not the only way to increase profits,—if it is a way at all. There are two others: Cutting down production costs, and getting bigger prices. The first is the first and the easier to do.

Exit 1926

THE reign of 1926 is over, spell it which way you will. Most farmers and a good many other people will be glad to give Father Time an opportunity to do better in selecting a successor for the out-going year. More charges could be preferred against 1926 than the colonists made against King George III if it were worth while to do so. But we shall not recount them. Taking new courage we look forward to the coming year with determination, hoping and believing that the New Year will give us better weather, better prices, cleaner politics; and that there will be fewer murders, fewer accidents, fewer hold-ups, and fewer scandals. As for resolutions, let us all make at least one: That each of us shall use our best efforts to make these things come true. For after all that is how the millennium will be ushered in.

More for Less

ACCORDING to the Department of Agriculture the farmers of the nation produced slightly more in 1926 than in 1925, but the estimated farm value is about twelve per cent less. Last year the estimated value of 55 lines of production was over $8,949,000,000, while the value of the same crops this year is estimated at something over $7,801,000,000. The decline in total value is due to the slump in the prices of cotton, corn, spring wheat, potatoes and apples. When these crops bring low prices, the result is disastrous to large areas because the great bulk of these crops is produced by specialists who have no other crop with which to offset the losses. In such instances the eastern farmer has a concrete example of the wisdom of diversified farming.

Farm Relief Still Uppermost

THE actions of several of the national farmers' organizations at recent meetings indicate that the President's message and the Secretary of Agriculture's report, in so far as they deal with the "farm problems," do not contain the panacea for agricultural troubles. The Farm Bureau Federation completely ignored the suggestions made and outlined other remedies. The National Grange, while held before Congress convened, adopted a resolution recommending a remedy along lines which the administration has frowned upon. Just what the results of the contention in Congress will be cannot be known at this time. The farm leaders in the West claim that there has been a decided change in the views of many of the Congressmen since that body adjourned last spring. A close reading of the President's message indicates that h has been giving serious thought to the subject and is possibly open-minded on the matter of proposed remedies.

Where Will It Stop?

ELECTION scandals are no new thing. They have existed from the beginning of the government. Usually, however, they have furnished material for a few days' talk and ended there. But the more recent ones have not died down so easily. Spectacular investigations have revealed practices and conditions which have—pretendedly at least—shocked the nation, and the end is not yet. We would like to think that the investigations and resentment aroused were the result of outraged patriotism. But we are not s sure. The whole thing has too many ear marks of partisanship. It will be strange if some northern politician does not demand light on the "Grandfather" clause in the election laws of most of the southern states b which 6,000,000 colored citizens are disfranchised. But if he does it will be inspired b a feeling of partisan retaliation rather tha virtuous patriotism. However, the exposure of crookedness in politics and the discussion attendant upon it ought to result in a clearer perception of what the duties of a good citizen are and what the right of franchise really means.

Editorial Sidelights

"HOW are you going to keep them down o the farm?" asks a Home Page contrib (Page 17). Don't make them stay, but make th want to stay, seems to be the answer. We ap with the ideas the writer of that article s forth, but we have an additional one we shall p down here.

This sort of thing is seldom talked about, b we believe that petty squabbles between pare cause more young people to leave home than an thing else. We know that nothing can be d to keep some married people from having an oc sional battle to relieve the monotony of existen There would be much more happiness in t world, however, if all of these domestic tiffs we fought out in private. For the innocent bystan ers, the children, always receive wounds th continue to hurt long after the belligerents h forgotten there was a battle.

THE WORD "KIPTOPEKE" doesn't appear the map illustrating the article on Page 3. T place is not hard to find, however, for it is very tip of the Del-Mar-Va Peninsula. The to of Cape Charles is usually represented as being the end of the Cape, but actually it is sev miles from the end, as shown on this map. T real point of the Cape, the jumping-off-place, Kiptopeke (accent on the last syllable which pronounced like "peak").

DON'T FORGET the Pennsylvania State F Products Show at Harrisburg, January 17-21. T usual large number of meetings of interest farmers is being scheduled for the week. show itself gives every promise of being bi and better than ever. Full details about the m ings and the show will appear in an early i The premium list may be obtained from the partment of Agriculture at Harrisburg. En close Saturday, January 15th.

NEW JERSEY'S big show and Agricult Week will be held in Trenton, January 11-1 An outline of the week's program and the or izations that will participate appears on Pag

CONGRESSIONAL TALK

Time and Money Wasted in Needless Navigation Appropriations—Farm Relief Hearings This Month.

Washington, D. C.

WHEN Congress adjourned for the holidays it had done little except talk. The rivers and harbors bill dragged slowly along the muddy current of Senate discussion. The same old pork-barrel gags about making an appropriation for deepening the channel of Duck Creek so that it could be navigated safely by ducks were rehashed. Each year congressmen and senators discover hundreds of new rivulets and springs that are in urgent need of appropriations from the Federal Treasury. In fact, only last year an appropriation was asked for the improvement of a stream 1.3 feet deep, so that it could be navigated by pole boats.

These little pork-barrel appropriations in the aggregate amount to millions of dollars that could be wisely spent in improving navigation on the large waterways that for many years have been neglected. There is a rising tide of sentiment in favor of the unified system of waterways development as is proposed by Secretary of Commerce Hoover. The Farm Bureau, National Grange and other farm organizations have gone on record in favor of pushing the inland water development as rapidly as possible.

Farm Relief Schemes

The McNary-Haugen brand of farm relief legislation is in a better position in Congress than ever before, according to Chester Gray, of the American Farm Bureau Federation. He thinks the bills now introduced in both branches of Congress are so nearly alike that it will require only a brief hearing to adjust the differences in the three bills introduced by Senator McNary and Representatives Haugen and Fulmer. Other farmer representatives in Washington are not quite as optimistic. Chairman Haugen announces that hearings on his bill before the House Committee on Agriculture will commence January 6th. This will open up the hearings for the other farm relief schemes of which there are several. Advocates of the Grange-Adkins export debenture plan will be heard January 10th.

Prophesies Trouble Ahead

Dr. W. J. Spillman, economist in the Department of Agriculture, asserts that if successful in raising prices on the commodities specified in the McNary-Haugen bill it would stimulate the production of these products so that the third year of operation there would come a collapse of prices that would bring greater hardship to the farmers than they are now passing thru, unless a clause is added restricting acreage by law. Dr. Spillman would have the equalization fee levied on acreage planted by each farmer above that prescribed by the Federal Farm Board.

Bill Has Strong Backing

The Capper truth-in-fabric bill now stands third on the calendar in the Senate, and there is an excellent chance of its passing that body, altho Senator Smoot, of Utah, has introduced a branding bill designed to sidetrack the Capper bill. The Smoot bill is similar to the Merritt bill which was reported out in the House. Senator Capper has the backing of the National Grange, American Farm Bureau Federation and other farm organizations represented in Washington, and is making an active effort to get his bill thru the Senate. In the House there is need for a united effort of all the interests in favor of honesty in fabrics to push the French bill which is practically the same as the Capper bill.

Milk Concerns Offered Opposition

Representatives of the large milk handling concerns in New York and Boston vigorously opposed the Taber bill designed to compel Canadian dairymen shipping milk to United States markets to produce milk under the same health regulations as those required in this country. The bill was ably defended by representatives of the National Dairy Union, National Milk Producers Federation, and other dairy organizations.—E. E. R.

PRODUCTS SHOW PLANS

Rural Vocational Training to Receive Recognition—Smaller Grain Acreage Sown in State These Days.

Harrisburg, Pa.

STATE agricultural and educational officials have completed their plans for what will be the greatest attention ever given to vocational training in rural communities at the State Farm Products Show here next month. References to that line of instruction will also be made in some of the annual meetings of allied agricultural associations. Both Governor Pinchot and Governor-elect Fisher have shown an interest in this line and are encouraging it. Wednesday, January 19, has been officially designated as vocational day for not only the distribution of the project medals, but for emphasizing the displays from homes and farm and school work shops. There will be something indicative of what is being done in over 130 communities in the state.

Wheat Away Down

This year wheat planting in Pennsylvania fell off between twelve and thirteen per cent of that in 1925, according to figures issued by the State Department of Agriculture. The acreage sown is officially given as 1,039,000 against 1,194,000 the previous fall. This is due to weather conditions. There is a possibility that if the winter is severe the harvest may be confined to only a million acres, a very low figure for the Keystone State. The decline in planting of rye continues, being down to 77,000 acres. In 1924 it was around 125,000.

Both Chairmen Back

Chairmen of both the Senate and House committees of the legislature will be members during the coming session and there are reports that Chairman W. A. Haines, of the House committee, will be again named to head that body. Senator F. W. Culbertson, of the Senate committee, has not yet indicated whether he desires to continue.

Heavy Freight Ruling

Considerable importance is attached here to the ruling of the Public Service Commission that a certificate can be given to a truck line covering the same route as one already authorized if it handles only heavy freight. The decision was given in a Bucks County case where a package delivery concern protested entrance into its field of a line dealing in heavy stuff. The commission limited the new-comer to freight weighing over 200 pounds, forbidding it to handle any "pick-up" business.

Feeding Game

Game Commission reports coming here indicate farmers in many interior counties are feeding quail. The early winter has covered large areas with considerable snow and owing to the proved value of "Bob White" in potato patches the birds are getting attention.—A. B. H.

TOMATO MEN MEET

Grading Practices Stressed in Marketing Discussions—Jardine Will Visit New Jersey for First Time.

Trenton, N. J.

TOMATO growers and shippers from South Jersey met with representatives of the vegetable department from the State College, in the State Department of Agriculture Board Room in Trenton on December 20, to develop an improvement program. The importance of further development of New Jersey's tomato grading practices was the principal matter discussed, and follows a series of personal visits to New York City receivers who handle tomatoes from the Swedesboro district. The dealers are unanimously in favor of the present 20-quart crate used by New Jersey growers and shippers. They all agree however, that the lack of grading and the quality of tomatoes as sent to market by the Gloucester County growers is not up to standard and is working to the disadvantage of the New Jersey pack.

Milk Council Appointments

Important business men and dairy producers have just been appointed to the Executive Committee of the New Jersey Milk Marketing Council by its chairman, H. W. Jeffers, Plainsboro, member of the State Board of Agriculture. The appointees are: Senator David H. Agans, Master, State Grange, Three Bridges, N. J.; Martin J. Sheridan, Jr., Producer, Lebanon, N. J.; W. W. Scofield, Chief, Bureau of Foods and Drugs, State Department of Health; Professor J. W. Bartlett, State Experiment Station; F. A. Wills, Supplee-Wills-Jones Company, Philadelphia; Dr. J. A. Webb, Abbotts Alderney Dairies, Philadelphia; Dr. F. D. Holford, Borden's Farm Products Company, New York; H. S. Van Bomel, Sheffield Farms Company, New York; Paul B. Bennetch, Bureau of Markets, Department of Agriculture.

Jardine on Program

Secretary W. M. Jardine, of the United States Department of Agriculture, will be the feature speaker of Agricultural Week at Trenton in mid-January, when he addresses the farmers in the State Capitol on January 12th. Members and delegates of the twelve agricultural organizations holding their annual meetings at the same time have been invited to hear the Secretary. This is the first time that Mr. Jardine has been to New Jersey. It is expected that he will draw an audience of well over 1000 farmers from every section of the state.

Sussex Epidemic Over

No new cases of vesicular stomatitis have been reported in Sussex County since the outbreak of the livestock epidemic in October, and the state has now lifted its quarantine from both Sussex County and four townships in Warren County, upon which the ban was placed. All farms where the disease has appeared are being kept under close supervision. General farm activities have assumed their usual proportions and no more trouble is expected. Plans of the Sussex County farm organizations are going forward as before.—W. H. B.

THE STATE FAIR

Arrangements Being Made for Fair Next Fall—Curb Market Prices Better Than Those at Shipping Points.

Ithaca, N. Y.

THE office of treasurer of the New York State Fair is to be discontinued. The auditing department of the State Department of Farms and Markets will carry on the duties. Secretary J. Dan Ackerman will be designated as manager of the fair. A bill to permit the fair to open on Labor Day will be pushed, with the sentiment of both fair and labor organizations in favor of the plan.

The fair commission will support a bill to appropriate $70,000 to house the collection of old time farming and household implements of the New York State Agricultural Society, which founded the state fair more than three-quarters of a century ago. In all $825,000 will be asked of the legislature for much needed buildings to house the horticultural exhibits, the boys' and girls', and women's exhibits, and to complete the sheep and swine buildings. Heads of farm organizations have pledged support of the state fair plans for 1927.

Grange Leaders Honored

S. J. Lowell, of Fredonia, formerly Master of New York State Grange and of the National Grange, has been made a member of the federal tariff commission. S. H. Strivings, Master of New York State Grange, has been elected a director of Collateral Bankers., Inc., of New York City. The latter is also a director of the National Grange Mutual Liability Company, Inc., and treasurer of the Producers' Cooperative Association.

Market Matters

Live turkeys are bringing 40 to 48 cents a pound on the curb markets, with live ducks at 25 to 30 cents, fowl and chickens, 20 to 30 cents, alive. Potatoes brought $1.75 a bushel in Syracuse this week and cabbage was in good demand at 60 to 75 cents a bushel. Eggs sold at 65 to 75 cents a dozen. Corn-fed dressed pigs brought 18 cents a pound. These prices are considerably better than those paid at shipping stations.—M. G. F.

New Batteries for Old

Trade-in allowance on all makes

Enjoy the service your light-plant gave when new. Give it a chance to do its job right with new, powerful Universal Batteries.

Save Money

We'll take your old batteries in trade on a set of Universal Nu-Seals—the original sealed-glass cell now recognized as the standard replacement for any make of plant.

Need Less Care

Universals need fewer fillings, require less attention, are built to give an abundance of sure, steady power and light current.

Replacements for ANY make of plant

Universal Batteries are suited to all makes of plants—now factory equipment on many.

Battery Guide FREE

Big free book that tells you how to care for all batteries. We make farm light, radio and auto batteries for every purpose—this book gives you our expert advice. Send for it. And remember there's a good trade-in-allowance on your worn-out batteries. Ask for it—today!

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS

BY R. P. KESTER

I SPENT three days, week before last, at Lancaster attending the State Grange meeting. That is an outing I always enjoy immensely because I meet so many of my old friends,—friends made during the past twenty-five years and whom I do not see often. Of course, there are many changes in the personnel of the delegates from year to year, yet there are many who, like myself, attend regularly year after year. I notice that Father Time has been running his fingers thru the hair of some of them, and gently but firmly pencilling their faces with lines, yet the handclasps and the eye messages remain the same.

◆ ◆ ◆

IT IS doubtful whether there is any body of delegates to a convention more earnest and loyal than those who attend a State Grange meeting. Of course, not all of them come from farms, nor know at first hand what farm life and work means, yet practically all are in full sympathy with the things that pertain to the welfare of farmers. I have sometimes felt that the work of the Grange would be more effective if all members made a more careful study of some of the propositions that are brought before them for action. Like other bodies of people, Granges often pass on a question simply at the urgent suggestion of the one who proposes it.

◆ ◆ ◆

I RECEIVED a box of four apples the other day from a reader friend living in York County. There were two fine, big Golden Delicious apples and two of a kind I do not know. The sender was Emile Boileau. The apples were fine and the Delicious really delicious. In a letter he sent a photo of himself and a little grandson whom he carried in his arms, and who was holding a fine big apple. He writes that as he walked past the young tree on which a few apples were hanging the little fellow reached for one and, he says, "of course I got it for him." If Mr. Boileau is like some other Grandpas I know he would have pulled off the only apple in the orchard if the grandson had wanted it.

◆ ◆ ◆

AS THIS is written the spirit of Christmas fills the air. Everything is subordinate to the preparations for the festive occasion. Everybody is stealthy and furtive as if they possessed dark, deep secrets which they are bursting to share. The streets are crowded with people bearing bundles and packages. Children are having the time of their lives visiting the shops and looking at the wonderful stores of things which Santa Claus has collected for "good little boys and girls."

◆ ◆ ◆

PERSONALLY, I like better the Christmas idea suggested by the name of Kriss Kringle, which in German means "Christ Child." The white-bearded, red-coated figure commonly used to represent Santa Claus comes from the much older legend of a man who came around once a year with presents for boys and girls. But this legend became interwoven with the idea of Christmas many centuries ago and it is too late now to change it. Even the children have difficulty in connecting the popular figure of Santa Claus with the idea of the Christ Child. However, the spirit is the important matter, and this most people appear to have at this season of the year. May the Christ Child reign in every home and in every heart!

◆ ◆ ◆

THE memories of Christmas are among the oldest and most continuous in my life. Little pieces of candy and a doughnut doll were the first. In those days the gifts were mostly home made and usually utilitarian in character. Out in the country we had no mechanical toys—a home made sled, a pair of woolen mittens, or something of like nature usually supplied needs as well as expressed the Christmas spirit. We were as full of joy and as well satisfied with what Santa Claus brought us as are the children of the present day, and I am sure that the love which prompted and provided the gifts was as truly that of the Christ Child as it is in this more luxurious age.

The Cheerful Plowman

Temper and Public Money

I'VE been on the jury a week and a day because of the fury of Billie McCrea who raised the old dickens, the evidence showed, when Hillary's chickens came over the road. It seems that Old Billy one Saturday morn, his brain hot and chilly, his temper forlorn, arose from his porridge with soul full of words and spied in his forage poor Hillary's birds! All love for his neighbor was gone in a trice; with mind like a sabre that's drawn for a slice, he killed twenty pullets, two roosters, and then he sent his last bullets right thru an old hen!

Poor Hillary seeking his wandering birds, his patience all reeking, his blood full of curds, arrived as Old Billy was doing his stuff, and maddened and silly he challenged his bluff! The neighbors collided with wide swinging arms on the road that divided their neighboring farms. Old Billy was beaten three sheets to the wind, his cuss-words were eaten, he owned that he sinned; but tho he was bested and made to confess he went and arrested his neighbor, yes, yes!

The action which lasted a week and a day has blighted and blasted Old Billy McCrea. For raising the dickens we soaked him the cost of the trial and the chickens that Hillary lost, then added a twenty, pure dollars in gold,—we soaked him a-plenty, we swatted him cold,—"For why should the county," we jurymen said, "dish over a bounty for tempers gone red? This gent in his fury has piled up a cost that any good jury will never see lost; this fire-eating Billy will ponder next time before he goes silly—we'll cure him of crime!"—J. Edw. Tuft.

Isbell's Seeds DO Yield More

For forty-eight years our customers' successful money-making gardens and bumper crops have proved Isbell's Michigan grown seeds more hardy, better yielding and more dependable. Isbell's seeds yield more for the same reason that thoroughbred stock pays better—breeding tells in anything that grows.

This Book FREE

For 48 Years

For nearly a half century Isbell's has been improving seeds—developing better strains, increasing hardiness and yield and improving cleaning methods. Every ounce of Isbell's seed is grown under strict supervision, sorted and cleaned in our perfectly equipped plant and then tested for germination. Every precaution is taken to make certain that all the seed we ship is true to strain, dependable and of high germination.

Pure Bred Seed

Be sure of your seed. If you are to have big crops and make more from garden and field, seed must be pure bred. This year there is a shortage in several kinds of seeds. Order early. Beware of imported seed not adapted to your soil and climate. Do not take chances—be certain by planting only Isbell's Pure Bred Seed. Then you know you have the best seed that 48 years of selection, experimentation and development can produce.

Isbell's 1927 Seed Annual Is Ready for You

This book—which has become the buying guide for more than 200,000 of America's most progressive farmers—is even more helpful this year. It tells you how to determine what crops are best for each purpose—what strains are best for your soil—how to prepare the soil—how to plant for best returns—how to care for the different varieties. It tells you how to select seed. And it quotes you money-saving, direct-from-grower prices, on Isbell's Pure Bred Seeds.

This Book Means More Money for You

Send for your copy today! It's Free! Over 400 true-to-nature illustrations—20 pages in natural colors. This book aids you to plan your crops. It means less money for seed and more profit from your farm and garden. It costs you nothing but may add many dollars to your income. Send the coupon now.

Garden and Truck Crops

W. T. TAPLEY, Staff Contributor and Adviser

A Green Manure Crop Is Useful Underfoot As Well As Underground

APPARENTLY winter has come along in earnest with temperatures below zero reported from many sections of the state. In most places a good snowfall is helping to protect things, but additional care may be required for some of the buried root crops or trenched celery. On the other hand too much or too warm a cover will start beets, carrots or parsnips to sprouting in the pits with consequent loss of quality. Besides, additional labor will be required to rub off the sprouts. Likewise, the celery stored in trenches may suffer from extremes of temperature if proper precautions are not taken. Experience is, of course, the best guide, lacking which constant vigilance and careful judgment count big.

It is common for vegetable gardeners to estimate the value of green manurial crops and cover crops in terms of organic matter produced, plant food conserved or erosion prevented. However, a dense green manure crop in late fall may prove very useful thru reducing and delaying frost penetration. As a consequence land so protected may in many cases be plowed for a week or more after bare or poorly covered land has frozen two or three inches deep.

Yours for the Asking

THE Lime Report for 1924 and 1925, compiled by the Bureau of Foods and Chemistry, Pennsylvania Department of Agriculture, is now available in printed form. The bulletin gives the analyses of 210 samples of lime representing 71 different brands, registered by 62 different companies, and carries a list of the lime products registered for 1926 up to July 1st. The publication is general bulletin No. 430 and can be secured by addressing a request to the Department of Agriculture at Harrisburg.

Is this not conservation just as truly as the saving of plant food? It means dollars saved and made to keep teams moving with the plow several days later than usual, reducing by just that much the common and almost unavoidable winter period of team idleness; a thing which we all know is both an expense to us and no kindness to the horse.

When Top-Soil Thaws

Leaving the matter of frost penetration aside, there are November mornings, after a stiff freeze during the night, when it warms up about half past nine that a good heavy green manure is worth a lot just to keep one from sliding and sprawling around in that muddiest of mud that comes with the thawing of an inch or two of wet soil. With the tractor that same slimy mud may roll on the wheels like snowballs, and put one out of business for a while.

For a number of years the writer has had wonderful results with oats sown at the rate of 3 bushels per acre during July and August, as a green manure to plow down in late fall or early winter in preparation for early truck or garden crops the following spring.

The question, "Is oats the best crop for this purpose and season?" had often come to mind. Accordingly a 5½-acre block from which the early truck crops had been harvested was plowed and harrowed and on August 10 was sown to the following crops using a standard make of grain drill:

Crop.	Rate per acre.	Seed cost per acre.
Golden millet,	1 bushel	$3.75
Sudan grass,	30 pounds	4.00
Sunflower,	15 pounds	2.25
Ensilage corn,	2 pecks	0.50
Buckwheat,	1 bushel	1.25
Barley,	3 bushels	2.25
Oats,	3 bushels	1.35

In a warm and not so wet fall, or on a light soil—this being a silt loam—results might have been different. However, the millet made a light and unsatisfactory growth, perhaps 10 inches. The Sudan grass made more bulk than the millet, reaching a height of 18 inches, but left much to be desired. The buckwheat made a rank growth, 24 inches, and was a beautiful picture—until the first light frost.

Jack Left His Calling Card

A week afterwards, with the leaves and stems dried up, there was not much left to tell the tale. The corn was about as high as the buckwheat but left a very much more substantial looking residue after Jack Frost's visit. The sunflowers came thru the first frosts without apparent injury, but succumbed to a light freeze. These plants reached a uniform height of over 3 feet, and proved the best organic matter producers of any of the green manures in the test.

By way of contrast, the oats and barley kept right on growing until real wintry weather arrived. There was apparently little choice between them, both stooling thickly and making an exceedingly rank and heavy growth which covered the ground completely. The soil under these turned like a sod whereas that under the other crops fell apart like fallow land, a tribute to the root-making powers of the small grains.

Oats Is Hard to Beat

It looks as tho, all factors considered, oats will be a hard crop to beat for sowing in midsummer, but we will put in some barley and sunflower again for comparison. Perhaps millet and Sudan grass will be tried if they can be drilled during July. To sow in September and October, or even in early November, the old standby, rye, holds its own.

In these days of diminishing manure supplies there are few gardeners who question the importance and efficiency of green manure crops in building and maintaining soil productivity. Nevertheless, scientific evidence is interesting. Prof. J. W. White, of State College, has found that fall-planted rye turned down in the spring, when it had produced six tons of green weight or 1½ tons of dry weight per acre, resulted in the conservation and addition of 103 pounds of nitrogen per acre, equivalent to the nitrogen in 10 tons of barnyard manure, 3000 pounds of a 4-8-4 fertilizer, or 644 pounds of nitrate of soda.—Gilbert S. Watts, December 7th.

Lady at Piano—Do you recognize this?

Famous Composer—"Er—I'm afraid not.

Lady—Why, you funny man, it's one of your own!—London Mail.

HORTICULTURE

DR. S. W. FLETCHER,
Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

Hort Week Came Up to Expectations

(Continued from page 2)

there is less danger of getting the gall. Never set plants where wild dewberries have been growing within five years; these may have had gall. One Pennsylvania raspberry grower produced 5520 quarts of berries per acre last year, selling for over twenty-five cents a quart. There is a future for raspberry growing in this state if the necessary precautions are observed, and pickers are available.

Attention was called by V. R. Haber to the value of birds in the orchard. A large percentage of the codling moth cocoons that are to be found at this time of the year under rough bark of apple trees, and in woods and waste places around the orchard, have already been perforated by birds and the insects destroyed.

During the winter the diet of the nuthatch, chickadee and sapsucker is mostly insects in their resting stage. It pays to encourage these birds to frequent the orchard by hanging pieces of uncooked suet high up in the trees, on the end of swaying limbs where sparrows are not likely to eat it.

Western Practice Not Used in East

Tying narrow bands of burlap around the trunks of apple trees, to catch the pupating codling moth, is often practiced in the West to supplement spraying, but it is not practicable in the East. We would not catch as many under bands here, since we have more waste places around our orchards which the insect would choose for hibernating; also, we have fewer broods in a season.

BLIGHT-IMMUNE NURSERY STOCK.—According to E. L. Nixon, most of the "collar rot," or "collar blight" that kills so many apple trees is due to fire blight which starts on the very susceptible French Crab seedling roots. He advocates the elimination of French Crab roots and the substitution of root-stocks of known immunity to blight.

Some of the most highly resistant varieties, when propagated on their own roots, are Williams Red, Stayman and Ohio Nonpareil. The latter is the most vigorous grower.

A method of propagating own-rooted trees, by means of a long cion root graft, which has a copper wire wound tightly around the graft at the point of union, has been patented by this experimenter. The wire encourages the development of roots on the cion, above the partial girdling caused by the wire. There are 12,000 of these own-rooted trees now growing in Pennsylvania nurseries.

The "double-worked trees" sold by some nurseries, especially of Grimes, and supposed to be blight resistant because the susceptible variety is grafted on a resistant trunk, are practically worthless, according to Nixon, because these trees still have the susceptible French Crab roots.

MORE BEES—MORE FRUIT.—The desirability of scattering colonies of bees around the blossoming orchard, as an aid in pollination, instead of leaving them all at one point, was pointed out by E. J. Anderson. In one orchard 10.3 per cent of the blossoms set fruit on trees near the hives, and 4.3 per cent on trees 150 yards away. Bees fly no farther than they have to for nectar and pollen, especially if the weather is unsettled. One colony to the acre is desirable, but one to three or four acres will do, except in seasons of unsettled weather during blossoming time.

Of the 35,000 to 60,000 bees in a colony only a few thousand are actually working on the blossoms at the same time. A bee will visit about six blossoms a minute. If the orchard is small and there is considerable waste land, old meadows and woodland near it, the supply of wild bees and other insects may be sufficient. In very large orchards it may be a profitable investment to pay two to five dollars for the use of a colony during the blooming season. Some bees will be lost if they are moved over three miles, even at night; they leave the hive without noting its new location.

Power Take-off Operates Sprayer

The power take-off from the tractor is likely to be serviceable to the fruit grower as well as to the general farmer, says R. U. Blasingame. The chief advantage is that it makes it unnecessary to have an engine on the sprayer, when this is pulled by a tractor.

The chief disadvantage is unequal pressure, if it is necessary to stop to spray large trees. This can be avoided only by having two clutches, one, a master clutch, the other to operate the power take-off continuously. The take-off costs about $50.

The spread of the European mite, the red spider, has stimulated interest in oil sprays. G. F. McLeod warned fruit growers against using an oil spray containing less than four per cent of oil; it is not fully effective against red spider at a weaker strength. In some cases poor results are caused by using it in hard water. Guard against freezing, and shake the emulsion well. The miscible oils have more oil in the stock solution than the oil emulsions, are more stable, and cost more. Both are effective when used properly.

(To be continued)

New Jersey Will Have Its Turn Soon

THE following program has been arranged for New Jersey Agricultural Week, January 11-14, in Trenton:

TUESDAY—Judging, Farm Products Show. Farm and Home Equipment Show. Annual meeting, N. J. Federation of County Boards.

WEDNESDAY—State Agricultural Convention: Election of two members of State Board. Addresses by Governor A. Harry Moore, Hon. Joseph S. Frelinghuysen, Secretary Wm. M. Jardine, Congressman Franklin W. Fort, Mayor F. W. Donnelly, of Trenton.

THURSDAY—State Poultry Association meeting. State Potato Association meeting. State Alfalfa Association meeting. Holstein-Friesian Association meeting. Guernsey Breeders' Association meeting. Farmers' Roadside Market Association meeting. New Jersey Home Bureau meeting. Beekeepers' Association meeting.

FRIDAY—Beekeepers' Association meeting. Horticultural Society meeting. Meeting of New Jersey Swine Growers. Rural Church Conference.

What Prof. Mapes Did in 1847 Is Benefiting You Today

As an expert chemist, Prof. James J. Mapes—originator of Mapes Manures—was famed far and wide. But he was not satisfied to be famous, he also wanted to be right; he recognized the place where the laboratory test should leave off and the crop test should begin. So, in 1847, Prof. Mapes bought a farm in New Jersey to ask the crops themselves what fertilizing materials they liked best.

Prof. Mapes believed that the crop could tell the value of fertilizing materials better than the laboratory. He set the crop up as the final judge. He put crop results far ahead of laboratory analysis. Today, every good farmer knows that two fertilizers of the same analysis may give widely different results because of the difference in the materials from which they are compounded.

Mapes Manures have always been formulated on the basis of crop results. The crops tell us what materials they like best—we put these materials into Mapes Manures. They are first made right, then they are priced as low as possible.

The little additional cost is returned to you many times over in increased crops of better quality. Try Mapes this year. Compare the crop yield, the crop quality and the crop profits with the results from any other fertilizer you can buy. Mapes "costs little more—worth much more".

Just Mail This Coupon Today

Write today for a list of the crop brands and prices of Mapes Manures. You'll be surprised at the little difference in cost between Mapes brands and other brands. Mapes "costs little more—worth much more". Please tell us what crops you plan to fertilize so that we can be of the greatest possible service to you in selecting the right brand to suit your special needs.

Feeding Practices When Artificial Lights Lengthen Short Days

THERE is nothing mysterious or magical about the use of lights in securing an increased production of winter eggs. The hens are not fooled into thinking that the good old summertime has arrived; they are merely given a longer day. The birds eat more, vital processes are speeded up, and production is accordingly increased.

The problem is to get enough of the right kind of feed into the pullets to enable this increased production without loss of weight and subsequent breakdown.

A flock of pullets under lights laying 25 per cent should eat at least 14 pounds of scratch and 11 pounds of mash for each 100 birds each day. Eight pounds are fed an hour before dusk, two pounds after dark to start the birds scratching when the lights go on in the morning, and the remaining four pounds about eight o'clock.

In order to get the mash into the birds, plenty of hopper space must be provided. One linear foot for three to five birds is about right. Many poultrymen favor an open hopper elevated about eighteen inches off the floor, and placed, if possible, directly under a light. If fresh mash is added daily, or the mash stirred up, the birds seem to eat more.

They Like Wet Mash

A wet mash made of the laying mash moistened with milk, or with condensed buttermilk, one pound per 100 birds, diluted, fed at noon helps to get more mash in the birds.

When production is around 50 per cent, the pullets are liable to get thin and become subject to disease. With such production, it is a good plan to feed a fattening mash made of one pound of condensed buttermilk, one pound of corn meal, and one pound of rolled oats, per 100 birds, instead of the wet laying mash.

To maintain the health of the birds, some form of green feed at the rate of 5 pounds per 100 birds per day should be given. A larger quantity should not be fed, as such material reduces the consumption of other feed without being particularly nourishing in itself.

The use of cod liver oil, one pint per 100 pounds of mash, is a rather new practice, but a very good one from the standpoint of health, because of its unusual vitamin content.

The increased consumption of feed and greater activity due to the use of lights are important factors in warding off fall molts of early hatched pullets. I remember one bunch that I had which I housed in September and lighted immediately. They laid heavily right along without molting.

A neighbor who had some birds of the same age, but did not use lights, found that his birds started off well, but went into a neck molt in December and laid off for six or eight weeks, while they were growing new feathers.

There is some prejudice among poultrymen against the use of lights on breeders, and quite a little difference of opinion about the practice. It is certainly true that eggs from lighted pullets generally give poor hatches.

On the other hand, I know of one large commercial breeding farm which holds its yearlings up to production until November by the use of lights from September until then. The lights are then taken off abruptly, cutting down production and forcing a molt. In about two weeks the lights are put on again. Grain is fed very heavily, and a fattening mash containing about 10 per cent protein, with buttermilk and cod liver oil takes the place of the laying mash.

The lights hurry the resting period and growth of new feathers, and when the birds are in condition to lay, after the first of January, the grain ration is reduced and the laying mash given. The owner states he has obtained excellent results from this method.

What has been said about lights applies especially to Leghorns, which give a much greater response to their use than do the Rocks and Reds and similar breeds.—R. L. Scharring-Hausen.

Across the Maryland Hills

Taken near Frederick before winter really came.

Oil Mixed with Mash

Our Leghorn pullets have developed leg weakness. We have been told to feed cod liver oil in the mash. Can you tell us the amount to add to 100 pounds of mash? Also, do you think yeast is good for leg weakness?—S. P., Jr., Baltimore County, Md.

The general rule has been to feed one or two per cent cod liver oil in the laying mash. That means a pint or a quart to each 100 lbs. of mash. The oil is poured over a few pounds of the mash and thoroly mixed and then the oil mash is carefully mixed with the 100-lb. lot.

To make the pullets eat the oil more readily, you might mix a quart of oil with 25 lbs. of scratch grain. This should not be fed in the litter as it will gather too much dirt. Feed the oil and grain in a long trough so all the pullets will receive a share.

Leg weakness in pullets is sometimes due to oviduct troubles and the birds can be isolated from the flock and well fed. Sometimes they recover in a short time. Yeast has been used with success in some poultry rations to stimulate both growth and egg production and it might help in keeping a flock more healthy and vigorous but could hardly be recommended as a remedy for leg weakness.

This trouble is not thoroly understood as yet and may result from different causes or even appear in certain individuals when the flock management seems about ideal.—R. G. Kirby.

In using lights, the roosts and as much space as possible under the dropping boards, as well as the main floor, should be illuminated. Forty-watt lamps, spaced every ten feet, hung midway between the end of the drops and the front of the pen, six feet above the floor, are recommended. Some people use 25's.

* * *

A well whitewashed interior helps to reflect the light into odd corners. If the ceiling is good and white and the lamp is placed against it, no other reflector may be necessary.—R. L. S-H

Winter Pasture for the Hens

WE FIND that feeding clover or alfalfa hay to the hens during the winter helps to keep them in condition to lay hatchable eggs in the spring. It helps to provide conditions a little bit similar to the summer range where hens can peck at green grass and leaves whenever they have an appetite for that material.

Build out a little wooden rack from the side wall of each section of the laying house. Cover the front with slats about three inches apart. Occasionally pack the rack full of clover or alfalfa and let the hens eat as much as they will. The tough stems will be pulled out and added to the litter but practically none of the leafy material will be wasted. Even a forkful of alfalfa placed loose in each house every other day will give the hens green feed and all but the stems will be used.

We keep a couple of metal measures in the barn and often fill them with the chaff from in front of the cows' mangers. This fine green feed is greatly relished by the hens. Poultrymen often lack storage space for a bulky crop like hay but can store a lot of baled alfalfa in a small space. Often the baled hay can be purchased for a little more than loose hay and it is much nicer to handle.

In our section I find it is often possible to buy a better grade of alfalfa when it is bought in bales. It seems that only good alfalfa is baled by the neighbors. Sometimes loose mixed hay is sold loose because it was not of good enough quality to pay for baling. The baled alfalfa will usually separate into small squares like big pancakes of green feed. They are easy to distribute in the laying houses without sifting out much of the fine green leaves which are the best part of the feed.—R. G. Kirby.

RADIO DEPARTMENT

Ground Wire and Tester

The ground wire to my radio set is about twenty feet long and is connected to the casing of a water well. Can I run this ground wire thru an ordinary garden rubber hose under ground in order to preserve insulation, or would it be better to use an iron pipe; or shall I bury the ground wire as it is? Which one of these methods is best? Would I be benefited by owning a tube tester and a tube reactivator for dry cell tubes? With the above-mentioned reactivator would I have to have a tube tester?—G. G., Westmoreland County, Pa.

1. It is not necessary to insulate the ground wire running from your set to the metal casing of your well. The ground wire may be a length of bare or insulated (whichever you have) copper wire, preferably not lighter than No. 14. It is, of course, extremely important to insulate the aerial and lead-in wire.

2. You can certainly improve old tubes by means of a tube reactivator, but the writer does not have any too firm belief in such devices inasmuch as the reactivation does not last very long. Seldom does the process make the tube fully equal to new and in many cases fails to work at all.

A tube tester is a good thing to own. You can tell pretty well the condition of the tubes in your set without one, however, if you keep on hand one extra brand new tube, tested by a reliable dealer when you buy it. From time to time this tube, known to be perfect, can be substituted for tubes in the various sockets. When a great improvement is noted the old tube can be tried out in other sockets or discarded.

A tube in the radio frequency socket is the most critical and must be most sensitive—next the detector and then the audio amplifier. The last-named will often operate perfectly with a tube which seems "dead" so far as the radio frequency amplifier is concerned.—B. F.

New Life for Old Tubes

Can you give me any method of rejuvenating an old tube so it will work again? I have a six-tube set with a three-tube amplifier, transformer and resistance coupled that I built myself. It fails to give results this season as it has done before. I have used it two years. Can it be worn out?—G. E. E., Bradford County, Pa.

Old radio tubes can be rejuvenated, altho it is unlikely that tubes which have been in constant service for two years can be brought to "life" again in a satisfactory way.

You can purchase a tube rejuvenator for a few dollars. It operates from 110 volts, 60 cycles, alternating current and the principle involved is to light the tube very brightly, with no "B" voltage connected, for a short period.

Another Possible Method

A substitute method that works in some cases is to light the tube very brightly by means of a 22½-volt "B" battery for about one-half minute. This will seldom burn out the filament. It should be done by inserting the tube in a socket separate from the set and with a 22½-volt "B" battery connected to the "F" binding posts.

Even tho tubes may light all right, the vital "thorium" impregnated in the filaments, and which is essential to a rapid discharge of electrons from the filament, is gradually used up. After a year or more of service tubes become insensitive. Rejuvenation does not revive them for long.

Taken from the Week's News

BOYS' AND GIRLS' club members from four Pennsylvania counties will exhibit 57 lambs at the State Farm Products Show in Harrisburg, January 17 to 21st. Centre County will be represented by ten pens of three lambs each, Tioga by four pens, Washington by four and Mercer by one.

§ § §

THERE WILL BE classes for farmers, for commercial poultrymen (having more than 500 birds) and for boys and girls in the egg exhibit at the Pennsylvania Farm Products Show. About $600 in prizes will be awarded to egg exhibitors.

§ § §

THERE ARE NOW ten adult poultry clubs in southeastern Pennsylvania. More than 5000 birds are represented by the 16 members in the club at Chambersburg, Franklin County, and 8000 birds by the membership of clubs recently organized at Newburg and Upper Mifflin in Cumberland County. The previous month's cost records, production and marketing problems are discussed at the monthly club meetings.

§ § §

MEMBERS OF BOYS' and girls' clubs will exhibit more than 200 baby beeves at the Pennsylvania State Farm Products Show. Lancaster County has the largest club in the state with 88 animals. Adams has 71, Lebanon 41 and Cumberland 27. These four counties will exhibit at Harrisburg.

§ § §

688 BUSHELS of potatoes per acre is the highest production recorded in Pennsylvania in 1926. This record was made by R. E. Briggs and Son, Luzerne County, a father-and-son partnership which has led the Keystone 400-Bushel Potato Club for three consecutive years. This year the club has 80 members, with 8 in Luzerne County, 7 in Lehigh and 6 in Montgomery.

§ § §

YOUR PULLETS should have laid an average of 10 eggs each during December, unless they were early hatched birds that have been laying since August. That is the egg production standard set by the Poultry Husbandry Department at the New Jersey State College of Agriculture. This standard is the number of eggs actually laid by pullets whose owners cooperated with the extension service of the department during the last three years.

§ § §

THREE STUDENTS of the New Jersey College of Agriculture won the Eastern Intercollegiate Fruit Judging League Contest held recently at West Virginia University. The winners were Glendon H. Elmer, of Bridgeton; Walter S. McClatchey, of Roselle Park, and Abraham Dobin, of Jamesburg. Professor Clark was the coach. Students from Ohio won second place, Indiana third, West Virginia fourth, and Pennsylvania fifth.

§ § §

THERE WAS LESS BUTTER, less cheese and fewer eggs in storage on December 1, 1926, than on the same date in 1925. The figures are: creamery butter, 64,377,000 pounds this year, 74,754,000 pounds a year ago; American cheese, 63,896,000 pounds, compared with 66,495,000 pounds a year ago; case eggs, 3,215,000 cases this year, 3,786,000 cases a year ago.

EXTRA MILK
—try this simple plan!

IT is a fact! Seven cows in ten are capable of giving far more milk than they do—in the winter months. Malnutrition—the bane of human health and well-being—is far more common in cows than in people. It is the biggest leak in winter dairy profits. Under the urgent strain of consuming and converting quantities of dry, coarse feeds into milk, the digestion and assimilation break down. The cow may *appear* healthy, but the milk fails to come in paying volume. Quantities of high-priced feed go to waste.

The remedy is simple—and amazingly inexpensive. Help the milk-making organs meet the added burdens thrust upon them. Build new vigor into the digestion and assimilation—milk profits simply MUST result.

Kow-Kare is doing just this job for added thousands of cow owners every year. Instead of just cramming feed into their cows these dairymen are helping their cows keep the milk-making process going full-speed. Kow-Kare has a marvelous tonic, strengthening effect on the productive organs—makes them function actively, produce maximum milk flow and resist disease. Kow-Kare, fed sparingly, but regularly with the feed will put your "poor milkers" back in the profit column. Try it; a single can of Kow-Kare will ration one cow from one to two months, the treatment being regulated by the cow's general condition. It's a little investment, with big—and certain—results.

For Cow Diseases

In treating Barrenness, Retained Afterbirth, Abortion, Bunches, Scours, Lost Appetite, etc., Kow-Kare has a well-earned 30-year reputation of bringing cows back to health and production. It goes to the source of the trouble—makes the affected organs regain vigorous health—resist disease.

For cows at calving Kow-Kare, fed before and after, prevents expensive troubles, makes cow and calf healthy and vigorous.

Feed dealers, general stores, druggists have Kow-Kare—$1.25 and 65c sizes. (Six large cans, $6.25.) Full directions on can. Mail orders sent postpaid if your dealer is not supplied. Our valuable free book on cow diseases sent free, on request.

Head of the Department of Dairy Husbandry
Pennsylvania State College

Eighty-eight Carry Off Prizes in Contest

CHECKS amounting to $14,025.00 went into the early Christmas mail from Chicago to 88 prize winners in the contest conducted by the Associated Corn Products Manufacturers, makers of corn gluten feed, to encourage better feeding of dairy and beef cattle.

Included in the winners were owners of dairy herds, cow testing associations, dairy breed champions, owners of beef cattle herds, and other special prize winners.

The winners in the dairy groups had completed a six months' feeding test under rules prescribed by the association and with authenticated records. In each ration at least 25 per cent of the grain fed was corn gluten feed.

Beef Cattle Tests Shorter

The beef cattle tests were for a shorter period—three months—and all of the rations fed included 15 per cent of corn gluten feed.

The judges of the contest were not connected with the association, but were men of standing and wide experience in matters of feeding. Their judgment was utilized, not only in the selection of the winners, but in determining the method to be used in equalizing on a fair and equitable basis the records submitted from various sections of the country, so that a herd in Maine would be on just the same basis of feeding costs as a herd in Iowa.

The basis of the awards in the dairy group was for the greatest net profit, determined by taking the value of the butterfat produced—(priced alike for all contestants) from which was deducted the cost of feed, roughage and pasture, also priced on a uniform basis.

This is possibly the first large national contest in which herds and cow testing associations in one section of the country were placed in comparison with similar groups in other sections.

Representative dairy herds from many sections of the country were entered. Wisconsin, with a large number of cow testing associations, furnished by far the larger number of entries. From the Corn Belt, naturally, came most of the beef cattle entries. In some of the groups competition was especially keen. The closeness of the final figures among the first ten best dairy herds was striking.

The contest, according to the association which conducted it, not only served to bring out striking and specific evidence of the value of corn gluten feed in dairy and beef rations, but it has provided valuable information, based on actual experience, showing the benefits possible in better feeding practices. To make these facts available to dairymen and feeders everywhere, the Educational Bureau of the Associated Corn Products Manufacturers plan to publish them in suitable form for free distribution.

Following is the list of winners in the contest:

Dairy Cattle, Individual Herds.—First prize $1000, W. J. Schimmelpfing, Wisconsin; second prize $300, O. H. Wiedemann, Minnesota; third prize, $200, William Huth, Wisconsin; fourth prize, $100, G. F. Smith, Wisconsin. Ten additional prizes of $50 each were also given. G. H. Monroe, of Bradford County, Pa., was one of these.

Associations Also Win Prizes

Four cow testing association prizes ranging from $1500 to $200 were paid also. In addition several smaller prizes of $50 went to other associations.

Beef cattle, herd prizes, were distributed as follows.—First prize, $1000, C. E. Laybourne, Ohio; second prize, $500, Bert DiVall, Wisconsin; third prize, $300, E. P. Inboden, Illinois; fourth prize, $200, W. A. Cutler, Missouri. Additional prizes of $50 each: W. B. Austin, Wisconsin; E. A. Beamer, Michigan; G. Ray Connolly, Iowa; D. R. Mallory, Iowa; George E. Motter, Pennsylvania; E. Lodge Ross, West Virginia; John Scholerman, Iowa; W. W. Shippert, Illinois; Delos Moff, Iowa.

The Crop That Yields the Largest Returns

FARMERS are constantly looking for products yielding a commercial asset. Every crop has its value. No crop on the farm yields a better value than a pleasant smile.

It is easy to grow pessimistic. Pessimism is contagious but there is no value to be derived for any one from the discussions of fancied troubles. Better become a cheer-up and shed a little sunshine. People like to transact business with a smiling cheerful man.

Years ago when I needed a lesson I got it. A neighbor had some hogs, they broke the fence down and wallowed down a large patch of corn. They knew where to find the best corn. When the destruction was discovered I was angry and prepared for a fight. The neighbor was a good level headed farmer, and we viewed the loss. One word from him would have fired my red hot Kentucky blood. I was somewhat disappointed when he said, "You estimate the loss and I will pay all the damages." In a minute the better quality in me dominated my feelings and I replied, "You don't owe me one cent, it can't be helped, I will repair the fence."

A few months ago a neighbor's horse broke loose and came to my place, doing considerable damage. I put the horse in the barn, went over and had a pleasant visit with this neighbor, and asked him if he had lost a horse. He offered to pay damages, and when I told him that there were no damages to pay he was surprised.

A week or so ago the pasture for my cows proved worthless and I knew this neighbor had a large pasture. He had sold his cows, some twenty of them, and his pasture was fine. I went over to visit him one night. Before going home I mentioned that my pasture was very poor and that I had to feed my cows. Then this good neighbor suggested that I turn my cows into his pasture. I told him I would gladly do so and would pay him. He said, "I have the pasture and I don't want any pay, it is a pleasure to help you out." My cows are in this neighbor's pasture. Does it pay to be cheerful and smile now and then? Is cheerfulness an asset?—R. A. Burriss.

Friendly Talks with Farm Folks

By Edgar L. Vincent

HOW have you come on this year? This is the time of the year when we are most apt to spend considerable time reckoning up how we stand now as compared with our condition a twelve-month ago. Are we any better off from a money point of view? Have we any more in the bank or out on interest, or have we dropped behind a little? We sit up nights looking over the books and trying to settle those questions, that is, if we keep any books, which far too many farmers do not, the more is the pity. A farmer who keeps no record of his doings may not have to spend any time figuring up at the end of the year, but he is like a ship at sea with no chart or rudder, drifting round hit or miss. Some kind of a record every last man of us ought to keep.

And then, have we made the farm any better? Is the home more attractive? Have we come any nearer to living up to our own ideals than we have in years gone by, or are we just about in the same notch, plodding along in the dark, without having made any progress whatever? So we cross-examine ourselves, and so we are made happy or miserable depending upon whether the balance sheet is favorable or otherwise.

We Strive for Perfection

But material progress is not all that concerns the live farmer. If he has the true spirit of the aspiring farmer, over and over the injunction of the Old Book has come to him in the year that is now drawing to its close, "Be ye also perfect." Perfect? That sets a stake for us pretty far across the field. With our world-dimmed eyes we can scarcely see it, and sometimes it seems to fade quite out of the range of our vision.

Perfect? Where is the man that can or does measure up to that as a farmer? We would all like to do it. In our best moments we think we will do it. Those are indeed red letter days in our lives. But how quickly we lose the vision! Far too soon we sink back to the old dead level, so that the year's windup finds us just about where we were at the beginning.

We plow our furrows in quite the same way; we think, "I can get along with the same poor herd of cows"; we forget that we intended to place at the head of our flock of sheep a better sire than we ever had, and the great injunction, "Be ye also perfect" comes to have very little meaning to us, unless it be to discourage us and take the fire out of our hearts.

But wait a minute! We never entirely lose out as long as we are faithfully working toward better things, and we can set our mark a little higher. Our progress may be slow! Never mind. There stands the plow. We may get between its handles and turn a better furrow than we ever did in all our lives. No target ever was set so high that we might not lift our arrow a little bit higher, and still even higher, and the day will come when we shall make a bull's-eye shot.

"Be ye also perfect." Never defeated if we still will to be conquerors! Sure of reaching the top if we keep climbing and aspiring and looking upward! Are we working that way? That is all any man can do, but we all can do that!

The Value of Shelter

JUST how much is shelter worth for cattle—in terms of feed?

This question has been answered by the Institute of Animal Nutrition at State College, Pa.

Normally the heat production due to the utilization of the feed is more than sufficient to keep an animal warm; and the greater the amount of feed eaten the greater the amount of excess heat to be disposed of; but with animals which are not fat, or which are not heavily fed, or with any animal in very cold weather, this heat of food utilization may be insufficient by itself to keep an animal warm, and nutriment must be "burned" in the body, thru exercise, directly for heat production.

By measuring the heat given off by cattle as influenced by the temperature of the air, Director Forbes and associates have learned that for each degree Fahrenheit which the temperature falls below the point at which the animal while at rest begins to feel cold, as indicated by shivering, the amount of food "burned" in order to keep warm is increased by 1.4 per cent of the normal maintenance requirement.

THE Commonwealth of Pennsylvania is $700 to the good as a result of the recent "raid" on dealers who were selling fake vinegar in the western part of the state. Fourteen prosecutions resulted and each offender paid a $50 fine. The so-called genuine vinegar was distilled vinegar colored with a coal tar dye to appear as the real product. The field officials of the Bureau of Foods and Chemistry are keeping a close watch to make sure that the fraud is not repeated any place in the state.

Laura, the Wonder Mother

"I WOULDN'T take ten thousand dollars for the old cow," said J. E. McManus, of Towanda, Pa., referring to Laura, the 23-year-old purebred Jersey cow which was never off his farm until she was exhibited at the Dairy Cow Beauty Contest at Towanda a few weeks ago.

In the 23 years that she has been on the McManus Brothers' farm Laura has given them 19 heifers and 1 bull calf. In her twentieth year she made a record of 408 pounds of butterfat in the Laurel Hill Cow Testing Association. According to the testers' figures she returns $2.12 for every dollar spent on her. This estimate takes into consideration the cost of labor, pasture and feed.

The last time that Charles McManus, father of the two brothers, was able to go to the barn before his death in 1905, he looked over his herd and then said to his two sons: "Boys, always keep Laura, she'll make a wonderful cow." His prediction has more than been fulfilled for the McManus brothers have never had to buy a cow since that time. Their present herd of 32 head is composed of Laura and her direct descendants, all bred from purebred sires. Twelve daughters, sixteen granddaughters, and four great-granddaughters are all in the one stable. In 1923-24 the entire herd of 25 cows averaged over 300 pounds of butterfat per cow.

The old foundation cow is still in good physical condition and carrying a fair amount of flesh. Only three of her teeth remain but her eye is bright and her step is firm and deliberate. It would be difficult to pick her out as the oldest cow in any average lot of mature cows. She is still milking.

49 YEARS of Service

4 MILLION DeLaval Separators Sold

De Laval Cream Separators have done more to change the dairy industry from a "pin money" proposition to the largest and most profitable branch of agriculture. The original centrifugal separator to begin with, De Lavals have led in every important improvement, and today the latest

Improved De Laval Separator is generally acknowledged as being the best cream separator ever made. Among other improvements and refinements it has a "floating" bowl which eliminates vibration, causing it to run smoother and easier. It gives you a richer, smoother, higher-testing cream, and skims cleaner under all conditions. It soon pays for itself.

Skim Your Skim-Milk

Ask your De Laval Agent to bring out a new De Laval Separator and run the skim-milk from your old separator through it. The new De Laval skims so clean that if you are losing any butter-fat it will surely be recovered. Have any cream recovered in this manner weighed and tested at your creamery, and then you can tell exactly how much a new De Laval will save for you. Trade allowances made on old separators of any age or make.

Better Prices for Your Butter

"Dandelion Butter Color" gives that Golden June Shade which Brings Top Prices

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and National food laws. Used for years by all large creameries. Doesn't color buttermilk. Absolutely tasteless. Large bottles cost only 35 cents at drug or grocery stores. Write for FREE SAMPLE BOTTLE.

Wells & Richardson Co. Inc. Burlington, Vermont.

Free Trial of Proved Swedish Abortion Treatment

Famous Foreign Formula quickly relieves badly infested herds. Gives amazing results in cases believed hopeless.

Thousands of American Farmers say the Froberg Swedish Abortion Treatment has saved their herds from destruction. This remarkable treatment has been used with complete success in the big dairy herds of Sweden for many years, and has cleaned up whole districts over there literally rotting with contagious abortion.

It was only after great expense of time and money that this secret formula was made available to American Farmers. During the past nine years the treatment in American herds has given all the amazing results that made it so famous abroad. Herd after herd has been rid of this disease. Even cows considered hopeless by veterinarians have yielded to its healing qualities and been restored to health and produced fine vigorous calves.

SAVED HIS HERD

David Mohr, Jamison, Michigan, says: "Last year I raised only one good calf out of 14 cows bred, all other calves were aborted. I was desperate. I used your C.C.C. treatment. This year with the same herd I have not lost a single calf. It's wonderful. My neighbor lost 3 calves in a few days—I gave him some C.C.C. and it stopped the trouble right there."

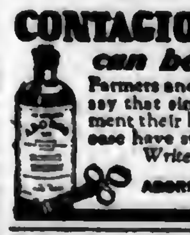
The fame of Cow Calf Control (C.C.C.) the name of this treatment has spread from breeder to breeder. Today it is put out only on an absolute binding guarantee that it will stop every case of abortion; that every cow treated will deliver a normal calf, or the treatment cost is refunded. Two reliable banks stand behind our guarantee. You can't lose. C.C.C. is practically 100% successful.

SEND NO MONEY

Mr. John W. Froberg, a native of Sweden and a large dairy owner, is responsible for introducing C.C.C. into this country. He has made the treatment easy to give, and at a cost per animal that every farmer will gladly pay.

Write today for full details explaining our free trial offer. Just send your name and address without further obligation to Froberg Remedy Co., 16 Lincoln St., Valparaiso, Ind.

CONTAGIOUS ABORTION
can be Prevented



Farmers and dairymen all over the U.S., say that since using the Abomo Treatment their losses from the Abortion Disease have stopped. Easily administered.

OUR YOUNG PEOPLE'S FORUM.

From Forum Members and Friends

Dear Cousin Ruth:—I received my membership pin with the nice letter you wrote me and I thank you for it.

We are having real winter here, the snow is nearly a foot deep all over the ground. I have a little brown curly water spaniel, one kitten and 12 chickens. We have five miles to go to school. My father drives the school rig for this district.

Just a word about winter near the Ausable Chasm. It is beautiful at this time of year with millions of icicles and Lake Champlain usually freezes over during the first few days of February and then all the men who love to fish have little coop-like houses built with stoves in them, too. They move way out a mile or more from the shore and drill holes thru the ice and catch the most delicious ice fish and ling. —Odith Fosgate, thirteen (X), Chenango County, New York.

Dear Cousin Ruth and Forum Friends:—I am sending you a picture of my sister, Mary, and me feeding our two pet lambs, Dicky and Teddy. I am the one with my arm around the lamb's neck.—Helen E. Clippinger, (X), Cumberland County, Pa.

FEEDING DICKY AND TEDDY
Helen E. Clippinger, (X), Cumberland County, Pa.

Dear Cousin Ruth:—I have two full-blooded Collies. Queen has brown ears. We got her from a kennel in Ohio. My brother and I got her for having our tonsils out. We have had her three years and had her on a trip in seven states. The other is just a pup yet.

I am in the seventh grade and have nine studies. I like to read. I am sending my favorite cake recipe.

WHITE CAKE

1-3 cup of butter
1 cup sugar
1¾ cup of flour
2½ teaspoons baking powder
½ cup of milk
3 egg whites
1 teaspoon vanilla
Some salt

Cream butter and sugar, add flour and baking powder and milk. Beat egg whites and add vanilla and salt. —Esther Heckes, (X), Montgomery County, Pa.

Dear Cousin Ruth and Forum Friends:—I will tell you about my trip to Philadelphia and the Sesqui-Centennial. We left home about six o'clock and arrived in Philadelphia about ten o'clock. We passed thru under the big bell. When we went into the Centennial grounds the first building we went into was the Government Building.

There I saw several large engines. Some of 1926 models, one was of an 1831 model. I was up on one of the steam engines and I was thru the electric engine. I saw several models of different machinery and lots of moving picture machines. I saw the machine that makes the United States coins and no one care to photograph it. There were models of what ships look like inside.

At one place there was a girl making a rug and at another place two girls were winding silk from the cocoon. It was a bright yellow and the girls were dressed in silk, too.

At another place it showed how they put the people in jail long ago and how they do today. There were lots more things that interested me but it would take too long to mention.

I guess you were at the Centennial, too, but I wrote for the good of those who could not go.—Nettie Scheuing, fifteen (X), Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—We had about 300 bushels of apples and we had 50 bushels of potatoes. I milk three cows morning and evening. We don't have very many chickens.

We have all kinds of music in our school. Miss Hermans gives music lessons in most anything and only charges 25c a week.—Gladys Arnold, thirteen (X), Bradford County, Pa.

Dear Cousin Ruth and Forum Friends:—Do any of you know any people in Hawaii? I do. The teacher I had last year went to the teachers' meeting in Indianapolis last year and got acquainted with the teacher that teaches in Hawaii. (She is an American.) This teacher gave my teacher some of the children's names and addresses, and then gave them to us. Some of them are: Rose Kawaa, Mary Louise Hopfe, Daisy Hawila Kaleohano, Lily Puon, Henry Puon and Philly Kaawa—Alae School, Hookena, Hawaii.

They enjoy our letters very much. They sent us beads of different kinds which are the seeds of trees and plants.

After the volcano had erupted (which was near their homes) they sent us some of the lava.

The people there are very poor. We send them some stamps and they send something back, using the stamps for the postage.

I have some pictures from Hawaii of some of the girls. If anyone wants to write or send something to them they would appreciate it very much.

I just sent some stamps to Rose K. for some beads which she promised my sister.—Marie David, thirteen (X), Burlington County, N. J.

Dear Cousin Ruth and Forum Friends:—Rheumatism still bothers me at times. I went to the hospital October 1 and had my tonsils taken out on the second. The doctor said I never could have walked as long as I had them. I stayed in the hospital one week.

I haven't gone to school any this term but the teacher is sending my work home with my brother for me to do.

BROTHER WATCHING THE COWS
Mabel Smeal, (X), Clearfield County, Pa.

I am sending a picture of my brother watching the cows with his mule.—Mabel Smeal, thirteen (X), Clearfield County, Pa.

Dear Cousin Ruth and Forum Friends:—As it is growing near Christmas day we are very busy getting out the recitations and characters for dialogues in my school.

I live ten miles away from the Gettysburg Battlefield where President Lincoln gave his great address. We are studying about Lincoln's Gettysburg Address now in school.

We have raised about 300 chickens this year and we are getting lots of eggs.—Cora Sharrah, eleven, Adams County, Pa.

Dear Cousin Ruth and Readers:—I live on a 25-acre farm and have a lot of work to do. I helped my mother dig potatoes one day, about 200 bushels, and helped rake leaves. I drive the horse, take the loads home and unload it. I can cook, bake bread, milk cows, feed hogs and do washing and scrubbing. I can do all the work a boy can do. Can ride a horse, too.

My sisters walk a mile and a half to school. This should be my first year in high school but I can't walk five miles to school. I shall go to school next year, I hope.—Magdalena Mandl, thirteen (X), Cambria County, Pa.

The Last Chance

TITLE, title, who has the title to the picture of a sleighing party that appeared on our page December 18th? Since January 1 is a holiday, any answers that are received on Monday, January 3, will be considered when I award the prizes for the best title. Now is your chance to hustle your suggestion into the mail if you haven't already done so.

Happy New Year to each and every one of you. Don't eat too much turkey and chicken and cranberry sauce and nuts at your family dinner. Leave a few little bits of chicken so mother can make soup next week!

COUSIN RUTH.
Care of Pennsylvania Farmer,
261 S. 3rd St., Philadelphia.

IN OUR FLOWER GARDEN
Mary Collins, (X), Chester County, Pa.

OUR LITTLE FOLKS PUZZLE CORNER

DEAR LITTLE FOLKS:—At New Year time, you know, many people make good resolutions—promises to themselves that they will do certain things during the year. Already one of Our Little Folks has told me that she is going to send in an answer to the puzzle every week. I think that's a good resolution and it makes me want to promise myself to give you puzzles which you will all enjoy working out. And that brings me to a little message I want to broadcast to you. Here it is, but you won't understand the title until you have solved the puzzle.

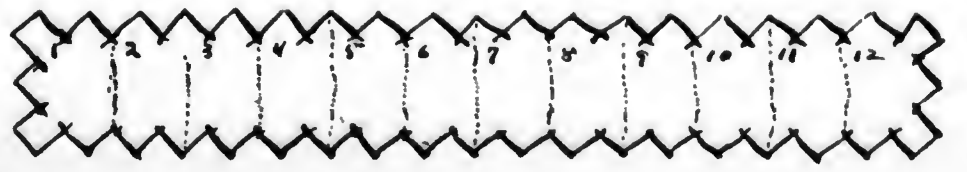
AND MANY OF THEM
My FIRST is in HER and also in HIM.
My SECOND'S in JANE but not in JIM.
My THIRD is in PENCIL and also in PEN.
My FOURTH'S the very same letter again.
My FIFTH is in HAY but not in STRAW.
My SIXTH is in SEEN but not in SAW.
My SEVENTH'S in EYE and also in EAR.
My EIGHTH is in NOW but not in NEAR.
My NINTH is in YES and also in YEA.
My TENTH is in HORSE and also in NEIGH.
My ELEVENTH'S in APPLE but not in PIE.
My TWELFTH is in CORN and also in RYE.
My WHOLE is a wish for each one of you
That the Puzzle Editor hopes will come true.

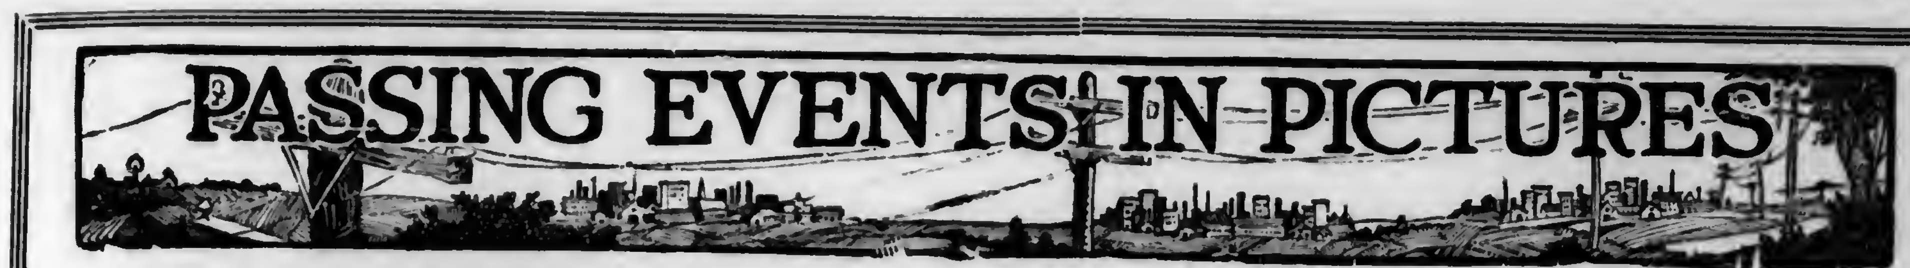
You will find that when the little rhyme says "my first," "my second" and so on, it means the first letter, or the second or whatever the number is, and you place the right letter in the space marked with that number in the little frame at the bottom of the page.

The first letter is an easy one to find because if it is in "her" and also in "him" it just must be the letter "H." The second is not quite so easy, because you have two guesses. I think if you will go thru the rhyme a few times and write down the ones you are sure of, you will soon discover what the other letters must be, and the first thing you know you will know what my message is and understand the title of the rhyme.

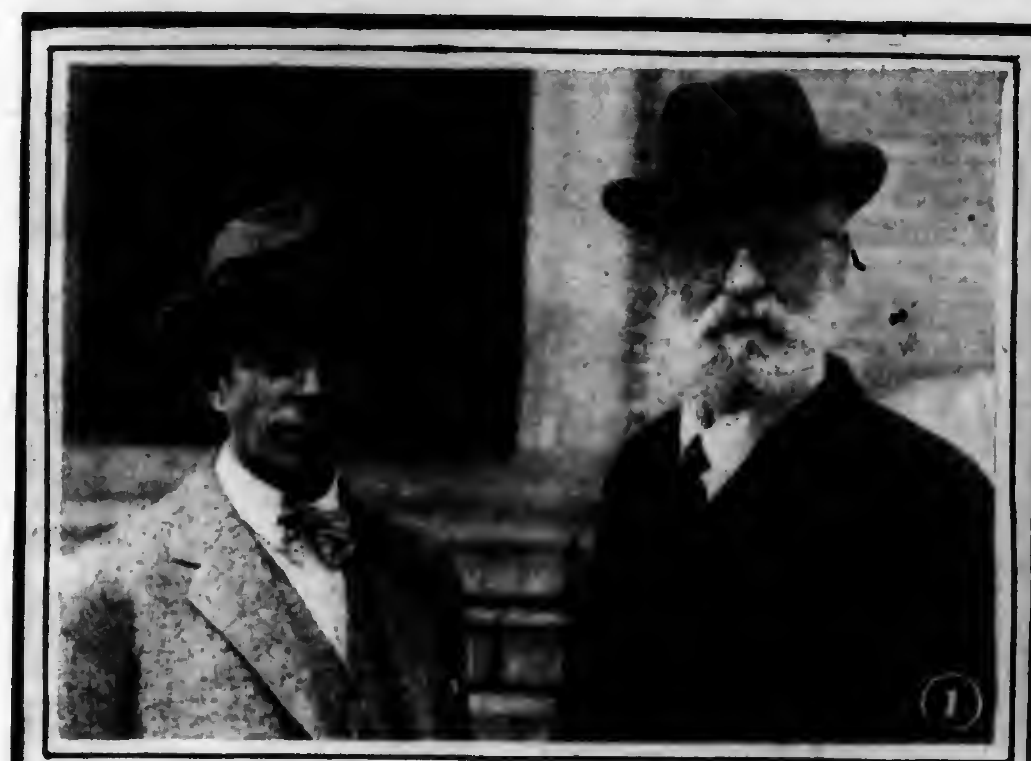
Let me have your answer by January 8, not forgetting to tell me when your birthday is and in what county you live. BE SURE TO SAY HOW OLD YOU ARE. The prizes will go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to the Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

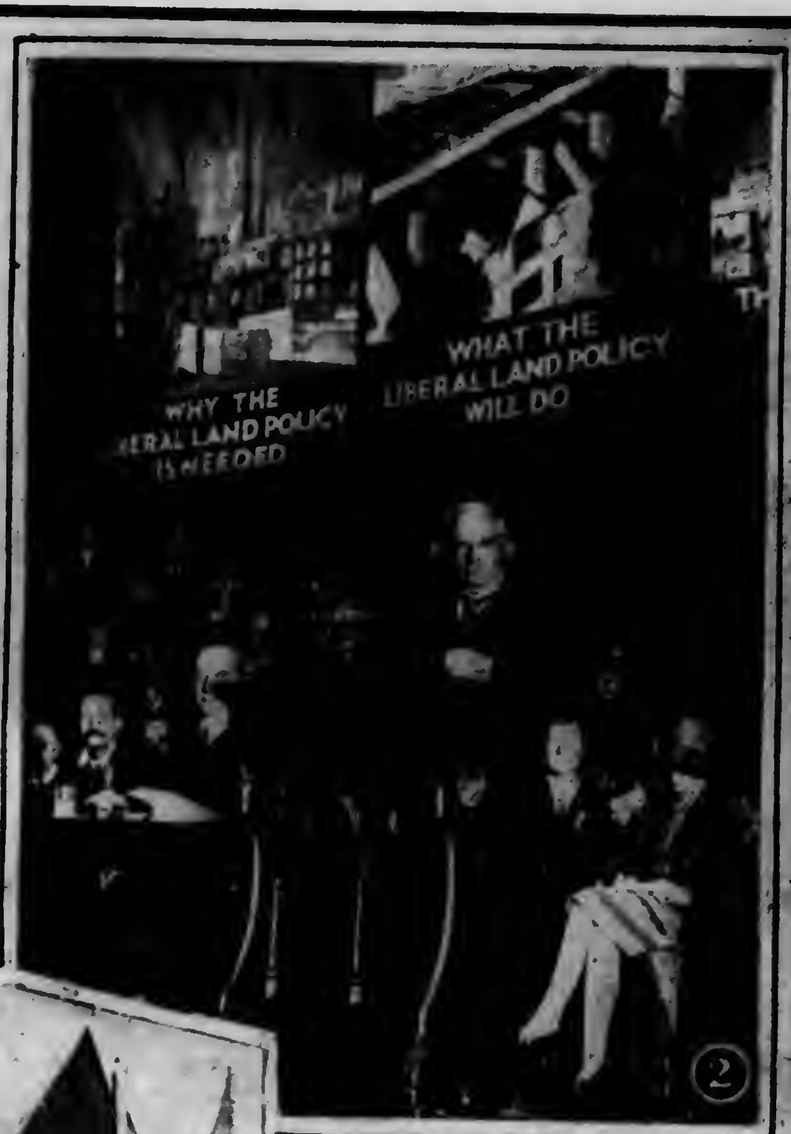
The answer to the puzzle in the December 11 issue of Pennsylvania Farmer (the one about the North Pole and the South Pole) is ALL THE DIFFERENCE IN THE WORLD. I was glad that so many of you sent in the correct answer. The prize winners, those lucky Little Folks whose correct answers were the best in these important things we mention each week: grammar, spelling, etc., are: Mildred Ashton, age 12, Woodstown, N. J.; David Bowen, age 9, Elmira, N. Y.; James Deman, age 7, Lancaster, Pa.; Bobby Gray, age 7, West Middlesex, Pa.; Theodosia Imber, age 9, Bedford, Pa.; Robert L. Neff, age 9, Ronks, Pa.; Evelyn Picht, age 10, Bethlehem, Pa.; Esther M. Shissler, age 12, Elizabethtown, Pa.; Mary Tark, age 9, Collier, Pa.; Louise Wilson, age 11, East Brady, Pa.

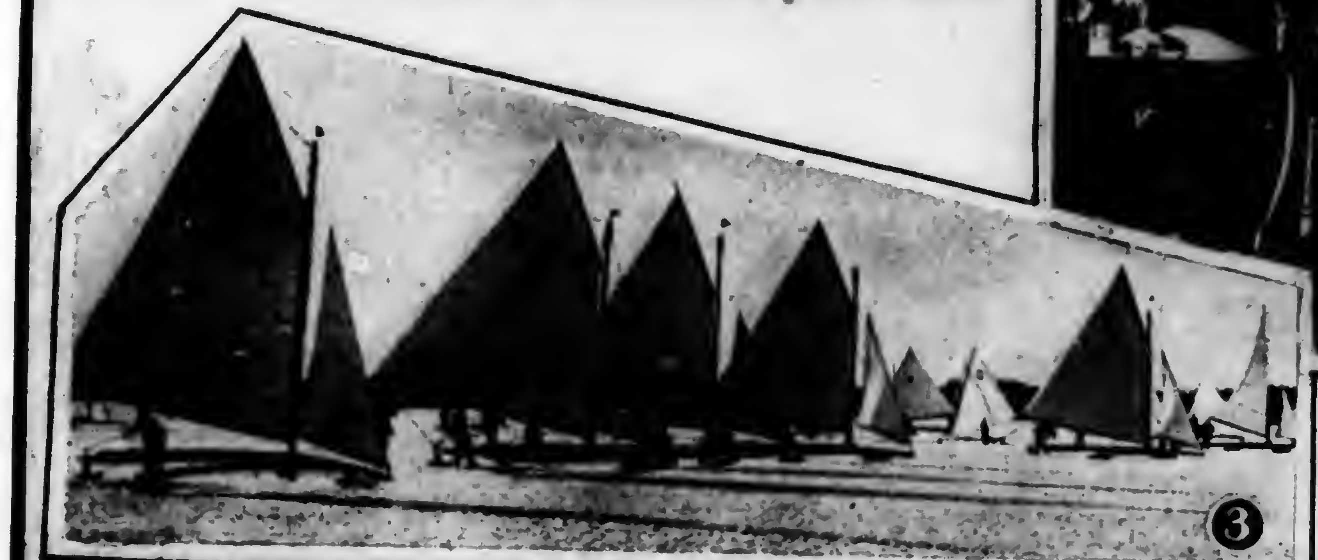


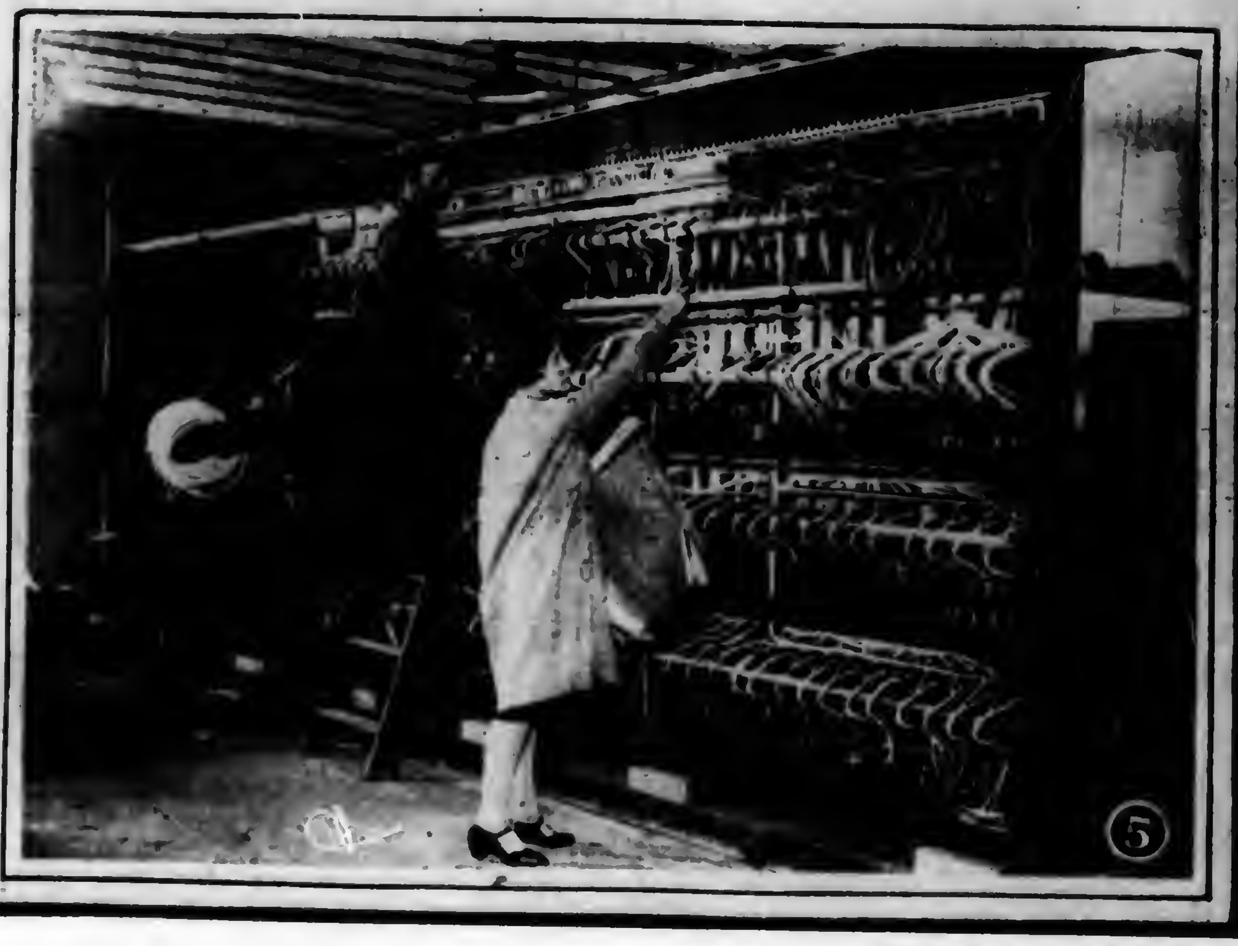


PASSING EVENTS IN PICTURES









(Copyright by Underwood & Underwood)

1.—Knud Rasmussen, famous Arctic explorer and authority on Eskimo tribes, and Major General A. W. Greeley, retired, the oldest Arctic explorer, met in Washington recently when Dr Rasmussen was presented with a medal and a life membership in the National Geographic Society

2.—Lloyd George speaking before an audience at Kingsway Hall, London, in favor of the Liberal Land Policy. His daughter, Miss Megan Lloyd George is seated on the right.

3.—The start of an ice-yacht race on the Baltic Sea near Stockholm, Sweden.

4.—Ready to say "Happy New Year."

5.—The switchboard shown in this picture is being built by a Chicago company for New York's largest theatre. Its 1200 controls, each one having control over one of the many groups of colored lights in the auditorium and on the stage, use enough electricity to light a town of 15,000 to 20,000 population. Miss Gertrude Stroobaut, shown above, made the blue prints and is supervising the construction of the board.

OUR HOME PAGE

Conducted by

Mrs. GERTRUDE S. STEWART

Do You Run Your Expenses Or Do They Run You?

HERE we are on the very threshold of the New Year, and to make it a happy one, we must know from day to day where we are going. Many of our readers have been asking for help on their budgets, and hoping to give all the most useful ideas on the subject, we enter the discussion now.

Budgets for farm folks are very different to manage and outline from budgets for the family whose income is the same from week to week and month to month thruout the year. They actually know what to build upon, while you can only estimate. That is if you are your own farmer or if you farm on the percentage plan so frequently used to day.

Budget Guards the Family Purse

Nevertheless, it is wise for country folk to have a budget. The family becomes a working unit for thrift and cooperation, and a working plan in black and white enables all to see where the minute or huge leakages occur, and you are helped in correcting what needs most attention.

If you want to plan a budget for 1927, get an account book and try it out, following these suggestions:

1. As nearly as possible estimate your income. You will need to do that on the yearly basis. It is wise not to place your estimate too high. Make it what you are pretty sure you will actually have.

2. Now estimate the family needs for the entire year. Do not forget anything.

Among items in this list do not omit food, shelter (rent or taxes or interest), fuel, lights, etc., and the family clothing. There will be insurance, also, and do not forget books, papers, recreation, and charity. Each year should find us climbing along, making progress, so better start out including an improvement or two, for both the farm and the house if possible.

The All-Important Balance

Now add up this list and compare with your actual income. Did you in your happy imagination spend more than the income? Then start in shaving and readjusting, for you should have some saved instead of spending all. What about health if there is no balance? Care of our family involves looking after teeth, eyes and all measures of prevention are savings, and should not be overlooked.

The Bureau of Home Economics, United States Department of Agriculture, has some helpful bulletins free on budgets. Write them for help if you are interested.—Gertrude S. Stewart.

The Rights of Others

STEALING is a dangerous habit because it is very apt to work out temporarily to the advantage of the child, and it can be utilized as a means of gratifying many of the desires that would otherwise have to go unfulfilled. To the child it seems a short cut to prosperity, and it is perfectly natural that he should use this method and continue it until he learns that it works out to his disadvantage.

When one considers that all children are born into the world uncivilized, non-moral individuals, dominated entirely by selfish motives and with the sum total of their physical and mental activity directed toward seeking pleasure and avoiding pain, and that certain natural tendencies are constantly operating in early life, unchallenged by training, experience and education, it is not surprising that pilfering among children is very common.

The child who during his early years of development has not acquired thru his home training the idea of respecting the rights and property of the family group is not likely to be honest at school.

Every parent should instill into the mind of the child at an early age the importance of respecting the rights of others in the group in which he lives. The child must learn from actual experience that conduct which disregards the rights and property of others invariably works out to his disadvantage.

Early Winter Plant Lore

I HAVE found that the house chrysanthemum can be made to bloom the second time each season. I had a large yellow chrysanthemum loaded with yellow balls of bloom. After the blossoms faded, I cut away about half of the plant, intending to carry it to the cellar but, instead of doing that, it was left for some weeks in a neglected north window, where it was cool, yet never reached the freezing point.

One day I noticed the plant had started a new growth of many branches, each terminating in a cluster of buds. I carried it to a south window and after taking good care of it for some time, was rewarded with another blooming season which lasted well into March. I had previously enjoyed its flowers from before Thanksgiving until nearly Christmas. From now on, I expect to enjoy a double length of the blooming period each year.

After trying to grow Asparagus Sprengeri in tin receptacles and clay jars, with poor results, I have found they do splendidly in small wooden tubs, growing long green fronds that never turn yellow nor drop foliage. I have found also that cacti will not do nearly as well in tin containers. As soon as the roots touch the tin, a blistered appearance strikes the cacti. In fact, the geranium is about the only plant I know of that will thrive in tin dishes.

Plans a Succession of Blooms

I shall bring my hydrangeas from the cellar the latter part of December, cutting back the plants nearly half and giving them small amounts of water until a new growth begins. Then I shall give them more water and fertilize them a little so as to bring an abundance of bloom in the early spring, when flowers are most needed after a long, dreary winter.

Only one pot of bulbs will be brought from the cellar at a time so as to prolong the blooming period. In this way I hope to have blooms from Christmas until the end of winter, such as tulips, crocus, narcissus and hyacinths.—E. M. L. B.

Orchards of Vitamin C

WELL I remember the first orange I ever picked. We had driven past many acres of orange trees and had watched the pickers, working with gloved hands, lest a fingernail scratch might cause spoilage in the oranges before they reached the end of their long journey in refrigerated cars.

How wonderful it was to pluck this little golden ball, full of its rich, flavorsome fruit. Thousands of acres are now devoted to oranges, and there are several varieties. Mrs. Tibbets introduced the orange into California. From one tree, she cultivated a whole orchard. Those first years were trying, with insect pests to fight, and early frosts.

Radio informs the orange growers when an early frost is coming, and they are always prepared to keep the orange grove warm with oil-burning smudge pots. Much skill, capital and knowledge are required to keep a good orchard bearing every year.

Even the very poorest of mothers buys an orange a day for the baby, as the cheapest source of vitamin C. Tomatoes are a good substitute; but it is not so convenient to open a pint of them as to peel a single orange for baby. No longer are oranges considered a luxury, a toe-filler for Christmas stockings. They are a real necessity in the heavy winter diet of meat, bread and potatoes, pudding, and a limited supply of canned fruits.

While milk is the almost perfect food, it lacks vitamins B and C, especially in the winter when the cows do not get grass. When he is a few weeks old, baby should have a few drops of orange juice, gradually increasing the amount, so that he takes the juice of a whole orange at five months of age. Later he can eat the orange sliced or diced, or divided into sections.

Healthful for Young and Old

If there is trouble with constipation, the juice of an orange taken upon rising in the morning helps. The glass can be filled with water, if baby is not getting enough water between meals. An orange in the school lunch appeals to youngsters of all ages.

Young and old, well and sick folks can take orange juice and be benefited by it. Tho it contains mostly water, the food value is as high as milk. Over-weight adults can take oranges, while cutting down on the allowance of carbohydrate and fats. The fruits and vegetables must be maintained in the diet, even tho weight reduction is desired.

Anything so full of natural flavor and piquancy needs no elaborate recipes. Yet the orange is as well adapted to cookery as the apple. It is rich in pectin, for jelly making. It is fine for marmalade, either alone, or in connection with other fruits. Some splendid recipes are contained in the bulletin on jellies and preserves from the State Women's College at Tallahassee, Florida.

Salad or Dessert

Oranges are fine in fruit salad, with grapes, cherries, apples, celery, dates or nuts. Crisp green lettuce makes the salad still better. Mayonnaise, French dressing, whipped cream, or a little lemon juice can be used with such a salad.

Plain sliced oranges, with a sprinkle of powdered sugar or cocoanut, are good enough for an elaborate dinner, yet inexpensive enough for an everyday breakfast. Yes, I am truly enthusiastic about this fruit, and for variety, serve it often.—Doris W. McCray, Iowa.

Only a visit to a California orange grove, with mountains in the background, gives any real idea of its beauty.

The Kitchen Cabinet

HICKORY NUT KISSES

1 pound pulverized sugar
½ pound hickory nuts or other nuts
Whites of four eggs

Beat the eggs and sugar until very stiff. Grind the nut meats thru medium blade grinder. Add nuts to sugar and egg mixture and drop from teaspoon on pans waxed with paraffin. Make them quite small as they puff up surprisingly.

• • •

CINNAMON STARS

1 pound granulated cane sugar
1 pound unblanched almonds
Grated rind of 1 lemon
1 heaping teaspoon Ceylon cinnamon
Whites of six eggs

Grind three-fourths of the almonds thru the medium blade grinder, and the remaining one-fourth thru the coarse blade. Beat the egg whites and sugar with wooden slotted spoon until very stiff. Put aside 5 teaspoons of this beaten mixture for icing.

To the remaining mixture add the almonds, the grated rind and the spice. Blend thoroly, then roll out to one-fourth-inch thickness. Cut into star shapes, and drop a bit of the icing in the center of each star. Bake in sheet that has been paraffined, and do not remove from pan until cool.—Betsey Ford, Md.

How Are You Going to Keep Them Down on the Farm?

A COUNTRY school teacher of many successful years' experience who has great ability in handling boys, is often asked by distracted parents: "What would you do to keep the boys at home?" Here is what she says:

"I'd teach the children to love their home and the country—beginning, if possible, when they are very small. Teach them to love animals, flowers, trees, birds. This is never hard to do, especially if we begin early.

"I'd take pains to have them learn all they can about things in the country. It isn't enough that they love baby chicks; they should also know how to give them correct care. It isn't enough for them to like honey; they should know how the bees gather it. It isn't enough that they admire and protect a young tree; they should know all about the needs and habits of trees. Such study makes the child alert and observing and such knowledge will be useful in any walk of life.

"I'd give them good food and a good time. Any country mother can do that. They can have the milk, butter, eggs, green vegetables, and fresh fruit that develop strong bodies and active minds. Simple enjoyments give pleasure to children and I'd provide them if I had to neglect some other things to do it.

I'd Teach the Joys of Work

"I'd teach my child from infancy the joys of work. Many a boy and girl wishes to leave the farm because the other fellow's job is 'easy'; and a good many times the parents are largely to blame for that attitude. Show him that the teacher and preacher had to spend long years and considerable money in preparation for their work. That the bank president first served as errand boy or in the mailing department. When the child wants to help let him and praise his efforts.

"But there comes a time when home ceases to bound the child's existence; he begins to cast wistful glances out over the world. Be prepared; don't wait for him to make the first move.

"Give him a feeling of freedom. Do not say: 'We need you here. Farming is the best job on earth. You'll be the fifth Warren to inherit the place.' It makes the boy feel bound, trapped, just as he is filling with an urge to try his own wings. That 'bound' feeling is responsible for many a boy's hatred of all things pertaining to the home farm. So I'd say: 'Whether you stay on the farm or decide to do something else later on, you will need to do and to know these things.'

Money of His Own

"I'd give him some branch of the home work for his own business venture to make or to break. Let him help decide what this shall be; would he prefer raising onions or taking over the care of the chickens for a share of the profits? In the doing he will learn a great many things that he needs to know and can learn in no other way.

"I'd see that the child had money even if it had to be a very small amount. I'd give him an income and I'd pay him for doing extra jobs that he willingly assumed just as I would hire some other boy or man. If my income made this course actually impossible I should give him the privilege to earn money away from home whenever possible.

"I'd not make my child sick of the farm by endless chores and hard work. Stated work and stated hours of freedom are generally best, with occasional 'over-pay' when emergencies arise. Father doesn't always realize how hard and how tedious the work is to a child. I know a boy who rebelled bitterly at the 'everlasting chores'; but when father said: 'You do my chores for me tonight so I can go after another load of hay and I'll do yours for you tomorrow so you can go to the circus,' and he went at them like a merry whirlwind. He saw a chance for relief from the 'everlastingness'.

"Having done my best to make my child healthy, studious, happy and industrious, I should say: 'Do whatever you think best. Farming is great—if you like it! Try something else if you want to and then come back if you prefer. Naturally we want you here. But we want you contented and happy. You're the doctor!' I am sure I should stand a better chance of keeping him than if I tried to force the issue.

"And, personally, I should not want him if he did not want to stay!"—Alice Margaret Ashton, N.Y.

Long Winter Evenings

The Chance to Do the Things You Like to Do

JANUARY and February are such delightful months for us on the farm to do some of the things we have been wanting to do reading, letter-writing, learning to do something new.

This is the best time for planning some of next year's Christmas presents—making some, too. It is such a comfort to have something ready for the unexpected shower or birthday party; often we find it inconvenient to shop on a few hours' notice. As our supply of "extras" is generally low by New Year's, we find it quite worth while to begin to replenish the gift-drawer at this season.

Books Open New Doors

During the busiest seasons we have little time or inclination for reading other than our papers and magazines and books of fiction. But while the blizzards "bliz" we enjoy resuming our Chautauqua course: this winter we shall delve into biography and travel, finishing the work begun last winter. New doors, indeed, are opened to us by such reading.

As for the "something new," one feels happy to find he has not outgrown the ability to learn. One winter, I took up paper flower making with a book of directions and a few folds of crepe paper. The winter after Santa brought my typewriter I took a regular course in typing with the help of an accredited textbook. The exercises did get tedious, and, of course, I was discouraged sometimes, but I am not a bit sorry for having spent so many hours of spare time in this way.

Last year's study of silk and velvet flowers has helped me in the making of this season's boutonnieres for my friends as well as for myself. And this winter's basketry lessons seem to solve many a gift problem for some time to come.

The Odd-Job Season

We all know that farm folks have to work some in winter, too—just keeping fires is a steady job some days—but we have more time then for the yearly house-sewing, the making of underwear, work dresses and aprons.

The man-of-the-house also has more leisure during the winter months. Keeping up a supply of firewood, and getting some for next year, is his only pressing task besides the routine work of milking and tending cattle. So he can spend stormy days by the fire doing those odd jobs of repairing harness and the like.

Sleighrides, skating, candymaking, photography, Home Bureau meetings, seed catalogs,—all these contribute to making winter a time of happy activity. One doesn't feel a bit shut in during a real blizzard so long as the ten-party telephone line holds and the phonograph records or the radio programs await our ears. Indeed, I am like Marjorie, of child verse fame, for I think "winter's pleasanter than all."—Mary Vida Bates.

All in Good Time

WE ARE considering all the discussions called for on the blanks sent in with your suggestions of a new head for Our Home Page. Each request not already answered will be given attention sometime. We shall be glad to have readers assist in the subjects listed below.

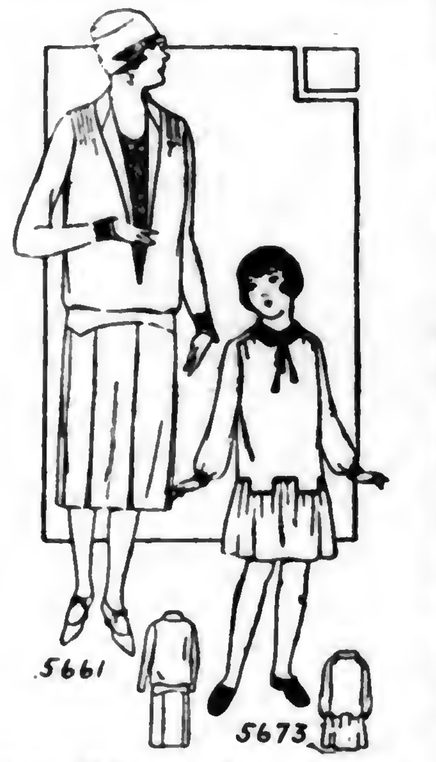
1. How can country mothers secure better medical aid? Doctors refuse to climb country hills in winter. They cannot drive thru winter's mud.

2. Please write your praises of the Pressure Cooker. (Experiences with potatoes are especially desired.)

3. And that problem ever with us: "How to keep 'em happy down on the farm."—Page Editor.

Two Smart Styles

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.



5661.—Slenderizing Lines.—Blouse effects are becoming to the stout woman. The model here portrayed also shows the deep V-neck. Eight sizes: 38, 40, 42, 44, 46, 48, 50 and 52 inches bust measure. A 42-inch size will require 4¾ yards of 40-inch material. Pattern, 10 cents.

5673.—For the Little Girl.—Velveteen, crepe, wool rep or jersey would be suitable for this design. Four sizes: 4, 6, 8 and 10 years. A 10-year size will require 2⅜ yards of 40-inch material, together with one-quarter yard of contrasting material for facings. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date fall and winter 1926-1927 Book of Fashions.

BLANKETS are USELESS

A blanket does not keep out the cold—it only helps to keep in the heat—and for a very short time. When you shut off your motor it grows colder and colder.

You can't prevent the cold but you can prevent frozen radiators by the proper use of FreezFoil (Denatured Alcohol) known and used for years by millions of motorists. Ask your Service Station.

Where You See This Sign —Expert Radiator Service

FreezFoil is not a motor-damaging compound—it is highest test completely denatured alcohol—sold under various trade names by members of the Industrial Alcohol Manufacturers Association who are licensed to use the trade mark below in connection with their own brand.

INDUSTRIAL ALCOHOL MFRS. ASS'N, Inc.
30 East 42nd Street, New York, N.Y.

SAVE YOUR RADIATOR

3 DRESSES FOR ONLY $2.98
SEND NO MONEY
Simply state sizes and colors wanted and the postman will bring to your door three beautiful dresses. When the dresses arrive deposit $2.98 (plus postage) with the postman. Remember, you will receive three dresses, no two alike. The dresses are made from the latest style fabrics, suitings, heavy linens and crepes. If it is not the greatest bargain you ever had, your money promptly refunded. Sizes, 34 to 52. Colors, green, brown, orange and rose.
SKYLIN MILLS
104 Hanover St., Dept. H-42, Boston, Mass.

DON'T WEAR A TRUSS
BE COMFORTABLE—
Wear the Brooks Appliance, the modern scientific invention which gives rupture sufferers immediate relief. It has no obnoxious springs or pads. Automatic Air Cushions bind and draw together the broken parts. No salves or plasters. Durable. Cheap. Sent on trial to prove its worth. Beware of imitations. Look for trade-mark bearing portrait and signature of C. E. Brooks which appears on every Appliance. None other genuine. Full information and booklet sent free in plain, sealed envelope.

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Far

BAYNE TREVORS, general manager of Blue Lake Ranch since the sudden death of Luke Sanford, had decided to sell all horses on the place for a flat $50 apiece no matter what Bud Lee, horse foreman, said they were worth. Hampton, one owner, wanted more money and if Judith Sanford, part owner in the ranch since her father's death, hadn't appeared during that conversation between the two men the horses would have been sold for a song.

Judith had had an idea Trevors wasn't square. She hadn't been in that office more than a minute before she knew he wasn't square and had fired him. To the general manager she was only a woman and her word didn't go with him even tho she now owned the controlling interest in the ranch. But he had reckoned without Judith.

Luke Sanford's daughter knew how and when to draw a revolver and it wasn't long before Trevors learned she meant business. And the men knew she meant business from the instant she stepped into the bunkhouse with "I am Judith Sanford. This outfit belongs to me. I have fired Trevors. You take your orders straight from me from now on."

The men grumbled. Ward Hannon didn't think anybody would "ketch" him working for a girl who couldn't ride a horse. Judith took him up on that. She'd ride anything on the place or quit the job. To prove it she rode Prince, the worst horse on the ranch, and then fired Hannon. Back in the ranch-house she sent Jose for Bud Lee, the man she felt would tell her the real condition of affairs on the ranch. It didn't take her long to dispatch a telegram to Hampton refusing the money he'd asked for and to call in old Carson and ask him to stick for awhile. Trevors had threatened to sell her out to the Western Lumber Company and Carson, who loved nothing better than a fight, could help her in the troubles she saw ahead.

That afternoon she called the veterinarian at Lower End. He wasn't there. He'd been fired by Trevors three days before. Instantly she put in a long distance for "Doc" Tripp, Rocky Bend.

Continued from last week

"HELLO, Doc," she said cordially. "I haven't seen you for so long I almost have forgotten how you comb your hair!" Tripp laughed at that; across the miles she could picture him running his hand thru the rebellious shock. "Yes, I'm back to stay, and from the looks of it I didn't come any too soon. Yes, Doc, we do miss him," and her voice softened wonderfully to Tripp's mention of the man who had been more than father to her, more than friend to him. "But we are going to buck up and show folks that he knew. He would have made a go of the thing; we are going to do it. What was the trouble with you and Trevors?"

Tripp explained succinctly. He and the general manager had disagreed openly and frequently about that part of the work in which, until the coming of Trevors, the veterinarian had been entirely unhampered. Two months ago Trevors had reduced Tripp's wages and had threatened another cut.

"Just to make me quit, you know," he added. "And I would have quit if it had been any other outfit in the world."

"I know," she said, and she did understand. "Go on. What was the excuse for canning you?"

"Case of lung-worms," he told her. "Some of the calves, I don't know just how many yet. He insisted on my treating them the old way."

"Slaked lime? Or sulphur fumes?" she said quickly. "And you insisted on chloroform?"

"You've hit it!" he exclaimed wonderingly. "How'd you know?"

"I haven't been loafing on the job the last six months," she laughed. "I've been at the school at Davis and hobnobbing with some of the university men at Berkeley. They're doing some great work there. Doc, I'll want to talk to you about it. You're going down there, expenses paid, to brush up with a course or two this year. Now, how soon can you get back here?—Trevors? Oh, Trevors is fired. I'm running the ranch myself. And, Doc, I need a few men like you! Can you come early tomorrow?—Tonight? You're a God-blessed brick! Yes, I'll stop that murderous sulphur treatment if it isn't too late. Good-by."

SHE lost no time in calling for Bill Crowdy, the man whom Trevors had put into Tripp's place.

"By the way," she said when the man with the voice which had sounded so boyish in her ears answered again, "who are you?"

"Ed Masters," he told her. "Electrician, you know."

A glance at the pay-roll in front of her showed that Edward Masters, general electrician, was a new man and was drawing eighty-five dollars monthly.

"What are you doing this afternoon?" she demanded sharply—"just hanging around the office? Is that the way you earn your eighty-five dollars?"

"Not always. But Trevors told me to be on hand today to take some orders."

"What work?"

"Don't know," he said frankly. "He didn't say."

"Well," said Judith, "I'll tell you one thing, Ed Masters. If you are one of the loaf-around kind you'd better call for your time tonight. If there's anything for you to do, go do it. Don't wait for Trevors. He's gone. Yes, for good. You can report to me here the first thing in the morning. Now send me Crowdy."

"He's down in the hospital and the hospital phone is out of order."

"And you're an electrician, hanging around for orders! That's your first job. Send the first man you can get your hands on to tell Crowdy I say not to touch one of those calves with the lung-worm. And not to do anything else but get ready to talk with me. I'll be down in half an hour."

She clicked up the receiver, drank a cup of lukewarm coffee, noting subconsciously that Jose must have had a fire ready against the time of her awakening, and again consulted the files before her. Then again she used the telephone, ringing the Lower End office. This time it was another voice answering her.

"Where's Masters?" she asked.

"Gone down to the cow hospital," was the answer.

"Where's Johnson, the irrigation foreman?"

"Out in the south fields."

"And Dennings?"

"Went to look the olives over."

"Send out for both of them. I'm coming right down as fast as a horse will carry me and I want to talk with them. Wait a minute—I'll tell you when I'm thru with you. Who are you, anyway?"

"Williams, the ranch carpenter."

"What are you doing today? Repairs needed at the office where you are?"

"No. You see—"

"You bet I see!" she cried warmly. "The first thing I see is that I've got more men on this job than I need. If there's no work for you to do, call tonight for your time. If you've got anything to do, go do it."

She clicked off again, waited a brief second and rang three for the dairy. After she had rung several times and got no answer, she murmured to herself:

"There's some one too busy on the ranch to be just hanging round after all, it seems."

And she went out to Jose and the waiting horse.

As she rode the five miles down to the office at the Lower End, her thoughts were constantly charged with an appreciation of the wonders which had been worked about her everywhere since that day, ten years ago, when she had first come with Luke Sanford to the original Blue Lake Ranch. Then there had been only a wild cattle-range, ten thousand acres of brush, timber, and uncultivated open spaces. Nowhere would one find rougher, wilder stockland in California. But Lake Sanford had seen possibilities and had bought the whole ten thousand acres, counting, from the first sight of it, upon acquiring as soon as might be those other thousands of acres which now made Blue Lake ranch one of the biggest of western ventures.

It was late May, and the afternoon air was sweet and warm with the passing of spring. The girl's eager eyes traveled the length of the sky-seeking cliff almost at the back door of the ranch-house, which stood like some mighty barricade thrown up in that mythical day given over to the colossal struggle of a contending race of giants, and she found that there, alone, time had shown no change. Elsewhere, improvements at every turn were living monuments to the tireless brain of her father. Stock-corrals, sturdily built, outhouses spotless in their gleaming whitewash, monster barns, fenced-off fields, bridges across the narrow chasm of the frothing river, telephone poles with their wires binding into one sheaf the numerous activities of the ranch, a broad, graded road over which she and her father had come here the last time together in the big touring car.

HERE the valley was only a mile across, shut in on both sides by cliff and steep, rocky mountains, walled by cliffs at the upper end, where the river from three-mile distant Blue Lake came down in flashing waterfalls.

But, as she rode, the valley widened, changed in character. At first, wandering herds of beef cattle, with now and then a riding cowboy turning in his saddle to wonder at her; then a gate to be opened as she stooped forward from her own saddle, and wide fields where the grass stood tall and untrodden and blooded Jersey cows looked up in mild interest; yonder a small pasture in which were five Guernseys, kept in religious seclusion, under ideal conditions, to further certain investigations into the ratios of five different kinds of fodder to the amount of butterfat produced; across a green meadow a pure-blooded Jersey bull, whose mellow bellowings drew Judith's eyes to the clean line of his perfect back, over which, with pawing hoofs, he was throwing much trampled earth; in a more distant pen, accepting the trumpeted challenge and challenging back, a beautiful specimen of careful breeding in Ayrshire.

The road wound on, following generally the line of the river, which began a generous broadening, flowing more evenly thru level fields. Looking down the valley, Judith could see the whitewashed clump of buildings where were the second office, the store and the blacksmith's shop, the tiny cottages. And beyond, the barns, the dairy, the tall silos standing like lookout towers, the alfalfa fields crisscrossed with irrigating ditches, and still farther on, the pasture lands where the big herd of cows was grazing.

Here the valley was spread out until from side to side it measured something more than four miles. The bordering mountains, like the river, had grown into a softer mood; rolling hills scantily timbered, rich in grass, were dotted with herds, cattle and horses, or fenced off here and there, reserved for later pasturage.

Across the river to the south, Judith marked the wandering calves, offspring of the herd; to the north, along the foothills, the subdued green of the olive orchards.

"It's a big, big thing!" she whispered, and her eyes were very bright with it all, her cheeks flushed. "Big!"

PASSING one of the barns, she heard the trumpet call of a stallion and, turning, saw in the corral one of those glorious brutes which Bud Lee had spoken of to Trevors as "clean spirit." From the instant her eyes filled to the massive beauty of him, she knew who he was: Night Shade, sprung from the union of Mountain King and Black Empress; regal-blooded, ebon-black from silken fetlock to flowing mane; a splendid four-year-old destined to tread his proud way to a first prize at the coming state fair at Sacramento, a horse many stock fanciers had coveted.

She stopped and marveled afresh at him, paid him his due of unstinted admiration, and then spurred on to the little clump of buildings marking the lower ranch headquarters. At the store, where a ten-by-ten room was partitioned off to serve as office, she swung down from the saddle and, leaving her horse with dragging reins, went in.

"Hello, Charlie. You're still left to us, are you?" she said, as she stepped forward to shake hands with Miller, the storekeeper and general utility man of the settlement. "I'm glad to see you."

"So'm I, Miss Judy," grinned Charlie, looking the part. "Howdy."

"I wanted to see Johnson and Dennings. Are they here yet?"

"No," answered Miller. "Johnson, the ditch man, you mean? He's somewhere at the Upper End. Has got a crew of men up there making a new dam or somethin' or other. Been at it purty near a week, now, I guess. They camp up there."

"How many men are with him?" she asked quickly.

"About a dozen," and looked hard at her. Judith frowned. But instead of saying what she might be thinking, she inquired where Dennings was.

"Out in the olive orchards, I guess." He paused, filled a pipe he had neither desire nor intention of smoking, and said, abruptly: "What's this I hear about Trevors? Canned him?"

"Yes."

"Um!" said Miller. "Well, Miss Judy, I ain't sayin' it wasn't purty near time he got the hooks. But, lemme tell you something. While you're riding around this afternoon, if I was you I'd pike over to the milking corrals."

She looked at him sharply.

"What is it, Charlie?"

"You just ride over," said Miller. "It ain't more'n a step an' I'll just shet up store an' mosey along after you."

Vaguely uneasy because of Charlie Miller's manner, Judith galloped down toward the four corrals where the cows were milked. From a distance she saw that there were a number of men, ten or twelve of them, standing in a close-packed group. She wondered what it was that had drawn them from their work at this time of day; what that big, bull-voiced man was saying to them. She heard the muttering rumble of his words before the words themselves meant anything to her. A quick glance over her shoulder showed her Charlie Miller hastening behind her, pick-handle in hand.

HER way carried her by a long, narrow building standing like a great capital E, the cow hospital. She thought of Bill Crowdy and the sick calves as she drew near, but was passing on to the men at the milk corrals, when the breeze, blowing lightly from the west, brought to her nostrils a whiff of sulphur.

A quick tide of red ran into her cheeks; that fool, Ed Masters, had not told Crowdy to refrain from the old fashioned, deadly treatment! Almost before her horse had set his four feet at the command of a quick touch upon the reins, the girl was down and hurrying into the middle door of the three, calling out as she went:

"Crowdy! Oh, Crowdy!"

She came into a small whitewashed room where were a table, two chairs, and a telephone; passed thru this into the calf-yard. Here were several compartments with doors which allowed of making them almost air-tight. And here she was met by a stronger smell of sulphur fumes.

"Crowdy!" she called again. "Where are you?"

Bill Crowdy, a heavy, squat figure of a man, shifty-eyed, with hard mouth and a nervous, restless air, came down a long hallway, smoking a cigarette. His eyes rested with no uncertain dislike upon Judith's eager face.

"I'm Crowdy," he said. "Want me?"

"I told Masters to tell you to stop the sulphur treatment for the lung-worm calves. Hasn't he told you?"

"Mr. Trevors said I was to give it to them," said Crowdy. "I can't be taking orders off'n every hop-o'-my thumb like that college kid."

"Then Masters did tell you?"

"Sure, he told me," said Crowdy in surly defiance. "But if I was to listen to everything the likes of him says—"

Judith's eyes were fairly snapping.

"You'll listen to the likes of me, Bill Crowdy!" she cried passionately, a small fist clenched. "You get those calves out into some fresh air just as quick as the Lord will let you! Into a pen by themselves. Doc Tripp will attend to them in the morning."

"Tripp's gone."

"He's on his way back right now. And you're on your way off the ranch. Understand? You can come to the office for your pay tonight."

Crowdy shrugged his shoulders and turned away.

"If I'm fired," he growled in that ugly voice which was so fitting a companion to that ugly mouth of his, "I quit right now. Get some of your other Willies to turn your calves out."

For a moment, in the heat of her anger, Judith's quirt was lifted as tho she would strike him. Then she turned instead and ran to do her own bidding. A moment later Miller was with her. The two of them got the calves—there were seven of them—out of the sulphur-laden air and into the corral. The poor brutes, coughing softly in paroxysms, some of them frothing at the mouth, two of them falling repeatedly and rising slowly upon trembling legs, filed by in a pitiful string. One of the youngest lay still in the hospital, dead.

"He would have killed them all," said Judith, her teeth set as she looked at the living calves in the corral where, with necks thrust far out, they fought for each breath. "And Bayne Trevors ordered a treatment that he knows has gone into the discard! Charlie, that man has gone farther than I thought he had the nerve to go."

"Crowdy did something else that don't look just right," said Miller, gazing with eyes of longing after the burly, departing figure. "I saw him do it just after Masters carried him your message. He drove three of the sick calves—there's a dozen or more got the worms, you know—out into the pasture with the well calves."

Judith didn't answer. She looked at Miller a moment as tho she thought this must be some wretched jest of his. And when she read in his eyes the earnestness in his heart, there rose within her the question: "How far has Bayne Trevors gone?"

"Charlie," she said finally, "I want you to close store for the rest of the day. Get some one to help you and cut the sick calves out from the bunch. Haze them back here into the detention corral. Tripp will attend to them all in the morning. Now, tell me—what's wrong down at the milk corrals? What are all of those men up to?"

"WE'RE going to see, me an' you," answered Miller. "I don't just know. But I do know there's a big guy down there that come onto the ranch a couple of hours ago an' that don't belong here. He's that guy talking. Name of Nelson. He ain't done any talking to me, but from a word or two I picked up from one of the milkers I got a hunch he's been sent over by Trevors."

Nelson, the big emissary for Trevors—for he admitted the fact openly and pleasantly—took off his hat to Judith and said he guessed he'd be going. And the men with whom he had been talking, including all of the milkers and all of the other workmen upon whom Nelson could get his meddlesome hands at short notice, all men whom Trevors had placed here, made known in hesitant speech or awkward silence that they were going with Nelson. There were good jobs open with the lumber company, it seemed. Nelson even expressed the hope that the quitting of these men wouldn't work any hardship to the Blue Lake ranch.

Judith, her eyes flashing, asked no man of them to remain, seeing that thus she would but humiliate herself fruitlessly, and turned away. And yet, with the herds of cows with bursting bags soon ready for the nightly milking, she watched the men move away, her heart bitter with anger.

"They've got to be milked, Charlie," was all that she said. "Who will milk them until I can get a new crew?"

"I'll tuck in an' help," answered Miller ruefully. "I hate it worse'n poison, an' I can't milk more'n ten cows, workin' twenty-four-hour shifts. I'll try an' scare up some of the other boys that can milk." But he shook his head and looked regretfully at the pick handle. "Good milkers is scarce as gold eggs," he muttered. "And the separator men has quit with the rest."

"GET Masters, the electrician, on the job. Get anybody you can. I'm going back to the ranch house pretty soon and I'll try to send some one from there."

"Cowboys can't milk," said Miller positively. "An' besides, they won't. But somehow we'll make out for a day or so."

"We've got to make out!" exclaimed Judith. "We've got to beat that man Trevors, Charlie, and do it quick. If he'll try to keep us shorthanded, if he'll spend money to do it, if he'll do a trick like giving sulphur for lung-worm and then send infected stock out into the herds, I don't just know where he will stop—unless we stop him."

In spite of her intentions, it was nearing the time of dusk when she returned to the ranch house. As she came up the knoll from the barn, she saw for the first time a thin line of bluish smoke rising from the north ridge. Saw and understood the new menace.

For that way had Benny, the discharged cook, gone.

It was after eight o'clock when Tripp rode in on a sweat-wet horse. Judith met him in the courtyard, giving him her two hands impulsively.

"I'm so glad you've come, Doc!" she cried softly. "Oh, you don't know how glad—yet."

She called Jose to take Tripp's mount and then led the way into the great living-room where deep cushions and leather chairs made for comfort.

(To be continued next week)

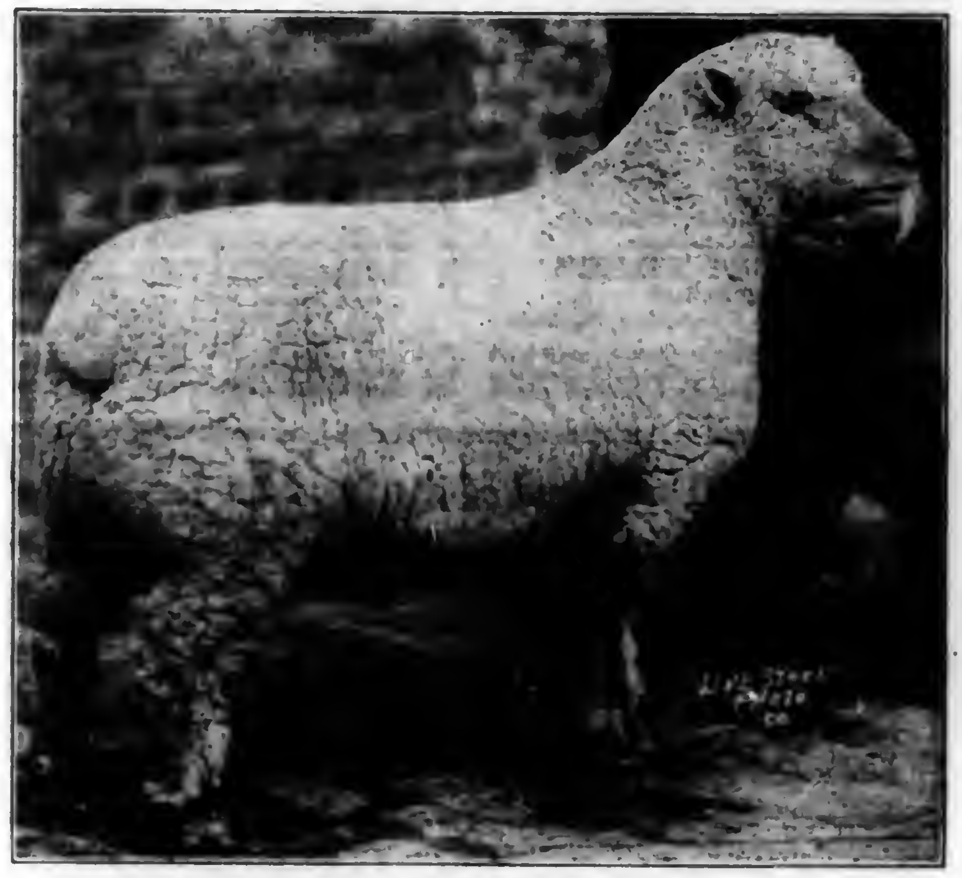
The Champion of Them All



This Southdown wether, bred, owned and exhibited by the Pennsylvania State College at the International Livestock Exposition, and grand champion wether over all breeds at the show, sold at auction for $3.65 per lb.

Did you ever hear this one?—

Who Lost?

A man went into a hat store to buy a hat, which he did for $7.50, giving the hatter a $10 bill.

Unable to change it, the hatter took the $10 bill next door to a delicatessen dealer, who was slicing ham at the time. The delicatessen man changed the bill. A couple of hours later he rushed into the hatter's to tell him that the bill was a counterfeit. The hatter gave him a good $10 bill for it.

Assuming the hat to have been worth $7.50, who lost and how much?

Advice in Season

An old farmer received a large ostrich egg from his son, who was a sailor. After weighing it carefully in his hand, he went out to the chicken run and placed it among the hens. He then addressed them thus:

"Dear hens, I do not wish to cast any aspersions upon your industry. I fully appreciate the fact that you do your best. At the same time, I should like you to observe what is being done by the hens in foreign countries."

She Had the Right Idea

As a steamer was leaving the harbor of Athens a well-dressed young passenger, approaching the captain and pointing to the distant hills, inquired, "What is that white stuff on the hills, captain?"

"That is snow," replied the captain.

"Well," remarked the lady, "I thought so myself but a gentleman has just told me it is Greece."—Sailor's Magazine.

Bullet Proof

Mr. Spriggins (gently)—My dear, a Boston man was shot at by a burglar, and his life was saved by a button which the bullet struck."

Mrs. Spriggins—Well, what of it?

Mr. Spriggins—Nothing, only the button must have been on."—Sacred Heart Review.

There Was a Reason

"But," protested the new arrival, as St. Peter handed him a golden trumpet, "I can't play this instrument; I never practised while on earth."

"Of course you didn't," chuckled the old saint. "That's why you are here."—Zion's Herald.

Comforting Words

"Oh, dear, here it's almost Christmas and I haven't presents for half the people on my list!" complained Betty's mother.

"That's nuffin," came unexpectedly from Betty in a reproachful tone, "just think all Santy Taus has to do!"

Couldn't Make the Grade

The old gentleman was a trifle bewildered at the elaborate wedding.

"Are you the groom?" he asked a melancholy-looking young man.

"No, sir," the young man replied. "I was eliminated in the preliminary tryouts."

Agent—Don't you want your office furnishings insured against theft?

Manager—Yes, all except the clock. Everybody watches that.

Husband—Dear, will you please turn off the radio?

Wife—But it isn't on dear. Now, as I was saying—

Markets

Editors' Note.—The suspension of trading on account of the Christmas holiday makes it impossible for us to publish our usual complete market reports. The quotations given on this page, however, reflect the general trend of prices.

PHILADELPHIA MARKETS

HAY AND GRAIN

December 24, 1926.

Baled Hay and Straw—Timothy hay, No 1, $24.50@25; No 2, $23@24; No 3, $20@21; timothy, light clover mixed, No 1, $22@23; No 2, $20@21. Straw, straight rye, $20@21; wheat straw, $14.50@15.50; oat straw, $14.50@15.50.

Wheat—No 2 red winter, $1.48¾ bid; No 2 red winter, garlicky, $1.40¾ bid; lower grades are selling at the usual trade differences.

Corn—Market nominal.

Oats—No 2 white, 60@61c; No 3 at a discount of 2@3c under No 2 white.

DAIRY MARKET

December 24, 1926.

Butter—Solid-packed creamery, in tubs, higher than extras, 54@57c; extra, 92 score, 53c; 91 score, 52c; 90 score, 49c; 89 score, 46c; 88 score, 44c; 87 score, 43c; 86 score, 42c.

Cheese—New York, whole milk flats, fresh, 25½@26½c; single daisies, fresh, 26@26½c; longhorns, round lots, 27@27½c; small jobbing lots, 28@28½c.

YORK PRODUCE

December 27, 1926.

Butter and Eggs—Fresh eggs, 50@55c; storage, 40c; country butter, 50@55c; separator, 55@60c.

Vegetables—Potatoes, 25@35c ½ pk, $2 bu; cabbage, 3@10c hd; lettuce, 10@20c hd; celery, 5@20c stalk; horseradish, 5@10c glass; onions, 10@12c box; soup beans, 10c pt; lima beans, 15c pt.

Fruits—Apples, 15@35c ½ pk, 75c@$1.50 bu; pears, 15c ¼ pk.

Wholesale Grain Market—Wheat, $1.32; corn, 82c; rye, 90c; oats, 45c; bran, $35 ton; middlings, $38 ton.

NEW YORK MARKETS

PRODUCE

December 24, 1926.

Butter—Wholesale market prices dropped four cents per pound dring the past week which brought about a good buying interest but still lower prices are looked for. Unsalted creamery butter is moving slowly. Some demand developed for fresh New Zealand at 51½@52c; Danish, 53½@54c; Siberian, 44@45c, duty paid. Market continues unsettled. Receipts, December 23, 8991 tubs, and 335 casks Danish, and 573 casks Siberian. Creamery, salted, higher score, 52½@53c; extra, 92 score, 52c; firsts, 88@91 score, 45@51c; seconds, 83@87 score, 41@44c; lower grades, 39@40c.

Eggs—Nearby hennery white and brown eggs selected qualities are about steady. Average and other grades are unsettled and irregular selling at a wide range in values. General decline in prices from two to five cents per dozen since last Friday's market report including western and southern stock. Market irregular. Receipts, December 23, 22,634 cases. Nearby hennery whites, closely selected extras, 60@61c; average extras, 58@59c; extra firsts, 56@57c; firsts, 53@55c; medium, 51@52c; peewees, 40@42c; pullets, 44@48c; Pacific Coast, extras, 56@58c; do, extra firsts, 54@55c; do, firsts, 53c; nearby gathered whites, firsts to extra firsts, 54@57c; seconds and lower grades, 45@53c; nearby hennery browns, fancy to extra fancy, 57@60c; average, 56@58c; gathered western and southern browns, extras, 54@56c; extra firsts, 49@53c; firsts, 44@46c.

Cheese—Quiet trading in all styles of cheese prevails. Only small lots of daisies and young Americae change hands at quoted prices. Market steady to firm. Receipts, December 23, 198,527 lbs. State whole milk, flats, average run, fresh, 25@26c.

Live Poultry—Nearby and state fowls and chickens in moderate supply all the week, good stock only in demand, for which prices held fairly firm. Turkeys were in too liberal a supply and the demand slowed down considerably and prices declined to 35c for fancy birds and as low as 20c for culls and very light weight. No wholesale trading in the market Friday and prices given are those of closing on Thursday. Fowls, Leghorns, 21@23c; colored, average run, 26@27c; heavy fat, 28@30c; chickens, Leghorns, 20@23c; colored, 28@30c; broilers, 1¾@2 lbs, 30@40c; geese, 28@30c; ducks, Long Island, 35c; other nearby, 30@31c; turkeys, 30@35c; capons, 40@45c; pigeons, 40c pair; squabs, 50c; jumbo squabs, $1.50.

Live Rabbits—Supply moderate, Christmas trade over, demand slow, market weak, lb, 25@30c.

Dressed Poultry—Fowls, chickens, capons, geese and ducks all were in fairly good demand at steady prices all the week but turkeys were in abundance and greater than the demand and prices declined from 5c to 8c per pound with no wholesale trading on Friday. Fowls, mixed weights, fair to fancy, 23@33c. Broilers, large to small, 30@40c. Fryers, 26@34c; roasters, 28@38c; capons, large, 43@47c; small, 38@42c; slips, 32@35c; ducks, Long Island, 34c; nearby, 30@34c; squabs, white, fancy, 60@85c, according to weights; culls and dark, $2@4 12 lbs; turkeys, Maryland, fancy, 50@53c; western, 49@50c; southwestern, 47@49c; guineas, pair, young, plucked, $1.25@2; feathered, $1@1.75; old, 75c@$1.

Beans—Market steady; fair to choice marrow, 6¾@7c; pea, 5½@6c; red kidney, 9¼@9½c.

LIVESTOCK

December 27, 1926.

Cattle—Top for week was $10 paid for good 1481-pounders and somewhat plainer 1200-lb averages made $9.90; bulk of short-fed medium kinds crossed the scales at $8.50@9.40, while common ranged downward to $7.25; cows sold steady and bulls declined 25c; all cutters moved between $2.40@4.50 with weighty fat cows upward to $6.75; medium bulls bulked between $6@6.75, altho light thin kinds turned as low as $5.

Calves—Choice vealers sold regularly at $16 with a good demand. Weighty slaughter calves closed 75c@$1 higher. Fat offerings cleared at $8.50@10.25 and cully kinds stopped as low as $4.50.

Hogs—Slaughter pigs averaging 82 lbs, $12.25; 160@200-lb weights, $12.40@12.75; heavyweights, $9.50@10.50.

Sheep—Best lambs reached $13.50 with choice quotable at $13.75; bulk, $12@13; cull and common, $8@10.50; sheep, steady with bulk between $4.50@6.50, while $2.50@7.25 was the extreme range.

HAY AND GRAIN

December 27, 1926.

Feed—Quotations were as follows: All prompt shipment city bran, $37.50; middlings, $38.50, in 100-lb sacks; red dog, $47, nominal; western feed, 30-day shipment, bran, $36.50, in 100-lb sacks; standard middling, $37.50; flour middlings, $41; red dog, $46, all in 100-lb sacks; all-rail and lake-and-rail shipments; white hominy feed, $36.50, nominal, in 100-lb sacks; cottonseed meal, 36 per cent protein, $32; prompt shipment linseed oil meal, 34 per cent protein, $48.50, in 100-lb sacks.

Hay—Old or new, large bales, timothy and light mixed: No 1, $27; No 2, $25@26;; No 3 and poorer, $20@24. Straw, large bales, rye, $25.

Grain—WHEAT, No 2 red, c i f, dom, $1.56¼; No 1 dark spring, c i f, domestic, $1.70¾; No 2 hard winter, f o b, export, $1.59¾; No 1 North Manitoba, in bond, f o b, export, $1.58⅝; No 2 mixed durum, f o b, export, $1.55¾. CORN, No 2 yellow, 90⅛c; No 3 yellow, 87⅛c. OATS, No 2 white, 57½c; No 3 white, 56c; No 4 white, 55c; ordinary white, clipped, 57¼@58¾c; fancy white, clipped, 61@63½c. RYE, c i f, export, $1.08¾. BARLEY, malting, c i f, domestic, 87⅞@89⅞c.

PITTSBURGH MARKETS

LIVESTOCK

December 27, 1926.

Hogs—Active, 25@35c higher; one load brought $13; bulk, $12.50@12.75; heavies, $12.25@12.40; 200@250-lb butchers, $12.40@12.50; 130@200 lbs, including pigs, $12.50@12.75; packing sows, $10@11.

Cattle—Steady; best beef steers, $10.25.

Calves—Best vealers, $15.50.

Sheep and Lambs—Steady to 25c higher, top fat lambs, $13.25; best wethers, $7.75.

CHICAGO LIVESTOCK MARKET

December 27, 1926.

Hogs—Active; generally 15@35c higher; butcher weights closing weak with part of advance lost; top, $11.90; all weights excepting pigs upward to $11.85; bulk better grades, $11.75@11.85; most slaughter pigs, $11.00@11.75; packing sows steady; bulk, $10.40@11.75; few lightweights, $10.85@11; shippers, 10,000; hold over, 1000; heavyweight hogs, $11.10@11.90; medium, $11.75@11.85; light, $11.35@11.85; light light, $11.25@11.85; packing sows, $10.10@11; slaughter pigs, $11.25@11.75.

Cattle—Pre-holiday receipts too small to establish a dependable market, most killing classes fully steady with week's advance; few heavy fed steers, $8.50@10.25; bulk scaling 1447 to 1454 pound kind at latter prices; long fed yearling absent; short fed, $8@10, low quality steers scaling 900@1100 lbs, $7.50@8; feeders and stockers slow; barely steady; vealers largely, $8.75@11.50 to packers.

Sheep—Fat lambs fairly active, strong; bulk wooled lambs, $12.25@13; holding choice medium weight around $13.25; strictly choice 94-lb lambs, $12.75; most heavies around $12 and below, 107-lb fed westerns, $11.50, choice medium weight fed clipped lambs, $11.75; culls around $9; sheep steady; fat ewes, $5@6.25; practically nothing done on feeding lambs; very few on sale; indications about steady.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, December 27, 1926. Quotations cover solid car lots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$35.00@35.50
Spring bran	34.50
Soft winter wheat barn	35.50@36.50
Hard winter wheat bran	35.00@35.50
Standard middlings	36.00@36.50
Soft winter middlings	37.20@40.50
Flour middlings	38.50@42.50
Red dog flour	44.00@44.70
White hominy	36.50@37.00
Yellow hominy	35.20
Gluten feed	34.85
36 per cent cottonseed meal	31.00@32.00
41 per cent cottonseed meal	33.00@34.75
43 per cent cottonseed meal	34.75@35.50
34 per cent linseed meal	48.70@49.25

Millfeed firm, supplies limited.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 10c per ton (for cottonseed meal 60c per ton), for Woodbury, Bridgeton rate points add $1.00 per ton, for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

WOOL MARKET

December 27, 1926.

Domestic Ohio and Penna fleeces—Delaine, unwashed, 4[illegible]@46c; ½-blood combing, 45@46c; ⅜-blood combing, 45@45½c; ¼-blood combing, 44@44½c; fine washed, 38@39c. Michigan and New York fleeces—Delaine, unwashed 44@46c; ½-blood combing, 44@46c; ⅜-blood combing 45c; ¼-blood combing, 44c; fine unwashed 36@37c. Wisconsin, Missouri and average New England—½-blood, 40@41c; ⅜-blood, 42@43c; ¼-blood, 41@42c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, December 21, 1926.

Cloverseed, cash, foreign, $20.40; domestic, $22.75; December, $17.85; January, $17.85; February, $18; March, $18. Alsike, cash, $20.75; March, $21; December, $[illegible]; February, $[illegible]; March, $[illegible].

Butter Markets

BUTTER markets opened week ending December 24 at unchanged prices with the market tone about steady. An undertone of nervousness prevailed on the Chicago market due to more liberal arrivals of fresh butter and a slight slowing up in the demand. This nervousness developed into a definite weakness on Tuesday, resulting in price declines of 2½c on 92 score butter and 1½c on 90 score centralized cars.

Eastern markets became weaker in sympathy with Chicago and with the arrival of a considerable volume of foreign butter at New York, sharp price reductions were effected on Wednesday at all markets. Eastern markets were steadier following the decline and much of the nervousness that had previously been noted had disappeared.

One encouraging factor in the situation was the continued early heavy out-of-storage movement as compared with last year. Withdrawals during the first days of the week under review were on a par with those of the previous week and exceeded those of the corresponding week a year ago by a considerable margin. This would indicate that consumption was fairly well maintained in spite of the comparatively high prices which have ruled during the past few weeks.

Potato Crop Lighter

THE December crop report indicates 357,800,000 bushels of potatoes this year, compared with 323,-toes this year, compared with 323,000,000 last season and 422,000,000 in 1924. The 19 surplus-producing late-potato states have a total of 253,228,000 bushels or nearly 20,000,000 more than last year. The difference amounts to some 33,000 carloads of which 40 per cent usually are shipped to market.

All the principal states have heavier crops except Pennsylvania, South Dakota, Nebraska, Colorado and Montana. On the basis of the July estimate of population—117,136,000 persons—the per capita production for the United States is slightly over 3 bushels. The increase of population by January 1 probably would reduce the per capita to less than 3 bushels.

Carlot movement from the leading shipping sections still lags behind last season's corresponding record. Only 92,000 cars had been forwarded by December 18, compared with 94,600 a year ago. The total from these states all of last season was 174,800 cars. For the first time in many weeks, shipments dropped below the weekly totals for the latter part of 1925.

Output for the seven days ended December 18 was only 2360 cars, and probably much of the decrease was due to the zero weather experienced thruout the North. Maine alone made a good showing of 820 cars. Idaho shipped 345 and Wisconsin 210, but no other state reached 200 cars.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .52	$ .56	$ .52¼	$ .49½
Eggs, fresh gathered extra firsts (N. Y.)	...	.54½	.64½	.45½
Potatoes, 150-lb sack, (Philadelphia)	4.05	4.00	4.50	6.75
Steers, good to choice (Lancaster)	...	9.37½	8.62½	10.00
Hay, Number 2 timothy, baled (Phila.)	23.50	23.50	23.50	24.50
Wheat, No. 2 red winter (Philadelphia)	1.48¾	1.46¾	1.46	1.77½
Oats, Number 2 white (Philadelphia)	.60½	.60¾	.54¼	.53¼

Potatoes Show Much Frost Injury

Review of the Week Ending December 24

BUTTER—The markets slumped sharply during the week due to more liberal receipts and a slowing up in the demand. Buyers were purchasing for immediate needs only and this depressed the market. The storage movement of butter was satisfactory, indicating that consumption has been about normal despite the previous high price levels.

EGGS—The New York market was unsettled and irregular. Cold weather in producing areas is expected to result in lighter receipts. Nearby white eggs were generally steady altho they were less active toward the close.

POULTRY—The live poultry market preceding the holiday was fairly active with fancy stock bringing premiums. Leghorn fowl held firm while chickens were about steady. Receipts of dressed poultry were heavy and the market was weak and unsettled.

LIVESTOCK—The top price on hogs at Chicago on Thursday was 15c higher than the week previous. Beef steers were 50@75c higher while heifers dropped 25@50c. Cows were higher while vealers and stockers and feeders held steady. Fat lambs advanced while feeding lambs were lower.

HAY—The market was quiet and most markets held steady. At some eastern points prices were a little lower on account of more liberal receipts. Offerings of alfalfa were liberal and ordinary grades were dull.

FEED—The market was generally unchanged but a few feeds were higher. The holiday had a depressing effect. Wheat prices were slightly higher, with the light offerings hardly ample for trade needs.

GRAIN—Markets were quiet on account of the holiday but wheat was slightly higher. Corn held practically steady. Oats were firm with prices higher.

POTATOES—The markets were generally steady under moderate supplies. In Philadelphia there was a slightly better feeling on fancy stock as the majority of the offerings were rather ordinary. A large percentage of frost injury is appearing in the receipts and this has had a depressing effect on the market. On Monday, following Christmas, the market opened steady and the lighter supplies resulted in a firmer undertone. Pennsylvania stock of ordinary quality brought $4 to $4.10 per 150-pound sack, while some fancy Lancaster County stock in two-bushel sacks brought $3.25@3.40. Maine Green Mountains ranged from $4.40 to $4.50 per 150-pound sack.

Adams County, Pa.—The weather has been cold since Thanksgiving with very little snow. No fall plowing done and a lot of corn in the shock. On account of wet weather corn did not cure out and is in poor cribbing condition. Much moldy corn which is causing sickness in horses and mules. Wheat in fair condition. Butchering is in full swing with fat hogs scarce. Also a good demand for shoats. Cattle are in fair condition with milk cows in demand. Prices: wheat, $1.34; corn, 75c; oats, 50c; milk, 4 per cent, $2.70; butter, 45c; eggs, 47c.—A. R., December 21.

Blair County, Pa.—The year 1926 is rapidly drawing to a close and much work remains to be done yet. There is still a good deal of corn in the fields and where it is cut off the fodder is frozen to the ground. Some potatoes were lost as it was too wet to raise them before they froze. We have had some snow and quite a little cold weather. Butchering is progressing finely, most hogs are lighter than usual. They sell for 12c a lb., live; 16c dressed. It is estimated that only about one-fourth as much wheat was sown in the county as was planned. Wheat has dropped from $1.30 per bu. to $1.25. Corn is selling for 75c a bu.; oats, 45c; hay, $25; straw, $15; potatoes, $1.90; apples, $1; eggs, 75c; country butter, 68c; chickens, live, 35c. A Happy and Prosperous New Year to Pennsylvania Farmer and all its readers.—H. E. H., December 18.

Lackawanna County, Pa.—November was a wet month. Silos were filled and potatoes dug during Thanksgiving week. Some in the ground yet. Lots of buckwheat was never dry enough to thresh after being cut. Farmers are threshing at this time where they were fortunate enough to gather their grain. We've had 7.4 inches of snow since Sunday the 5th with the coldest December 4 on record. Roads drifted full and mail routes were not all covered on Monday. Toxin antitoxin being given to the children. Consolidated school buildings are open to all pre-school age children as well as those of school age on certain days during the week. Of the 59 farmers reported to date who have qualified in the 400-Bushel Potato Club, three are from Lackawanna County. T. M. Kresgee and T. M. Roth, both of Newton Township, and F. W. Smith, of Madisonville. Apples $1; potatoes, $2@2.25; butter, 60c; eggs, wholesale, 80c.—E. A. K., December 13.

Mercer County, Pa.—Zero weather these days and 8 to 10 below. Roads very rough. Considerable corn to husk yet and some not cut. Many acres of potatoes not dug. A new high record for baby beef was established in Mercer a few days ago when at the annual round-up of the boys' and girls clubs the grand champion—a heifer—raised by Dorothy Brenneman, of Volant, was sold at auction for 26½c per pound. This calf was sold to McCann Bros., of Pittsburgh, Pa. The reserve champion, owned by Blend Tait, weighing 900 pounds, was sold to Schaffner Packing House at Erie and brought 21½c per pound. Other weights were 881, 865, 868, 777, 763, 755, 705 and a good number around 760. About 40 head, mostly Durham, were disposed of at an average price of about 19c per pound, most of which were bought for Christmas trade by McCann Bros., and Schaffner Packing Co. Mercer County potato pool of about 10,000 bushels is still unsold as a whole but is being sold in small lots by the individual owners. Also, Mercer County has a wool pool of some 85 to 90 thousand pounds that is yet unsold—price not satisfactory yet. Prices: apples, $1.25; potatoes, $1.75; butter, 55c; eggs, 60c; milk, 3.5 test, $2.55; hogs, 16c; calves, hog dressed, 18c; chickens, 21c; turkeys, 50c; wheat, $1.35; buckwheat, $1.70. No corn, oats or hay being sold.—J. W. B., Dec. 18.

Middlesex County, N. J.—The year is practically ended for Middlesex County farmers and most of them know whether they are coming out on the long or short side of the ledger. Returns to farmers for the year have been somewhat variable. Potato growers probably fared the best with a fair yield and good prices. After several bad years this looks good to them. Dairymen are in a fair position with a good demand for milk and fair prices. There has been some increase in the amount of milk from T. B. tested cows, which is being absorbed at prices considerably in advance of wholesale prices. Poultrymen are getting less for eggs than a year ago but considerable expansion is going on in the business. Vegetable growers received good prices for some products and poor for others. Apple growers are at the bottom of the list tho some men with a retail trade moved their apples at fair prices. December has been cold so far and outside farm operations have practically ceased.—O. G. B., December 20.

Mifflin County, Pa.—Weather much like winter. A snow on the 5th filled the highway thru the Kishacoquillis Valley so that it could not be traveled on Monday at all. Several tourists traveling thru there were caught in the storm and were taken in by nearby farmers. Much corn to husk in the Juniata Valley on account of the continual wet weather this fall. Some of the roads are in a very bad condition. Some farmers are getting in wood which is scarce with most farmers. Some are burning coal on account of no wood. Eggs are scarce, selling at 60c.—J. H. B., December 15.

Passaic County, N. J.—The weather for the past month has been rather cold for the season with an occasional warm muggy spell. The coldest was December 6 with the thermometer 3 degrees below zero and the cold followed a 6-inch snow. The ground did not freeze very early and about all the fall work was finished up. Pruning of grape vines and fruit trees is under way. The Passaic County Board of Agriculture holds its annual meeting December 15 and its annual stag banquet January 6th. The markets are about the same as usual for the time of year. Apples are still selling slow.—N. D., December 14.

Tioga County, Pa.—We have had some pretty cold weather the past month. November 11 the thermometer dropped in places to 4 degrees above zero. Potatoes still in the field were spoiled. On November 11 rain fell and there was the highest water in the county since the so-called "June flood." Damage was done to crops still standing along the rivers, cellars were filled with water, and highways made impassable. Early in December the thermometer fell to from 6 to 20 degrees below zero thruout the county. Several inches of snow fell December 5 but roads were soon cleared. Farmers are cutting wood, grinding feed, butchering, etc. Many have taken a few days' hunting. Both deer and bear are plentiful. The largest bear reported in the county for some time was killed by Wayman Boelen, of Tiadaghton, on the Pine Creek hills. It weighed 450 pounds hog dressed. Some prices: eggs, 50@55c; butter, 50c; lambs, 11c.—P. W. L., December 16.

Union County, Pa.—The annual meeting of the Farm Extension Service was held December 16 with Professor R. R. Welsh and Mr. R. H. Bell, of State College, present as the speakers. The farm products show will be held the first week in January and the banks of Lewisburg will furnish the money for the premiums. There are a number of farms still for rent. Many farmers have corn in shocks to be husked and very little corn stover has been stored as there has been too much sap in stalks to keep in tight mows. Seed corn will need special care and selection with testing later on to insure a stand next spring. Corn dried out very little, and some is not keeping well in cribs, unless it was fully matured. Very little sod was plowed for corn, tho some sod was manured for that crop. A few farmers have bought steers to use up the immature corn. Wheat seeding was done as late as November which is unusual with us. A covering of snow protects the wheat at present. Many bushels of apples are held in storage for lack of a market. Farmers are encouraged with the selling price of milk. Wishing a prosperous year for 1927 to all readers.—J. N. G., December 16.

Only Red Means Danger

WHAT are the real facts about colored clover seed? There is a shortage of red clover this year and American farmers will be forced to use imported seed. When they buy this imported seed they will find that some of it is dyed violet, some is dyed green, and they may even find some that is dyed red.

There is no need for alarm if a seed mixture is found to contain seeds that are dyed,—if they are dyed the right color. Red is the danger signal, and as a rule red clover or alfalfa seed which contains red-dyed seeds should be avoided. Seeds that are stained green or violet may be used without fear. They are colored simply as a means of identification.

These statements are based on the new regulations of the United States Department of Agriculture in regard to imported seeds. The regulations provide that of all red clover and alfalfa imported from Canada at least one per cent of the seed in each package shall be stained iridescent violet. This applies also to any seed mixtures containing more than 10 per cent of either red clover or alfalfa.

Red clover or alfalfa seeds grown in other countries are colored green, unless they come from a country whose seeds have been determined not to be adaptable to use in the United States, in which case they are dyed red.

In other words, seeds not adapted to general agricultural use in the United States, and imported seeds of unknown origin, are stained red. Other imported seeds are stained green or violet.

Red clover from Italy and alfalfa from Turkestan and Africa are the seeds which have been labeled with the red danger sign by action of Secretary of Agriculture Jardine.—W.

More Winter Wheat Sown

THE United States Department of Agriculture estimates that the area sown this fall to winter wheat is 41,807,000 acres, or 5 per cent more than the revised estimate of 39,799,000 acres sown in the fall of 1925. The revised estimate of the sowings in the fall of 1924 was 38,848,000 acres. In August, farmers expressed an intention to increase the plantings this fall by 14.4 per cent. The percentage of the area that has been abandoned during the last 10 years averages 12.8 per cent, with individual years ranging from 1.9 to 28.9 per cent.

Farmers in some of the states were prevented from sowing to winter wheat as many acres as were intended by rains, by drought, and in one state by scarcity of seed and inability to buy it. On the other hand, the low prices for cotton have caused the conversion of some cotton acreage into winter wheat acreage. For nearly all of the states increased, or unchanged, acreage is estimated, decrease being confined to New Jersey, Pennsylvania, Ohio, Michigan, Wisconsin, Maryland and West Virginia.

Goes Into Winter Under Average

For the country as a whole, the winter wheat crop entered the winter on December 1, with a condition of 81.8 per cent of normal, against 82.6 per cent, and 81 per cent for December 1, 1925 and 1924, respectively, and a 10-year average of 84.4 per cent. Comparison indicates that the condition of the crop is somewhat under average.

Rye sowings for grain have been made on 3,579,000 acres, or 1.9 per cent more than the revised estimate of 3,513,000 acres in the fall of 1925. The plant of this crop is more hardy than the plant of winter wheat, and the condition of the rye crop on December 1 was 86.3 per cent, comparing with 83.8 and 87.3 per cent on December 1, 1925 and 1924, respectively, and a 10-year average condition of 88 per cent.

Surplus Problem Is Nothing New

ONE of the big issues before the nation at the present time is the question of how to dispose of surplus agricultural products. With the numerous markets and diversified agriculture in Pennsylvania, the general farmer has not felt the need for a solution of the problem as much as the more specialized farmers in the Middle West.

With this situation existing, it will surprise many farmers at the present time, to know that more than 200 years ago, the producers of the state were confronted with a serious surplus problem. According to historians, in 1719 the agricultural produce of the state became superabundant and the foreign demand insufficient to draw off the excess. As a result, many laborers, whose number constantly increased because of immigration from Europe, were unemployed.

Records of exportation for the years 1729, 1730 and 1731 show that approximately 166,000 bushels of wheat, 130,000 barrels of flour, and 31,000 casks of bread were shipped to foreign countries from the pioneer farms in Pennsylvania. It is said that at that early date wheat yielded as much as 30 to 40 bushels per acre. In 1751, 86,000 bushels of wheat, 129,960 barrels of flour and 90,743 bushels of corn were exported. The value of exported products during that year totaled more than a million dollars. The population of the state at that time was about 180,000.

On the Road to Kiptopeke

(Continued from page 3)

It was just before noon of a Saturday well toward the close of the 1926 shipping season when we made our call on Mr. Waters. There were 30 or 40 cards on the board when we arrived and the young man at the telephone was putting up a new one every few minutes. Mr. Waters estimated that he would have from 50 to 75 cars of potatoes standing on the tracks before the end of the day.

"Can you sell them all before night?" we asked rather anxiously. That trainload of unsold potatoes didn't seem to prey on his mind as we thought it should.

"Small Potatoes" to Him

"Yes, I think we can place them all before closing time." The answer made us realize that sales of only fifty or sixty cars are "small potatoes" for the Exchange.

Mr. Waters is called sales manager and it is no empty title. An outline of the Exchange's selling plan will make that perfectly clear.

Every morning the sales manager and his staff in the Onley office get together and decide upon the price they think they should get for all potatoes sold that day. They base this decision on their knowledge of the previous day's market trends thruout the country, on the condition of the Eastern Shore crop and the activity of their producers, and on prospects in other important potato growing sections.

The eight or ten salaried representatives of the Exchange in the large markets of the country are informed of this price; also the brokers who handle the organization's business in the smaller markets. None of them is supposed to sell below that price without first consulting Mr. Waters.

At One End of the Wire

As this was all being explained to us the telephone rang. It was a long-distance call from one of the Exchange's sales representatives in one of the northern cities. As we couldn't help eavesdropping we overheard one side of the conversation, which was enough to convince us of the truth of Mr. Waters' earlier statement about the importance of wide distribution.

It appeared that the man on the other end of the wire was not able to sell his quota of potatoes at the figure that had been given him that morning. The buyers were trying to make him cut his price.

Now as sales manager it was Mr. Waters' business to get the highest possible price for the members of the Exchange. At the same time, he had to keep the stock moving. There he was this Saturday morning with 30 or 40 cards on the board reminding him that he had a lot of potatoes to sell before night, and his representative was saying that he couldn't move those cars until he cut the price. The buyers were getting touchy.

Did he tell his man to give in and sell at their price?

He did not.

He had his finger on the pulse of scores of other large markets. He knew that he had sold potatoes in 616 towns in a single year and that 125,000 barrels of Exchange potatoes had gone to Cuba that same year. With the markets of half the United States within easy reach he needn't worry because the buyers in a single town were trying to force an unjustifiable price cut. He knew that if this particular lot of buyers wouldn't take the stock at a reasonable figure the Exchange could, and would, sell in other cities.

Mr. Waters didn't put it just that way over the telephone, but that is what he meant. He simply gave his anxious salesman a word of consolation, told him that the potatoes could be sold elsewhere and hung up.

Wide distribution!

Uniform Product a Big Factor

A uniform product was the second important factor that has helped bring success to the Exchange, according to Mr. Waters' way of thinking,—wide distribution and a uniform product.

A potato loading station on the Del-Mar-Va Peninsula.

We inquired about the provisions made to insure a uniform produce. We learned that there is an inspector at each shipping point to see that the growers understand the grade specifications and observe them rigidly in loading cars for shipment. Special meetings are held at the various loading points and frequent demonstrations of proper grading are staged by the Exchange. The state experiment station near Onley helps by giving instruction in the right production methods.

The Exchange is proud of the reputation of its fancy grade, the Red Star Brand, so much so that the trade mark of this brand, registered in the U. S. Patent Office, is featured in color in the organization's letterhead. The second grade, the Bell Brand, conforms to specifications only slightly below those for U. S. Standard No. 1 Grade. Stock which falls in the U. S. No. 2 Grade is sold under the Gearwheel trade mark.

Don't Wait Long for Checks

All potatoes of the same grade which are loaded on the same day bring the growers the same price. The stock is marketed f. o. b., the customer paying the freight. The producer gets a check for each car from six to eight days after it is loaded and sold.

The selling costs and other expenses of the Exchange are met by a charge of 15 cents per package (per barrel in the case of potatoes) on all sales amounting to over $3.00 per package. When the return is less than $3.00 per package a straight charge of five per cent is made. The "profits" of the organization, i. e., the money that is left after all expenses have been paid out of this 5 per cent selling charge, are divided among the 5500 members of the Exchange at the end of the season.

The plan of organization provides for three classes of members: stockholders, tenants of stockholders, and holders of shipping privileges. It costs a farmer only one dollar to obtain shipping privileges, but the organization cancels his rights if he violates his agreement by selling elsewhere than thru the Exchange. Surplus profits at the end of the season are divided among all the members in proportion to the amount of business handled for each one.

Divisions and Directors

The territory of the Exchange is divided into some fifty divisions, the headquarters of each division being the local shipping point. In each division there is a director who is a member of the central board of directors. The board meets three or more times a year and passes upon all important matters before they are acted upon by the officers. The manager of the Exchange is elected at the annual meeting of the stockholders.

At each shipping point there is an agent, to look after the business affairs of the Exchange, and an inspector, who checks the grading and labeling of each car as it is loaded.

Altho we have had space here to mention only white potatoes, the organization handles other products in immense quantities,—sweet potatoes, berries, cabbage, onions. The eight to ten week white potato shipping period, which usually opens about June 5, is by no means the only busy season for the Exchange.

By Water and by Truck

Nor are all the products handled thru the fifty railroad shipping stations we have mentioned. At eleven different wharves potatoes are loaded on boats which take them up the Bay to Baltimore. The berries are sold at auction in Onley and the buyers carry them away in motor trucks over the Eastern Shore's magnificent highway system.

If you ask how the Eastern Shore of Virginia Produce Exchange was started you will be told it was largely thru the efforts of Mr. W. A. Burton. Even back in 1900 Mr. Burton, who had been a produce dealer in New York City, saw the possibilities of the Eastern Shore. He is now General Manager of the Exchange. Perhaps some day we can write an article giving him and his associates the credit they deserve.

Quality Most Important

THAT high quality in New Jersey tomatoes is preferable to extreme earliness was demonstrated to a group of representative farm leaders, called together by W. B. Duryee, Secretary of Agriculture. Outlining the result of a two-month survey of this state's tomato industry, John M. Fenton, field worker in the State Department of Agriculture, declared that the lack of quality in tomatoes is directly responsible for their lack of popularity on the New York Market. Earliness in reaching the New York market is no longer of prime importance, since the first New Jersey shipments usually appear when that city and vicinity is glutted by southern tomato shipments. Secretary Duryee appointed L. G. Schermerhorn, of the State Agricultural College, as chairman of a committee that will study means of relieving the tomato marketing situation. Gloucester County was named as a logical place to start the work.

SWINE

Large Type Berkshire Pigs and Shoats sired by Rockwood Leader 2nd, whose sire was champion of both Ill. and Iowa state fairs, and weighed 800 lbs. at 2 years of age. Young stock always on hand ready to ship C. O. D. or approval. WIANT FARMS, Huntingdon Mills, Luzerne Co., Pa.

100 CHESTER WHITE, Duroc, Berkshire pigs, 6 weeks old, $5. 8 to 10 weeks old, $6. Purebred and high grade pigs, $7. OAKS DAIRY FARM, Wyalusing, Pa.

BERKSHIRES Large and prolific strain. Cholera immune breeding stock, all ages service boars, mature sows bred. Special price on trios. DAVIS BERKSHIRE FARM, Dagsboro, Del.

300 FEEDING PIGS six to seven weeks old $5.00 each. These pigs are grown on free range with access to growing grains. INDIAN CORN HOG FARM, Dushore, Pa.

CHESTER WHITES—Spring boars, Sept. pigs. Big type with quality. PUSEY CLOUD, KENNETT SQUARE, PA.

A GOOD BERKSHIRE BOAR 8 mos. and a pair of extra fine ones 1 mos. Registered. W. F. McSPARRAN, FURNISS, PA.

REGISTERED O. I. C.'s—"The hog that satisfies." Pigs, bred sows, herd sire. Best blood lines. Fair prices. GEO. N. RUPHACHT, Mallory, N. Y.

PEDIGREED BIG TYPE CHESTER WHITES—125 fall pigs, 25 service boars, 85 bred sows, priced low, shipped on approval. C. E. Cassel, Hershey, Pa.

BIG TYPE REG. DUROCS—A few choice gilts, boars and pigs. Shipped on approval. S. C. SAUFLEY, Hummelstown, Pa.

SPOTTED POLAND CHINAS RITTER STOCK FARM, FREMONT, O.

PURE BRED BIG TYPE POLAND CHINA PIGS weighing around 75 lbs., either sex. Prices reasonable. C. L. LEBO, WOMELSDORF, PA.

DAIRY

YOUNG GUERNSEY BULLS rich in the blood of Ne Plus Ultra, out of A. R. dams. Federal Accredited herd No. 37111. Prices and pedigrees on application. WILLOW BROOK FARMS CO., Churchville, Bucks County, Pa.

SEVEN PUREBRED GUERNSEY COWS, one bred heifer, one yearling, one calf. All guaranteed breeders, accredited herd. Sold on personal inspection only $2,000. LOCUST LANE FARM, MEDFORD, N. J.

BUCK & DOE RUN VALLEY FARMS—Hereford Cattle and Poland China Hogs. Stock of all ages for sale. DELAWARE LAND & DEVELOPMENT CO., Mortonville, Penna.

JERSEY BREEDERS ATTENTION—3 bull calves. Superior breeding. Priced for immediate sale. LEON G. VAN NOY & SONS, Troy, Pa. Bono Farms.

TEN GUERNSEY HEIFER CALVES, practically purebred, $25.00 each. EDGEWOOD DAIRY FARMS, Whitewater, Wisconsin.

JERSEY BULL 12 mo. old, exceptional individual. Bull calf, 6 weeks old. C. P. & M. W. BIGHAM, GETTYSBURG, PA.

HELP WANTED

WANTED—Jan. 1, married man, small family, as helper on poultry farm. Experience not necessary if you are a good worker and interested in your work. Year round job, good house with water and electric lights, garden, etc. Address H. C. Wood, Laurel Lake Farms, Pottstown, Pa.

AGENTS—New plan, makes it easy to earn $50.00 to $100.00 weekly, selling shirts direct to wearer. No capital or experience needed. Represent a real manufacturer. Write now for Free Samples. Madison Shirts, 566 Broadway, New York.

AGENTS—Our new household cleaning device washes and dries windows, sweeps, cleans walls, scrubs, mops. Costs less than brooms. Over half profit. Write Harper Brush Works, 176 3rd St., Fairfield, Iowa.

MAN WANTED—To sell Nursery Stock for old reliable firm. Pleasant work. Liberal commission payable weekly. The Clyde Nursery, Clyde, Ohio.

SALESMEN—New invention beats vacuum sweeper and all its attachments. No electricity required. All complete only $2.95. Over half profit. Write O. P. Morgan, Mgr., 750 Grimes St., Fairfield, Iowa.

SALESMEN to sell our garden and field seeds direct to planters. A good position with big income. Cobb Co., Franklin, Mass.

MARRIED MAN WANTED to plow and cut wood. $50 month and house with garden and firewood. Middleville Co., Middleville, N. J.

PLANTS

FROST PROOF cabbage and Bermuda onion plants. Varieties: Copenhagen Market, Early Jersey and Charleston Wakefield, Flat Dutch and Succession. Prices parcel post paid, 250, $1.00; 500, $1.50; 1,000, $2.50; express collect, $1.50 per thousand. Nothing too small shipped. We guarantee to ship size to please you. Agents wanted. Tifton Plant Co., Tifton, Ga.

PEACH TREES $5.00 per 100 and up. Apple trees $7.50 per 100 and up. In large or small lots, direct to planters by freight, parcel post, express. Plums, pears, cherries, grapes, nuts, berries, pecans, vines. Ornamental trees, vines and shrubs. Free catalog in colors. Tennessee Nursery Co., Box 125, Cleveland, Tenn.

50 GLADIOLUS BULBS, mixed, blooming size, charges prepaid on receipt of $1.00. H. M. Barrett & Son, Hightstown, N. J.

TOBACCO

HOMESPUN TOBACCO—Smoking or Chewing, 4 lbs. $1; 12, $2.25. Send no money. Pay postmaster on arrival. Pipe free for ten names of tobacco users. United Farmers of Kentucky, Paducah, Ky.

TOBACCO—Chewing or smoking 5 pounds $1.25, ten $2. Cigars $1.80 for fifty, $3.25 for 100. Guaranteed. Pipe free. Pay postmaster. Farmers Union, Paducah, Ky.

HOMESPUN TOBACCO—Chewing, 10 lbs. $2.00. Smoking, 5 lbs. $1.00; 10, $1.75. Aged in bulk. Mellow and sweet. Satisfaction guaranteed. Farmers Union, Mayfield, Ky.

HOMESPUN TOBACCO—Guaranteed. Chewing five pounds $1.50; 10—$2.50. Smoking, 10—$1.50. Pipe free; pay when received. United Farmers, Bardwell, Kentucky.

DOGS

PEDIGREED COLLIE PUPS—The handsome and intelligent kind. Also, Fox Terriers. LONDON KENNELS, Box No. 87, Grove City, Pa.

GOATS

WORLD'S BEST Milk Stock. Nubians $40. Toggenburg & Saanens $35. Some first freshening $35. Fine Yea. Buck $25. Goldsboro's Goatery, Mohton, Pa.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COW HAS MILK FEVER; CURE FOR WORMS.—I have two cows, one had a calf about a year in August. She had milk fever. Another was fresh a short time after but her calf was dead. Now this one has another calf and she has milk fever. Both cows are in good health. What is a good remedy for worms in dogs?—M. B. M., New Sheffield, Pa. Milk fever occurs in cows that are in prime physical condition and are good producers. For a period of ten days before calving, see that the diet is laxative by feeding roots, oil meal and bran. Do not milk the animal dry for a period of 36 to 72 hours after calving. Allow the calf to suckle the cow during the first 48 hours. There was no direct connection between the two cases which would lead one to suppose that it was contagious. While there are a good many proprietary worm medicines on the market, it would be wise for you to have your veterinarian give this dog a capsule which will be efficient. Treatment varies somewhat with the kind of worms with which the dog is infested, hence no definite drug can be advised until the kind of parasite is known.

LACKS BALANCED RATION.—My sow had pigs in September. Pigs and sow did well. When pigs were 8 weeks old, sow fell over and squealed. She lay without eating or moving for a few days. Now she can get up on front limbs but has no use of her hind parts.—J. B. W., Summerville, Pa. This may be due to a lack of a balanced ration. Try feeding clover or alfalfa hay and a mixture of corn ten parts, tankage 1 part, oil meal 1 part. One may substitute fish meal for tankage. Add one ounce cod liver oil to the feed daily for ten days, allowing animal to be in direct sunlight as much as possible. The periods of pregnancy and lactation constitute periods of greater drain on the animal body.

DOGS DIE SUDDENLY.—I had a valuable red-bone coon dog. At nine o'clock Saturday night was all right, Sunday morning found him dead. I opened him and his heart was large and there were blood spots along his back-bone. My pal also found his coon dog dead this morning.—R. M. O., Slippery Rock, Pa. A careful post mortem by your veterinarian would have materially aided in determining the cause of death. While poisons may have been the cause it is doubtful whether any one would take this method of disposing of a valuable dog. These dogs may have found some spoiled meat and died as a result of eating too much of it.

Harness May Make a Team

THE part which good harness plays in making a good team has never been demonstrated so thoroly as it has the past year at the various horse-pulling contests. Inability to move maximum loads because of ill-fitting collars could be remedied easily but in many cases when harness broke under the intense strain, the team refused to pull again that day and, according to some reports, for several days afterwards.

The old rule of judging the correct size of a horse's collar by inserting three fingers between the bottom of the collar and the horse's neck was found unsatisfactory because the size of men's fingers varied too much. A clearance of one and one-half inch was found to be the proper space to give the horse plenty of wind room.

This year's contests also brought out the folly of fitting a colt whose shoulder is soft and full and then expecting the same collar to be satisfactory when the colt is broken into hard work. Many tests have shown that a canvas collar is best for colts and a leather-faced one for the mature team.—Thos. H. Wittkorn.

Law to Be Enforced

BEGINNING January 1, the Secretary of Agriculture of New Jersey will be responsible for the enforcement of Chapter 28, Laws of 1926, known as the "True-to-Name Fruit Bill," in that state. This law provides that all nurserymen selling peach, plum, apple, pear or cherry trees under contract guaranteeing them to be true-to-name under which they are sold shall file with the Secretary of Agriculture a copy of such contract and a surety bond or insurance policy providing for the payment of damages suffered by the purchaser thereof thru failure of the trees to prove true-to-name as specified in the contract.

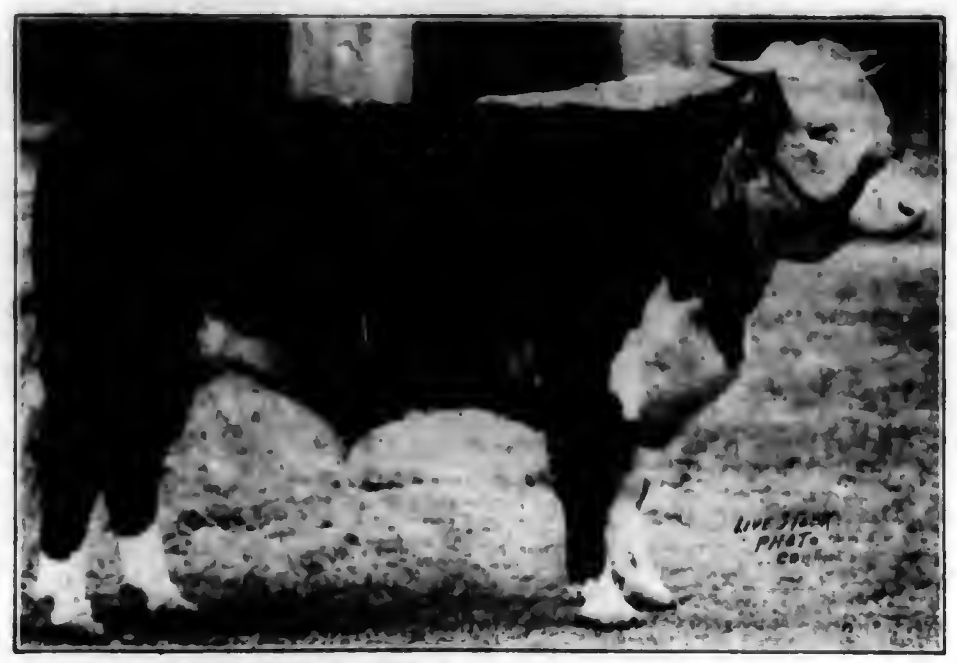
Every purchaser of such trees shall file with the Secretary of Agriculture an accurate plan of planting. The details of operation are specified in the law, and anyone desiring to receive this service should get in touch with the secretary's office for full information.—S. D. S.

Florian—Chief, ah needs protection! Ah done got a unanimous letter this mornin' which done says: "Nigger, let mah chickens alone."

Chief of Police—Why, protection? Just leave the chickens alone.

Florian—Dat's all right, boss, but how does I know whose chickens I's to leave alone?—DeLaval Monthly.

He Brought a Big Price



Rnpert B, grand champion steer of the 1926 International, bred, owned and exhibited by the Oklahoma Agricultural and Mechanical College, sold at auction for $3.60 per pound.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 95,000 farm families read Pennsylvania Farmer every week. Rate 8 cents a word each for one, two or three consecutive weekly insertions; 6 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department.

Minimum, Ten Words.

WHITE LEGHORN CHICKS sired by pedigreed males, records 200 to 293 eggs. Low prepaid prices. Shipped anywhere c. o. d. and guaranteed. Hatching eggs, cockerels, pullets, hens, egg bred 27 years. Winners at 17 egg contests. Write for free catalog and special price bulletin. Geo. B. Ferris, 930 Union, Grand Rapids, Michigan.

BARRON White Wyandottes, cockerels. Eggs for hatching from stock I imported direct. Records 262 to 313. E. E. Lewis, Apalachin, N. Y.

BARRED ROCKS from selected flocks, R. I. Reds, Wyandottes and Leghorns. Chicks and eggs. Write for catalogue. Byron Pepper, Georgetown, Del.

BABY CHICKS for winter broilers. Rocks, Reds, Wyandottes, Leghorns hatching every week 13c up. Quality Hatchery, Elkview, Pa.

LARGE stock fine poultry, turkeys, geese, ducks, guineas, Bantams, Collies, pigeons, chicks, stock, eggs, low, catalog. Pioneer Farms, Telford, Penna.

WHITE WYANDOTTES from a heavy laying strain now ready. Chicks, cockerels and pullets. Write for catalogue. Byron Pepper, Georgetown, Del.

BIG DISCOUNTS on early orders for our high quality chicks. Write for catalogue. Portland Hatchery, Portland, Indiana.

SHEPPARD STRAIN Single Comb Anconas. Cockerels, pullets, $2 to $5. Kie Brown, Mann's Choice, Pa.

PEAFOWL, Pheasants, Bantams, Pigeons, free circular. John Hass, Bettendorf, Iowa.

TURKEYS

BRONZE TURKEYS—Good stock. No blackhead. Mrs. Samuel B. Collins, R. D. No. 2, Middletown, Del.

BRONZE TURKEYS—No blackhead for fifteen years. Mrs. Alfred E. Reid, Star Route, Freehold, N. J.

MISCELLANEOUS

BIGGER POULTRY PROFITS can be yours by simply mixing a well known ingredient in your poultry feed. Cod liver oil is now used by the foremost poultry raisers in the country and its use is also taught in many of the agricultural schools. It makes more profits because it produces better layers, better eggs, and bigger poultry for market. The cost is small when the oil is bought in bulk. It is packed in tin lined barrels of 30 gallons each. Write for prices. Smith, Kline & French Company, Department 41, Philadelphia, Pa.

FREE DOG BOOK—Polk Miller's famous dog book on diseases of dogs. Instructions on feeding, care and breeding with symptom chart. 48 pages. Illustrated. Write for free copy. Polk Miller Products Corp., 1025 W. Broad St., Richmond, Va.

STANDARD HOTBED SASH—Redwood, $1.40 each; white pine $1.75 each, made in four styles; write for circular. Glass, $2.50 per box. C. N. Robinson & Bro., Dept. 2, Baltimore, Md.

A FEW "SUCCESSFUL" demonstrator incubators for quick sale at great reduction. 80 to 300 eggs capacity. Good as new. Des Moines Incubator Co., Box 734, Des Moines, Iowa.

ROOFING REMNANTS—Smooth surface 1-ply $.80; 2-ply $1.10; 3-ply $1.40; 30-inch slate surface $1.75. Buffalo House Wrecking and Salvage Company, 477 Walden Avenue, Buffalo, N. Y.

PHELPS CARBIDE gas light and heating plant. Approved by Underwriters. Cheaper than electric. Generator complete, reasonably priced for immediate sale. John A. Millard, Etters, Pa.

WILSON SOY BEANS, $2.25 bushel. Virginia Soy Beans, $2.25 bushel. Bags 12c each. Cash with order. Recleaned. New crop. Joseph E. Holland, Milford, Del.

FURS WANTED—Ginseng, skunks, raccoons, mink, muskrats, $1.75; weasels, $1.50. Postage refunded. Flat prices—list free. Stern's Furriers, New Brunswick, N. J.

ALL WOOL YARN for sale from manufacturer at bargain. Samples free. H. A. Bartlett, Harmony, Maine.

FARM LANDS

IN THE SAN JOAQUIN VALLEY of California farming is now a paying business, feeding millions of people in towns. Dairying, hogs, poultry and fruit should yield a good income. A small one-family farm, with little hired labor, insures success. You can work outdoors all the year. Best crops to plant are well proved. Selling is done co-operatively in established markets. Newcomers welcome. The Santa Fe Railway has no land to sell, but offers a free service in helping you get right location. Write for illustrated San Joaquin folder and get The Earth free for six months. C. L. Seagraves, General Colonization Agent, Santa Fe Railway, 914 Railway Exchange, Chicago.

125 ACRES and splendid home, fully equipped; riverside; close village, best of neighbors, in a prosperous farming section with ready markets; 80 acres crop land, good water, ample woodlot; delightful home of 7 rooms, fireplace, barn, poultry houses, garage, etc., thrifty orchard of apples, peaches and other fruit. Low price $3800 takes it and horses, cows, poultry, all farm and garden tools included to settle quickly. Part cash. Details in new Illus. Catalog Supplement. Copy free. Strout Farm Agency, 1422-BE Land Title Bldg., Phila., Pa.

20 ACRES BUCKS COUNTY—Remodeled Colonial house, modern conveniences, electric light, bath, vapor heat, 4 bedrooms. High elevation. Near station. Within commuting distance of Phila. Barns, outbuildings. Good water. More acreage if desired. C. A. Euler, R. D. Newtown, Pa.

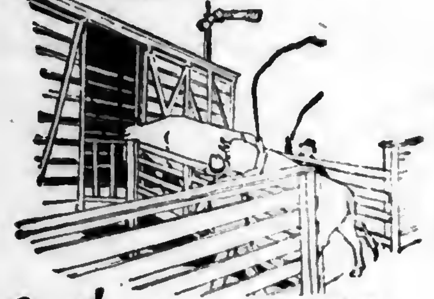
WONDERFUL OPPORTUNITIES, Southern Georgia farm lands. Write for complete information. Chamber of Commerce, Quitman, Georgia.

WANTED to hear from owner of farm or unimproved land for sale. O. Hawley, Baldwin, Wis.

40 ACRES—Oklahoma, contains 150,000 ft. of standing pine timber, $1200. E. Anderson, Watsontown, Pa.

16 WAYS IT PROFITS

Linseed MEAL —shows a good profit when added to rations for dairy cows. Helps raise calves economically.



Linseed MEAL —hastens prime market condition for beef and shows a good profit on the investment.

Linseed MEAL —pays good profits when added to rations for fattening lambs and for maintenance rations for breeding ewes.

Linseed MEAL —proved worth $85.00 per ton feeding value in recent experiments, saved month's time in securing market weight of 200 pounds and solved fall pig problem by giving 1 ½ pounds daily gain without pasturage.

Linseed Meal Finds Increasing Popularity with Successful Feeders and Breeders Everywhere BECAUSE

1. It pays large returns on the investment.
2. It is rich in Protein.
3. It is a mild laxative, mucilaginous and soothing.
4. It is safe.
5. It is palatable.
6. It can be profitably fed to all farm animals.
7. It makes mellow hides and silky hair.
8. It is widely used for cows on test; lengthens lactation.
9. Extensively used for fitting animals for show.
10. It proves the thrift of animals.
11. It lessens the time needed to fatten stock.
12. It saves a large bulk of other feeds.
13. It is contained in nearly all good mixed feeds.
14. It is highly digestible.
15. It helps make other feeds more valuable.
16. It greatly increases the value of the manure.

How—and Why—are Shown in the Books Illustrated Below

Among which is our latest offering to the American live stock feeder—

"How to Speed Farm Stock to Market"

This book is a Marketing GUIDE that will prove of great value to every one who buys, feeds and sell hogs, cattle and sheep. It emphasizes the fact that skillful marketing is equally as important as skillful feeding. It shows how Linseed Meal enables the feeder to market his live stock 30 to 40 days earlier than otherwise, but is primarily a book of "pointers" on the best weights, the best time and the best place to buy and sell. By all means get this book—and the others, too, if you do not already have them.

DO YOU KNOW---

—why some men secure gains at half what others pay?
—the exact weights at which live stock are discounted?
—the best rations for producing Baby Beef?
—how to get quicker "turnover" in your farming operations?
—how to figure market demand?
—how to be a good judge of values?
—how other industries affect feeding?
—what a "Cattle Cycle" is?
—what a "Hog Cycle" is?
—what a "Sheep Cycle" is?
—the apparent and REAL returns in stock farming?
—Linseed Meal can lower your costs?
—Linseed Meal saves 30 to 40 days in getting stock to proper weight, thus enabling you to sell on a rising market?
—what day of the week is best for shipping hogs?

The Book "How to Speed Farm Stock to Market" Will Tell You

Send for it. Get the other two books also. Any or all of them may be had—FREE—Write our Dept. E-1.

This book written by marketing specialists who are in daily contact with activities at leading live stock markets.

This book written by sucessful dairymen, feeders and breeders—practical men who have learned by the hard knocks of experience the "100% value" of Linseed Meal.

This book written by Prof. F. B. Morrison, author, with W. A. Henry, of the famous book, "Feeds and Feeding" and Director of the Wisconsin Experiment Station.

7 Rooms—1 Plan $1148 All Materials—Readi-cut

You can buy all materials for a complete home direct from themanufacturer and save four profits on the lumber, millwork, hardware and labor.

Price Includes All lumber cut-to-fit, highest grade interior woodwork, siding, flooring, windows, doors, glass, paints, hardware, nails, lath, roofing. Complete instructions and drawings are also furnished. Safe arrival of complete materials is guaranteed. We pay the freight to destination on all Houses, Summer Cottages and Garages.

Save 18% Lumber Waste—30 % Labor Costs

The lumber that's wasted costs just as much as the lumber that's used, and the best way to cut your cost is to save the usual waste. The Aladdin System prepares all the lumber in our mills ready to be nailed in place. Cost of lumber is reduced 18 per cent, cost of labor is reduced 30 per cent. Quantity production of standard designs allows us to quote the very low prices we do, and still maintain the High Quality materials for which Aladdin Homes are noted.

Aladdin Certified Lumber

Aladdin homes are all built of beautiful, clear siding, clear flooring, clear interior woodwork, and sound, strong framing. They are permanent, year 'round houses, and are not portable or sectional in any sense. They are just like any other architect-designed, contractor-built homes in your neighborhood, and are warm in winter. You get the finest quality of materials obtainable. Our blue prints and instructions make it easy for anyone familiar with tools to erect an Aladdin. We guarantee safe arrival of complete materials and PAY THE FREIGHT to destination.

Aladdin's 21 Years' Success

is proof that you can do as thousands of other home builders do every year—save from $200.00 to $800.00 by building an Aladdin home. There is an Aladdin near you wherever you live. Go and see one. SAVE money, time and annoyance by ordering all materials from one reliable manufacturer. Complete shipment guaranteed.

New Jersey Farm Week

Display of Labor-Saving Equipment a New Feature

AGRICULTURAL problems of New Jersey will be discussed by national and local leaders during Agricultural Week in Trenton, January 11-14th. Secretary William M. Jardine, of the Federal Department of Agriculture, will address the State Agricultural Convention on Wednesday afternoon, January 12th. He will be followed by Hon. Franklin W. Fort, congressman from the Ninth District, New Jersey, who has attained national prominence by his study and exposition of farm relief measures under consideration by Congress. Other speakers on that day are Governor A. Harry Moore and former United States Senator Joseph S. Frelinghuysen, president of the State Board of Agriculture.

Tag the Dog Now

THE Pennsylvania Dog Law requires that the 1927 licenses be on all dogs by January 15th. It is just as much a violation of the law to allow a dog to be without a 1927 license after that date as it would be to run an automobile without a new license on or after January 1, 1927.

Dog licenses for 1927 are available at the county treasurer's offices thruout the state, according to the Bureau of Animal Industry, Pennsylvania Department of Agriculture.

During the week twelve state agricultural organizations will hold their annual or adjourned meetings in Trenton at the invitation of the State Board. They are: State Horticultural Society, State Poultry Association, New Jersey Federation of County Boards of Agriculture, State Potato Association, Alfalfa Association, Holstein-Friesian Cooperative Association, Guernsey Breeders' Association, New Jersey Home Bureau, Farmers' Roadside Market Association, Beekeepers' Association, New Jersey Swine Growers, and New Jersey Town and Country Church Federation.

This year, in addition to the usual display of New Jersey farm products in the Armory, Secretary of Agriculture William B. Duryee has arranged for an educational exhibit of labor-saving equipment for the farm and home. This innovation is receiving widespread approval by leaders in the various commodity groups, who have assisted in planning for the types of machines found to be most practical. Tuesday, January 11, has been designated as "Farm Equipment Day" when attention will be centered upon the following classes of farm and home equipment, which have been authorized: dairy equipment, milk-cooling apparatus, garden tractors, transplanters, spray machines for vegetables, graders, poultry equipment and practical home equipment.

Educational exhibits will also be shown by several state departments and the State College of Agriculture. Modern kitchens equipped with practical time-saving appliances will be of interest not only to large numbers of farm women, but to women of the cities as well.

Travels Among the Danish Country Folk

By FRANK O. LOWDEN

I VISITED J. P. Mortensen at Olstak, Denmark. Mr. Mortensen's farm consisted of 11 acres. There were on the place four cows, two heifers and two calves. He keeps four cows and delivers his milk to the cooperative creamery. His average production of milk last year per cow was over 9000 pounds, testing 3.83 per cent of butterfat. He sells about 15 hogs a year to the cooperative packing house. In addition he gets a substantial revenue from his hens, the eggs from which are also packed and sold by a cooperative.

Owns Only High-Class Stock

Mr. Mortensen had established a rotation of crops, the reasons for which he could give clearly. His cows, as you may judge from their yield, were high-class cows—as good as could be found upon the larger farms. Likewise his pigs.

He took us into his house—a neat, comfortable and home-like place—where he showed us the records of production of his cows and his books of account. Mr. Mortensen was a farmer and a business man. He was making a very comfortable living from his small farm and apparently was leading a satisfying life.

His case, I was told, was not an exceptional one, but was typical of the small holdings.

The middle sized farm, which means a farm from 50 to 125 acres, is the farm which is regarded as the backbone of Danish agriculture. I visited several farms of this size in different parts of the country. They had better homes, better equipped, better and more complete farm buildings than can be found in the most favored portions of the United States so far as I have seen.

In more than one instance we were hospitably invited by the farmer into his house for a meal. The food was abundant, too abundant I thought, and of excellent quality, and there were all the indications of culture in the home.

The thing that impressed me most as I motored thru Denmark was that

(Continued on page 13)

A level stretch in rural Denmark.

Farm Products Show Plans Completed

Highlights of Pennsylvania's Farm Exposition and Convention Week

THIS year's Pennsylvania Farm Products Show, to be held in Harrisburg, January 18, 19, 20 and 21, will have the greatest floor space for exhibits, the largest number of livestock entries, and more meetings and lectures than ever before in its history. The exhibits will cover over 120,000 square feet of floor space and at least twenty-eight different organizations will convene to transact their business and hear approximately 175 lectures and discussions during the week.

The exhibition is now regarded as the largest winter show of its kind in the United States. In addition to some of Pennsylvania's finest livestock, the exhibits will include corn, small grains, apples, potatoes, wool, tobacco, maple syrup and sugar, honey, milk, butter, poultry and eggs. The eggs, wool and corn exhibits have become recognized in the past few years as the largest exhibits of their kind in the eastern states. Sales of Berkshire, Poland China, Chester White and Duroc swine, and beef steers have also been arranged.

The printed program of the week's events is a 28-page booklet which gives the schedule of all meetings, the location of exhibits and other events of interest scheduled for Harrisburg during Agricultural Week.

Notables at Mass Meeting

The open mass meeting will be held Tuesday evening in the Chestnut Street Auditorium and the principal speakers will be Governor-elect John S. Fisher and President-elect Ralph D. Hetzel, of Pennsylvania State College.

The members of the former STATE BOARD OF AGRICULTURE and INSTITUTE SPEAKERS will meet Tuesday afternoon at 3:00 in the State Chamber of Commerce and will have a luncheon at 5:00 in the Plaza Hotel.

The PENNSYLVANIA ASSOCIATION OF MARKET MASTERS have scheduled a business meeting and program of talks for Tuesday morning in the State Chamber of Commerce.

The SOCIETY OF FARM WOMEN OF PENNSYLVANIA will convene on Wednesday and Thursday in the Penn-Harris Hotel, with Mrs. Alda Mayo, president of the Federated Farm Women of America, as principal speaker.

The PENNSYLVANIA DAIRYMEN'S ASSOCIATION will meet Wednesday in Felton's Hall on Cameron Street and will hold a General Dairy Banquet Wednesday evening in the Masonic Temple.

A meeting of the PENNSYLVANIA AYRSHIRE BREEDERS' ASSOCIATION will be held Thursday, 10 A. M., in the State Chamber of Commerce.

There will be a meeting and luncheon of the GUERNSEY BREEDERS Thursday noon in the Penn-Harris Hotel. The JERSEY BREEDERS ASSOCIATION will hold a meeting after dinner Thursday in the State Chamber of Commerce. The HOLSTEIN BREEDERS' meeting is scheduled for Thursday, 10 A. M., with a luncheon at noon in the Masonic Temple.

Sheep, Wool and Swine Luncheons

A luncheon and business meeting of the SHEEP BREEDERS' AND WOOL GROWERS' ASSOCIATION is set for Wednesday noon at the Plaza Hotel.

The HEREFORD BREEDERS' ASSOCIATION will convene Thursday afternoon in Felton's Hall.

The swine breeders' luncheons and business meetings have been scheduled as follows: BERKSHIRE, Wednesday noon at the University Club, 7 North Front Street; CHESTER WHITE, Wednesday evening at the Plaza Hotel; DUROC JERSEY, Thursday noon at the University Club; POLAND CHINA, Wednesday evening at the University Club.

Veterinarians, Horticulturists, Potato Growers

The VETERINARY MEDICAL ASSOCIATION will convene for both morning and afternoon meetings on Wednesday in the Penn-Harris Hotel.

The STATE HORTICULTURAL ASSOCIATION has scheduled meetings for Wednesday and Thursday in the Assembly Room of the South Office Building, with a banquet on Wednesday evening. Wednesday and Thursday are the days on which the meetings of the VEGETABLE GROWERS will be held in the Senate Caucus Room. A banquet will be held Wednesday evening.

The meetings of the POTATO GROWERS' ASSOCIATION are scheduled for Wednesday and Thursday in the Chestnut Street Hall. A banquet is scheduled for Wednesday evening.

Poultrymen, Beekeepers and Many Others

The STATE POULTRY ASSOCIATION and the BABY CHICK ASSOCIATION will hold their business meetings on Wednesday and Thursday, a banquet to be held on Wednesday, in the Lodge Room of the Elks' Home. A meeting of the Buff Orpington Breeders is scheduled for Thursday evening in the Harrisburg Chamber of Commerce. A Barred Rock meet will be staged Wednesday afternoon in the State Chamber of Commerce.

A meeting of the PIGEON SHOW ASSOCIATION is scheduled for Wednesday in the State Chamber of Commerce. The BEEKEEPERS' ASSOCIATION will convene on Wednesday and Thursday in the Harrisburg Public Library. The FARM BUREAU FEDERATION will meet on Thursday evening in the State Chamber of Commerce. Meetings of the THRESHERMEN'S AND FARMERS' ASSOCIATION have been planned for Thursday, Friday and Saturday mornings in the Chestnut Street Hall. There will be a session for the EASTERN STATES FARMERS' EXCHANGE on Thursday evening in the State Chamber of Commerce. The PENNSYLVANIA FARMERS' COOPERATIVE FEDERATION will meet Thursday evening in the Auditorium of the South Office Building.

The STATE COUNCIL OF AGRICULTURAL ASSOCIATIONS will meet Thursday at 6 P. M. at the University Club. The IMPLEMENT DEALERS' ASSOCIATION will convene Wednesday, 8 P. M., for an entertainment in the Lodge Room of the Elks Home.

Wednesday, January 19, has been designated Vocational Day. The presentation of the gold and silver medals to the winners in the Junior and Senior Project Contests, will be one of the features of the afternoon meeting. An opportunity will be given to the boys and girls to see the State Capitol and meet the Governor.

A vocational exhibit will feature certain phases of vocational education in the rural districts. Products from the laboratories, shops, and home projects will be displayed. These exhibits, with a number of demonstrations, charts and photographs will illustrate the methods of teaching vocational agriculture and home economics in rural districts.

A special feature will be the exhibition and sale, in the International Building at 27 North Cameron Street, of 200 head of baby beeves by members of the boys' and girls' baby beef clubs of the state. The members of these clubs organized for the purpose of demonstrating proper methods of feeder selection, proper methods of feeding and management, showing and marketing their animals.

Public Auction Thursday

Another feature will be the exhibit of 150 fat lambs by the boys' and girls' clubs. This exhibit will be in the Duco Building at 40 North Cameron Street.

Animals will be exhibited and judged on their merits Tuesday afternoon and Wednesday morning, and be sold at public auction on Thursday afternoon in the Duco Building at 40 North Cameron Street.

The swine sales will be held in the Duco Building on Cameron Street on January 19 and 20 as follows:

Berkshire	9:00 A. M.	Wednesday
Poland China	12:30 P. M.	Wednesday
Chester White ...	3:00 P. M.	Wednesday
Duroc Jersey	9:30 A. M.	Thursday

Following are the exposition buildings: Emerson-Brantingham Building, Tenth and Market Streets. Show Headquarters. Apples, apiary products, dairy products, maple syrup and sugar, potatoes, dairy equipment, orchard supplies, farm machinery.

Chestnut Street Market House. Poultry and pigeons. Vance Building, Fourth and Chestnut Sts. Educational exhibits, wool, corn, eggs, small grains. Duco Building, 38 N. Cameron St. Swine and Sheep. International Building, 29 N. Cameron Street. Baby beef. Felton Building, 42 N. Cameron St. Dairy cattle. Breed Association booths.

The State Farm Products Show is under the management of three representatives from each of the participating organizations and agencies and an executive committee of which F. P. Willits, Secretary of Agriculture, is chairman; R. H. Bell, Pennsylvania State College, secretary; John M. McKee, treasurer, and Henry E. Klugh, manager.

The Growth of the State Show

THE first state-wide Farm Products Show in Pennsylvania was held in Harrisburg in 1917. Previous to that year local shows had been held in various parts of the state. As early as 1875 the State Horticultural Society, in cooperation with the Pennsylvania State Board of Agriculture, began to hold quarterly meetings in different parts of the state. At the last meeting, which was usually held in January or February, they would arrange a State Fruit Show, with a few agricultural products thrown in.

Every two years, when the Legislature was in session, the show was held in Harrisburg; on all other occasions the shows were staged in other places of which Lancaster, York, Reading, Pittsburgh, Wilkes-Barre and Philadelphia were the principal cities.

In 1901 the Fruit Show had attracted so much attention thruout the state that other agricultural organizations joined in the movement and brought about a great expansion in the exhibits. The Pennsylvania Breeders' Association and the Pennsylvania Dairy Union were the principal organizations that cooperated with the Horticultural Society. In 1917, the Pennsylvania State College and the Pennsylvania Department of Agriculture joined with these three associations already mentioned, and staged in Harrisburg the first state-wide Farm Products Show.

Vol. 95, No. 2 Phila., Pa., January 8, 1927 Whole No.1547

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

A gem is not polished without rubbing nor is a man perfected without trials.—Chinese.

December Farm Prices

AN EXAMINATION of the crop report published by the Department of Agriculture, dated December 20, shows that fifteen of the general farm crops were bringing lower prices than they did one year ago, the only exceptions being rye and cloverseed. The same is true when the prices are compared with those of two years ago. The 1926 crop of wheat was about 30,000,000 bushels less than in 1924, yet the farm price this year on December 20 was ten cents per bushel below the 1924 price on the same date.

Potash Prices to Be Higher

WORD has been received that the German Federal Potash Council has voted an average increase of nine and one-half per cent in potash prices. The Minister of Economies who has the veto power has not yet passed upon it, but it is expected that he will approve. No doubt the price in this country will be advanced accordingly, but there is nothing we can do about it. Some comfort may be taken from the fact that since the prices were reduced about nine per cent after the close of the war, the increase will put them back to pre-war levels. It is said that the increased price was made necessary by the gradual falling off of trade. In order to maintain the mines and keep part of them at work it was decided to raise the price,—a reduction having failed to stimulate consumption.

Justice in the Basic Milk Price

PROBABLY no one thing has done more to bring about the production of a regular milk supply in the Philadelphia district than the adoption of a "basic" price for surplus milk. So well has this worked that there are now no seasons of disastrous surpluses with their consequent derangement of prices. The producers make more money, the dealers know where they stand, and the consumers have an ample and regular supply of milk at all seasons. Of course, there are those who still believe that the producer should be paid the highest price for all he produces at all seasons of the year, but they are few in number and it is heartening to note that the great majority realize the justice as well as the economies of the adopted plan. By the way, it is some such plan that the farm relief people are trying to work out for disposing of the surplus crops of the nation; at least the same principle is sought after.

Help the Mothers

IT IS to be hoped that the public will bring sufficient pressure upon the coming legislature to cause it to appropriate enough money to carry out the provisions of the mothers' assistance act. The state has set up all the necessary machinery, but so far it has failed to provide sufficient funds to give the needed aid to all who deserve it.

The purpose of the law is to enable mothers having dependent children to keep them together when the husband and bread winner has been removed, but so far, the legislature has always failed to provide sufficient funds to carry it out. We do not like to think it is because children have no votes, but the results might be different if all people who have votes would demand action in the matter.

Aside from sentimental and humanitarian reasons, and viewed from the cold standpoint of state economy alone, it is good business to keep little children under the care of their mothers as long as possible. The cold-hearted objection that we maintain children's homes and almshouses for the care of dependents is a most shortsighted one. It is a well-known fact that such institutions, even under the best of management, are inimical to the best development of childhood and that many of the wards become criminals or public charges. A proper home life is necessary to make good, self-supporting citizens and a mother is an essential part of such an institution. Every child having a mother has a right to her care.

A House Divided

TO AN outsider who reads the dairy and farm papers of New York it would seem that the different factions of the dairy industry would become weary of persistent warfare and get together. We shall not assume to say what the united body should be named, but we offer the Inter-State Milk Producers' Association of Philadelphia as proof that it is possible not only for the milk producers but for the milk distributors to get together and work in harmony. In order for an entire section to cooperate there must be unity, and if any person or faction having influence becomes bull-headed and sets out to create discord, harmony and full cooperation are impossible. We once heard of an old Scotch-Presbyterian who said he fully believed in a union of all the churches,—providing they all became Presbyterians.

The Women Are "Clamoring"

IT WAS stated the other day in the news of a meeting of politicians that it was observed that the women of the state were "clamoring" for the reappointment of Dr. Ellen C. Potter as Secretary of Welfare. Now, clamor may be a perfectly good English word but we don't like its use in this case. It sounds as if the men using it resented the suggestion made. Politicians do not like the interference of outsiders when they sit down in a back room to make up a slate. We never read of a body of business men "clamoring" for favors. They "ask," "suggest," and "demand." Maybe we have overlooked the sex ending in the declension of these words. Who has a better right to be interested in the personnel of a department the business of which is to improve human welfare than the women? At the risk of being charged with "clamoring" we reiterate our statement that Dr. Ellen C. Potter should be reappointed.

Teachers for Rural Schools

A FARMER came into the office of Pennsylvania Farmer the other day and said he would like to tell the man who wrote the article on "Better Teachers for Rural Schools" a thing or two. We invited him to write his answer and we would publish it,—providing it was sane and temperate. What he wants to bring to the attention of the writer is that rural districts are financially unable to pay salaries which will get and hold the best teachers. Their absence in rural neighborhoods, he said, was not because rural people did not appreciate the value of the best for their children, but because they could not pay them what city schools can afford.

Here is something everyone should realize and think about. A great many things would be done to better rural institutions if there was money available to do it. Taxes are up to the limit now in most places and until there is a more equitable system of taxation adopted and a more generous distribution of state money little can be done in matters that require more money. Of course, Professor Cromwell in his article was not dealing with any phase of the question except that of ability in teachers.

What Is an Editorial?

WE ONCE asked an editor of a paper who had been at the work longer than we what an editor should say on the editorial page. His answer was, "Say what you think, within reason, and stick to it."

A regular reading of a good many periodicals leads one to believe that many editors have not heard of this rule, or that they are afraid to apply it. A great many writers and public speakers fall into the habit of saying the things people like to hear, rather than the things the writer or speaker firmly believes. We know from experience that a frank expression of opinion is pretty sure to be followed by a brick or two in the form of disapproving letters. However, it is our belief that an editorial page should contain the honest convictions of the editors, and that to use it for creating applause alone is to prostitute its use. We do not expect that all will agree with everything we write. If they did we would conclude that the readers considered it "applesauce."

Editorial Sidelights

ANY man whose name is in the list published on Page 22 of this issue may be proud of the company in which he finds himself. Like the members of the 400 Bushel Potato Club, the farmers who have qualified for the Keystone Ton Litter Club have done so by accomplishing the impossible,—or what would have been considered impossible a few years ago.

POULTRYMEN who are concerned about "lights on hens" will find on Page 11 some interesting conclusions reached by New Jersey egg producers who are using electric lights to increase production in the season of high prices.

WHILE YOU are making your plans to attend the Farm Products Show don't forget that your county agent has certificates which will entitle you to reduced railroad fare to the show.

WHAT WILL BE the future trend in American agriculture,—toward immense farms run by wealthy men or large corporations, or toward small family farms where the farm is a real home? Mr. Lowden doesn't attempt to answer that question in his article this week, (Page 2), but he does point out an ideal that is worth striving for.

SOME STAYED ON JOB

Farm Relief Men Recruit Forces for Action—Treasury Department May Examine Farm Loan Banks.

Washington, D. C.

CONGRESS adjourned for the holidays. Many of the members returned to their homes for the seasonal festivities. But those who are engineering the fight for farm relief legislation remained at the Capital. In cooperation with the Corn Belt committee leaders they have been busily engaged in developing a line of action to secure consideration of the McNary-Haugen bill at the earliest possible moment. Leaders of the general farm organizations are taking steps to get into the fight. A call has been issued by Charles S. Barrett, of the National Board of Farm Organizations, for a meeting of member organizations at the Temple of Agriculture in Washington, January 6 and 7 to discuss farm relief. The meeting will be closed to the public.

Taber Calls Conference

In compliance with instructions from his organization, National Grange Master L. J. Taber has called a conference of farm organizations, including the executive committee of the National Grange, President Sam H. Thompson and the executive committee of the American Farm Bureau Federation; President C. S. Barrett and the executive committee of the National Farmers' Union, and the executive heads of other national farm organizations to be held in Washington January 7 and 8, in an effort to reach an agreement on a farm relief program.

Agriculture and Industry

A meeting of the Better Understanding Between Industry and Agriculture Committee is called for January 10 to discuss better relations between agriculture and industry. The principal subject for this meeting will be federal, state and local taxation. The agricultural section of the conference will handle farm relief, Muscle Shoals and truth-in-fabrics legislation. Henry Harrison Lewis, of Washington, is managing director of this organization. L. J. Taber, of Ohio; W. J. Thompson, of Maine; Sam H. Thompson, of Illinois, and E. M. Bailey, of the American Dairy Federation are among the directors.

Explains Surplus Control Bill

The chief differences in the new and old McNary-Haugen bills are pointed out by Senator McNary. "The bill is essentially a surplus control bill, the sole aim being to stabilize prices thru control of the surplus. For that purpose a separate stabilization fund is provided for each of the five basic commodities—cotton, wheat, corn, rice and hogs. No public funds may be used directly in effecting such control but loans may be made from a revolving fund of $250,000,000 to the several commodity stabilization funds in anticipation of the collection of the equalization fees. . . . The aim is to provide funds drawn from each commodity to be employed in stabilizing the market for that commodity by sound commercial methods.'"

New Control Proposed

The move to bring the Federal Farm Loan system more directly under the control of the Treasury Department has taken form in a bill, H. R. 15540, introduced by Chairman McFadden, of the House Banking and Currency Committee, amending the Federal Farm Loan Act.

"The proposed amendment does not alter in any way the administration duties of the Federal Farm Loan Board," according to Secretary of the Treasury Mellon, "but plans to transfer to the Treasury Department the duty of examining the banks of the system. Its purpose is to bring the Land Bank System into closer accord with comparable practices of the national banking system." Representatives of some of the farm organizations profess to see excellent features in this bill, but all are agreed that it should be carefully analyzed before it receives the support of friends of the Federal Farm Loan system.

Help Is Needed

Senator Arthur Capper is making a determined effort to get his truth-in-fabric bill thru the Senate. The American Farm Bureau Federation and National Grange are strongly backing this move but all the help that the farmers, sheep raisers and other friends of honesty in fabrics can give at this time may be needed to put the bill across. Letters addressed to Senators urging enactment of the bill will help.—E. E. R.

INFORMATION APLENTY

Governor and Governor-elect Cover Wide Range in Addresses—One Potato Menace Believed Checked.

Harrisburg, Pa.

MEMBERS of the legislature will not want for information in regard to state governmental affairs when they get down to business for the biennial session later in the month. The Pinchot address reviewing the four years' administration is one of the most comprehensive ever read to lawmakers and its recommendations cover a wide range. Governor-elect John S. Fisher's inaugural address will likewise be a broad discussion of public affairs. Each will have reference to agricultural matters and the finances. The budget is to be presented to the legislature the last Monday of January and will be taken up without delay. It is about complete.

Wait for Appointments

Governor-elect Fisher will not be hasty in the matter of appointments of heads of his departments and chances are the great majority of the cabinet will not be announced until just before the inauguration. In this he will have abundant precedent. The Pinchot appointments came out after the organization of the legislature; the list going before the Senate for action at inauguration time. Mr. Fisher has declined to discuss his plans for the Department of Agriculture for whose head a number of well qualified men have been proposed. He has made a close study of activities of this branch of the government and observed the developments of the last year with much attention.

Rough Sailing

Members of the legislature coming to Harrisburg to look up abiding places for the session have frankly said some of the proposed constitutional amendments carrying bond issues are going to have rough sailing. Several proposals will come before the present session for second approval and if they get by will take their place with those previously passed along for submission to the people in 1928. The disposition of the legislatures of late years has been to pass all resolutions carrying amendments on the theory that the people should determine them, altho this has not always held good. The action of the State Grange on bond issues caused considerable comment among legislators coming to the State Capitol.

Beetle-Borer Plans

The incoming state administration will in all probability vigorously support the campaigns to hold down the spread of the Japanese beetle and the corn borer this year. Information on the methods and cost of the two campaigns for 1926 has been assembled and the possibilities of more trouble from the bean beetle are being considered. People at the Capitol have been hearing with interest suggestions for men concerned in the fights to get together for discussion of ways and means to meet the pests in the field.

Wart Checked

According to a statement prepared at the Bureau of Plant Industry the spread of the potato wart, which promised a few years ago to be one of the greatest menaces to Pennsylvania potatoes, has been checked. Surveys in eleven counties have shown the disease is not spreading. This inspection has extended to gardens in small towns where the worst trouble was encountered. Prof. W. A. McCubbin, who has been in charge of the survey, says that if the present close inspection work is continued valuable results will be obtained for the future.—A. B. H.

AGRICULTURAL WEEK

Farm and Home Equipment Big Feature of Show—Not Only Jersey Listens In When WPG Broadcasts Talks.

Trenton, N. J.

SPECIAL emphasis is being placed on the subject of farm and home equipment at the show being held in the Trenton Armory during Agricultural Week, January 11-14th. Manufacturers of poultry equipment, dairy equipment, transplanters, garden tractors, graders, field and orchard sprayers, etc., have been asked to exhibit the latest type machines in their respective fields. This phase of the exhibition is being conducted purely on an educational rather than a commercial plan, the expense of erecting booths being charged on the basis of cost.

Week's Course in Marketing

The New Jersey marketing institute opens at the College of Agriculture in New Brunswick on Monday, January 24 and continues until the 29th. Registration will be held from 9 to 10:45 A. M. on the first day. Information regarding the course and rooming accommodations may be obtained by writing to F. G. Helyar, College of Agriculture, New Brunswick, New Jersey.

Extension Men Open Conference

The county extension workers of the state are meeting in New Brunswick during the first week of the new year for their annual conference. This mid-winter session takes the place of the usual fall conference formerly held in October, but postponed this year until January.

Talks to the Whole Country

Every Monday County Agent Eldred, of Atlantic County, broadcasts short talks on agricultural subjects from WPG, the 5000-watt radio broadcasting station at Atlantic City. Altho his talk is intended for New Jersey farmers he receives letters in response to his talks from farmers living everywhere from New England to Florida.

Seed Certification

Final inspection of white potatoes entered for certification was made during November. Of 63 growers, 22 were located in Salem County, 40 in Cumberland and 1 in Monmouth. The acreage entered was practically the same for Salem and Cumberland Counties. The Cobbler variety was decidedly the most popular for certification, with a small acreage of Green Mountains and Red Skins entered.

TRUSTEES ELECTED

American Institute of Cooperation Sponsored by Organizations Representing Two Million Farmers.

Ithaca, N. Y.

EASTERNERS are interested in the election as trustees for the ensuing year in the American Institute of Cooperation of two nationally known leaders, L. J. Taber, of Ohio, Master of the National Grange, and John D. Miller, Susquehanna, Pa., head of the National Milk Producers' Association, and a leader in Dairymen's League official circles. The third summer session of the Institute promises to be the biggest event in the history of cooperative activities and will be held at Northwestern University, Chicago, from June 20 to July 17th. It will be sponsored by practically every cooperative of the country. The recent session held in St. Paul, Minnesota, was participated in by organizations representing more than 2,000,000 organized farmers, doing more than a billion and a half of business in the past year. The 1928 session will be held in California, with all the cooperatives of that state actively participating. The Institute is a unique educational enterprise, combining technical instruction and advanced methods in marketing to employes of cooperatives, with the practical experience features of a conference body.

Death of Dairy Official

Loton Horton, president of the Sheffield Farms Dairy Company and chairman of the National Dairy Products Company's board, died in Nice, France, on December 15 of pneumonia. He had been abroad two months, studying dairy conditions.

Farmers' Week

Plans for a Farmers' Week program that will equal or exceed the past events of this kind are proceeding very rapidly, with farming interests to be well represented thruout the state. The meeting will be held the second week in February.—M. G. F.

The patented Top Notch heel construction

The strengthened heel means lengthened wear!

WHERE do your arctics usually break through first? At the heel, don't they? Then, even though the sole and uppers are still good, you have to throw them away.

You won't have that trouble with this Top Notch Redfore cloth-top arctic. The "Clincher Cushion" construction gives an extra reinforcement that makes the heels last as long as the soles. It's a patented feature exclusive with Top Notch Arctics.

Then, to make sure that every other part equals the heel in long life, we strengthen with strips of the toughest rubber all other spots that have to stand the hardest punishment.

This *balanced* construction makes the Redfore unusually durable without making it heavy or clumsy. It gives you absolute foot protection and astonishingly long service.

Redfores have tough red soles. They are the *most economical* arctics you can buy—they last much longer than cheap arctics which are not fortified at the points where the hardest wear comes.

Rubber footwear for all the family

BOOTS, arctics, heavy and light rubbers, all styles and sizes for men, women and children. Made with unusual care to safeguard our 26 years' record for building durable, distinctive footwear. Ask for Top Notch Rubber Footwear by name and look for the Top Notch Cross. The best stores carry it or will get it at your request.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS

BY R. P. KESTER

WHILE the big Sesqui-Centennial is over, we are having another this week in celebrating an event which, tho not so widely heralded and remembered as the signing of the Declaration, was vital to independence. The event this week is the celebration of the one hundred fiftieth anniversary of Washington's crossing of the Delaware. I am interested in this event for reasons which I will give herewith.

◆ ◆ ◆

THE winter of 1776-77 must have been similar to the one this year. There was considerable snow and much cold weather. Washington with his half-starved, half-frozen army had been retreating thru New Jersey for several weeks. Many soldiers were without shoes, and the supply of blankets was not half sufficient. The Revolutionary War had been going on for a year and a half and Washington had won but two battles. The British had taken New York, Long Island, and every other point in that region. Washington had lost many men and most of the supplies. His skill as a general was conspicuous only by the successful manner in which he conducted his retreat. The soldiers were discouraged. They were deserting by scores, and going home as fast as their enlistments expired. Washington had retreated across the Delaware into Pennsylvania and left the English in possession of everything east of the river. The next move of the British would be upon Philadelphia, and its seizure seemed inevitable.

◆ ◆ ◆

AS CHRISTMAS approached, gloom and despondency hung like a pall upon the country as well as over Washington's army. The term of enlistment of most of the soldiers would expire on New Year's day, and they declared they would go home and end the war. Thus it will be seen that on Christmas, 1776, all indications pointed to the possibility that the glee inspired by the signing of the Declaration of Independence six months before would be turned to sorrow, and that the attempt to gain independence would end in failure.

◆ ◆ ◆

TRENTON was in possession of the British who had located 1200 or 1300 Hessian soldiers. So sure were they that they had everything sewed up and that it was only a matter of a short time until they would end the affair, that they became careless. Colonel John Rahl, who had command of the troops in Trenton, seems to have been a genial soul, for on Christmas he took a holiday and spent the day and night in drinking and carousing. The morning after he slept late, but was rudely and quickly awakened.

◆ ◆ ◆

WASHINGTON had planned a bold attack. For all we know he may have considered it a last attempt. He and his little army again crossed the Delaware, in the manner which every school boy knows, at a point nine miles above Trenton, and surprised the troops in Trenton. So quickly and unexpectedly did it happen that it was all over before the British were well awake. Colonel Rahl was awakened out of his stupor, only to run out and be fatally shot.

◆ ◆ ◆

NOW to the point that personally interests me. Most of the captured army was brought across the river to Newtown, the town in which I live. The prisoners were quartered in the churches of the town. One of them, the old Presbyterian church, still stands in good repair. The others have been built anew. The Presbyterian church and a fine old stone house where Washington made his headquarters are located about half a mile above Neshaminy Gardens on the Buck Road to Philadelphia.

◆ ◆ ◆

THE Buck Road is a state highway and the plans are to make it an improved road thru to Washington's Crossing on the Delaware, a distance of about five miles. Washington's Crossing has become a popular resort and a great deal has been done to beautify it and make it a fitting memorial to one of the most important incidents of the Revolutionary War.

◆ ◆ ◆

THE success of this bold stroke on the part of Washington put new life into his army and into the hearts of the American patriots. Congress voted money and new troops enlisted. In fact, it was the turning point of the war. While it may be idle to speculate upon the subject, still, one knowing the conditions as they were may well wonder whether the United States might not have remained for a good while longer a British colony if Washington had not made that bold attempt. It is another illustration of the value of sustained determination.

Query—Does a cat only purr when she has an audience; or does she purr for gladness when alone?

Answer—We never happened to be with a cat when she was alone.

Covers a Lot of Ground in a Day

Breaking up the lumps is an easy task with an outfit like this.

I'll Set You Up in the Oil Business Without A Penny Investment

Yes, Sir; If you have the ambition to work—where work means big money, I'll start you in the oil business with me without a cent of investment. I want ambitious, trustworthy, energetic men—men I can depend upon—in every county to take orders and look after my business. The man I select for your territory I'll make my partner, furnish everything that's needed to do business and *divide the profits 50-50 every week.* I have hundreds of men established now on this basis. Am ready to put on 100 more. It's a chance of a lifetime—a real opportunity to win unlimited success.

$50 to $250 A WEEK

Your Share Of The Profits

On this square deal plan, Wengard, an Ohio partner, made $430.00 for his share in one week. Montgomery, in Iowa, made $216.00 for the first week he started. In West Va., Mason's share for a week was $126.02. Hundreds are making $200 to $500 every month the year round. No wonder my representatives are enthusiastic. No wonder my men call this "the prize opportunity of the age".

Everybody Buys Oil

It's a great business—something doing every minute. Millions of automobiles, trucks, tractors, farm engines use oil. You know that. The market is unlimited. In this proposition you handle the nationally known line of Cen-Pe-Co Motor Oils—oil of wonderful quality—15 years a leader in the field of motor lubrication. Prices are right. Beats all competition. You simply take orders on *long credit terms.* We ship direct from nearby warehouse and collect. *Pay you every week.* Every order means a satisfied customer. You soon have a large, steady, repeat order business of your own.

PROFITS GROW FAST

In addition to lubricating oils, I give you the opportunity for greater profits with my complete line of Columbia Paints and Roofing—well known brands in constant demand. There's a big business waiting for you wherever you are. No matter what you are doing now or what kind of work you've done, how young or old you are, if you are willing to work, follow my directions and have the ambition to make real money, I can guarantee your success.

Write Quick Don't wait if you want this chance. Opportunities like this can't wait. My organization for this year must be completed at once. If at the start you can devote only your spare time to this business, I can arrange that. Just say, "I am interested in your proposition" in a letter or on a postcard. Mail it and I'll send complete particulars by return mail. All it will cost you is a stamp. You can begin doing business and making money within a week without a penny more capital. First applications get the preference.

Friendly Talks

By EDGAR L. VINCENT

WHEN you are going to town with stuff to sell don't you think it pays to take time to shave and put on a clean collar? You feel so much better than you would with your face rough as a hetchel and your collar showing the wear and tear of a week. What is more, the folks down town are more apt to trade with you than they would if you looked as if you had just tumbled out of bed. They know the difference, even if we sometimes imagine they do not.

This morning I heard a man say, "I have spent quite a lot of money keeping my farm buildings painted, but I am not sorry. It is my home and I want it to look the best possible." Now, there is more in that than we are in the habit of thinking. Folks in this world are all subject to the subtle influence of contact with one another.

Last night I was talking with the mistress of our home. Every time she spoke a word, I heard something not far away make a ringing sound. For some time I could not think what it was, but at last I made up my mind that it was the vibration of the air striking a big dish that sat on the top of the kitchen range. She spoke; the dish responded.

It is so with painting houses and barns and doing other things to keep them in good condition. If you let your buildings get bare of paint, the glass in the windows broken and the holes stuffed with old bran sacks, and everything showing a loose and run-down appearance, the spectacle will not be a very inviting one to those who pass by. Somehow or other it will make them a little bit more lax about their own buildings, and the time may come when the entire neighborhood will drop down a trifle in tone, just because you have neglected the truth that men's actions have an effect upon those of other people.

But when you keep things shipshape, well painted and the battens all nailed down tight, the yard well cared for and everything showing the touch of the man and the woman who care, why, it gives an uplift to every farm in the community. The paint on your barn will help to keep paint on your neighbor's barn.

And there is more to it than this. The care we take of things about the old place has more than a little to do with the success we gain and the kind of men we are. No man ever made much of a go of farming unless he thought well of himself. That made him think well of the farm; it led him to try to make it the best possible; it brought better cows, and sheep and hogs and hens to the farm, and contributed to the sum total of his success.

Now, follow this a bit farther. Life is made up of things that seem unimportant, but all of which add a little something to that wonderful thing we call character. You know, character means something chiseled into something else. We take a hammer and a well-tempered stone cutter and we cut all sorts of beautiful things in the hardest substances.

The things we do on the farm are the tools we use to carve out character in ourselves. High living, and that means just being good and honest and true and kind and tenderhearted, chisels manhood into the very fibre of our lives. The higher we live the more perfect will be our lives at last. And after all, that is about all there is of life, to carve out a good character and help others to do the same.

STAR Equipment

Make Your Good Cows Still Better

Get the full satisfaction and profit from careful feeding and breeding by having your barn right.

Let us help you get your barn right and save you money and many a backache.

When you turn your present barn into a real money maker or build a new one, this big organization can help you. Get the benefit of their forty-four years experience in planning and in designing and building equipment to cut out work, worry and expense.

Get a Barn Plan and Big 228-page Star Line Book Free

Tell us the size and kind of barn, hog house or poultry house you want to build or send sketch of one you want to fix up. We'll help you develop your own ideas and furnish a floor plan blue-print without the slightest cost or obligation to you.

This big 228-page book shows you how Star Equipment cuts down production costs by saving steps, time, feed and labor; by preventing dirt, dampness, waste, accidents and diseases that wipe out profits. Shows all about Star Stalls, Pens, Water Bowls, Litter Carriers, Hay Carriers, Door Hangers, Ventilators and other conveniences. Letter, coupon or postal brings it to you.

$5 AFTER 30 DAYS FREE TRIAL

I Will Ship You a Walsh Harness for a 30 day free trial on your own team. See for yourself that my harness is stronger, handsomer, better fitting, handier in every way—a proven success for over ten years. If not convinced that it is the best harness you ever laid eyes on, send it back at my expense.

Three Times Stronger Than Buckle Harness

Buckles weaken and tear straps. Walsh 1¼-inch breeching strap holds over 1100 lbs. The same strap with buckles will break at the buckle at about 350 lbs. pull. Ordinary harness has 68 buckles. Walsh Harness has no buckles. Easy to see why Walsh is three times stronger than ordinary harness. Packers' Northern Steer Hide leather—best that can be tanned.

SAVES REPAIRS—LASTS TWICE AS LONG

The Walsh Harness costs less because it saves many a dollar in repairs. Users show average repair cost of only 9 cents per year. No patching, no mending, because no rings to wear straps in two, no buckles to weaken and tear straps. Greatest advance in harness making. Easily adjustable to fit any horse. Write today for new reduced prices.

$5.00 AFTER 30 DAYS' TRIAL OFFER

Balance easy payments, or cash after trial if you wish. Write today for free book, prices, easy payments and thirty days' trial offer, also how to make money showing Walsh Harness to your neighbors.

A New John Deere Spreader

Now you can get a tight-bottom New John Deere Spreader with the same distinctive features that have made the John Deere the leading endless-apron spreader.

This new spreader with the beater on the axle and the box roll turn gives you the four essentials in a spreader that are really important: It saves work in loading; it is easier pulling; it does better work; it lasts longer.

Its lower box saves from 15 to 25 per cent of the labor in loading. The energy required to load 100 loads of manure into the ordinary spreader will load from 115 to 125 loads onto the New John Deere.

Its higher drive wheels and fewer moving parts, combined with draft-reducing roller bearings, save your horses. Many farmers who always have used three and four horses on ordinary spreaders, use only two on the New John Deere.

Better work follows the low-down beaters. Manure is not thrown high in the air. A wide, even blanket of manure is spread beyond the drive wheels before winds can cause drifting and unsatisfactory spreading.

For years to come the New John Deere will give you profit-making, labor-saving service. It is built to the John Deere high standard of quality.

See it at your John Deere dealer's—compare it with others. You are sure to want its exclusive advantages.

FREE—A Real Treatise on Fertilizers

SOIL FERTILIZERS, a booklet worth dollars to you. Tells all about the value and use of barnyard manure and other fertilizers. This booklet, also folder describing the New John Deere Spreader, free. Write John Deere, Moline, Illinois, and ask for Booklets S-736

Hort Week Came Up to Expectations

(Continued from last week)

EXPERIMENTS by S. W. Frost, at the Arendtsville Field Laboratory, indicate that bait pails may be of value in controlling the Oriental moth as a supplement to spraying and early spring cultivation. A one-gallon tin pail with a long bail that is made into a hook at the end is hung in the top of the peach tree. About fifty pails are used per acre.

They are filled with a bait consisting of one part molasses and ten parts water. Water is added from time to time during the summer, so as to keep the pails about half full. In dry weather they will need attention once a week, but usually once in three weeks is sufficient. The higher grade, lighter-colored New Orleans molasses will catch the most moths, but black strap will do.

All Moths Stick Fast

The fermenting mixture attracts moths of all kinds, including the Oriental moth, which are caught in the sticky material. Nothing is gained by adding poison. From 100 to 350 Oriental moths are caught in a single pail. They are about equally divided between male and female, and about eighty per cent of the females have not yet laid eggs.

The pails should be set from about the middle of April until the middle of August. Use discard pails costing two to three cents each at the cannery. The materials and labor ought not to cost over fifteen dollars an acre. In one orchard the bait pails reduced the wormy fruit from forty per cent to twelve per cent. Bait pails are suggested merely to supplement spraying, not to replace it.

Last season the spray service was supplied to about 18,000 fruit growers in twenty-six counties, thru the county agents. There were 750 in Erie County alone. This service consists of definite advice on when to apply sprays in that particular county. This is based on local observations on the emergence of insect pests, the discharge of disease spores, and weather conditions. Notice of when to spray goes out long enough ahead to give the fruit grower about thirty-six hours of continuous spraying before the critical time occurs.

This greater timeliness of application should result in greater effectiveness than is usually secured by following the old time spray calendar, which is necessarily very general in its scope. Labor conditions on the farm, local weather conditions and the spraying equipment available necessarily must modify the time of application somewhat, but the nearer the spray is applied at the time recommended the more likely it is to hit the mark. Other counties should secure the spray service.

Several growers expressed a fear that this will prove to be a year of severe winter killing. The trees went into the winter with wood and buds very poorly ripened, some of them almost in full foliage. Where the orchard is not large it may be an advantage to delay peach pruning until the extent of the injury, if any, can be determined.—S. W. Fletcher.

Budding and Grafting

When is the best time to graft or bud fruit trees? Also, where can I obtain grafting wax?—L. J. S., Westmoreland County, Pa.

Budding is usually done in July or August. It is used chiefly on young trees, mainly to work over seedlings that are one or two years old. It cannot be used to advantage on old trees.

Grafting is done from February to April. Grafting wax can be made according to the following formula: 4 parts resin, 2 parts beeswax, 1 part rendered tallow. Melt, pour into cold water and pull until of a light color. It can be bought of seed houses.—S. W. Fletcher.

A Cue for Eastern Growers

MORE than one lesson can probably be learned by eastern fruit growers from the experiences and methods followed by their progressive competitors in the Pacific Northwest.

The far western efforts of fruit growers in cooperative marketing have been reviewed many times with benefit to all. Less has been said about their experiences in selecting varieties of fruit which are best suited for their conditions both in production and marketing. One particular cooperative marketing association in the state of Washington has been spending much time and money keeping production and sales records of dozens of different varieties of apples.

Non-Profitable Trees in West

The field department of that organization just recently made a report on these varieties pointing out that odd varieties and poor producers show up especially in low price years. Non-profitable trees were divided into two classes: odd varieties which are not salable, and commercial varieties which have been found unprofitable for other reasons.

Of course, conclusions reached on the Pacific Coast may not apply to the East, but nevertheless the findings out there are worthy of attention, especially as they relate to trends in future competition.

Among the odd varieties, they list Baldwin, Ben Davis, Blue Permain, Grimes Golden, King David, Kinnard, Missouri Pippin, Northern Spy, Paragon Sap, Ruby Spitz, Snow, Wagener, York Imperial, Geniton, Gano, Black Ben, Black Twig, R. C. Pippin. The King David was found fairly good in the early districts.

Of the so-called commercial varieties the Spitzenberg has been found unprofitable in most sections, according to the department, because of shy bearing and its liability to infestation of all kinds. The report goes on to say, "large blocks of Spitzenbergs are being pulled thru the Yakima Valley, as are also Rome Beauties in the Kennewick district, as a study of the sales record over a period of years shows that this variety has not been profitable as the size, and also the color is poor.

"In many orchards also Jonathans are being pulled out. The Jonathan is grown over practically the entire United States successfully, and the association's records show that in a year of low prices, like the present, the only ones of this variety which bring a profit are the earliest shipments. These varieties are not only unprofitable for the grower but for the selling organization."—Geo. F. Johnson.

Look Backward—Then Ahead!

BEFORE you start work on your next potato crop, look back a moment at your last year's results.

Were you satisfied with your yield per acre? Did you get a lot of firsts or were there too many culls? Did your crop suffer badly from disease, insect attacks or frost injury?

If your crop was poor in any of these respects, *this* is the time to decide how to make your next crop a better one.

It will pay you to look into your rotation, your seed, and preparation of your seed bed and also into feeding your crop plenty of potash in the form of a well-balanced mixed fertilizer. For potash helps to increase yield, strengthens the vines, aids starch to form in the tubers (a big factor in quality) and assists the plant to fight disease and insect attacks, and to withstand frost.

It is important to check up on the actual number of pounds of potash which your crop receives. Good profits have been made when 80 to 150 lbs. of actual potash was supplied per acre. These amounts can be had in 800 to 1,500 pounds per acre of a high analysis fertilizer containing 10% potash, in 1,000 to 1,875 pounds per acre of an 8% potash mixture, or in 1,600 to 3,000 pounds per acre of a 5% potash mixture. For muck soils 1,000 to 2,000 lbs. per acre of a 4-8-10 or 0-10-10 fertilizer is recommended.

FREE—Lots of useful information about fertilizers in our booklet "Better Potatoes." Write for a copy today.

From the Week's News

ABOUT 1500 CARLOADS of peaches, apples and potatoes received official shipping point inspection in Pennsylvania this year. The inspection service was started in 1923 when 234 carloads were inspected at eight shipping points in Adams, Cumberland, Franklin and Potter Counties. This year the work was carried on at 55 points in 12 counties.

§ § §

JAPANESE BEETLES like geranoil, a new substance developed by the U. S. Bureau of Entomology. In experiments with geranoil, beetles nearly a half mile away were drawn to a small block of trees sprayed with this substance within 15 minutes after the spray was applied. When this spray is used it is possible to kill large numbers of beetles with a relatively small amount of contact spray.

§ § §

NINE MEMBERS of the House in the Pennsylvania legislature which convenes this month are classed as farmers and one as a farm manager. This is an unusually large number. Only two members of the State Senate call themselves farmers.

§ § §

NEARLY seven per cent of the 14,000 bee colonies that were inspected last summer by the Pennsylvania Bureau of Plant Industry were found to be diseased, and ten per cent were housed in illegal hives which make treatment for disease impossible. The state bee law, effective since 1923, provides that it is unlawful for any person "to keep or maintain honey bees in any hive other than a modern movable frame hive which permits thoro examination of every comb to determine the presence of bee diseases. All other types of hives or receptacles for bees are declared to be a public nuisance and a menace to the community."

§ § §

A LARGER PERCENTAGE of hogs are vaccinated for hog cholera in Pennsylvania than in any other state. Due to the foresight of the Bureau of Animal Industry there was no shortage of anti-cholera serum in this state as there was in the Middle West during the recent hog cholera epidemic.

§ § §

THREE TIMES as many peaches are now being grown in New Jersey as 15 years ago. The 1926 crop totaled nearly 3,000,000 bushels, in spite of unfavorable weather thruout the season.

§ § §

HOW CAN THE MILLIONS of acres of brush land in Pennsylvania be made profitable? That is the question Arthur C. McIntyre, a government forest research specialist, is going to try to answer. Mr. McIntyre has recently joined the staff of the Pennsylvania Agricultural Experiment Station.

A New Kind of Farmers' Week

INSTITUTIONAL Farmers' Week for the farm managers and farm operators of the various charitable, penal and educational institutions in Pennsylvania will be held at the Pennsylvania State College, January 10-14, 1927. The program includes a discussion of potato, swine, fruit, vegetable, poultry and dairy cattle problems, which may confront the managers of the farms. The program is so arranged that round table discussions are included.

The State Department of Public Welfare and the School of Agriculture of the Pennsylvania State College have cooperated in making arrangements for the Institutional Farmers' Week which is the first program of its kind to be attempted in the state.—A. L. B.

GRIND!

Don't Let Whole Grain Cheat You

WHOLE GRAIN is bulky and it fills the animal's stomach, but it cheats you by satisfying the hunger through this bulk rather than through complete nourishment.

Tests have been conducted by Government stations in past years, with healthy, full-toothed animals, to determine the seriousness of these feeding losses. The tests show an average loss of from 12 to 26 per cent. In other words, out of every 100 bushels of whole corn fed, 26 bushels yield practically no nourishment while passing through the digestive tract. The unground oat diet showed a similar loss of 12 bushels out of every 100.

Such feeding losses can easily spell the difference between possible loss and a handsome profit. Many farmers are putting various combinations of grains through the McCormick-Deering Feed Grinder, assuring their animals a nourishing ration that is quickly and completely assimilated. In the interests of greater stock-raising profits, investigate the McCormick-Deering at the local dealer's store.

McCormick-Deering Feed Grinders—built in three sizes from 6" to 10", requiring from 3 to 16 h. p. according to size and type. Designed to grind various combinations of grains and forage crops.

McCormick-Deering Corn Sheller—for every need; ranging from the 1-hole steel hand sheller to the power cylinder sheller of 350 to 400 bushels per hour capacity.

POULTRY

R. G. KIRBY
Staff Contributor and Adviser
Kirby Poultry Farm

Experience of a Practical Poultryman

Editors' Note.—We have received a number of questions from poultrymen asking which is best and most economical,—to mix their own poultry rations according to standard formulas, or to purchase ready-mixed feeds. In order to get the experience of practical poultry raisers we wrote to a number of them asking which plan they have found best. The following article was written in response to our request.

A GREAT deal of controversy has arisen in the past few years over the question of commercial poultry feeds versus home-mixed feeds and it will continue to arise until the poultryman really knows what commercial feeds are doing today, and how the large feed houses are testing, experimenting and improving their feeds, year by year, far better than the average poultryman can do for himself.

The writer has been mixing feeds for poultry for 15 years, and during that time has used no less than ten different formulas, some of which he has worked out himself, and he finds that it is impossible to get the ingredients fine enough, or well enough blended, so that each individual bushel of this mixture will contain the right proportions.

Now let's take the commercial feeds. There are still a few cheap forcing rations on the market, but there are a lot more that are good than bad. We are, of course, interested only in the good products.

Only Standard Ingredients Used

Commercial feed houses which put out a good product make it a business to accept nobody's test on grains. They buy in train loads, and reject corn, wheat, bran, or whatever the ingredient is, if it does not come up to their test. Thus the products they put into their feeds are of the same quality and the same chemical analysis the year around. Then, too, the ingredients are thoroly blended and scientifically compounded to maintain the health of birds and keep up egg production.

Just to illustrate this point, I will give the results obtained from 600 chicks hatched in one incubator from the same breeders. Chicks were equally divided.

Lot No. 1 received a good home mixture. They consumed 570 pounds of feed up to the 42nd day, with a loss of 29 chicks, and weighed 361 pounds. Lot No. 2, cared for in exactly the same way as lot No. 1, except that they received a reputable commercial feed, consumed 543 pounds of feed up to the 42nd day, with a loss of 17 chicks, and weighed 382 pounds. A check of this type has been duplicated five times during the past three years, with results similar to the one just given.

The writer has been successful in producing just as many eggs from the home-mixed ration as with the commercial, but at the end of the year when the books were balanced two facts stood out. The birds fed the commercial feed came thru in better physical condition, and the cost per dozen eggs produced was one and a half cent lower. This may not mean much to the 100-flock owner, but the commercial plant with 1000 or more birds will have enough additional income to pay the taxes.

A Life Hangs in the Balance

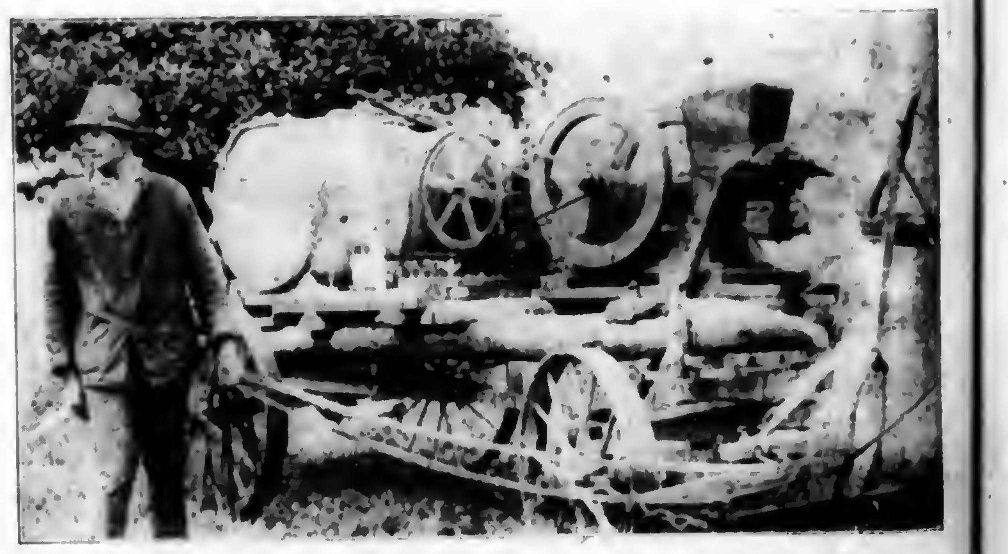
There is one more phase of the commercial feed that is worth mentioning. Ninety per cent of our poultry ailments today come from digestive disorders that occur during the first six weeks of the chick's life so it is important that the babies receive the very best care and feed during that time.

A sudden change of feed with a two-week-old child would cause death. Likewise with a baby chick. A chick's digestive tract is very delicate and should be watched closely.

Never feed smutty, moldy or coarse fibrous feeds, but a carefully compounded ration mixed by men who know their business. We have succeeded in mixing a ration that seems to answer all requirements for the development of good healthy birds, but after we buy the necessary ingredients, which consist of the very best we can get, the cost is about equal to that of the average commercial starting feed, and we find one thing in favor of the commercial feed. It is finer and the baby chicks do not pick over it as much. This, however, may be due to the fact that our own feed is not proportioned correctly.

The writer believes the day of home mixing is fast becoming a thing of the past, just as the policy of mixing fertilizers at home was discontinued when the farmer realized he could buy a better product than he could mix himself.—R. H. Stabler, Chester County, Pa.

It's Not Fancy, But It Works



Detsch Brothers, of Elk County, owned a potato sprayer. Deth Brothers had an engine. The two were combined, making the efficient high-pressure orchard sprayer shown above.

How to Get Big Hatches

Remarkable New Ingredient for Mixing in the Mash Shows Big Increase in Hatchability.

W. V. Steen of Dagsboro, Del., reports far bigger hatches than ever before. He gives credit to Protozyme, the Enzyme Digestant for Poultry and Stock. In a recent interview, Mr. Steen said:

"I noticed some of my trays were showing an increase of 15 per cent above others. Then I discovered the birds laying these eggs were fed mash containing Protozyme. Further check merely confirmed this good news. Also I noticed the chicks had greater vitality and my customers are more pleased with them. My hens and pullets are in far better condition than any previous years."

Eggs of Highest Fertility

More proof of the wonders of Protozyme is given by Mr. James Shannon of Eastport, N. Y. Mr. Shannon writes: "All my surplus eggs are shipped to one of the largest hatcheries in the East. I recently received a letter from them saying eggs I shipped are of the highest fertility of any they receive. I feed 2 per cent Protozyme in the laying mash."

Made Records at N. J. Station

Protozyme is the product tested and proved by the New Jersey Agricultural Experiment Station. Its record is the talk of poultry authorities. Baby chick losses were reduced to practically nothing. Twenty per cent quicker growth was noted and egg production greatly increased. All this in addition to the greater hatchability just reported. Protozyme looks like dry mash. It keeps indefinitely and is easily mixed in the mash.

Booklet Gives Full Particulars

A booklet giving the official figures will be sent free to anybody interested. Many dealers and feed mixers are now supplying Protozyme. If yours can't supply, send for the booklet and full particulars. A little Protozyme goes a long way. Address, **Enzyme Products Co., Dept. 54, Montclair, N. J. or Chicago, Ill.**

DOWN FLAT

MR. KING Says—
HAPPY HEN WORM REMEDY
is the only worm remedy I have ever found that will get the worms and not throw the hens off production.— (Signed) Wm. King, Vineland, N. J.

To folks who depend on eggs for their profits this means a lot and it is one of the reasons why Happy Hen Worm Remedy is the recognized dependable worm killer. When your birds are pale faced, always hungry, light weight, or perhaps prostrated—get this great life saver and use it according to the simple directions leading poultrymen everywhere recommend it. 600 doses $1.10; 2000 doses $2.50; 4400 doses $5.00; all post paid. Guaranteed to kill Tape, Round and Caeca Worms.

For individual treatment use
Happy Hen Worm Tablets
convenient, wonderfully effective and inexpensive: 100—$1.10, 450—$2.50 all postpaid.

Mail your order today—or have your Dealer get them for you.

More Eggs from Hens Under Artificial Lights

A RECENT survey of the use of artificial lights on New Jersey poultry farms by Willard H. Allen, extension specialist, shows that the average production of 60,000 pullets under lights was 42.6 eggs during the months of November, December, January and February, while during the same period, 20,000 birds not under lights averaged 32.1 eggs apiece. This is a difference of ten eggs per bird or fifty cents as prices go in Jersey, in favor of the lighted birds.

For two months after the lights were discontinued, however, the unlighted birds averaged two eggs apiece better, due probably to a slight molt on the part of some of the lighted birds. After that period the pullets were not kept separated from hens on farms where lights were used and comparable records for the entire year could not, therefore, be kept. Past experience has shown, however, that there is practically no difference after May 1st.

Different Systems Studied

In addition to the problem of lights versus no lights, the different systems of using lights were studied. Here the advantage in egg production seemed to rest with the use of both morning and evening light, giving the bird a 12-hour day from 6 A. M. to 6. P. M. This system produced 4 eggs per bird more during the winter than either the "Evening Lunch" from 9 to 10 P. M., or the morning light from 4:30 A. M. to daylight. The latter two systems gave equal results.

After the lights were discontinued, however, the birds that had been under morning light only produced the best, so that over a six-month period the difference in the three systems was too small to be of any significance. The conclusion was that the operator should follow the system most convenient for him.

Regardless of the system of lighting it was shown that lights were only profitable when used on well matured, healthy pullets, that were kept in a dry, relatively warm house and well fed. An abundance of light that was sufficient to get the bird off the roost and keep it off was found to be of importance.—C. S. Platt.

Nest Box Notes

OLD hens are subject to tuberculosis. Cold weather and molting bring out the symptoms. Such hens are listless, often with dark and shrunken combs. They are light in weight, with the flesh wasted away from the breastbone.

• • •

Internal symptoms of tuberculosis are yellowish nodules in the lungs and spots on the liver. The disease is incurable. Infected birds should be killed and burned, and clean quarters kept. Prevention consists of not keeping birds beyond their second year.

• • •

Cod liver oil is known to increase the hatchability of eggs and should be given to breeding stock from now on. It is very conveniently given in the noon wet mash. If the flock is eating 100 pounds of dry mash a day, add one pint of oil to the wet mash, varying the amount of oil to suit the consumption of mash.

• • •

Breeders that sell high grade chicks often have their output for the most desirable hatching dates sold out early in the year. Consequently it is a mighty good plan to get in touch with some reliable man right away, if you are going to buy very many chicks later, and make the necessary arrangements while the choice of dates is open.

Have a Better Farm

Good fences will enable you to have a better, more profitable farm. They permit modern, diversified farming, more live stock and poultry, easier marketing and more fertile soil. They distribute the work, save hired labor and make each field yield more profit.

SuperZinc-ed REG. TRADE MARK
Pittsburgh Perfect and Columbia Fences
are designed to give the greatest possible service per dollar invested. They are made from our own formula of steel which has unusual strength and an affinity for the heavy zinc coating which insures great durability. Both the Columbia and Pittsburgh Perfect brands have proven their merit under the tests of severe service. Buy the dependable Super-Zinced Fences for your spring fence improvements.

Guaranteed
All of our fences are Super-Zinced, that is, armored against rust by the heaviest coating of zinc that can be successfully applied to wire, and are guaranteed unexcelled in quality and durability. Look for our brands when buying fence, barbed wire, gates, steel posts and wire nails. Write for catalogue and our excellent new booklet, "Farm Records", mailed free upon request.

Healthy Teats and Udder

The easy milker is usually the profitable milker. Much of the holding back of milk is due to lack of care of the udder and teats. It pays to go after the extra quarts by giving constant care to even the "little" hurts that make the cow nervous and restless.

Bag Balm has a permanent place in thousands of cow barns, because it keeps the delicate udder and teat tissues free from Caked Bag, Bunches, Inflammation, cuts, bruises, chaps, cracked teats, etc. All sores or congestion are quickly eliminated by this great penetrating, healing ointment. Most troubles are healed by Bag Balm between milkings—it acts like magic.

Bag Balm is clean and pleasant to use. Nothing in it to taint the milk; it penetrates at once to the injured part and restores the tissues to normal. A wonderful healer for any sort of skin trouble or animal sore—hundreds of uses on the farm.

Big 10-ounce can, only 60c at feed dealers, general stores and druggists. If your dealer is not supplied, order from us. Ask for free booklet, "Dairy Wrinkles."

Make a note now to put Bag Balm on the job of keeping your cows milking easily and liberally. It pays its cost every day in the average dairy.

Carbon Association Leads

THE Carbon County Cow Testing Association is the first association in Pennsylvania to reach the goal of 10,000 pounds of milk production. The report for the fiscal year just ended is:

Av. no. cows in association	209.6
Av. lbs. milk per cow....	10,378
Av. lbs. butterfat per cow	358.6
Av. per cent butterfat ...	3.5
Value of product	$406.79
Cost of feed	162.58
Value of product above feed cost	244.21
Returns for $1 expended for feed	2.50
Feed cost per 100 lbs. of milk	1.57
Feed cost per pound of butterfat	.45

Sixty cows in the association produced over 400 pounds of butterfat. One cow produced over 800 pounds, two produced between 700 and 800 pounds, four produced between 600 and 700 pounds, and 16 cows produced between 500 and 600 pounds.

An individual milk production record for a cow in a Pennsylvania Cow Testing Association was also made by a cow in this association owned by Adam Begel. This cow produced a total of 27,094 pounds of milk, containing 815.2 pounds of butterfat.

The average production of cows in testing associations of the state is 3000 pounds less than that of the Carbon association producers, while the average Pennsylvania cow gives only 4400 pounds a year.

Have You Sent Yours?

HAVE you written us about your milking machine? There is still time to enter your letter in our milking machine contest. The subject is: "HOW THE MILKING MACHINE HAS HELPED US SOLVE THE LABOR PROBLEM." The following prizes will be awarded for the best letters on this subject:

First prize	$10.00
Second prize	7.00
Third prize	4.00

Other letters which are published will be paid for at regular space rates. All contributions should reach this office on or before Monday, January 10th. Address them to the Contest Editor, Pennsylvania Farmer, 261 S. 3rd Street, Philadelphia.

Their Daughters Score

ACCORDING to actual records taken from cow testing associations, the daughters of bulls in the Montgomery County Holstein Bull Association produce 16 per cent more milk and 21.3 per cent more butterfat than their dams. The average production of all cow testing association yearly records of the dams was 10,825 pounds of milk and 338 pounds of fat for the last year. The daughters from six dams, sired by association bulls, produced 12,512 pounds of milk and 470.7 pounds of fat. The bulls have doubled the production of some of the daughters of the poorer cows and even increased the production of the daughters over the best cows in the herd.

These facts were given by Professor S. J. Brownell, dairy extension specialist, State College, and County Agent R. G. Waltz at the recent annual meeting of the association.

There are now 166 purebred heifers of the association bulls in the herds of the members, which is approximately 50 per cent of all the cattle in the herds. These daughters will all be in production within two years and their increased production due to the association bulls should be worth $16,000 per year to the members of the association.

Forty-three sons of the association bulls have been sold in the county as breeders and are carrying the inheritance of more efficient production to other herds.

Big Change in Seven Years

When the association was organized in 1919 the active members had 173 purebred animals and 284 grades. At the present time the same men have 260 purebred and 126 grades, which is an increase of 256 per cent in the number of purebreds in the herds of the members, while the purebreds of Montgomery County as a whole have increased only five per cent. This increase in purebreds raised the inventory value of the herds of the association over $5500. The association bulls have sired 336 heifer calves and 395 bull calves.

Plans were made at the annual meeting to expand the activities of the association by purchasing younger sires and to encourage the members to obtain records by joining a cow testing association. C. E. Wismer, president of the organization, stated that the only definite method to determine the relative merits of the bulls is to keep actual production records.—R. G. W.

For Milking Only

CONSTRUCTION of a large barn to be used exclusively for the milking of cows will shortly be started on the famous Walker-Gordon Farm at Plainsboro, N. J. It is contended that by using one barn for the milking that the process will not only be more sanitary but a great deal of time will be saved.

At present 1033 cows are being milked at the Walker-Gordon Farm and about 14,000 quarts of milk are obtained daily. Some of the cows are being milked three times a day as an experiment. With the completion of the milking barn, one barn of cattle will be driven there and milked and another barn of cows will be waiting. At present there are 27 barns of 50 cows capacity on the farm—J. G. P.

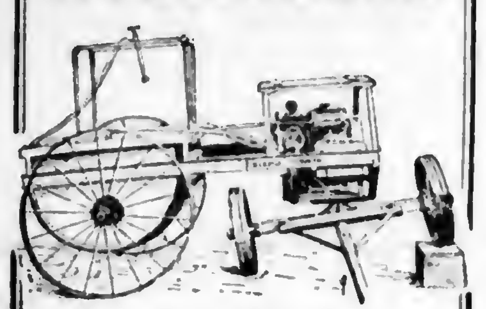
New Basis Fixed

AFTER carefully considering the market conditions, a modification of the Philadelphia Selling Plan was agreed upon by the officials of the Inter-State Milk Producers' Association.

Until further notice all cooperating buyers of milk will, under this agreement, compare the average basic quantity made by each producer in October, November and December, 1925, with the average basic quantity of the same producer for October, November and December, 1923. The higher of these two quantities shall be considered the established basic quantity of each producer beginning January 1, 1927, and until further notice.

New producers taken on after January 1, 1927, are to establish their basic quantities as heretofore arranged.

New Year Resolutions



Resolve Now To:

Grow better fruit.
Have less fungus.
Fat fewer worms.
Smite the red bug and aphis.
Grade fruit on the trees.
Spray on time and thorough.
Have less spraying delays.
Cut spraying costs.
Increase profits.

Travels Among the Danish Country Folk

(Continued from page 2)

nowhere did I see farm improvements run down, which is so noticeable in America, especially in recent years. And it is a mistake to suppose that the Danish farmer does not have as high a standard of living as the American farmer at the best. In fact, as other travelers have noted, it is impossible in Denmark, from dress or manner, or in any other way, to distinguish between the farmer and the business man of the towns and cities.

In one instance we were told that the farmer was away at the seaside enjoying the sea bathing. His wife and daughter, however, very cordially explained to us the operation of the farm.

Sons Want to Stay on the Farm

Upon the middle sized farm some labor is employed in addition to that of the family. Usually it is a young man or young men from the neighborhood who are preparing themselves for farming on their own account later on.

Wherever there was a son or sons in the family, I asked if they were satisfied to remain upon the farm and succeed their fathers. This question caused some amusement for they could not understand what better in life the young man could look forward to than to carry on the work of the farm.

Nor did we see or hear of a middle sized farmer who was planning to buy additional land to add to his farm. He seemed satisfied with what he held. He employed his surplus funds, if any, in improving his farm, making his home more comfortable, or investing his surplus funds in bonds of the credit associations, which are also cooperative.

In this I thought I saw a great lesson to the American farmer. He has been too ambitious to increase his acres rather than to improve and make more productive the acres he already owns. This, perhaps, is natural in a new country where farm land values until recently have pretty steadily risen. The figures now disclose the fact that even in the most prosperous days of American agriculture the farmer's profits came not so much from the operation of his farm as from the increase in its value per acre. It therefore seemed to him an easier way to get ahead to take every dollar he could spare from his farm, make a partial payment upon other lands even tho he did not need them, confidently expecting a rise in their value.

If It Were Only True in America

That time, however, has passed in American agriculture. From now on the American farmer must depend upon the profits of operation of his farm if he is to have any profits at all. It is to be hoped that the spirit which has moved the Danish farmers to make their lands more productive, their homes more comfortable, their manners of living more satisfying, will become the spirit of the American farmer.

I left Denmark with the profound conviction that just as the middle sized farmer had become the backbone of Danish agriculture, so the family size farm in America is the ideal towards which we should strive. I could not but think of what an agricultural paradise America would be if these family size farms with improvements equal to the improvements in Denmark were to cover the agricultural area of the United States.

"Liliums," said the newly married man, "show me your cook book. This pudding tastes like a typographical error."

The Whole Family Likes it!

FATHER likes the De Laval Milker because it saves so much time, produces more and cleaner milk, and makes milking cows so much more profitable.

Mother likes it because there isn't so much help to care for, and because milking doesn't require the help of the whole family.

Brother likes it because it is so much fun to milk with it, and because it enables him to take the place of a man in milking.

The hired man likes it, too, because milking is so much easier, and he and the boss "trade off" milking every other Sunday, so that one has a full day off.

And best of all, the cows like it because of its regular, stimulating and soothing action—and prove it by giving more milk.

A Leadclad Roof is Lightning Proof!

"Ring out the Old—Ring in the New"

Time alters all things. New discoveries and new methods change our habits and our customs. Now even ordinary farm fence is fast going out of date.

The advent of Leadclad fence makes it expensive and even extravagant now to buy just ordinary wire fence.

Leadclad with its extra thick coating of pure lead, provides a fence that will remain rustless many years longer than the ordinary fence.

Let your New Year's resolution be a Leadclad resolution.

Leadclad will save you money, trouble and time. Costs no more to erect than a short-life fence.

LEADCLAD WIRE COMPANY
1202 Plainfield Avenue, Moundsville, W. Va.

Giant Grips GIVE THEM Sure Footing.

On slippery roads, icy hills—all wintry conditions—Giant Grip shoes and calks furnish sure and safe footing. Horses can play or work without fear—without strain

Your horses can have the same sure footing—always be shod sharp. Giant Grip calks *stay in—wear sharp and wear longest.* Easily changed without removing the shoes.

Your blacksmith has Giant Grip shoes and calks. Have him put on a set *now,* when your horses need sure and safe footing.

THE PENNSYLVANIA FARMER PHILADELPHIA, PA.

OUR YOUNG PEOPLE'S FORUM.

From Forum Members and Friends

Dear Cousin Ruth:—Thank you for your membership pin. We have the Palmer method penmanship in school and I have my Palmer method pin, my merit award, my progress pin, and I am getting my improvement certificate.

We are having a Christmas program in school on Friday and then we will have off the last two weeks of this month. I am very glad for Christmas. I might go to Lancaster next week.

I went sledding the other Friday and got my left hand under the runner of the sled. I wish the snow would not have melted so quickly.—Mary Hunchberger, Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—We are having good sleighing now. I go out to sleigh ride every night. Mary Rusin and I have lots of fun together. We go down the big hill, and sometimes we go into the ditch.

We also go skating on the pond. There, too, we have loads of fun falling down.

I wish some of the Forum friends would tell about the fun they're having now.—Jennie Serwanski, (X), Sullivan County, Pa.

Dear Cousin Ruth and Forum Friends:—I have a cat named Rusty. He is yellow with kind of rusty rings around him. That is the reason we called him Rusty. I used to have a pet calf but it died.

In the summer we had baby chicks. I fed and watered them twice a day, morning and evening. They would get up on top of my head and on my arms and shoulders. I often wish I would have had their pictures taken like that.

We have a cross rooster. Almost every time I see him I tease him. That makes him cross. He will stand you a battle every time he gets a chance. When the battle is over he will get up some place high where every one can see him and crow. He spurred me on the ankle the other day till it bled.—Eleanor L. Miller, twelve (X). Perry County, Pa.

MY BROTHERS AND PET CALF
Emma Elwell, Salem County, N. J.

Dear Cousin Ruth and Forum Friends:—We live on a farm of 100 acres near Paradise. My father raises Holstein cattle. We have 32 head all T. B. tested. I like to help father with the cows.

My teacher, Mr. Hemphill, was kind enough to take the girls of my class to the Sesqui this summer. Coming home from the Sesqui we stopped at the Zoo. We enjoyed the trip very much.—Elsie Metzler, Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—I live on a farm about ten miles from the Allegheny River. Yes, Ada, there is plenty of elbow room on the farm. In summertime I help to harvest the grains and haul in hay. I milk two cows in the evening and one in the morning. I like to milk and like to drink it, too.

We have about 100 chickens and I feed them. When we sell them I get part of the money.

I baked a "Snow Cake" and, Elsie, it just tasted fine.—Gertrude Hawkins, (X), Armstrong County, Pa.

Dear Forum Friends:—I entered high school this year and I like it very much. I go to the Frankford High which is about a mile and a half from where I live.

I live on a 200-acre farm and there is always lots of work to do.

Yesterday the U. S. Navy dirigible, "Los Angeles," went over. The balloon seemed very low and you could see real well. Nearly every week a dirigible or an airplane goes over so that I can see it. Just before the Shenandoah was destroyed by that storm in Ohio it went over our farm. You could look right straight up in the air and see and hear it very plainly.

Why don't some more of the boys from Sussex County write?—Francis M. Gum, fourteen (X), Sussex County, Del.

MY BROTHERS AND SISTER. I'M HOLDING BABY BROTHER
Francis M. Gum (X), Sussex County, Del.

Dear Cousin Ruth and Forum Friends:—My goat, Billy, is my favorite pet. He butts at trees and at me but he doesn't mean to hurt.

My dog, Prince, is jealous, if you pet Billy and not him. He barks and growls at you.

If I take time to write about each of my pets it would fill pages and pages.—Anna May Craven, (X), Cameron County, Pa.

Dear Cousin Ruth:—I have a pet dog named Wallise. He is brown and white. He is a good dog. He will get the chickens together in the evening. I live on a farm and I like the farm much better than the city. We have some good apples on our farm.—William Seeley, Cambria County, Pa.

Dear Forum Friends:—I am a new reader of Pennsylvania Farmer. We have been living on a farm only a little over a year. We moved from a large city and it is quite different in the country.

I sure do enjoy reading about the Forum friends. Well, we are having the first snow this year. My brother and I go coasting in our orchard. We are very busy bringing in wood. I enjoy feeding the chickens and hunting the eggs. We have about 300 chickens.—Thelma Bender, Berks County, Pa.

Dear Cousin Ruth:—I am a little boy and can't write so my sister is writing for me. On May 2 we went with our neighbor and some of their relations to Pittsburgh to see their little girl who is deaf. We only rested once on the way. It was about dinner time when we got there. It was lots of fun to see the children at the school make signs with their fingers.

After we ate our dinner we took the little girl along and went to the Highland Park. There we saw all kinds of animals. It was lots of fun to watch them. We were watching the elephants when one of them got mad. Then the keeper ordered all of the people out of the building. It was about time to feed them anyway.

Papa, mamma, my three sisters and myself were together then. So papa went and got the people that went with us. Then we started home. Our neighbor took the little girl back to the school. Coming back we stopped at some garage and ate our supper. We arrived home about nine o'clock.—William Smith, Jr., five, Venango County, Pa.

Dear Cousin Ruth and Forum Friends:—I have a pet cat, he is striped like a tiger. He likes to go after my feet and will bite them. He can take somersaults and roll around a spoke on a chair. I am in the eighth grade. I like grammar best of all my studies. I have different teachers for grammar and history. We sleighride every day up at school. I do not have far to walk. I just cross over a little field and I'm at the schoolhouse.—Florence Johnson, twelve, Elk County, Pa.

Dear Cousin Ruth and Forum Friends:—We have a skating pond out in our field. I am just learning to skate. I had a pet lamb whose name was Susie. I went on a trip this summer. We went around lots of mountains and I had lots of fun.—Hazel Tulloch, ten, Crawford County, Pa.

Thanks and Explanation

MANY thanks to the Forum folk who sent me holiday greetings in letters and on Christmas cards. I appreciated them very much.

I hope you have all had a fine time this vacation Did you find yourselves in a beautiful fairy world when you woke up the day after Christmas? Every tiny grass and tall weed, every fence and telephone wire, every branch on all the trees around my home was wrapped in a thick coat of ice. It was a dazzling sight when the sun shone between cracks in the clouds and made everything shine brightly against a black sky. I took several pictures. If any of them turn out well perhaps I'll show you one sometime.

Each week someone asks how to become a member of the Forum. To those who don't know our few rules I write the following explanation.

It costs nothing to join the Forum. Boys and girls who send in contributions, not of money but of letters, pictures, drawings, original poems, recipes, etc., become friends of the page. Those sending in contributions which I think particularly good are made members and receive the pin.

Many Forum friends write several times before they become members. Don't grow discouraged if you send in one, two, or even three contributions and aren't made a member. If your next contribution is very interesting and I think you have done the best you possibly can I'll make you a member.

COUSIN RUTH.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS.—All this arithmetic puzzle needs is just one minus sign—no pluses to add—nothing to do but place the minus sign where it belongs to make the four figures before the "equals" sign really equal to eleven plus eleven. Maybe you'll need to take some of the figures together as you did when you called the two "ones" eleven. Just try it out a few ways and I think you will get it. I'm glad I could have an arithmetic puzzle so soon after some of you asked for one.

When you have solved this puzzle, send me the answer on a postcard or in a letter so that it reaches me by January 14th. BE SURE TO SAY HOW OLD YOU ARE, and where you live, including the county, and don't forget to tell when your birthday comes.

The prizes go to the ten children, sending in the correct answer, whose cards (or letters) are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to the Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the puzzle published in the December 18 issue of Pennsylvania Farmer (the one about the little boy puzzler) is DICK BROWN:

The prize winners are: Douglas Cooper, age 6, Denton, Md.; Alda L. Haney, age 7, Leechburg, Pa.; Miriam Hoover, age 8, Leola, Pa.; John Kuczynski, age 10, Hackettstown, N. J.; Pauline Shellenhamer, age 10, Hershey, Pa.; Adelaide Soden, age 11, Englishtown, N. J.; Ruth Stahl, age 10, Wrightstown, N. J.; Mary Esther Stoner, age 9, Ephrata, Pa.; Harry Walling, age 12, Keyport, N. J.; John Henry Yackey, age 11, Egg Harbor City, N. J.

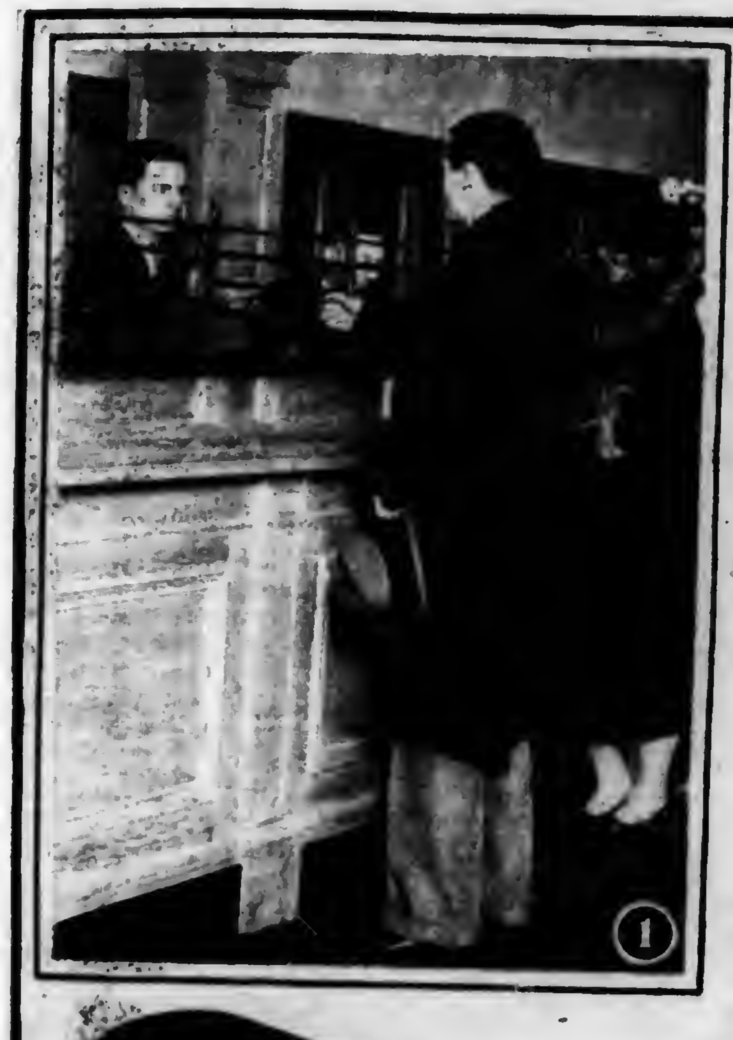
A number of you Little Folks that I have known for some time sent me nice holiday greetings. As there are so many new names each week, and I cannot write to every one of you, I want to say this:

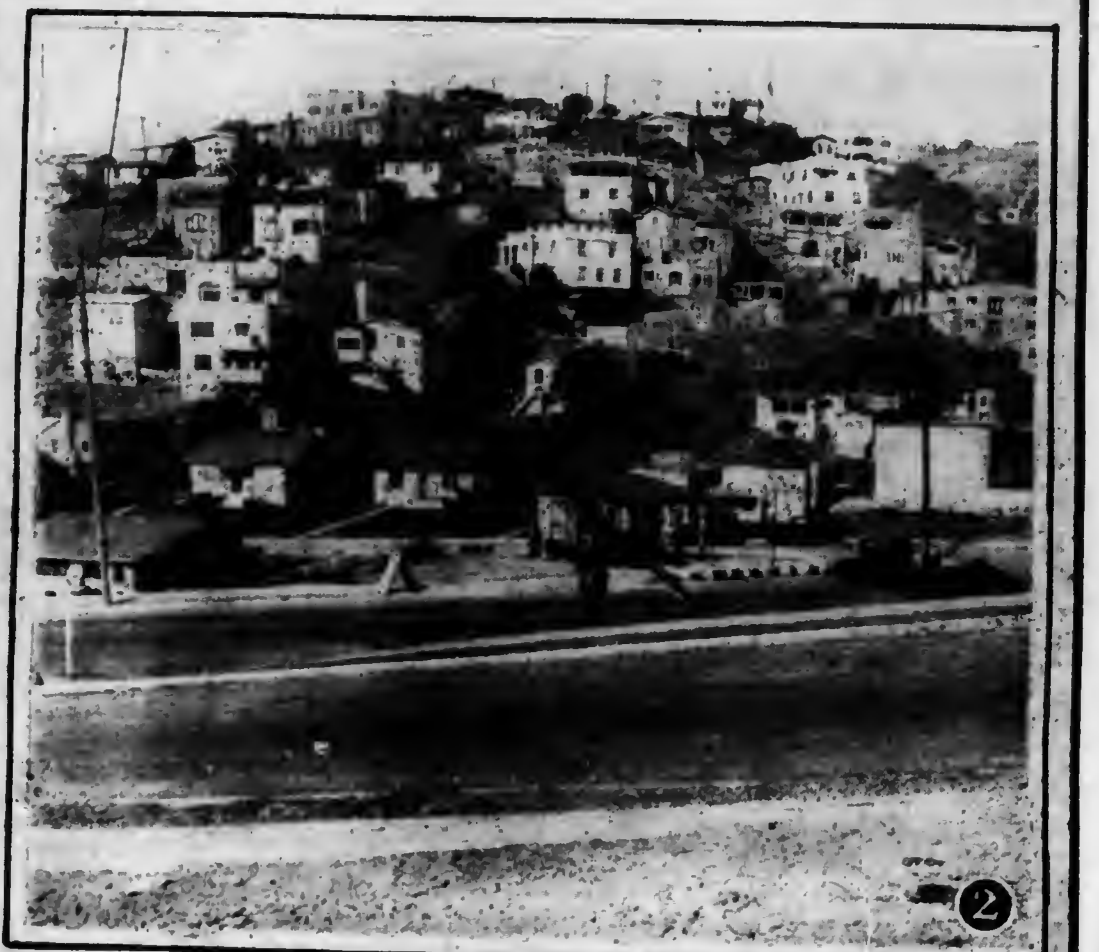
Thank You! You're Welcome!

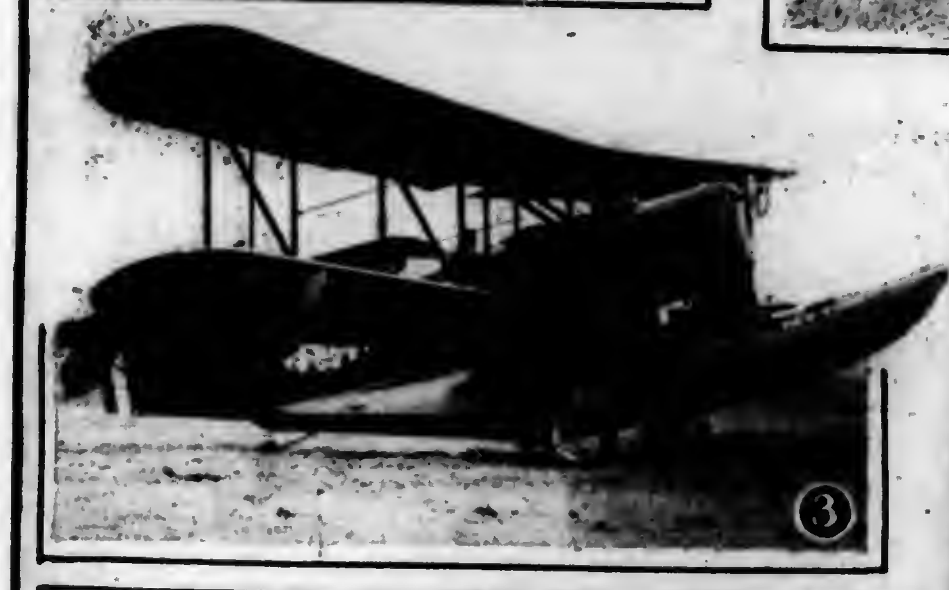
That does for old friends and new ones and I'm glad to have so many of both kinds.

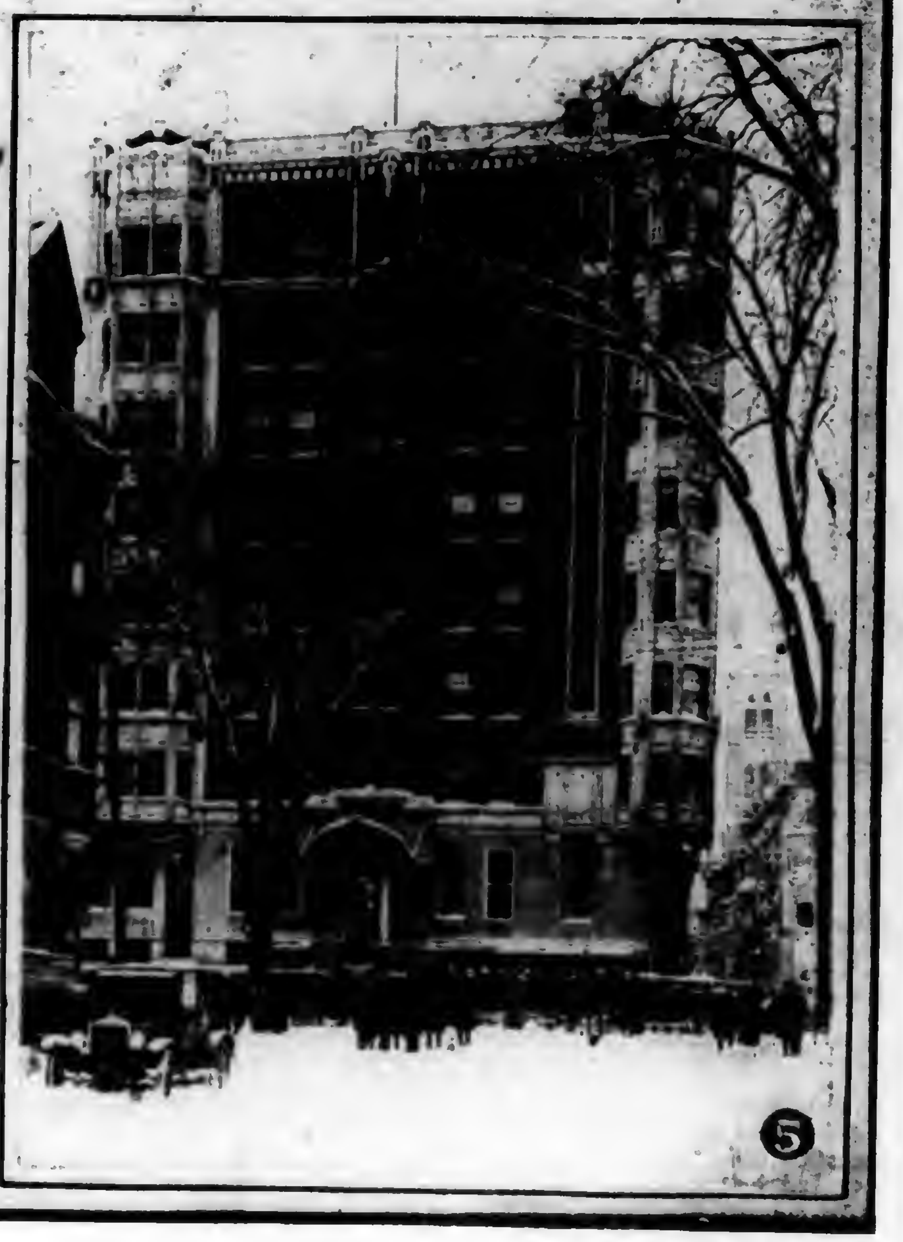
9 8 7 6 = 11 + 11

PASSING EVENTS IN PICTURES









1.—As cages seemed to be no protection against hold-ups in banks, a New York banking house equipped its newest branch with the tellers' counter shown above. Nothing but an ornamental grille separates the teller from the depositor. This is the first bank in the United States to remove cages. We wonder how it affects the insurance risk

2.—Real estate men of Hollywood, California, have followed the practices of the cliff dwellers by building homes on steep hillsides surrounding the city.

3.—The "New York," one of the five planes making the Pan-American flight, just before hopping off from San Antonio, Texas, on December 20th.

4.—At the Perkins Institute for the Blind, Watertown, Mass., the children study and play much as normal children do, and enjoy making snow houses.

5.—In Albany, New York, an eight-story apartment house was removed from its foundation, "jacked" onto a transfer table of rollers and moved an entire block thru two feet of snow. Here it is on its way to its new site.

Light and Outdoor Pictures for the Workroom of the House

NOT long ago I enjoyed seeing inside a new house. The big living room was carefully planned for light and air but the kitchen had somehow missed out in the arrangement. It had but two small high windows over the sink which was in one corner of the fair sized room. The range was to be placed in a dark alcove at the other end of the room. Even if they finish the walls and woodwork in white enamel, it will not be a place where I should like to cook and bake.

Many older kitchens, also, appear to have been arranged to escape a window tax, but a little thought, planning and some money work wonders. In one such place the unsatisfactory cupboards were removed to add a window and then more compact cupboards were built against a partition. In another kitchen where countless dishes had been washed in a dark corner sink, a small casement window has quite transformed the place.

And then after we get enough windows to see what we are doing, we begin to notice the view outside. Fortunately for us country folks we can control, to a greater extent than city people, the scenery around our homes. Whatever the natural advantages of our location, any of us can have flower beds to provide a succession of blooms thru spring, summer and fall. Shrubs, as well as vines, make good screens to hide anything unsightly, and they are beautiful in winter when loaded with snow.

Particularly if one is limited as to available space or time, it is well to "paint the picture" for the kitchen view with a small variety of plants and shrubs, choosing those best adapted to local conditions. For instance, if I had the sunny brook that slips across my friend's backyard, I should border it with Jap iris, forget-me-nots, and ribbon grass, with possibly a willow or two as background.

If the ground sloped steeply up or down from my windows, I would try clumps of hydrangeas, both early and late, and sweet rockets and lilacs and bridal wreath for May blooming. I think Scotch marigolds and golden glow would thrive there, too.

There are so many hardy flowers from which to choose those best adapted to our own place and pocketbook — let's have our prettiest vistas opening from the windows where we work.—Vida M. Bates, N. Y.

Some kitchen windows look out upon fruit trees, others upon hills and valleys. Whatever the view from your window make it as attractive as you possibly can.

Southern Windows and a Rocker

I WAS in a kitchen the other day that appealed to me. There were two southern windows—I should always want southern windows in a kitchen—both with deep sills, deep enough for plants. A work table was in front of one window and a small rocker close to the other. The housewife assured me that she used that rocker more than any other chair they have. In it she has more visits with the family than in any other.

Father drops into that chair every time he comes thru the house and visits a few moments. Son sits there while he recounts the day's doings in school.

Our kitchens must be large enough to work in comfortably, and we must not shut our families out.—May H. Mumaw, Ohio.

Editor's Note.—If you are building a new kitchen or rearranging your present one, you will want to study a brand new bulletin on the subject of modern labor-saving kitchens. Farmers' Bulletin 1513-F tells just how to plan both new and old kitchens to make them practical. The bulletin is full of suggestions of all kinds which add to the convenience of the country woman. You may obtain this book free by mailing your requests to the United States Department of Agriculture, Washington, D. C.

These New Kitchens

THE kitchens they have now-a-days
Are very grand indeed,
They shine with paint
But still they ain't
Just what I seem to need.

The winders have chintz curtains
And the porcelain table's fine,
The sink's so nice
Must cost a price
The very faucets shine.

With all the fancy fixin's tho
I think they're kinda bare,
It seems to me
There ought to be
Some place—a rockin' chair.

Electric ice-box—'lectric stove—
Linoleum made to wear—
Can't fill the lack
Or rest the back
Like my old rockin' chair.

There ain't a single spot to wait
While somethin' finishes boilin',
A place to sit
And rest a bit
And stop a spell from toilin'.

I know you can't keep up a house
'Less into work you're pitchin'—
But I don't care
Old Rockin' Chair
I want you in my kitchen.
—Elsa Clark.

Timely Tips

HERE is a substitute for cream. Thoroly beat two large or three small eggs, then pour very slowly over them one cup of boiling hot tea, and keep stirring. Only an expert can distinguish this combination from excellent rich cream.

* * *

By mixing together one ounce of sulphate of copper, one ounce of sweet spirit of nitre and one pint of water, and then waiting a few days you will have a fine home made bronzing liquid.—M. G. Taylor, Pa.

* * *

Thermometers cost but a trifle when compared with the time, labor and needless expense they often save. All winter long we keep one in the bathroom, one in the cellar, and another one is moved from the fruit closet to any room or place we think requires it.

By knowing just what the temperature is you can fortify yourself against frozen water pipes and possibly a large plumbing bill.—Clarice Raymond, N. Y.

* * *

The days are past when an evening dress needs an entire trunk tray to hold it, lest it crush and crease. An overnight case unpacked, the other day, disclosed the owner's party gown rolled, for safe transportation, on a mailing tube the length of the little suitcase. It was then covered with tissue paper and wedged in place. The dress came thru with hardly a wrinkle, and took the minimum of space for the inside of the tube could also be utilized for small soft bits of lingerie, folded silk stockings, or toilet articles.—Aldis Dunbar, Mass.

* * *

A friend with whom I was having a telephone conversation about the chances of the power company's giving us electricity (which are slight) told me how she had just cleaned her lamps. She boiled the burners with water to which she added caustic soda and even boiled the wick and hung it out in the sun to dry. Now she has a fine light.—Mrs. W. E. Hebel, Pa.

For the Sick Room

INSTEAD of discarding the old arm chair, fit it up for use in the sick room. Cut off the back and arms just where they join the seat, and this section makes a very handy arrangement for the patient to use during the stage of "sitting up in bed."

If you cut a nice board of the right length to place across the arms, you will have a good place on which to set the food tray. The same board provides a writing or working table for all sorts of bedside activities. The frame can be strengthened by nailing thin strips of wood from the bottom of the back across to the bottom of the piece which supports the arms on each side.—Helen Manning.

Soups That Stick to the Ribs

A SOUP need not be just an appetizer, made thin and unattractive, but so nourishing and palatable as to become the main dish. Especially during the cool months, these soups ought to be served.

CREAM OF CAULIFLOWER

Break a large cauliflower into sections and boil in salted water until tender, covered. Season and rub thru a sieve, saving the water in which it was cooked. Heat a quart of milk very hot with a little butter. Rub two tablespoons of flour smooth in a little cold milk, add to the hot milk, stir until thickened. Add the cauliflower and water and serve.

A little onion, grated, boiled with the cauliflower and rubbed thru the sieve with it adds flavor for those who like it.

RED BEAN SOUP

Wash two cups of dried red beans and soak an hour. Cook slowly until soft. Chop four full slices of bacon very fine and brown in a hot pan with one diced onion. Cover with three cups of milk, heat well, adding the beans which have been allowed to cook down, but not burn. Season and serve.

LAMB BROTH AND DUMPLINGS

A pound and a quarter of rack of lamb will serve six. A pound of the neck makes excellent broth if you do not wish to eat the meat.

Wash the meat and put on to cook in cold water. Season when hot and cook until tender, seeing that there is plenty of water on it to make broth. Make dumplings of flour, salt, milk and baking powder, mixing quickly and dropping them into the hot broth from a spoon. Cover and steam for twenty minutes. Serve the dumplings in the broth.

BEEF AND TOMATO SOUP

Chop a pound of top of the round beef into inch cubes. Season and cover with water. Cook until tender. Add two cups of tomatoes and serve with buttered toast or hot biscuit.

GREEN SOUP

Cook together in water, a quart of fresh spinach, half a small cabbage, shredded, and enough chopped celery to make two cups. Season and rub thru a sieve when soft. Heat a quart of milk very hot, season with butter and pepper, add the greens and the water in which they were cooked, thicken a little with flour and serve with salt crackers.

POTATO AND TRIPE SOUP

Cut a pound of fresh tripe into squares an inch and a half each way. Boil ten minutes in salted water. Meanwhile boil three large potatoes cut into slices until tender. Cover the potatoes with milk, season with butter, add the tripe and serve.—[illegible]fie Maurine Paige.

KEEPING HUSBANDS HAPPY

Neatness Wards Off Many a Household Tragedy

NINE out of ten housewives think they would make highly successful business women had Fate placed them in an office instead of a kitchen, and eight out of the nine are right in their opinion. The only trouble is that they under-rate the kitchen position and its possibilities.

In the first place if you lose a boss, or rather he decides to lose you, it is only the work of a few days (if you are competent) to get another. If you lose a husband the loss mars your whole future life. If you don't like the way your boss brushes his hair and he doesn't like the way you powder your nose, so long as you know how to handle his business and he signs the Saturday pay checks before he goes out to the golf links, life runs along fairly well. When you begin to notice that husband's hands are awkward and he wonders why your hair is always wispy and untidy, tragedy enters.

In planning a season's clothes it is better to wear a cheaper coat, to buy less ribbon for the fancy undergarments and less expensive things for the house, and invest a reasonable amount of money in house dresses, house shoes and becoming caps.

Appropriate Clothes Are Best

Pretty one-piece house-dresses cost no more than the calico wrapper of a former generation, boudoir and sweeping caps not only keep the hair in good condition and save frequent washing, but are becoming. The wearing of a cap also insures cleanliness and domestic science schools require their pupils to wear a washable cap of simple design when cooking.

The slender woman may wear a ark skirt and a middy blouse of ghter material or white. A house-ress of medium blue chambray with hite collar or a large white lawn chu will be becoming and it can be overed with an artist smock of dark- color when washing windows, opping floors, etc. A pair of foot- stockings or underwear sleeves ay be drawn over the dress sleeve hen cooking bacon, or meat the fat which is likely to fly These are ly removed as soon as the frying completed.

Shoe Comfort for All Tasks

A worn-out, down-at-the-heel shoe only one use in the kitchen, it ill serve in the place of a stick of dling, if the fire is low. A neigh- once slipped on a pair of shoes, sole of which had worn thru but uppers were apparently too good throw away. At the top of the irs that broken sole caught and rolled ignominiously down, for- nately escaping with bruises and ained muscles.

A pair of gymnasium shoes for rubbing and mopping, for the trips o the damp garden and for wear hen it is necessary to stand on a f to wash the second-story win- ; and a pair of comfortable light ight shoes with a medium heel for wear at other times, are an nomy,—because they are health d strength savers.

Keeping the Figure Fit

Then there's the question of girdle corset. No woman wants to wear same one for kitchen and church, if an old, out-of-shape, broken- yed corset is to be worn at all, it l be more useful when the wearer "holding herself up" keeping her cles taut, because she is in pub-, than in the kitchen where there a temptation to let one's self go, d where there is need of good ch-correcting stays.

A general would look a sorry fig- at the head of his army attired in a bathing suit. Correct attire is a housewife's uniform for in it she battles for her home and happiness. —Laila M. Thornton, N. Y.

The Kitchen Cabinet

BASLER LEBKUCHEN

1 pound granulated sugar
¾ pound candied citron cut into small pieces
Rind of 1 lemon, grated
4 eggs
¼ teaspoon cloves
¼ pound almonds ground medium fine
1 tablespoon cinnamon.
Nearly 1 pound flour

Stir eggs and sugar till extremely light—about twenty minutes. Add the other ingredients in order named. Roll to one-quarter-inch thickness. Cut in diamond shapes and long narrow strips. Bake on well paraffined pans and cool before removing. Ice one shape with powdered sugar and orange juice, the other with powdered sugar and lemon juice. Stir each icing till a smooth nice spreading consistency.

* * *

HAZEL NUT CAKES

5¼ ounces hazel nuts
4½ ounces almonds, unblanched
12 ounces granulated cane sugar
Whites of five eggs

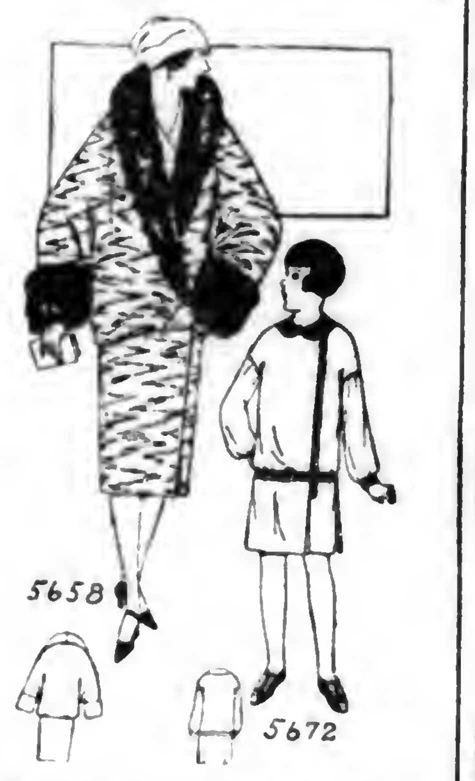
Beat eggs and sugar until very stiff. Reserve 4 tablespoons of this mixture for icing. Add nuts ground medium fine. Roll mixture on board dusted with powdered sugar and flour.

Cut into small cookies one-quarter inch thick. Ice and bake in slow oven ten minutes.—Betsey Ford.

When Wintry Blasts Blow

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5658.—Coat Model.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3⅜ yards of 54-inch material together with five-eighths yard of contrasting material for facings on collar, cuffs and fronts. Pattern, 10 cents.



5672.—Neat for School.—Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2¼ yards of 40-inch material together with one-quarter yard of contrasting material for facing on collar, cuffs and belt. Pattern, 10 cents.

Tom Sawyer's COMING BACK
Yes, right into your own home, in the Pathfinder. Tom is alive again with all his impishness, his hair-raising experiences, his escapades, his thrilling rescues, his quest for adventure—the very same Tom Sawyer who made Mark Twain famous—and he's coming to you in the Pathfinder. The Pathfinder editor is spending a lot of money so that everybody may have a chance to read this most popular of all American stories. The only way to secure this story except in costly book form is to read the Pathfinder. Every week the Pathfinder is loaded down with just the things you want to read—world news and pictures, brilliant editorials, stories, travel articles, puzzles, humor, and miscellany. The Pathfinder is the nation's most helpful and entertaining weekly magazine with nearly 3 million readers—and it comes to you direct from the seat of government. Not sold on newsstands or streets. Mark Twain's masterpiece, Tom Sawyer, will begin in the Pathfinder Jan. 29. You can get the Pathfinder every week on trial 3 mos., 13 issues including Tom Sawyer, for 15 cents, coin or stamps. Send your 15 cents today so you won't miss any of this great story.
PATHFINDER, 464 Langdon Sta., Washington, D. C.

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Far

JUDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, had for sometime had an idea that Bayne Trevors, general manager, wasn't square. She hadn't been in his office more than a minute before she knew he wasn't square and had fired him. It didn't take Trevors long to realize she meant business and the men realized she meant business from the instant she stepped into the bunkhouse with "I am Judith Sanford. This outfit belongs to me. I fired Trevors. You take your orders straight from me from now on."

The men grumbled. Trevors threatened to sell her out to the Western Lumber Company. Fortunately, Bud Lee, horse foreman, said he'd stay and old Carson, who loved nothing better than a fight, promised to help her in the trouble ahead. She couldn't depend upon Pollock Hampton, third owner of the ranch. He didn't care how things went if he got money when he wanted it.

That afternoon when she called the veterinarian at Lower End he wasn't there. Trevors had fired him three days before because they didn't agree on treatment for lung worms. Instantly she put in a long distance for "Doc" Tripp, Rocky Bend. It didn't take him long to say he'd be out at once.

Then Judith began to check up on the men about the place—Ed Masters, electrician; Williams, the carpenter; Johnson, ditch man, and Miller, the storekeeper, one of the old guard who advised her to hurry over to the milking corrals—and went along. There was trouble all along the line. Bill Crowdy in defiance of her orders was still giving sulphur treatment for lung worms and Nelson, sent by Trevors to make trouble, had persuaded the milkers to leave the place for jobs with the lumber company.

Toward evening "Doc" Tripp came.

Continued from last week

"I'LL give you time to draw a second breath," she told him, forcing into her tone a lightness which she did not quite feel, even tho a surge of satisfaction had warmed her at the first thud of his horse's hoofs. "Then we'll talk."

She switched on the lights and turned to look at Tripp. He was the same little old Doc Tripp, she noted. His wiry body scarcely bigger than a boy's of fourteen, he was a man of fifty whose face, like his body, suggested the boy with bright, eager eyes and a frank, friendly smile.

"Prettier than ever, eh, Judy?" Tripp cocked his head to one side and gave his unqualified approval of the slim, supple body, and superb carriage of this girl of the mountains, warming to the vivid, vital beauty of the rosy face. "Been driving those cow-college boys down at Berkeley plumb crazy, I'll bet a prize colt!"

Judith laughed at him, watched his slight form disappear in the wide arms of a chair which seemed fairly to smother him in its embrace. Then from her own nook by the fireplace she opened her heart to him:

"It's not just that Trevors has crippled me by taking all of my milkers away; not just that he has come near doing I don't know how much harm in having Crowdy turn those calves with the lung-worm out into the fields with the others; not just that during the last few months, he has lost money for us right and left; not just that Benny, the cook, has tried to fire the range."

"What's that last?" said Tripp quickly. "Tried to smoke you out, huh?"

She told him briefly. How she had first seen the smoke as she came back to the ranch-house; how she had sent Jose on the run to get some of the other hands to see the fire did not spread; how, a little while ago, Carson, the cattle foreman, had come in and assured her that the damage was negligible.

"It was just a brush fire," said Judith. "Thank Heaven, things are pretty green yet. Carson says it might have been lighted by Benny, who, it seems, is one of Trevors' hirelings and not above this sort of thing; or it might have been accidentally started by some careless hunter. Anyway, and that's enough for me, the fire broke out close to the trail that Benny traveled on his way to the Western Lumber camp. But it isn't just these things which have set me to wondering, Doc. What I want to know is this: in how many other, still undiscovered ways, has Trevors been knifing us? And what else will he have ready to spring on us now?"

"Just what do you mean?" Tripp looked at her keenly.

"This case of lung-worm, to begin with: where did it come from?"

"Imported," said Tripp. "Trevors bought those calves, or at least four of the sick ones, last month. Brought them in from somewhere down the river. Smuggled 'em in, so far as I am concerned. Never gave me a chance to look them over." He paused a second. "Specially imported, I might say."

"I knew it!" cried Judith. "That's the sort of thing I am afraid of. If he has gone to the limit of introducing one disease among our cattle, what other plagues has he brought to the ranch? Has he imported any other outside stock?"

"No. He's been busier selling at a sacrifice than buying, just as I wrote you. Never another head has he bought lately—unless," and Tripp's eyes twinkled at her, "you count pigeons!"

"Pigeons!" repeated Judith.

Tripp nodded.

"Funny, isn't it," he went on lightly—"that a man like Bayne Trevors, hard as nails and as free of sentiment as a mule, should fancy little cooing, innocent-like pigeons? You'll hear them in the morning."

BUT Judith was not to be distracted by Tripp's talk. She smiled at him, however, to show him that she had understood and appreciated the purpose back of his light words.

"We're all going to have our hands full for a spell, Doc," was what she said. "To Trevors, with a free swing here, it must have appeared rather a simple matter to make so complete a failure as to force us, encumbered as we are, into selling out to the highest bidder inside the year. Especially when he counted young Pollock Hampton as a man without business experience and Judith Sanford as a girl without brains! But, Doc, he must have known, too, that at any time there might occur the very thing which has happened—that he'd lose his job. He strikes me as a rather long-headed man, doesn't he you? Now, a man who saw ahead, figuring on this very contingency, would have more than one trick up his sleeve. We've caught him, luckily, at the sick-calf game, before it is too late. I think that the obvious thing for you to do is to make certain that all the rest of the stock are in shape. Will you begin tomorrow making a thoro investigation?"

"Yes," he answered. "You're right there, Judith. There's nothing like making sure."

"HE'S not thru with us," continued the girl; "you could read that in the look of his jaw and eye when he left. Just what he stands to make on his play, I don't know. But I do know that the Western Lumber crowd is offering us only a quarter of what they'd be willing to pay if they had to. That means that they could afford to bribe Bayne Trevors pretty heavily and still save half a milion on the deal if he succeeded in the thing he has begun."

"In his way," admitted Tripp thoughtfully, "Trevors is a big man. Big men cost big money. And, besides, it looks to me as tho he were a heavy stockholder in the Western Lumber. He'd stand to win two ways."

"Another thing I want you to do," Judith went on, "is to try to locate all of dad's old men whom Trevors let go. Johnny Hodge and Kelley and Harper and Tod Bruce. We'll need them. We've got to have men that crooked money can't buy."

"Aren't you magnifying things, Judith?" asked Tripp quietly. "There's such a thing as law in this country, you know."

But she shook her head.

"Maybe I'm seeing the dangers too big. But I don't think so. And it will be a lot better for Blue Lake ranch if I see them that way at the beginning. And as for the law, it costs money. I'm not sure that Trevors or the lumber people would be averse to getting us involved in a lot of legal intricacies. Oh, he has been careful not to leave any definite proof behind him."

"You hit the bell that time!" laughed Tripp, and Judith smiled with him as there came to their ears the faint tinkle of the telephone bell in the office.

Judith excused herself and hastened to answer the summons. Hastened because she wanted to be back with Tripp as soon as might be. So, knowing her way so well about the big house, she went quickly thru the dark hallway without turning aside to switch on the lights and came into the office, dimly lighted by the stars shining in thru the windows.

"Doc!" Her voice rang out suddenly and Tripp sprang to his feet, wondering what had put that note into her exclamation. "Doc! Come here, quick!"

He ran into the hall that was suddenly illuminated as at last Judith's groping hand found the office switch. He saw Judith running ahead of him, out of the door opening on to the veranda and down into the courtyard.

"What is it?" he asked sharply.

"There was some one here," she told him quickly. "He went out that way, I think. Look thru the lilacs."

She ran on one way, Tripp hurrying the other, wondering. They saw the lilacs standing still in the starlight, saw the thick shadows thrown by the columns and grape-covered trellises, heard the murmuring of the fountain.

"Jose, perhaps," suggested Tripp, coming at last to her side.

"No!" cried Judith. "It wasn't. It was somebody in his stocking feet, standing in the hallway, listening to us. I heard him run before me; I saw him for a second, framed against the square of the window as he slipped thru and out on the veranda. Who could it have been, Doc?"

But a close search thru the shrubbery showed them nothing. It was clear that if a man had been listening at the door he could have had ample opportunity to slip away into the darkness. He would not be loitering here now.

The telephone bell was still insistently ringing and they turned back to the office.

"Judy," said Tripp solicitously, "don't you go and get nerves, now."

"You think I imagined the whole thing!" She looked at him with clear, confident eyes. "Don't you fool yourself for one little minute, Doc Tripp. I'm not the imagining kind—yet!"

She snatched up the telephone instrument.

"Hello," said Judith. "Who is it?"

It was the telegraph operator in Rocky Bend. A message for Miss Judith Sanford from Pollock Hampton, San Francisco. And the message ran:

What were you thinking of to chuck Trevors? Thoroly excellent man. You should have consulted me. Don't do anything more until I come. Send conveyance to meet Saturday train. Bringing five guests with me.

Pollock Hampton.

Judith turned frowning to Tripp.

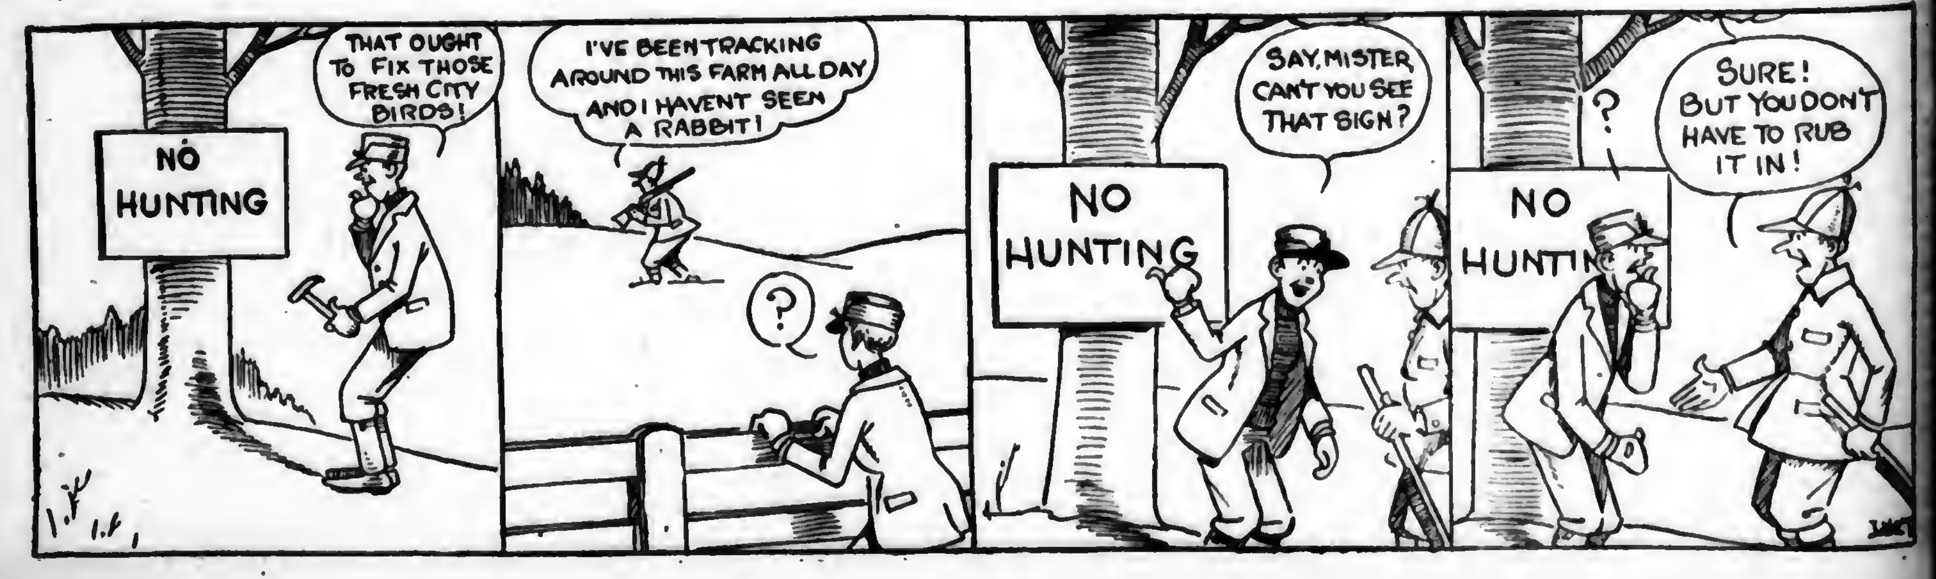
"As if I didn't have enough on my hands already," she exclaimed bitterly, "without Hampton dragging his fool guests into the mix-up! I could slap his face."

"Do it!" chuckled Tripp. "Good idea!"

BUSY days followed for Judith and for every man remaining upon Blue Lake ranch. A score of men, including the milkers, Johnson, the irrigation foreman, and his crew of laborers, had quit work, going over openly to Bayne Trevors at the Western Lumber camp. He had work there for every man of them, and Judith was not the only one upon the ranch who came to wonder how much money Trevors—or the lumber company—was prepared to spend in fighting her. From the first day she found the outfit short-handed.

Almost her first answer to Trevors' coup was to telegraph San Francisco for a Firth milking machine, together with an expert sent out by the Firth Company to install and superintend its working for the first few days. At the same time she hired from one of the Sacramento dairies a man who was to be foreman of her own dairy industry, a capable fellow with an intimate practical knowledge of automatic milkers. He, with a couple of strippers paid overtime wages managed until the dairy crew could be builded up again. Her new foreman from the first took the greater part of this burden off her shoulders.

Activities of Al Acres: *The City Man Says That the Sign Is Superfluous, Al* : By Lee



NO HUNTING
THAT OUGHT TO FIX THOSE FRESH CITY BIRDS!
I'VE BEEN TRACKING AROUND THIS FARM ALL DAY AND I HAVENT SEEN A RABBIT!
?
NO HUNTING
SAY, MISTER CAN'T YOU SEE THAT SIGN?
NO HUNTI
?
SURE! BUT YOU DONT HAVE TO RUB IT IN!
LEE

Mrs. Simpson, the matron from Rocky Bend, arrived, true to her promise and, motherly soul that she was, took a keen interest in Judith's comforts and in caring for the big house, of which she immediately waxed proud with an air of semi-proprietorship. Jose, from the first, bestowed upon the cheerful, bustling woman a black hatred born of his thorogoing Latin jealousy. From this or that corner, appearing unexpectedly, glaring darkly at her in a manner which ruffled her placidity and suggested to her lively imagination terrible visions of knives in one's back, he brought an actual thrill into Mrs. Simpson's long days of routine.

Busy days also for Bud Lee, who had already begun the education of a string of colts. Busy days for Doc Tripp who, unhampered, trusted, aided at every turn by his employer, was from dawn until dark among the ranch livestock, all but feeling pulse and taking temperature of horses, cows, colts, calves, hogs and mules. He stopped the calf sickness; effected cures in every case excepting one. And the rest of the stock he finally gave a clean bill of health.

BUSY days for Carson. Painstakingly he estimated, to the head, the number of cattle the pastures should be carrying, counting from long experience upon the hard months to come from August to December; estimating values; appearing at the week's end to suggest the purchase of calves from the John Peters Dairy Company, to be had now at a very attractive figure. And suggesting, almost insistently, upon buying a certain Shorthorn bull worth twice the twelve hundred dollars asked for him. Busy days for the foremen who had held over from the management of Trevors or who had been taken on since. The first crop of alfalfa, shot thru with foxtails, must be cut without delay and fed into the silos before the beards of the interloping growth could harden. Busy days for the short-handed milking crew; busy days of installing the new milking machines.

Judith and Doc Tripp had sought to find some trace of the man who, Judith insisted, had listened at the door in the hall. They had found nothing. So that episode, as well as Trevors himself, was shoved aside in their minds, in the stress of activity demanding attention everywhere.

With Saturday came Pollock Hampton and his guests. Trevors had misnamed him a fool, sweepingly mistaking youth, business inexperience and a careless way, for lack of brains. Just a breezy young fellow, likable, gay-hearted, keen for the joy of life, scarcely more than a boy after all. One of those rare beings whose attitude toward his fellow mortals was one of generous faith, who sought to see the best in people, who had an outspoken admiration for efficiency in any form. He came to the ranch prepared to like everything and everybody.

"Look here!" he exclaimed to Judith, before she had time for more than a sweeping appraisal of his friends. "Why didn't you tell me you were up to a thing like this? Great Scott, Judith, you don't know what you are tackling, do you? It's ripping of you; you're a sheer wonder to tie into it; you've got no end of nerve. But running a ranch like this—why, it's a big proposition for a thunderingly big man to swing."

"Is it?" smiled Judith.

Beyond that, the only answer he got from this brief conference was the timely suggestion that his chief concern for the immediate present lay in making his guests comfortable.

Accompanying young Hampton were "Major" Langworthy, a little short, fat, bald gentleman, who, so far as the knowledge of his club members went, had never been connected with any part of the army or navy, unless one counted his congenial brigades of cocktail drinkers; Mrs. Langworthy, his supercilious, uninteresting wife; Marcia, his languidly graceful daughter, in whom Hampton gave certain signs of being considerably interested; Marshal Rogers, the Oakland lawyer, and Frank Farris, the artist. Also Marcia's maid and Hampton's Japanese valet, Fujioki. In due course of time this representative of the Flowery Kingdom grew to be great friends with Jose, the two forthwith suspected by Mrs. Simpson of all sorts of dark plots and of a racial sympathy which must be watched lest it produce "something terrible."

Pollock Hampton, holding a third of the shares of the big venture, with his legitimate claim upon a third of the income, was of course a factor which must be taken into account. Judith, knowing little of him, sought to know more, watched him when he was talking, got his views upon many matters that came up haphazard, and found that, while she liked him, she would have been more than glad if he had not come to still further complicate matters for her. For it was open and shut that his interest and enthusiasm would demand a voice. She asked frankly how long he planned to stay?

"I'm here for good," he answered cheerfully. His explanation followed with a grin, quite as tho he were telling her of some rare good news: "Money's all gone, creditors are nuisances, there's no prospect with you here of having you send me anything. What is left for me but to stay?"

Judith suggested a monthly allowance. Hampton laughed good humoredly.

"Pay me to keep out of the way? There's nothing stirring, Judith. Absolutely. I'm here to give a hand."

Judith had hopes, even yet, that a couple of weeks or a month at the most, of life as it runs forty miles from the railroad would dampen and finally extinguish his bright enthusiasm. But swiftly those hopes died. This was his first visit to the mountains, and for a man sick of the city's social round, every inch of the ranch, river and cliffs and rolling hills had its compelling interest. Perhaps the thing which Judith overlooked was the blood of his fathers. For before Pollock Hampton, Sr., had made his money, he and his wife had been, like Luke Sanford, pioneers. Now something in the mountains here called vaguely to the soul of young Hampton and made him restless and stirred his heart. He looked up at the sheer and mighty fall of rock behind the ranch house and his face glowed; he leaned over the rail of a rustic bridge and forgot Marcia, who was with him, as he watched the beauty of the foam-flecked water. As he stood stock-still, looking on while Bud Lee rode a bucking bronco, his eyes were bright and eager.

"Glory to be!" he exclaimed to the major, who had been coaxed away from the buffet for a brief half-hour. "Watch that man ride! While I've been learning to dance and play the piano these men have been doing real things."

"Let's go have something," said the major hurriedly. For it did not fit in with his and Mrs. Langworthy's plans to have Hampton risk his neck at such pastimes—at least not yet.

It soon became obvious that long ago Hampton had given freely of his admiration to Bayne Trevors. For Trevors had taken the time, his own purpose in mind, to look in upon Hampton some months ago in San Francisco. Further, he had created the impression which he sought to make. An impression, by the way, not entirely erroneous.

"A great man!" cried Hampton warmly. "The only man I know big enough to swing a job like this."

To himself he said that the chief good he could do at the outset was to work to get Trevors back. With this in his mind and having had no full account of Judith's manner of ejecting the general manager, he went straight to her.

"Trevors is a friend of mine," he said lightly. "I'm going to ask him over to meet my guests. No objection, is there?"

She looked at him keenly.

"Do as you please," was her cool answer. "I imagine he won't care to come."

(To be continued next week)

The Latest in Potato Diggers

LAST season W. H. Leslie, who lives in the southern New Jersey potato section, used a new style tractor digger to take out his six acres of spuds. It was as far ahead of the horse-drawn digger, he said, as the horse digger is ahead of the old plow and potato hook.

This new way of handling the heaviest job in growing a crop of potatoes was developed last year by a manufacturer who has made a digger which can be fitted into the tractor now found on most potato farms. The change can be made in a very short time by extending the two tractor axles and installing a gear box.

Power to run all the lifting and separating mechanism is taken by a sprocket and chain from the tractor take-off and shaft and all the working parts are under the control of one man in his regular seat. If anything happens to clog the elevator a safety clutch automatically throws it out of gear before any damage can be done.

Mr. Leslie told me that it did the work very much faster than horses and even when set to go deep it had lots of power and made a perfect separation of the trash. Indeed, he said it was one of the most satisfactory tools he had ever used.

The compactness of this digger, the point is right under the front axle and only eleven feet over all, appealed to him as it got all the potatoes in a row. Also, with its abundant power, he could proceed with the work at top speed no matter how hot the day or adverse the conditions.

When the potato market or the thermometer is falling, speed in getting out the crop is essential and many growers remember only too well the dollars they have lost thru inability to work faster.—Thos. H. Wittkorn.

Digging potatoes in this way speeds up the job when the market or thermometer is falling fast.

Did you ever hear this one?—

There Is a Limit

The man and the girl were saying good-night on the doorstep when a window above them was pushed suddenly open and a weary voice said, "My dear sir, I have no objection to your coming here and sitting up half the night with my daughter, nor even your standing on the doorstep for two hours saying good-night, but out of consideration for the rest of the household who wish to go to sleep, will you kindly take your elbow off the bell-push?"

A Good Shot

A keen-eyed mountaineer led his overgrown son into a country schoolhouse. "This here boy's arter learnin'," he announced. What's yer bill o' fare?"

"We teach arithmetic, algebra, geometry, trigonometry—"

"No triggernometry," interrupted the old man, "he's already the best shot in the mountings."

First Aid

An elderly gentleman was observed acting rather nervously in a department store, and the floorwalker approached him.

"Anything I can do for you, sir?"

"I have lost my wife."

"Oh, yes. Mourning goods two flights up," promptly responded the floor-walker.

Helpful Hubby

During the spring cleaning, a man told his wife to go to the movies while he papered the house. When she came back, he showed her the results.

"But," she asked, "what are those big square lumps on the wall?"

"Dash it," said the man, "I've forgotten to take the pictures down!"—Sanford Mills "Velmo Times."

Political Pull

Ruth came home from her first visit to Sunday school carrying a small bag of chocolate.

"Why, Ruth, where did you get the chocolate?" asked her mother. Ruth looked up in surprise.

"I bought it with the nickel you gave me," she said. "The minister met me at the door and got me in for nothing."

Training Tells

Teacher—If there are any dumbbells in this room, please stand up.

A pause, then finally Johnny stood up.

Teacher—What, do you consider yourself a dumb-bell?

Johnny—Well, not exactly that, teacher, but I hate to see you standing all alone.

No Doubt About It

Minister—I hear, Paddie, they've gone dry in the village where your brother lives.

Paddie—Dry, mon! They're parched. I've just had a letter from Mike, an' the postage stamp was stuck on with a pin.—Chase Bag Co. "Bagology."

First Eskimo—You should pull the curtain down when you kiss your wife. I saw you last night.

Second Eskimo—The joke is on you, I was out last night.

Seasoned Boarder (to newcomer)—I say, old man, I don't think I'd touch the rice pudding if I were you. There was a wedding in this street yesterday.

Markets

Editors' Note.—The suspension of trading on account of the New Year's holiday makes it impossible for us to publish our usual complete market reports. The quotations given on this page, however, reflect the general trend of prices.

PHILADELPHIA MARKETS

December 31, 1926.

HAY AND GRAIN

Baled Hay and Straw—Timothy hay, No 1, $24.50@25; No 2, $23@24; No 3, $20@21; timothy, light, clover-mixed, No 1, $22@23; No 2, $20@21. Straw, straight rye, $20@21; wheat straw, $14.50@15.50; oat straw, $14.50@15.50.

Wheat—Car lots, in export elevators, No 2 red winter, $1.48 bid; No 2 red winter, garlicky, $1.40 bid; lower grades are selling at the usual trade differences.

Corn—Market nominal.

Oats—No 2 white, 58¾@59¾c; No 3 at a discount of 2@3c under No 2 white.

DAIRY MARKET

Butter—Solid-packed creamery, in tubs, higher than extras, 57@60c; extra, 92 score, 56c; 91 score, 55c; 90 score, 51½c; 89 score, 46c; 88 score, 45c; 87 score, 44c; 86 score, 43c.

Cheese—New York, whole milk, flats, fresh, 25½@26½c; single daisies, fresh, 26@26½c; longhorns, round lots, 27@27½c; small jobbing lots, 28@28½c.

LANCASTER MARKETS

PRODUCE—CURB MARKETS

January 3, 1927.

Butter and Eggs—Country butter, 60c; creamery, 58@68c; fresh eggs, 68@72c.

Dressed Poultry—Chickens, $1@2.50 ea; ducks, $1.50@2.50 ea; geese, $2.25@5.75 ea; turkeys, 75@80c lb.

Vegetables—Beans, string, 35c qt; beets, 10@15c bch; cabbage, 5@20c hd; carrots, 10c qt; cauliflower, 15@50c hd; celery, 10@20c bch; eggplant, 10@25c ea; endive, 10@15c a platter; lettuce, 10@20c hd; mushrooms, 25c pt; onions, 10c qt; parsley, 2 bchs for 5c; peas, 50c ¼ pk; peppers, 5c ea; poke, 15@18c bch; potatoes, 30c ½ pk; radishes, 10c bch; rhubarb, 15c bch; sauerkraut, 15@18c qt; scallions, 10c bch; souse, 5@25c mold; spinach, 10@15c ¼ pk; soup beans, dried, 13c pt; sweet potatoes, 15@25c ¼ pk.

Fruits—Apples, 20@30c ½ pk.

Grains (prices paid to farmers)—Wheat, $1.30; corn, 77c; hay, baled, timothy, $18@20; straw, $10@12.

Feeds (selling prices)—Bran, $39@40; shorts, $41@42; hominy, $41@42; middlings, $45@46; linseed, $54.50@55.50; gluten, $40@41; ground oats, $43@44; alfalfa, regular, $40@41; alfalfa, reground, $44@45; cottonseed, 41 per cent, $39@40; dairy feed, 16 per cent protein, $34@35; 18 per cent, $38@39; 20 per cent, $41@42; 24 per cent, $44@45; 25 per cent, $47@48; horse feed, 85 per cent, $44@45.

PITTSBURGH MARKETS

PRODUCE

December 31, 1926.

Vegetables (wholesale prices)—CABBAGE, N Y and Penna, Danish seed, bulk bbl, best, $2.50@2.75; poor, $2; carlots, ton, $28@30. CELERY, Calif, crate, best, $4.50@5; poorer low as $4. LETTUCE, Ohio, hot house, 3-lb bskt, 25@30c; 10-lb bskt, $1.25@1.40; Iceberg, crate, Arizona, $2.25@2.50; Fla, ½-bu hmpr, head, $1.25@1.50. MUSHROOMS, Penna, 3-lb bskt, $1@1.25. PARSLEY, La, bbl, plain, $4@5; Calif, drums, $3.50@4.

Fruits—CRANBERRIES, box, Mass and N J, best, $3.50@4; poor, $2.

HAY AND GRAIN

Hay—No 1 timothy, $20.50@21; standard timothy, $20@20.50; No 2, $18.50@19.50; No 3, $16.50@17.50; No 1 light clover, mixed, $22@23; No 2, $20@21; No 1 heavy clover, mixed, $26@27; No 1 clover, mixed, $26@27; No 2, $23@24; No 1 clover, $26@27; No 2, $22.50@23.50.

Oats—No 2 white, 55½@56c; No 3, 50@53½c; No 4, 43@48c.

Corn—New, No 2 yellow ear, 72@74c; No 3 and No 2 mixed ear, nominal; No 2 yellow shelled, 83½@84c; No 3 yellow shelled, 79½@81½c; No 4, 72½@75½c. Mixed corn value 2@5c under values of yellow.

YORK PRODUCE

January 3, 1927.

Butter and Eggs—Fresh eggs, 50c; storage, 45c; country butter, 50@55c; separator, 55@60c.

Vegetables—Potatoes, 25@35c ½ pk, $2 bu; cabbage, 3@10c hd; lettuce, 10@20c hd; celery, 5@20c stalk; horseradish, 5@10c glass; onions, 10@12c box; soup beans, 10c pt; lima beans, 15c pt; spinach, 20c ¼ pk.

Fruits—Apples, 15@35c ¼ pk, 75c@$1.50 bu; pears, 15c ¼ pk.

Wholesale Grain Market—Wheat, $1.32; corn, 82c; rye, 92c; oats, 45c; bran, $35 ton; middlings, $38 ton.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, January 3, 1927. Quotations cover solid car lots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$ 35.00
Spring bran	34.00@34.50
Soft winter wheat bran	36.00
Hard winter wheat bran	34.50@35.00
Standard middlings	35.50@36.00
Soft winter wheat middlings	37.20@40.00
Flour middlings	39.00@42.50
Red dog flour	44.00
White hominy	36.50
Yellow hominy	35.70@36.50
Gluten feed	41.85
36 per cent cottonseed meal	31.50@32.00
41 per cent cottonseed meal	33.50@34.50
43 per cent cottonseed meal	34.75@35.50
34 per cent linseed meal	48.70@48.75

Millfeed in light supply with demand quiet.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Prices Less Than Year Ago

FARM prices have not changed much the past month or so. The beginning of the New Year finds the general level about like the average of November and December, but the range is some 10 per cent under that of a year ago owing to the slumps in cotton, grain, fruit and in some lines of livestock.

Those who feed grain are mostly in better position than those who raise it to sell because animal products raised on cheap feed have been selling to better advantage than the crops. Wheat prices did not show any great net change the last two months of the year, altho some lines advanced. The price is still 25c or more under that of a year ago, while corn and feeds sell about the same as in early 1926. Winter wheat acreage is a little more than last season and condition not quite so good, but the outcome depends mainly on the extent of winter injury. The export prospect is considered moderately good because of the comparative shortage of the wheat crop in Europe, but part of the deficiency will be supplied by liberal crops of Argentina and Australia.

Supply curtailment, attributed to holiday influences and to the previous declines, was credited as the principal factor in price upturns on most classes and grades of livestock at Chicago around the end of the year. Heavy steers advanced fully 50c, yearlings and other slaughter classes gaining less, while stockers and feeders held barely steady. Hogs showed a net advance of 15 to 25c for the period, packing sows excepted, and fat lambs, under sharply reduced receipts, recovered 50 to 75c of the preceding week's decline. On the week-end session top hogs scored $11.90 and top lambs, $13.25. Wholesale trade in western dressed fresh meats at Atlantic Seaboard markets has been sluggish and price changes, for the most part, in buyers' favor.

Competition of imported butter became the main cause of unsettlement in dairy markets near the first of the year. Various sharp declines disturbed the minds of buyers and operations became more cautious with a tendency to buy for immediate needs only. Losses of one to 2½ cents occurred, with some recovery later. A more cheerful feature of the situation was the active demand for storage butter, causing much heavier withdrawals than for corresponding time a year ago. It is evident that the active consuming demand is the principal support of the market. Imports may limit any rising tendency but are not likely to become of large volume under present conditions. Cheese markets continued quiet and steady.

After reaching high point of the season in December, eggs declined somewhat in price but have been holding fairly steady since. This is the time of year when the main trend is downward with more or les interruption from weather conditions. Arrivals are fairly heavy fo winter, including liberal shipme from the Pacific Coast, where th poultry industry has been makin great advances. Eggs in cold storage are in lighter volume than year ago and are going into th market at a satisfactory rate.

Poultry markets quieted dow after the activity of the holiday season and prices have held abo steady. Storage holdings, howeve show increases. Trade in turkeys wa active, with advance in prices an the year-end supplies were fairl well cleaned up.

Apple markets show some sligh improvement with advances here an there of 25 cents per barrel for leading varieties and more than that f some kinds in light supply or especially wanted for export. Foreig markets have continued active wi good demand especially for the gr and yellow varieties, and over 12 p cent of the market crop has been e ported already.

The Butter Markets

THE evidence of strength in th butter markets which becam apparent late in the week ending December 24 developed into a decided firm tone at the opening Monday an prices advanced rather sharply o all markets. Confidence in the situ tion appeared more general and bu ers with direct consumptive outle operated more freely.

In addition to this buying, speculative interest developed in so quarters where operators felt th the supply of fresh butter was insu ficient to take care of consumpti requirements, especially on the eas ern markets.

Just why fresh domestic butt should be short at the moment is d ficult to say. Receipts at the fo markets for the first few days of th week under review were consid ably heavier than for those of th previous week and the correspond week a year ago. Some explanati for this condition can probably found, however, in the fact that bu ers for consumptive trade had boug sparingly during the period of decli ing markets early in the previ week and had allowed their stocks reach a low point not anticipat the rather sharp reaction which curred during the current wee Finding themselves short of butt and the markets advancing th came on to the markets and boug heavily.

Supply Centralized Cars Light

Centralized cars have been in ra er light supply during the curr week on all markets but especially at Chicago. Lower grades of wh milks have also been in short sup and in fair demand. Butter has m ed out of the freezers in fairly l eral amounts and the situation a whole appears quite favorable. Th are few, if any, weak points evid that would indicate any sharp brea but neither are the factors of fir ness such that further sharp a vances are anticipated.

According to the informati available at the moment the prod tion of butter is slowly increa from week to week. This is n in the slight increase of size of r ular shipments from the creame during the current week.

During the week under revi 7838 boxes of New Zealand bu arrived at New York and was f ing a ready sale at prices rang from 52@53c. The declines of mestic prices last week curta the purchase of more foreign b ter but with prices advancing dur the current week a certain degre confidence was restored and with wider range between foreign domestic prices some new buyin New Zealand has developed.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	...	.52	.54	.48½
Eggs, fresh gathered extra firsts (N. Y.)	...	...	.58½	.43½
Potatoes, 150-lb sack, (Philadelphia)	4.25	4.05	4.25	7.13½
Steers, good to choice (Lancaster)	...	...	9.50	10.00
Hay, Number 2 timothy, baled (Phila.)	23.50	23.50	23.50	24.50
Wheat, No. 2 red winter (Philadelphia)	1.48	1.48¾	1.48½	...
Oats, Number 2 white (Philadelphia)	.59½	.60½	.57¾	...

Many Markets Show Advance

Review of the Week Ending January 1

GRAIN—The market held about steady with trading limited on account of the holidays. Wheat prices held about steady after the recent decline. European markets were also quiet. The movement of new corn increased and prices were slightly lower. The best quality oats were in demand and the market firm.

HAY—The market averaged firm despite the rather liberal offerings. The demand in the East and South was good. Alfalfa receipts were liberal.

FEEDS—The holidays retarded the movement of feeds and trading was quiet. Wheat feeds were about steady but linseed meal was weaker. Gluten feed moved readily altho offerings were fairly liberal in the East. Hominy feed was barely steady and cottonseed meal was firm.

LIVESTOCK—The top price of hogs at Chicago was higher than last week but beef steers registered declines of 25@75c. Heifers advanced and cows held about steady. Vealers were $1.00 to $1.25 higher with stockers and feeders unchanged. Fat lambs were steady with yearling wethers advancing. Feeding lambs were steady and fat ewes unchanged.

BUTTER—The markets opened firm and prices advanced sharply on all markets. Supplies of fresh butter were light and buyers were more active. The best 92 score reached 56½c in Philadelphia and 55c in New York. Most operators expect a firm market this week.

EGGS—The New York egg market was firm toward the close of the week, especially on fancy fresh stock. Prices on this stock advanced. Nearby Pennsylvania and New Jersey eggs were more plentiful but the quality was irregular. Extra fancy stock sold readily at a premium.

POULTRY—The live poultry market in New York was firm with prices advancing. Chickens advanced about 2c per pound on Thursday and fowls were higher. Supplies of broilers were not ample for the demand. Receipts of dressed poultry were liberal and the market weak.

POTATOES—The potato market in Philadelphia opened steady and became firmer as the week advanced. The cleaning up of the accumulation of stock was the chief strengthening factor. Prices advanced and fancy well graded stock was in active demand. On January 3 the market was strong and Maine Green Mountains brought $4.65 to $4.85 per 150-pound sack. Pennsylvania stock offered was not of as good quality and sold at $4.25. There was some stock of better quality in two-bushel sacks that brought $3.65 to $3.85.

Berks County, Pa.—Have been having winter weather for some time. We had very little snow. The ground is frozen about four inches. Manure on most farms is nearly all loaded on spreaders and taken directly to fields as long as the snow does not interfere. Butchering is about at its height. Dressed hogs sell at $18 per hundred pounds. Beef sells at $17@18 per quarter. Most farmers finished threshing this week, weather conditions were most favorable. Some hay and straw was baled during the last few weeks and will be ready for spring delivery. Very few farm sales this spring and very few changes in farms will be made in spring. Wheat, $1.30; corn, 70c; oats, 50c; eggs, 75c.—W. N. M., Dec. 27.

Bradford County, Pa.—The thermometer has been below zero several times and we have about six or eight inches of snow which piles up in places to four or five feet. The main thorofares are kept open with scrapers but many of the crossroads are not open for auto traffic. Winter grains not looking as well as usual. Some buckwheat still in the fields and snowed under. Very little fall plowing done. Apples are very plentiful, many being fed to poultry and stock. Poultry flocks in general are not laying up to par this year. Very little roup and colds as yet. Red Cross and Christmas seal drives prove quite popular. Prices on feeds and grains are on the increase.—G. E. E., December 27.

Butler County, Pa.—The holiday season finds the ground almost bare. There has been much hard freezing and the late sown grain has suffered. About 50 per cent of corn still in the field. No plowing done. Fat hogs not very plentiful, selling at 18c dressed, eggs, 60c. Potato growing and purebred cattle increasing in interest among the farmers of this county, the Farm Bureau having placed orders for 17 carloads of disease-free seed potatoes and several head of purebred cattle having recently been purchased.—F. E. , December 27.

Dauphin County, Pa.—Weather wet and cold, very few fair days. Much corn still to be husked and little fodder has been hauled. Much butchering being done. Trapping wild animals has been carried on very extensively. Animals are numerous. Few farmers raise turkeys but many are shipped to the local markets and sell at 60c lb. Farmers having woodlots find ready sale for wood at good prices. Prices for products: eggs, 65c, butter, 58c; potatoes, $1.75; apples, 80c.—I. F. M., December 24.

Fulton County, Pa.—Rain, snow and sleet have come every few days during the month with some very cold weather. Streams had been frozen over but the ice went out with the high waters of the past week. Owing to the wet weather very little fall plowing was done. Most of the corn has been husked; much of it spoiled entirely in the field while the remainder is of inferior quality. Farmers are hauling and sawing wood. A large number of sawmills are preparing to saw as soon as the weather permits. Our timber is fast disappearing and the result is evident in the washed-away lands that were once very productive and now little more than waste land. Eggs, 45c; butter, 33c; chickens, 18c; turkeys sold for 40c; pigs scarce and selling for $6@7 each.—T. H. , December 27.

Lawrence County, Pa.—During the early part of the month side roads were wet and muddy. Since freezing weather came on many rough spots are found and the traffic keeps going. Cattle testing caused a ripple of anxiety during this month. Many dairymen awaited the second call from the veterinarian with fear and trembling. Fortunately but very few were condemned compared to the previous test. We feel that little Lawrence will soon be clean. Plenty of butchering to be done yet. An unusual amount of poultry was marketed for Christmas, live chickens bringing from 22c to 28c. Dressed poultry brought from 50c to 55c; veal, dressed, 20c; good country butter, 60c; strictly fresh eggs, 75@80c.—M. L. V., December 27.

Lebanon County, Pa.—J. C. Kreiner, of [illegible]ettlerville, Pa., judged the poultry at the county's biggest show. Mr. Kreiner judged stock at Richmond, Va., at the Sesqui-Centennial and he will assist at the Madison Square Garden Show. Our show was great. John Light, Grange lecturer last year, was elected treasurer for 1927 at the Lancaster meeting. Henry [illegible], of Mt. Zion, butchered four hogs which gave 17½ stands of lard. John E. [illegible], of Iona, had best potato exhibit at the county show held in Malta Temple, Lebanon. My home town, Richland, held a fine show in the town hall. Many other products shows just held over county. The band of boys and girls belonging to the potato clubs was banqueted by Chamber of Commerce and sponsors. Have had perfect sleighing in December. Are having much damage to trees by rain which is turned to ice. Some corn and fodder still out in snow. Milk, cwt., $2.75; dressed hogs, 16c; beef, live weight, 7@8c. Christmas market prices: live turkeys, 55@60c; do. geese, 30c; dressed chickens, 50c; butter, 60c; potatoes, $1.75; celery hearts, 35c large bunch; artichokes, 15c each; turnips, 20c ¼ pk.; apples, 50@75c large basket, Christmas trees, 50c; holly sprays and wreaths, 15@25c each. We wish all a happier and more prosperous New Year—R. I. W., December 27.

Snyder County, Pa.—Christmas was the warmest in many years; little snow and birds warbling in the trees. Trapping is resulting in many valuable catches with good demand and fair prices. Apples all sold out and farm work, save corn husking, up-to-date. There will be corn to husk in April and farmers are fearing an outbreak of the borer as many sheaves remain in the fields to afford a harbor. Coal plentiful, turkeys, ducks, geese and all manner of poultry being bought up by hucksters for the coal region markets. Prices range high. Wheat generally remains in the granaries awaiting higher prices. Oats advancing. Little ice garnered thus far. The annual Road Supervisors' Convention in the Court House on the twentieth was well attended. Master of State Grange P. H. Dewey was present and gave an illuminating talk. The recent high storms washed out many local bridges, tho roadways are in good repair otherwise.—W., December 27.

Somerset County, Pa.—We are having rainy weather with a lot of ice, not much snow but rain, rain, and more rain. Some potatoes froze before being dug; some in the ground yet. Many sportsmen who went deer hunting were successful. The cold weather came suddenly this year. More plants froze in the house than for years, there was so much cold east wind. Health of community good. Prices of farm produce, hay, $18.50; straw, $12, oats, 55c; wheat, $1.40; buckwheat, $1.65 cwt; eggs, 45c; butter, 50c; creamery, 60c, milk for November, $2.88 for 3.5.—Mrs. H. W. B., December 27.

Sullivan County, Pa.—Thus far we have been having an unusually hard winter. It started early and has shown no signs of letting up. We have about six inches of snow with the thermometer constantly hovering around zero. In many places ice is thick enough to start operation of ice cutting crews. A large number of farmers are cutting their winter's wood while a few are selling wood. Winter wheat is amply protected by the blanket of snow. Wild animals, especially deer, are very numerous this winter. Nearly every farmer has deer wintering in his back pastures. The dirt roads, which were badly washed by the recent flood, are in bad condition. Jobs are scarce and wages low. Oats, 50c; buckwheat, $1; corn, $1; butter, 50c; eggs, 55c.—M. G., December 28.

York County, Pa.—The freakish weather of 1926 still keeps up. Owing to rough and stormy weather a lot of men, who are usually ahead of their work, still have corn to husk and other fall work unfinished. The corn crop this year was not as good as usual and the quality of the grain is very poor. The potato crop was slightly better than was expected but not up to average. Most of crop has been marketed at a good price, many truckers hauling direct from farm to the city market and at one time paying as high as $2.75 per 100 lbs. at the farm. Most of the wheat was sown late and as the weather was unfavorable all fall it has not made a very good growth. The county farm products show was held in the State Armory at York on December 15 and 16 with a good showing of produce and a good attendance. Wheat, $1.32; corn, 85c; oats, 45c; four per cent milk, $2.70 cwt., eggs, 41c; chickens, 23c; hogs, $14 cwt., live weight.—W. K., Dec. 21.

State of Delaware—Weather conditions in Delaware and thruout the entire Peninsula during the past few weeks have been very unfavorable for corn harvesting, consequently many of the farmers have been greatly delayed in getting their crop of corn husked. The shortage of farm hands and the low market price for corn at this particular time of the year has resulted in the Delaware grain growers being in adverse financial circumstances. Corn and wheat are the two chief grain crops produced in this state, so the majority of the farmers depend upon these crops for the cash returns from their farms. The lack of proper storage facilities and the need of operating capital has caused practically all of the 1926 crop of wheat to be sold, but there is a great amount of corn on the farms at the present time being held for more favorable prices.—R. E. W.

HARRY WOODRUM
Pasteurized and Raw Milk
CHARLESTON, W. VA.

November 15, 1926.
Dr. L. D. LeGear Medicine Co., St. Louis, Mo.
Gentlemen:
For the past 15 years, I have been engaged in the dairy business and could not get along without Dr. LeGear's Stock Powders. It's a wonderful help in getting more milk from my cows.
I keep an accurate account of the test on all milk going out from my dairy and am getting a larger percentage of butterfat than anyone I know of in this district. This I attribute to the fact that my cows get Dr. LeGear's Stock Powders every day. I also use Dr. LeGear's Remedies whenever disorders appear among my cattle, and they are quickly overcome. I am also proud to say that my pure bred Holsteins took three first prizes at the Kanawha County Fair this year. They were raised on your Stock Powders.
You see I am having such splendid results that I felt I must write you about it. I wish every farmer could know what success I have had.
Yours truly, HARRY WOODRUM.

Dr. LeGear's Stock Powders

Dr. L. D. LeGear, V. S. in Surgeon's Robe

contain *Tonics* to sharpen the appetite, aid digestion, and purify the blood—*Laxatives* to correct bowel troubles—*Vermifuges* to expel worms—*Minerals* for bone and blood.

Winter's the time when live stock need food rich in heat units and nourishment. For years successful stock and dairy men have kept their herds in the pink of condition all winter by using Dr. LeGear's Stock Powders. Every farmer also needs

Dr. LeGear's Antiseptic Healing Powder

Quickly heals all cuts and sores on livestock—prevents infection.

Dr. LeGear's Poultry Prescription

Keeps chickens healthy, active—insures more eggs—better fertility.

ROUP Use Dr. LeGear's Roup Pills for individual cases or Dr. LeGear's Roup Remedy for the whole flock. Check this highly contagious disease before whole flock is infected. Nothing better than these time-tested remedies.

All Dr. LeGear Remedies sold on money-back guarantee. Get a full package from your dealer and use it up. If not satisfied, return empty package to dealer and he will refund purchase price.

Two Valuable Books—FREE Dr. LeGear's "Care and Treatment of Stock"—128 pages. Send 10c to cover mailing. Also "Dr. LeGear's Complete Poultry Guide and Feeding Manual." Contains feeding formulas of 48 U. S. and State Experimental Stations. Ask your dealer for free copy or send 6c for postpaid copy. Address

Pennsylvania Holds First Place in Ton Litter Contest This Year

LAST year Illinois tied with Pennsylvania for first place in the ton litter contest but so far this year Pennsylvania leads all states with 114. Three counties, Adams, Indiana and Jefferson, report nine litters each. To Cambria goes the honor of having the heaviest ton litter in the state. Eleven pigs, sired by a purebred Yorkshire boar, weighed 3158.5 pounds in the specified time of 180 days. They were fed by Mr. A. A. Feighner. Theodore Klinger, Dauphin County, raised the second heaviest litter, 13 pigs, sired by a purebred Duroc-Jersey boar and weighing 2890 pounds. The following farmers produced ton litters this year:

Adams County, Roy W. Bream, Gettysburg; Hartman Brothers, Biglerville; Knouse Brothers, Biglerville; Francis Murren, Hanover; E. C. Prosser, York Springs; Arthur Roberts, McKnightstown, two; R. M. Spangler, Gettysburg, and A. B. C. Williams, York Springs.

Armstrong County, James Rayburn, Worthington. Bedford County, R. B. Ferry, New Enterprise, and Ray Reasey, New Enterprise. Berks County, Calvin Moyer, Stouchsburg. Bucks County, Harry F. Landis, Pleasant Valley.

Cambria, Clarion, Crawford

Cambria County, E. A. Farabaugh, Loretto; A. A. Feighner, Carrolltown; J. N. Griffith, Ebensburg, and J. C. Sides, Southmont, Johnstown. Carbon County, E. A. Bec[illegible]er, Lehighton, and Dennis Strohl, [illegible]hton. Centre County, B. Claude [illegible], Bellefonte; John A. Thomas, Port Matilda, and Pennsylvania State College, State College, three.

Clarion County, L. L. Brown & Son, New Bethlehem; L. T. Conner, Clarion, and J. W. M. Gruber & Son, Shippenville. Clearfield County, G. M. McDivitt, Curry Run; Harry McDivitt, Curry Run; S. V. McKee, Westover, and W. T. Thrope, Grampian. Clinton County, John W. Ferree, Mill Hall. Columbia County, W. J. Fairchild, Berwick; C. L. Dietrick, Orangeville; J. C. Miller, Rohrsburg, and T. A. Potts, Millville.

Crawford County, Thomas Slobodyok, Conneautville, and R. J. Robar, Conneautville. Cumberland County, C. G. Leigh, Newville; J. K. Shields, Mechanicsburg, two, and S. L. Weidner, Gardners. Dauphin County, Theodore Klinger, Gratz. Fayette County, G. W. Blaney, Jr., Smithfield; A. B. Crow, Smithfield; T. W. Gans, Gans; Frank Rolf, Farmington. Indiana County, W. F. Barkley, Livermore; B. L. Compton, Livermore; J. A. Compton, Livermore; T. W. Craig, Parkwood; S. L. Fyock & Son, Clymer; W. M. Kunkle, Blairsville; Hugh McIsaac, Rochester Mills; G. C. Swan, Home, and F. W. Williams, Indiana.

Jefferson Has Long List

Jefferson County, J. D. Anthony, Punxsutawney; C. F. Gahagan, North Point; Frank DeMotte & Son, Brookville; H. M. Haugh, Brookville; V. S. Himes, North Point; T. P. Smith, Falls Creek; E. S. Smith, Punxsutawney; C. C. Stahlman, Baxter, and Bert Wonderling, Summerville. Lancaster County, W. J. Carter, White Oak Station, two; Ralph Keener, Lancaster; J. Harold Rand, Refton; Isaiah Schoch, Washington Boro; H. H. Snavely, Willow Street, and C. Y. Stauffer, Quarryville. Lebanon County, F. L. Hellman & Son, Cleona, and Robt. W. Klick, Palmyra.

Luzerne County, R. A. Briggs, Nescopeck, two; Central Poor District Retreat, and Hayfield Farm, (J. Hamilton), Dallas. Mercer County, A. J. Campbell, Grove City; M. M. Kin[illegible], Mercer; C. A. McCandless, Grove City; J. B. Tait, Mercer; Boyd Wilson, Grove City; F. A. Woods & Son, Mercer, and W. E. Wylie, Grove City. Mifflin County, John B. Kauffman, Belleville.

Northampton County, W. A. [illegible]heimer, Nazareth; G. W. Buss, Easton; C. F. Graver, Easton, and C. [illegible] Werkheiser, Easton. Northumberland County, A. C. Hottenstein, Watsontown; Scott Rohrbach, Northumberland, and C. E. Ross, Sunbury. Perry County, N. B. Gabel & Son, Newport, and C. E. Tressler, Newport.

(Continued on next page)

Samples from World's Champion Litter

These purebred Poland China barrows are from the World's Champion Ton Litter of 17 pigs which weighed 5117 pounds at six months old. The litter was bred and developed by the W. T. Rawleigh Company, Illinois. When six months old these three barrows weighed 336, 337 and 3[illegible] pounds, respectively. Corn, ground hulled oats, wheat middlings, and plenty of buttermilk, together with rape pasture, were the principal feeds used.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COW HAS LUMP ON JAW.—We have a cow which has a lump on her upper jaw under the eye. It is hard and fast to the bone. She eats all right.—C. B., Kermoor, Pa. This lump may be a new growth of bone due to injury or disease. It is possible that it may be an abscess having a thick wall. The treatment would vary according to the condition. It would be impossible to give you a definite treatment until the exact nature of the lump could be determined. Have your veterinarian examine this cow and advise you concerning treatment or surgical removal.

DOG IS BLIND.—I have a Shepherd dog about 2 years old. About 3 weeks ago he got a large swelling on top of head which caused him much pain for a week. Now he is all right from swelling but is blind.—L. E. L., Smithmill, Pa. The swelling should be examined by a competent veterinarian. If it is an abscess it can be drained which should give the animal relief. Apparently the blindness is due to pressure and may be overcome by surgical treatment.

BULL BLOATS.—I have a two-year-old stock bull which bloated about two weeks ago. Have had a veterinarian stab him and remove the gas but did not give relief. Had to stab him each day since. Please tell me the cause and what to do.—C. G., Gettysburg, Pa. Bloating is usually caused by animals feeding on green feeds such as clover, alfalfa and green corn that ferment readily. Stormy, rainy weather seems to favor bloating. Spoiled and frozen feeds are another cause. It is possible that a foreign body is at fault. The use of drugs and the trocar will usually remedy the trouble. You are advised to give this bull a variety of foods to stimulate his appetite and to keep the bowels open. It is unfortunate that the examination did not reveal the cause of bloat.

HORSE HAS GROWTH IN EYE.—I have a horse ten years old that has some sort of growth in his right eye. This condition has existed for about one year. The eye was not totally blind until lately. When worked the condition of the eye becomes much worse, discharging yellow matter having a very bad odor.—J. O. K., Export, Pa. In your description you did not indicate the color of the horse. If it is white or gray this growth may be a tumor known as a melanoma. In this case other tumors would probably be evident on the neck and on the tail. Such tumors usually have an exudate with a bad odor. The tumor may be removed by a competent veterinarian and healing will probably occur in a relatively short time.

DAIRY

BUCK & DOE RUN VALLEY FARMS—Hereford Cattle and Poland China Hogs. Stock of all ages for sale. DELAWARE LAND & DEVELOPMENT CO., Mortonville, Penna.

START THE NEW YEAR RIGHT by buying one of my Registered Jersey Bull Calves, 3 months old. W. F. McSPARRAN. FURNISS, PA.

Live Rubber••

One reason why "U.S." Blue Ribbon Boots stand the hardest farm wear

HERE'S a real test. If you cut a strip of rubber from the upper of a "U.S." Blue Ribbon boot—it will stretch more than 5 times its own length without breaking! Under the roughest treatment on the farm this rubber stands up!

This "U.S." Blue Ribbon boot is right all through. The gray sole is as tough as the tread of a tire. And at every vital point from 4 to 11 separate layers of tough fabric and reinforcements are built in to give *extra* strength.

Seventy-five years of experience in making waterproof footwear is back of "U.S." Blue Ribbon boots and overshoes. They look better, fit better, wear longer. Get a pair—you will notice the difference.

United States Rubber Company

"U.S." Blue Ribbon Boots *are made of high-quality rubber—flexible, long-wearing. They have sturdy gray soles, uppers red or black—in knee to hip lengths*

Trade Mark

The "U.S." Blue Ribbon Walrus *slips on right over your shoes. Its smooth rubber surface washes clean like a boot. Either red or black—4 or 5 buckles*

"U.S." BLUE RIBBON
Boots Walrus
Arctics Rubbers

How much does it cost to produce a pound of pork?

WHEN corn brings 60c a bushel, middlings $1.80 a hundred and hogs selling at 11c a pound, what is your margin of profit in turning your low-priced feed into high-priced pork?

Dr. H. B. Ropp, D.V.S., of Ohio, recently made a most interesting experiment and test along this line. He took a bunch of eight wormy, unthrifty shoats and fed them for six weeks. To the daily ration he added a small quantity of Dr. Hess Improved Stock Tonic to drive out the worms and keep the hogs in condition to do their best.

Feed consumed and cost as follows:

2809 pounds of corn costing	$24.06
550 pounds of middlings costing	9.90
Dr. Hess Improved Stock Tonic used	2.10

Pork Produced at 5⅓c a Pound

The total cost of the feed and Stock Tonic was $36.06. The gain in weight for the six weeks was 668 pounds. The cost of the weight gained was therefore only 5⅓c per pound.

At the time of making this experiment Dr. Ropp was feeding another pen of pigs for a comparative test. This pen had the same weight to start with, had the same ration and the same care, but were not given the Stock Tonic. At the end of the six weeks he found that these hogs had gained only 371 pounds at a cost of 8⅓c a pound.

Apply a little hog arithmetic and figure for yourself how well it pays to add Dr. Hess Improved Stock Tonic to the ration.

Dr. Hess Stock Tonic

Improved—with Minerals Added

—Drives out the worms.
—It supplies the minerals, calcium carbonate, calcium phosphate, potassium iodide, lacking in the feed.
—It prevents hairless pigs.
—Gives good appetite and digestion.
—Its laxatives provide the necessary elimination and keep hogs' systems from clogging.

An offer to all hog owners

Go to the dealer and get enough of Dr. Hess Improved Stock Tonic to last your hogs 30 days. Get 25 pounds of Tonic for every 20 hogs. Feed as directed. If it does not drive out the worms, keep your hogs thriving right along and produce gains in weight at a less cost per pound, simply return the empty container to the dealer and he will refund your money or cancel the charge. We reimburse the dealer.

Prices: **25 lbs., $3.00. 100 lbs., $10.00. 500 lbs., at 9½c. 1000 lbs., at 9c. Ton lots, at 8½c a pound.**
Except in the Far West and Canada

Cigarettes Played Havoc with the Pennsylvania Tobacco Industry

Editors' Note.—The following article is taken from a report on the Pennsylvania tobacco situation just issued by H. Andrew Hanemann, of the Pennsylvania Bureau of Markets. Complete copies of this mimeographed publication, entitled "An Analysis of the Pennsylvania Tobacco Market," may be obtained, while the supply lasts, from the Bureau of Markets, Department of Agriculture, Harrisburg, Pa.

DURING the last three years the outlook for the Pennsylvania tobacco grower has been far from bright. He has been faced with high production costs and steadily falling prices for his products. The average price per pound of the 1925 Pennsylvania tobacco crop was estimated to be 10.4c by the U. S. Department of Agriculture. This is nearly 7c less than the average price for the years 1916-20 inclusive and is only slightly above the average price for the pre-war years 1910-1914. During the period from 1910-1914 Pennsylvania tobacco brought an average of 8.75c a pound and during the years 1916-1920 it averaged 17.3c.

A Giant Appears

The market for Pennsylvania tobacco, despite the increase in population of this country, has been shrinking since 1920. The cigar industry, which is the principal user of Pennsylvania tobacco, is losing ground to the new giant of the tobacco industry—the cigarette industry. In 1920 the cigar output in the United States exceeded 8,000,000,000 cigars but in 1925 production dropped to 6,500,000,000. During the same period the production of cigarettes nearly doubled. The output of cigarettes in 1920 was slightly less than 47,500,000,000 and in 1925 total production reached nearly 82,000,000,000.

Production of Pennsylvania tobacco from 1921 to 1925 was almost constant and the decline in cigar production caused an accumulation of stocks on hand. From 1921 until 1924 average stocks of Pennsylvania tobacco held by manufacturers and dealers steadily increased altho during the last two years (1925 and 1926) they have shown a slight decline. This increase of stocks has no doubt caused the sharp decline in tobacco prices.

From 1897 to 1907 the production of cigars showed a steady annual increase, mounting from 4,000,000,000 in 1897 to 7,300,000,000 in 1907. During the same period there was only a small increase in the production of cigarettes. In 1897 the production of cigarettes totaled 4,600,000,000 and during the next ten years it fell considerably below this amount, but from 1907 until the present the production of cigarettes in the United States has increased by leaps and bounds.

The Cigar Loses Ground

From 1907 to date, with the exception of the year 1920, the production of cigars has remained almost stationary, being in the neighborhood of 7,000,000,000 annually. In 1920 the output of cigars exceeded 8,000,000,000 but in each year since then annual production has declined and in 1925 it was barely 6,500,000,000. Cigarette production however, has climbed from 5,256,000,000 in 1907 to 81,926,000,000 in 1926.

These figures show that the American public is changing its smoking habits and turning from the cigar to the cigarette. As no Pennsylvania tobacco is used in the manufacture of cigarettes this change is bound to affect the Pennsylvania tobacco market. However, a close analysis of the cigar production statistics in which Pennsylvania tobacco is principally used does not paint as black a picture for the future of the Pennsylvania tobacco industry as a first glance would indicate.

Pennsylvania tobacco is used in the lower priced cigars principally, particularly in Class A cigars. Class A cigars are those which retail for not more than 5c apiece. Considerable Pennsylvania tobacco is also used in Class B cigars which are those that retail at more than 5c and not more than 8c apiece. A few manufacturers of Class C cigars (which retail at more than 8c and not more than 15c) use Pennsylvania tobacco for filler but the total amount which

(Continued on page 28)

Boy Champion Tobacco Grower

LOWER costs thru better production methods is one solution of the tobacco grower's problem. The picture above shows a fine field grown two seasons ago by the most approved methods under the direction of James R. Landis, a pupil in the West Lampeter Vocational School, Lancaster County, Pa. The yield from two acres was 4392 pounds of tobacco which returned a profit of $458.91.

In November, 1924, the seed bed was fertilized with chicken manure. The bed was sterilized and seeded on March 25th. After the seed was sown, bristles, canvas and sash were put on the bed to keep an even temperature. Then the two-acre patch was manured and plowed. The plants were set in the field when four to six inches high, being placed thirty inches apart in rows forty inches apart.

A hot spell in early June killed three-fourths of the plants but the weather was ideal for the second planting and it came along rapidly. The patch was cultivated three times. The plants were topped to ten or fourteen leaves and in early September the entire patch was suckered.

The tobacco was allowed to remain standing five days after the last suckering began. It was left on the scaffold until partly cured and then it was hauled into the tobacco shed.—G. F. J.

He Made a Profit, But Couldn't See It

The Income Tax Man Points Out Some Good Things in an "Intolerable Nuisance"

THE income tax reports will soon be due—whether we will have to pay an income tax or not. Last year at about this time I spent a day at our bank with one of the income tax "specialists." He gave me several new ideas about income tax reports.

I intimated that making income tax reports was a lot of bother, whereupon he informed me that having to make these reports was one of the best things Uncle Sam has required of us, and especially for farmers.

Of course, I immediately was interested.

He told me of one farmer who came to his office to see if he would have to make a report. The Income Tax Man said: "Have you made any money this year?"

"I should say I have not," replied the farmer, "I have actually farmed at a loss."

Outside the Window

The specialist looked out the window and said: "Well, I see you are driving a rather good looking car. I suppose that was given to you."

"Oh, no," said the farmer. "I bought that automobile." It was far removed from the flivver class.

"But you could not buy that car if you had no money," rejoined the federal man.

"Well, an automobile isn't a luxury—it is a necessity now-a-days," said the farmer.

"True," came back Uncle Sam's representative, "but the fact of the matter is there are still a few people left who do not have enough money to buy an automobile—and I am one of that class."

There was nothing more for the farmer to say.

"Now let me see—how many children have you?"

"Two," replied the farmer.

"And they have enough to eat? They have not been kept by charity?"

Good Food, Of Course

At which the farmer bristled and replied: "Well, I must say we sit down to the table first and we do have the best of food. You see we keep chickens. The children tend them and our egg money more than keeps us in the groceries we need to buy. Of course, we have our own milk and eggs and pork and potatoes and flour and apples and garden . . ."

Well, the long and short of it was, before that particular farmer left that office he began to realize that he actually had made a clear profit of more than $3000 the last year.

So many realize it takes all the money that comes in to pay expenses, so they feel they are farming at a loss, when actually the money they are putting back in the farm is investment.

It has always seemed to me it is a good thing for the housewife on the farm to keep the accounts. Really the woman can do it easier than the man. And then the wife realizes just how the money goes. I do believe in keeping accounts, but it does seem unnecessary to keep track of each postage stamp. Why not devise some method that will keep finances straight with the minimum of detail work? For example, I planned that my egg money bought groceries, so wrote down the amount of my egg check each week, but kept that amount of currency on hand.

Do you actually know how much you spent for gasoline for the automobile? It is quite surprising how that counts up. If you buy your gasoline by the 100 gallons it is not so difficult to keep track of.

I do not believe that any method of keeping farm books will be equally good for all farmers, for there are so many different kinds of farming.

Of course, farmers now-a-days pay by check, and it does seem necessary to know what each check was paying for. If these checks are listed in true ledger style, with what the check was paying for written after it, it will be comparatively easy at the end of the year to know just how much was spent for fertilizer and how much for twine; how much for feed; for labor; for taxes and for interest.

A Page a Month

I like each month's business kept on one page of the ledger, credit on one side, debit on the other. It is comparatively easy to summarize the business at the end of the year, and know how much was taken in from milk, and how much from potatoes, etc.

If these accounts are kept from year to year it is interesting to go back over the accounts and see at a glance which year the cows made the most money and which year the potatoes made the most. Of course, the cost of the potatoes must be kept as nearly as possible so the accounts are accurate. We have our farm accounts beginning in 1912, and enjoy going back over the years to see actually which were the best years and why.

An Inventory Is Essential

Of course, no farmer can actually know how he stands without an inventory. Which is the best time for the inventory, the first of the calendar year, or the beginning of the crop year when barns are empty? Probably it does not matter greatly, tho personally it seems to me preferable to go by the calendar year.

If these accounts are kept accurately income tax time will not be a time to be dreaded. Perhaps Uncle Sam is helping us to help ourselves, as suggested by his representative at our bank.—May H. Mumaw.

There are three things a man should get out of his business—(1) profit, (2), permanence, (3) pride. Without profit, it isn't business, but only a hobby. Without permanence, it's only an existence. Without pride, it's only a drudgery.—Obiter Dicta.

Our New Staff Contributors

THE EDITORS take real pleasure in announcing this week two important additions to the Editorial Staff of PENNSYLVANIA FARMER. One is a new Staff Contributor and Adviser to head the Garden and Truck Crops Department. The other will act in the same capacity in the Poultry Department.

These additions to the staff will give our readers the services of two more outstanding men who are actively engaged respectively in commercial gardening and poultry raising in the very heart of PENNSYLVANIA FARMER'S territory. The former contributors to the Truck Crops and Poultry Departments will continue their popular and valuable articles.

Readers, Meet Mr. Watts

GILBERT S. WATTS, the new Staff Contributor and Adviser on Garden and Truck crops owns and manages Logan Spring Farm, in Blair County, Pennsylvania. Mr. Watts grows about 75 acres of vegetables and strawberries each year, marketing a very large part of his output thru his own model wholesale and retail roadside market. Permanent irrigation mains with portable distributing lines provide irrigation for 36 acres of the farm. A plant house 15 by 75 feet and 250 hotbed sash are required to grow the plants used on Logan Spring Farm. No plants are sold.

Mr. Watts was raised on a truck farm formerly operated by his father near Johnstown, Pennsylvania. He was graduated in Horticulture at the Pennsylvania State College in 1918 and immediately entered training in the United States Naval Aviation Service. After the war he was connected for a time with the Virginia Truck Experiment Station at Norfolk, and later with the Department of Vegetable Gardening, at the Massachusetts Agricultural College. He bought Logan Spring Farm, midway between Altoona and Tyrone, Pennsylvania, in April 1922.

and Mr. Scharring-Hausen!

R. L. SCHARRING-HAUSEN, new Staff Contributor and Adviser on poultry, is the owner of Glenview Farm in Mercer County, New Jersey. High producing White Leghorns are his specialty, but even tho he finds them profitable he doesn't put all his eggs in the egg basket. Tree fruits, small fruits and asparagus are grown as sidelines. The eggs, poultry and most of the fruit are marketed at the farm. Some fruit is sold at wholesale in Trenton.

The poultry flock at Glenview Farm now numbers about 1000 birds but will be increased as new laying houses are completed. The buildings he now uses all have electric lights and running water. Incubator and brooder capacity has already been provided to care for future needs.

Mr. Scharring-Hausen was graduated from Rutgers University in 1916 and for some time after his graduation was connected with the New Jersey Agricultural Experiment Station at New Brunswick. He resigned in 1918 to take up the work on his farm.

HERE'S WHAT YOU ASKED FOR, MR. FARMER

Here are the butcher knives you have wanted. Since Remington put out a line of pocket knives that meet the exacting needs of farmers and stockmen, there has been an insistent demand for butcher knives of the same fine, Remington quality.

The blades in Remington Butcher, Sticking, and Skinning Knives are made from special high-grade crucible steel, developed by Remington metallurgists to stand up under the hard use such knives get. Each blade is carefully tested, beautifully finished, swaged, correctly shaped, and scientifically tempered, hardened and ground. Each blade is sharp, and has a strong, durable edge.

The handles are made in one piece from selected, highly-finished walnut, mounted securely to the tangs with three large brass rivets.

The cold weather is here. Killing time is at hand. Get these Remington Knives and know the satisfaction of having the best knives ever designed for butchering, sticking, and skinning. They are made in all the popular sizes and in various patterns.

See them at your dealer's in the display stand with the Remington red ball.

No. 4306
Remington Butcher Knife
(Clip Point—6 in. Blade)

Blade made from special, high-grade crucible steel, beautifully finished, swaged, correctly shaped, and scientifically ground, uniformly hardened, and tempered. It is sharp, and has a strong, durable edge. Handle made in one piece from selected, highly-finished walnut, mounted securely to the tangs with three large brass rivets. Also furnished with 7 in. or 8 in. blade.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS.

BY R. P. KESTER

THIS is the first batch of Neshaminy Garden notes written in the new year, altho not the first to be printed. It seems but a short time since the introduction to 1926 appeared. As I remember it our hopes and expectations at this time a year ago were as high and ambitious as they are now for 1927, but they began to ooze out early in May. The grower of the tender kinds of plant life must have favorable weather at the start of the season in order to succeed. Last year we did not have it, nor did it improve thruout the season. The oldest inhabitant cannot recall a season so adverse to successful farming here in the East.

◆ ◆ ◆

BUT the books are closed on that. The accounts have been balanced and we turn a new page with high hopes and renewed faith. The figures for some of the crops are on the wrong side of the ledger in red ink, but on the whole we came out very well. The encouraging thing about it is that we did not lose money, and if we were able to do even that well in such a season and under our unfavorable conditions what may we do when we have a fair chance? We have had letters from some people who have given up. Their courage has gone and they will seek some other kind of employment. Well, it is probably as well. When hope, the mainspring in life, breaks, the individual is like a clock with a broken spring; he simply cannot go on.

◆ ◆ ◆

MANY farmers seem to be slow in realizing that farming has changed recently from a purely individualistic, isolated, home-making vocation to a keenly competitive business. It is only a short time ago that country life was simple and farm homes primitive in their furnishings. The farmer was satisfied if the returns from the farm furnished most of the family's food and enough surplus to pay the taxes and interest. The farmer who could do this was rated a successful farmer.

THE difference between city homes and rural homes, and between city conveniences and country conveniences was great. Rural people and city residents had little in common, either in equipment or ideals. But a great change has taken place. When some close observer takes up the work of writing the history of the first quarter of the twentieth century, he will find that the most outstanding improvement made was in the rural communities. In that time farm homes have been installed with the same equipment and conveniences that were found only in city homes before.

◆ ◆ ◆

BUT the development in these directions has required money,—a great deal more than was needed by farmers previous to 1900. The amount sold from the farms must be much greater than our fathers and grandfathers produced, and this selling requires a higher degree of merchandising skill than they possessed and which we are slow in acquiring. Thus, the business end of farming has sprung into first place in importance. It requires clear judgment to produce most economically and keen ability to sell advantageously on a highly competitive market. Those who may unconsciously feel that they are incompetent in these directions have been and will continue to be forced out of the farming game.

◆ ◆ ◆

WELL, maybe that's enough philosophizing for this time. It does not get us any place,—except as each one realizes the facts for himself and sets out to improve. Each of us is, after all, more interested in his own affairs than he is in generalities. For instance, I am more concerned just now about making out seed orders, deciding on fertilizers, getting the house built, starting the chicken flock, preparing to fight insects and disease in field and orchard, working up the asparagus field to get a good crop, than I am in what goes on at Washington or Harrisburg.

SPRAY Rigs of All Sizes For All Uses

The OSPRAYMO LINE

You must spray to get fine fruits and vegetables. Let our catalog tell you about the famous *High-power Orchard Rigs, Traction Potato Sprayers, Bucket, Barrel and Knapsack Sprayers, Hand Pumps, etc.*

An OSPRAYMO sprayer means one that will make your work effective. Suction strainer brushes, mechanical agitators. High pressure guaranteed. Send today for late catalog. Don't buy any sprayer till it comes. Local dealers at many points. Address

The Cheerful Plowman

The Storekeeper's Side of It

BILL HONK is thru at Willison's store, he'll trade with Willison never more, for he has found too high a price on butter scotch and pungent spice. "The catalog I have," says he, "shows plainly Willison's fleecing me! I'm thru with him, I am, I vow; I'll send for goods, I say it now!" "Well, Honk," says I, "you have the right to run your business, day or night! If you can really make it pay to quit the store and 'send away,' I must admit that's up to you, no man can tell you what to do! But, there's another side, my friend, to think about before you 'send,' and that is this: don't be too sure that Willison's crooked, simon pure!

"Please keep in mind his stock is small, some things 'turn over' not at all. He's forced to carry all the time some goods that do not yield a dime. He buys thru channels ready made, from wholesale firms that must be paid, he pays their prices, has to, friend, or lock his store at either end. No doubt at times he feels the same when he confronts the buying game as you feel when you buy from him,—feels that his chance is mighty slim!

"Then, Honk, I know quite well myself he's filled your larder from his shelf when you were strapped, plumb out of cash; his credit nearly went to smash one year because men 'on his books' were slow—or should I call them crooks? Quit if you wish at Willison's store,—that's your canoe and not my oar; do as you please, this land is free, and no one dares dictate to me,—but if you quit, be kind, my friend, don't 'send' with rancor when you 'send,' for there's two sides to every deal, two sides to everything, I feel, two sides, I know, to Willison's price when he sells butter scotch and spice!"—J. Edw. Tufft.

This map shows the States served by our Baltimore House.

This advertisement is addressed to those who do NOT buy at Ward's

To you we bring this opportunity. To you we say that a business of $200,000,000 a year—and that serves over 8,000,000 American families—could be built only upon the basis of saving money for our customers.

Eight million people could hardly be wrong in comparing prices. Eight million people could hardly be wrong in judging Quality. They could hardly be wrong in choosing Ward's as the place to buy for Saving and for Satisfaction.

You, too, can find at Ward's Your Greatest Saving

Saving money for our customers is not merely a claim. "Lower-than-market prices" is an established proven fact. A fact made possible by enormous purchases for ready cash—through buying for this Catalogue $100,000,000 worth of merchandise and paying cash.

This is the enormous buying power that secures for you, too, the big saving this Catalogue offers. Goods bought by the thousand dozen cost less than if bought by the piece; a train load of lawn mowers cost less than if bought by the dozen; shoes by the hundred thousand pair, made under our supervision of carefully tested and examined leather, cost less and wear longer. They will be to you a true bargain, bringing you a saving in their first cost, and doubling that saving by longer service. And that is equally true of all our lines of merchandise.

Ward's High Quality is Always Maintained

Quality, strong sturdy wearing quality, the honest in-built quality that makes any article serve its purpose longer—*that* kind of reliable quality is the first consideration at Ward's.

We want you who do NOT buy at Ward's, to consider these facts:

There is for you, too, the same Saving and Satisfaction that over 8,000,000 customers find in their dealings with Ward's.

Ward's

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

My wish is this: To make the aged happy, to show sincerity towards friends and to treat young people with tenderness and sympathy.—Confucius.

Simple Bookkeeping

IN SPITE of the urging that has been done, comparatively few farmers keep any kind of book records of their business. Many have tried to simplify a system so that it would be easy and practical, but, so far, no popular plan has been evolved. The simplest system we have found is the card plan. A card of good size, say six by eight inches, ruled for Dr. and Cr. entries, is prepared for each crop or product. If each item of cost or sales is recorded as it is made, at the end of the season a good working account of each crop is available, and a summing up of all of them will give the needed information about the farm as a whole.

Our New Staff Contributors

OUR two new Staff Contributors, Mr. Scharring-Hausen and Mr. Watts, are not entire strangers to the readers of Pennsylvania Farmer. For some weeks they have been contributing to the Poultry and the Garden and Truck Crops pages and we are sure they will be welcomed as regular staff contributors.

These new members of our staff are widely known as live wires. They are not, however, the know-it-all kind of live wires. They will have many interesting things to write about their experiences on their own farms, but they want to do more than tell about their own successes and failures. They want readers to join in the discussion by writing in their own problems so they can be threshed out in round-table style.

Can You Make $500 More?

"IT HAS taken us eighteen years to write this editorial," says the editor of the Progressive Farmer at the beginning of an article entitled "The Average Farmer Can Really Make $500 More." While that statement is addressed to the cotton farmers of the southern states, it is based on a careful study of the whole farm problem. The editor proved over and over that he was right before he made the flat statement that the average farmer could make $500 more.

Here are the things he says are needed to give the average cotton grower this extra half-thousand dollars: Richer land, the result of intelligent use of legumes and fertilizers; not fewer but more acres per man, thru the use of more power and machinery; food, feed, and fertility first, plus two money crops; practice thrift, avoid time prices, go into debt only for productive purposes.

All these items in the advice given to cotton growers may not be applicable to the farmers in the territory of Pennsylvania Farmer but some of them are, and there are other items which might be added. There is nothing surer than that farmers need to drop some of the old practices and adopt others which will meet the changed conditions. Now is a good time to study out new plans.

What of 1927?

BUSINESS men and political leaders are always glad to share their prophetic optimism at this season of the year. Recently, most of the noted men in industry and finance have expressed the almost unanimous opinion that the outlook for 1927 was very promising, even tho the volume in some lines might be somewhat less than in 1926. They see no clouds on the horizon of the business world, and find no indications of a serious slump in business. Of course, all these opinions refer to industry, commerce and finance,—few of them caring to include statements concerning the farmer's prospects. But if, as we are told, the farmer must make his profits from the prosperity of other business he ought to feel encouraged.

A few statements taken from a daily paper's business section will epitomize the general feeling:

"Profits of corporations in 1926 were the greatest in the nation's history . . . The steel, building, and automobile business have enjoyed a year of unprecedented prosperity, but the outlook for 1927 is not so promising . . . The financial structure of the Federal Government is strong and its credit is ample . . . The whole Philadelphia district has been a veritable hive of industry in 1926, altho a slight slowing down at its close . . . The mounting burden of taxes is a menace to the profitable maintenance of railroads . . . The necessity for cheaper meat is gradually taking Europe out of the market for American meat products . . . No reason for expecting a lessening of prosperity so long as credit remains as now . . . The general rise in real estate values has given an increased field for placing mortgages . . . How can business be poor when labor is 100 per cent employed and railroads are carrying more freight than ever? . . . The best basis for optimism is the fact that American people have been spending liberally, yet have put more money into savings banks than ever before . . . An unbiased survey of the farm problem will convince the open-minded man that the outlook for agriculture during the next decade is one worthy of optimism."

A Lagging Institution

A FEW years ago speakers and writers on farm subjects had several subjects at their disposal,—the farm home, the public roads, the rural schools, and the country church. Within ten years the first three of these have been solved, or are in the process of satisfactory solution. The last one,—the country church,—remains in an unimproved condition. Reports from every section indicate that little has been done to popularize the church and its activities. What is the reason for this? Surely, it cannot be truthfully said that rural people do not need the church, nor that they are not interested in the things the church is supposed to stand for. Is it the fault of the farm people, or is it because the church as it exists does not furnish what is wanted? We asked this question once before, and an ex-minister replied that it was because church leadership was not equal to the job of ministering to the needs of the rural communities. What do you think?

How Much Should Be Planted?

THE success or failure with the crops of last year, whether because of price or yield, should not be the sole criterion in planning the acreage for the coming year. There is little danger of eastern farmers over-planting grain and forage crops so far as markets are concerned, because the East is not self-supporting in these things. The facts to decide are, how much can I plant and take care of properly under the labor conditions, and what acreage can I fertilize and cultivate and get maximum yields?

Deciding on the perishable, marketable crops is a more important matter. Not only the acreage but the varieties of fruits and vegetables must be considered. Time was when the natural advance of the seasons set and limited the products of a region. Now, owing to rapid transit, cold storage, and refrigerated cars, the products from the different sections of the country overlap in the markets so that the grower in the Philadelphia district cannot say, "Well, the products of the Eastern Shore will be off the market on such a date, and I will have a free hand." Anyone who is acquainted with what has occurred in the peach industry in the last ten years knows what is meant. The whole question of marketing has been greatly changed and only those who know and keep step with these changes can succeed. It is not only how much? but what?

Editorial Sidelights

THE MAN behind the voice. You'll find his picture on Page 16. In this particular case it is the voice of radio Station WIP. It has been heard from the clouds and from the floor of the ocean. It has been heard all over America, in Europe and even in far-away South Africa.

Next week and for several weeks thereafter we shall publish the pictures and life stories of the men whose voices are heard by more people than ever heard one mortal's voice before. The article that begins the series this week is but a fair sample of the interesting stories behind the announcers of the great broadcasting stations.

WE ARE BEGINNING this week another series of articles, this one on how not to dig your grave with your teeth (Page 25). Everyone knows, and usually to his sorrow, that his feelings and his disposition are influenced very largely by what and how he eats.

Doctor McCoy's articles are not propaganda for any health fads or trick diets. Some of his ideas about food and about eating may seem novel at first, but a little consideration will convince anyone that they are only sound common sense.

MANY NEW JERSEY READERS will recognize the new Garden and Truck Crops editor (Page 3) as the man who started something when he addressed the New Jersey State Horticultural Society's annual meeting last year—or was it the year before?—on the subject of roadside marketing on Sunday. He was against it.

THOSE SWINE SALES held during the Farm Produc's Show at Harrisburg have come to be events of real importance to livestock men. They have gained prestige because of the good management behind them. There is more to a successful sale than a good auctioneer. The article on Page 31 gives some of the other requisites.

PROSPERITY AHEAD

Conditions Seem to Indicate a Good Year for 1927—Dairy Interests Want Larger Appropriations.

Washington, D. C.

THE present industrial prosperity is going to continue thru 1927. This is the prediction of nearly every one whose financial prognostications are considered worth printing. The public buying power is greater than ever before. The condition of the railroads is said to be the best since the World War. Building operations in the United States during 1926 were the largest in history, totaling $6,850,000,000, and it is predicted that operations for 1927 will equal those of 1926.

Hoover Is Optimistic

Secretary Herbert Hoover gives out the optimistic information that the highest total production and consumption of any year in the history of the United States was the record of 1926, and this prosperity is to continue during 1927. He defines economic progress in the fact that per capita as a result of the year 1926 we have more and better homes, more electric lights and power, more transportation, more roads, more substantial buildings, more radios and more automobiles, more savings, more life insurance and more of a lot of things.

While the past year proved a disappointment to many farmers who were hit by low prices of cotton, grain and fruit, drought, floods and epidemics, other producers did well from their potatoes, winter wheat, sheep and dairy products. He feels that farmers can look toward the new year with reasonable confidence.

Busy Counting Votes

The McNary-Haugen farm relief relief bloc in Congress is doing some careful speculating on the probability of their measure getting thru Congress if it comes to a vote. They are figuring that if all who voted for the bill in the House last spring will stand put, only 23 more votes will be needed to pass it. If the senators who voted for the bill last spring are of the same mind, only six new recruits will be needed to pass the bill in the Senate. No aid is expected for the bill from the East, but the McNary-Haugen bill promoters are confident that the new bill will win additional support from southern members.

Favor Canadian Route

The Great Lakes-St. Lawrence ship canal project has received another boost. In its report to President Coolidge, the United States-St. Lawrence Commission, of which Secretary of Commerce Hoover is chairman, gives its unqualified support to the St. Lawrence deep water canal in preference to the all-American routes.

The commission reports that the cost of the St. Lawrence canal would be $148,000,000, as contrasted with an estimated cost of $506,000,000 for the route from Lake Ontario to the Hudson River and with a cost of $631,000,000 for the all-American plan.

The report figures that the toll cost per ton necessary to carry operating expenses of the St. Lawrence canal would be 43 cents. For the all-American route it would be $2.06 while if the Lake Ontario-Hudson canal were constructed the cost would be $1.64 per ton.

Strong Backing for Dairy Bureau

Representatives of the American Dairy Federation were given a hearing before the Senate Committee on Appropriations for the Department of Agriculture on December 29, on the matter of appropriating for the carrying on of the work of the Bureau of Dairy Industry. Appearing for the dairy interests were Henry N. Woolman, of Philadelphia, and Prof. A. A. Borland, of State College, Pa., member of the federation's committee on relations with the Department of Agriculture; Fred Rasmussen, secretary of the National Association of Ice Cream Manufacturers; Robert W. Balderston, of the Philadelphia Interstate Milk Producers' Association; Charles W. Holman, secretary of the National Cooperative Milk Producers' Federation, and A. M. Loomis, secretary of the American Dairy Federation.

Mr. Loomis says that the Bureau of Dairy Industry has the same relationship to the dairy industry that the Bureau of Plant Industry has to the plant crops of the United States. This bureau now gets $459,094 per year and the dairy representatives want it raised to $717,794. The Bureau of Plant Industry receives $3,801,000, and this is being increased in this bill to $3,914,585 or $137,000 more than the Budget Bureau recommends. Why should the $4,000,000,000 dairy industry not have proper work done for it?—E. E. R.

UNDER NEW REGIME

Federal and State Agencies Will Coordinate in Fighting Pests—T. B. Eradication Won't Be Curtailed.

Harrisburg, Pa.

ONE of the purposes of the new state administration about to assume responsibilities here will be to coordinate the efforts of not only various state agencies working against the pests and menaces of the Pennsylvania food supply, but those of the federal government and the several states as well. The activities of the State Department of Agriculture against borers, beetles and other trouble makers have been surveyed and will be linked up with the other states where possible. A plan for very close cooperation with the federal government is in prospect, in fact, the relations between Harrisburg and Washington will be closer in many ways than they have been of late. State authorities have been giving some attention to plans under discussion at other state capitals on the borer and during the remainder of the winter will be in communication.

To Continue Work

There is no truth in reports that operations of the state to help stamp out tuberculosis in cattle will be curtailed during the next administration. What reduction will come during the winter will be owing to the funds on hand. Recommendations for substantial sums for this campaign will in all probability figure in the budget. At the close of every administration there is always a lot of talk about what its successor is not going to do, most of which turns out to be barnyard gossip.

Exhibits on the Way

Altho the Farm Products Show does not start until next week a number of exhibits for the big exhibition are in Harrisburg, having come to be placed in storage until called for. Work of preparing the exhibition buildings has been progressing and the opening will not only be on time, but complete, according to reports. The lack of a suitable hall in which to group the exhibits is to be urged by Harrisburg people as a reason for state matching of local contributions for a building. Considerable money is said to be in sight for a location right in Harrisburg.

Traffic to Be Regulated

Judging from what is said by legislators gathering here for the opening of the session there is pretty certain to be strong support for the proposed uniform traffic regulations. Rural members discussed certain proposed clauses in the bill suggested with city colleagues in an effort to get some agreement in advance which would not make things burdensome or dangerous.

More County Aid in Sight

If only some of what is said here by visitors for the start of the legislature is true there will be more aid of money for matching state cash for road improvements from county sources than for a long time. It is generally realized that with the road bond money either used up or covered by contracts the state must depend on current revenue and the motor vehicle license fund. From the latter must come the millions for fixed charges on bonds and as there will be millions required to put state hospitals and normal schools in shape to meet demands what can be spared from the general funds will not be extensive. Hence, the disposition to make county or local money available for early matching of what the state can find.—A. B. H.

MORE SPRAY RINGS

Success of One Ring Insures Organization of Others—Grange Lecturer Contest Again This Year.

Trenton, N. J.

THE operation of the Shiloh potato growers' spray ring in recent seasons has been so successful that the Cumberland County Board of Agriculture will organize another ring this year in potato growing districts. At a recent meeting of the County Board further emphasis upon practical service to members was apparent. The County Board will foster a number of farm group demonstrations and will start an innovation at its next annual meeting in the form of a county exhibition of farm products. Field demonstrations held in conjunction with members of the extension service will be the order of the day during the spring, with pruning demonstrations now being scheduled.

LET'S KEEP THE NEW BOOK CLEANER

Pomona Granges Meet

The next few weeks will find practically all of the Pomona Granges in annual meeting. Some of the northern counties have already held their annual meetings while others are scheduled for the latter part of the month. The State Grange lecturer has renewed the lecturers' contest, which runs this year from February to next October. Awards will be made to the Grange conducting the best average lecturers' program during the season, the honors being based on points according to an established score card. Last year the contest brought forth much favorable comment and resulted in the improvement of lecturers' programs very generally thruout the state.

State Board Meeting

Considerable interest is centering on the election of two new delegates to the State Board of Agriculture which is holding its annual meeting at Trenton on January 12, in conjunction with Agricultural Week. The present State Board has functioned admirably with the State Secretary and altho the plans are to make the representation on the State Board as wide as possible, there has been a serious effort to select candidates for nomination that would work freely with the department on its newly developed plans for service to farmers of the state.—W. H. B.

BEEKEEPERS' COURSE

Practical Talks and Exhibits Planned at College—Farmers Urged to Take Inventory.

Ithaca, N. Y.

THE beekeepers of New York state will have a chance to attend a special short course for beekeepers to be held at the college on January 24 to 29th. An exhibit of helps for selling honey will be a feature of the school. Modern methods of combating American and European foul brood, which are much improved over former methods, together with a report on eradication work in the state will also find places on the week's program of practical talks.

Farm Inventory Week

A real state-wide effort has been made for the past weeks to get more farmers to take farm inventories, the week of January 3 to 9 being an especial date to observe in this practical way. The state college furnishes free blanks that are valuable helps. Those farmers of the state who take annual inventories are the ones who are business-like enough to be really successful and they would not dispense with this definite aid in their year's activities.

Farm Conditions

The value of farm crops in this state showed an increase of nine per cent over last year's crops. Dr. G. F. Warren, Cornell's farm economist, says that if the prices farmers receive for these crops were as much above pre-war prices as retail prices of the same products are the farmers would be getting a cash income of $1,900,000,000 more than they are now receiving. No more convincing argument as to the need of cooperative marketing for all farm products could be imagined.

Dairy Day Featured

One of the outstanding features of the 20th annual Farmers' Week, to to be held at Cornell on February 7 to 12th, will be "Dairy Day"—on Thursday February 10th. A full day's program, with speakers of state and national fame, will be followed by a banquet in the evening. —M. G. F.

FREE HUNDREDS of Delicious Radishes and Gorgeous Poppies

NOW is the time to plan your garden; and right now is your chance to get, *Absolutely Free* a big 50c worth of tested Poppy and Radish Seeds. If you order only a dollar's worth of seeds or bulbs from the Maule Catalog we will give you a Big, Full Size packet of the new Maule Hybrid Poppies and new Maule Radishes. This is your one big opportunity to have a gorgeously beautiful poppy garden and to supply your table with hundreds of big, crisp, delicious radishes, all at no cost. This offer of two great novelties is made to celebrate our Golden Anniversary.

Write Now for the Free Maule Garden Guide. It contains lots of new, helpful information about planting. It pictures and describes more than a thousand high quality low priced Vegetables and Flowers. For 50 years we have been selling the *Highest Quality Pedigreed Seeds and Bulbs at the Lowest Prices.*

All Maule Seeds are tested for abundant life and virile strength; your money back if results do not satisfy. *Don't buy a bulb or seed until you get our catalog;* send for it today.

Once Grown Always Grown

Protect Crops *from* Frost

Insure Against this Hazard — "Hotkaps" Stimulate Growth, too, so You Can Be Earlier to Market for Better Prices.

USE "Hotkaps", individual hothouses that completely cover each plant, *protecting them from frost,* and stimulating a rapid, healthy growth. "Hotkaps" also shield plants from practically every danger, stimulating their growth to earlier maturity. Yet they get ample moisture and can be easily ventilated.

The most economical, and the most certain insurance for plants known against frost, rain, excessive heat, and wind. The cost is small—in quantities less than a penny each. Now widely in use in 38 of the states of the Union.

Your dealer probably has them in stock. Go see. If not, send the coupon now for additional information.

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

Observations from Logan Spring Farm

LET us not forget that the "biggest ever" Pennsylvania State Farm Products Show will be held in Harrisburg, January 17-21st. But even more important, we should remember that the vegetable growers last year broke away from the mother organization, the State Horticultural Association, and are now sailing their own craft, the Pennsylvania Vegetable Growers' Association. The secretary, Mr. Walter Nissley, of State College, Pa., will furnish details of the meetings upon request.

I am sure many of our readers, including some of those who are more interested in vegetables for home consumption than for market, will find the vegetable meetings well worth while. Unless signs fail there will also be a vegetable growers' banquet.

Those who are especially interested in vegetable growing will find the 1925 Yearbook of the U. S. Department of Agriculture a rich source of information. Several hundred pages have been devoted to the vegetable industry; cultural details, crop pests, statistics, marketing, and distribution of the industry all come in for attention. No doubt a letter to your congressman will bring a copy.

Eight American Vegetables

An interesting feature is a list of 32 common vegetables divided into the 8 which are of American origin, and 24 of Old World origin. All of the eight were handed down to us by the American aborigines, and, it is pointed out, exceed in value of product the other 24. What are they? Corn, potatoes and beans, of course. That was as far as the writer was sure of himself. The others are tomatoes, sweet potatoes, squash, pumpkins and peppers. It is also interesting to note that every one of the eight is tender to cold and that the white man has made no addition to the list.

Thruout the winter months we see in our grocery stores quantities of long, beautiful, golden-hued celery, much of it of enormous size. California, Florida, and to a lesser extent certain other states, make their contribution to this supply and many hundreds of thousands of Pennsylvania dollars flow West and South in return for the commodity and the service which makes it available at this season.

It is very difficult, if not impossible, to store native celery until this time of year and have it compete with the freshly-harvested, shipped product on the basis of appearance. When the comparison is gotten down to that final basis, table quality, the story is very different and I wonder if we fully realize the extent of the demand thruout our Pennsylvania cities and towns for celery that is fit to eat from the outside in.

The Profit Comes from the Pack

On the other hand, is it not true that a great many of us have failed to realize the profit we should have secured because we have so packed and marketed our honest-to-goodness good celery that it was finally sold to the housekeeper at a disadvantage when compared with the more handsome shipped stuff? I am sure the writer has done that very thing.

More recently, and the idea is not original, his entire output of stored celery, and much direct from the field, has been trimmed very hard. All stems of inferior quality have been removed, very leafy tops have been trimmed back and one pound of celery hearts, every ounce good as can be, has been wrapped in parchment paper and tied with red braid. The pack holds up in market, is attractive, whether the celery is large or small, and, perhaps most important of all, is recognized by the consumer who has "tasted the stuff" as an essentially different product. Just so long as quality is maintained and an honest pack is given, that same consumer—and there grow to be more and more of him—will buy again and again in the identical package.

It is not too soon to make certain that seeds of cabbage, tomato, celery, pepper and eggplant are on hand for planting in the greenhouse, hotbed or kitchen. Market gardeners who aim for highest prices quite generally grow plants that are transplanted once or more before going to the field. When so grown cabbage is commonly sown in late January or early February, tomatoes and pepper in late February or early March, celery and eggplant in early March.

When digging the spent manure out of last year's hotbed it will pay to conserve this material as it is ideal for use in the bottom of plant boxes or flats and in squash, melon and cucumber hills. Fresh manure may be put in shape for such use before spring if it is placed in compact piles and is kept moist but not soggy. Forking over at intervals as the piles become heated thru will hasten decomposition and insure a product of even texture. A good reserve of rotten manure, and well composted soil, represents a not inconsiderable investment of material and labor but is the foundation for growing good plants.

If the cold frames are not filled with snow and no protection against frost has been given, delay and annoyance may be avoided later by placing a liberal mulch of horse manure in the beds to prevent further freezing. In fact, if considerable freezing has already taken place thawing will begin under 8 or 10 inches of good hot manure unless the weather is extremely severe.—Gilbert S. Watts.

On an Old Indiana County Homestead

After years of experience, Mr. Clarence McHenry, Indiana County, finds that fruit growing pays better on the old homestead than general farming. His trees are carefully sprayed and the fruit carries off many premiums at the county fairs. Mr. McHenry is a member of the local fruit growers' association and the Farm Bureau and he takes a keen interest in all farm problems.—McC.

Duster Races Sprayer

THE results of a direct comparison between spraying and dusting for the control of insect and disease enemies of apples were given by Professor H. A. Cardinell, extension pomologist of the Michigan State College of Agriculture, before the recent joint meeting of the American Pomological Society and the Michigan State Horticultural Society.

Separate blocks of McIntosh and Winter Banana apples on the same farm were treated with a high pressure spraying outfit and a duster. The spraying pressure was fixed at 300 pounds and the 300-gallon tank was emptied in about 28 minutes. The duster, drawn by the same type of tractor used on the sprayer, could be operated continuously for eight hours without going to the barn to reload.

Where Dust Won Out

The dust won over liquid thru the loss of time when the liquid tank was forced to go to the barn for reload. The dust machine sprayed at the rate of 294 trees per hour while the liquid machine could treat but 94 an hour.

The trees were sprayed with the tractor pulling the sprayer at full speed. It was thought this "careless" method of spraying would give poor control but the records at harvest showed 93 to 95 per cent of the apples in the Winter Banana and McIntosh blocks, the two varieties most susceptible to scab injury, were clean.

In dusting 374 trees of these two varieties all season the cost was found to be 24.8 cents per tree. In spraying 374 trees with liquid materials the cost was 23.8 cents per tree.

Split applications (from one side of the tree one week and from the other side the next week) were used in the experiment. Five complete applications were given of each treatment.

In the McIntosh block, the percentage of clean fruit was 95 for both liquid and dust. There were 4 per cent stings in the liquid block against 1 in the dusted. Other insect injury in the liquid block was 1 per cent against 2 per cent in the dusted. There was no scab in the liquid stock and 1 per cent in the dusted.—G.

SUPERIOR
—the Name to Trust!

BUY with confidence any farm implement that bears the name SUPERIOR. It is a trade symbol worthy of your highest trust. It is your guaranty not only of remarkably long service but of exceptionally profitable service.

SUPERIOR implements not only save time, reduce labor and eliminate the need for early replacement—*most emphatically, they do better work!* We have built quality implements only—for more than a half-century. Our products are famous for outstanding efficiency in every grain-growing section of the world. The line is complete. There is a SUPERIOR seeding-machine for every planting need. And every model built is a precision tool—correctly designed and perfectly constructed for utmost planting accuracy.

Plan NOW—for Better Planting

See your SUPERIOR dealer now—or write direct to us—if you are in need of a drill or planter for any purpose. Grain, Corn, Cotton, Beets, Beans, Clover, Alfalfa—all crops are given the right start with SUPERIOR.

SUPERIOR seeding is safe seeding because the seeds are planted evenly and accurately—uniformly buried under an even covering of soil. No clogging. No skips. No misses. Perfect timing—even spacing—mechanical precision in every detail of the work. Dependable performance—and long years of heavy-duty service. You get both—in fullest measure—when you insist on genuine SUPERIOR Planting Machines.

The coupon below will bring you full information on any implement in the complete SUPERIOR line, which includes the famous SUPERIOR Black-Hawk Manure Spreader and the SUPERIOR Buckeye Cultivator. Even if you are not in the market for an implement of any kind, write us for advice and information regarding any special planting problems you may have.

start 1927 right use FUL-O-PEP EGG MASH

—and get More Eggs and Better Chicks

January is a good time to start feeding your hens Ful-O-Pep Egg Mash. For if you resolve to do it this month you may be sure that you have a profitable New Year ahead.

Ful-O-Pep Egg Mash is the excellent producing ration that contains Cod Liver Meal! This substance helps the rich oatmeal, minerals and other egg-making ingredients of the mash to do faster and more thorough work. Despite short daylight, and chill weather, or the absence of green-stuffs, the hens lay more regularly.

You get more eggs—*and better eggs*—eggs that are large, more uniform in size, and strong-shelled. Ful-O-Pep eggs are very desirable for their high food value and good flavor.

And eggs produced with Ful-O-Pep Egg Mash hatch into strong, lively chicks. The Cod Liver Meal adds greatly to the fertility of eggs, and the baby chicks are sturdy, husky little birds that can be developed into profitable market poultry, or layers.

Ful-O-Pep Egg Mash is easy to buy and easy to use. Near you is a dealer who has it—also, Ful-O-Pep Scratch Grains. Start now.

Glenview Farm

Lights on Birds

I would like to get some information on how to light hens for winter egg production and as to whether it is more profitable to light pullets or yearlings, season to begin and when to take lights off and how feeding is carried out. Could you tell me where I could get complete information on this subject?—Mrs. W. C. G., Sullivan County, N. Y.

Pullets are lighted from the time they are housed until April, giving enough artificial light to make the day and night of equal length. Yearlings are not lighted until after they have completed the molt in January; and if they are to be used as breeders, a great many poultrymen declare that they should not be lighted at all.

You can readily see that lights on pullets are much more important and profitable than lights on hens (yearlings).

The principle of lights is to get the birds to eat more, and hence produce more. They should have free access to laying mash and get about 14 pounds of grain per 100 hens daily, fed 4 pounds at 8:00 A. M., 8 pounds an hour before dusk, and 2 pounds after dark to be found when the lights go on.

If you will write to the State Experiment Station, New Brunswick, N. J., and ask for "Hints to Poultrymen," Volume 14, Number 12, you will get plenty of information on the subject.—R. L. Scharring-Hausen.

Why They Shake Heads

Can you tell me what makes my chickens shake their heads all the time?—G. A. S., Westmoreland County, Pa.

Chickens shake and scratch their heads because of some irritation or because of colds or roup. Dry, dusty or moldy litter would cause an irritation of the nostrils. Perhaps your chickens have colds. If you find birds with a foul-smelling discharge from their nostrils, get your druggist to make you a 10 per cent solution of argyrol and place a drop in each eye and nostril twice a day until they get better.

Old hens cannot be expected to lay much at this time but mature pullets should. They should have dry poultry mash in hoppers before them all the time, and should get at least twelve pounds of scratch grain per 100 birds a day. They should also have plenty of oyster shell.

If your pullets are getting these things, are well housed and ready to lay and still are not producing, perhaps they have intestinal worms. The remedy is to add 2 pounds of tobacco dust to every 100 pounds of mash. I would try this for a time.—R. L. Scharring-Hausen.

What Size Should It Be?

Would you please tell me the size a brooder house should be for five hundred chicks?—Mrs. M. H. H., Lawrence County, Pa.

We use a 10x12 colony house for a 52-inch hover and 300 chicks. If the hover of your brooder is not more than 52 inches, I would advise you not to put more than 300 chicks under it. As a rule, the smaller flocks do better.

However, if the hover is large enough, you could use a 14x16 house and have the same floor area per chick.—R. L. Scharring-Hausen.

"There goes a man who thinks in terms of millions."

"He doesn't look to me like a great financier."

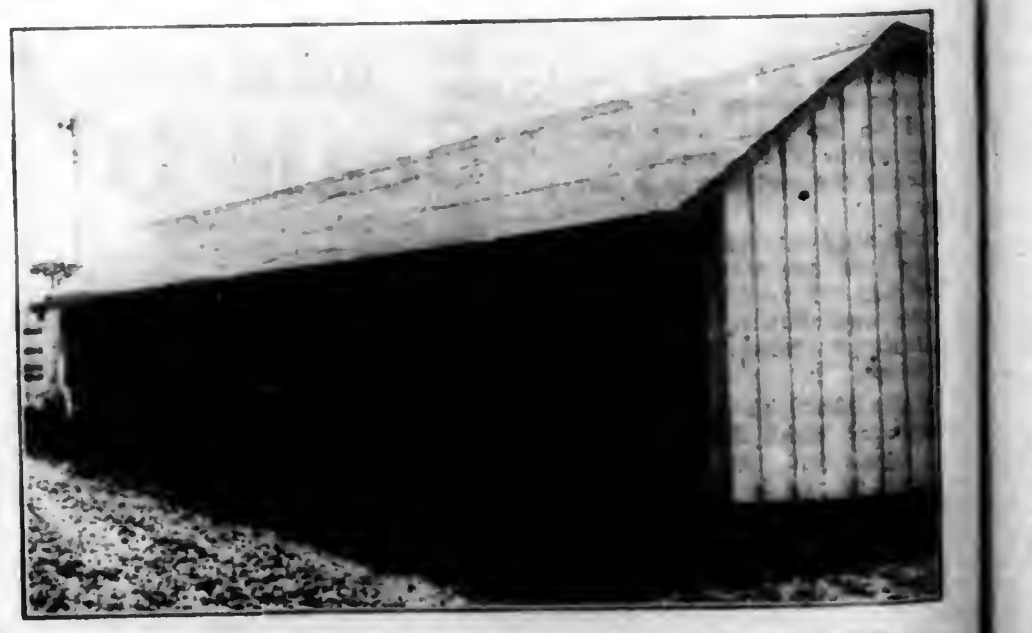
"He isn't; he's a germ expert.—Exchange.

Machinery That's Under Cover Lasts a Lot Longer

SINCE it has been settled definitely that more farm machinery rusts out than is worn out and that nearly all farm machinery has nearly doubled in price during the past few years, it behooves the farmer, as never before, to take proper care of his machinery. This is a physical impossibility without storage quarters.

The accompanying photograph shows the storage house on the farm of W. S. Kilmer, Virginia, which measures 20x100 feet and safely houses $8000 worth of valuable farm machinery.

This is a type of storage building endorsed by a score of experimental stations. There is not a wasted foot of lumber in the entire building. Faced to the southeast rain and snow rarely blow in. The open front, providing outside drainage is taken care of, permits free circulation of air at all times and air dries up the moisture which, it is well to remember, is a friend to rust, the destroyer of machinery.—C. C. Conger, Jr.



Many experiment stations have endorsed this type of storage building.

Warding Off Trouble

I RECENTLY had an interesting experience in bringing back a pen of 100 Leghorn pullets into laying after a sudden check.

Early in November this pen was laying 35 per cent and coming right up. Following a spell of warm, bright weather we had a sudden cold snap over night, and the birds reacted by dropping way down in their production and refusing to eat.

Such actions generally precede a fall molt or an attack of roup and chickenpox, both of which I set out to avoid.

The first thing I did when I saw what was up was to give the flock a pound of Epsom salts in the drinking water. Then we cleaned out the pen and spread fresh straw. I cut down the grain ration to a point where the hens were anxious for it, and started a noon wet mash containing a pound of condensed buttermilk mixed with laying mash and germinated oats, about what they would clean up in half an hour.

This program was successful in warding off both roup and molt, and the birds started back into production in a couple of weeks.

One of the worst things a poultryman has to face is such a sudden drop of temperature when the birds have been accustomed to warm sunny days. Steady continued cold is not nearly so bad.—R. L. S-H.

Nest Box Notes

IT WILL soon be time to start breeding, hatching and brooding operations. Right now is the time to make plans and get everything ready before the spring rush begins.

• • •

A good many farmers who keep only small flocks now depend on buying their chicks from a hatchery instead of trying to hatch them under hens or in incubators. This eliminates much uncertainty and save a lot of time. Also the chicks are all the same age and much easier to raise. Then, too, the pullets are a uniform lot when the time comes to house them in the fall.

• • •

A 10x12 colony house with a good coal brooder will accommodate 300 chicks. This number should give 100 pullets in the fall, allowing for losses and male birds.

• • •

Sometimes an old building about the right size can be made over into a satisfactory poultry house. Whether old or new, it should be thoroly cleaned out and whitewashed some time ahead. We use a disinfectant whitewash made of hydrated lime, water and commercial lime-sulphur. Enough lime-sulphur is used to give a deep yellow color to the mixture. It dries out white and sticks well.

• • •

Whitewash can be applied much more quickly with a sprayer than with a brush. It should be put thru a wire sieve before going in the tank. A consistency about like cream is right.

• • •

Roosters should be kept by themselves until three weeks before fertile eggs are wanted. As soon as the weather gets nice, breeding flocks should go on free range. This insures higher fertility. Two per cent of cod liver oil in the mash also increases fertility, improves shell texture and reduces losses from chicks dying in the shell.

• • •

Farmers who have good flocks of hens often want to keep their strain instead of buying chicks. Such flocks can often be improved by the purchase of a good cockerel from a recognized laying strain. The chicks can then be hatched at home or at a commercial hatchery, which usually costs about three cents an egg.—R. L. Scharring-Hausen.

Cheated myself

bought only on price—thought I was saving money

BY A MASTER FARMER

I know *now*—I fooled myself for years on binder twine.

Last Spring I wondered if my cheap twine was really worth the grief it gave me. So, at harvesting time I tested out, under identical conditions, my cheap twine and (according to my dealer) the best twine on the market—Plymouth.

Had a crop of 104 acres to cut. We bound 52 acres with my cheap twine and 52 acres with Plymouth. It took 19 balls of my old twine and only 16½ balls of Plymouth to harvest exactly the same number of acres.

More length in each ball of Plymouth

The answer dawned on me! Although both twines averaged 8 pounds per ball and were tagged 500 ft. per pound—the Plymouth Twine lived up to its guaranteed length* and the cheaper twine ran 13% short. Plymouth's guaranteed length was actually saving me money by giving me several hundred feet more twine in every ball.

No breaks—no loss of time

Another difference surprised me! My old twine was knotty and full of thick and thin spots—broke and tangled as usual. Plymouth was free of knots, snarls and unevenness and didn't break once.

I decided then and there I'd quit cheating myself on poor twine. Plymouth twine for me—it's dependable! I can always count on its evenness, strength and guaranteed length.*

**Plymouth Twine is spun 500, 550, 600 and 650 feet to the pound. Look for guaranteed length on tag.*

PLYMOUTH

the six-point binder twine

Made by the makers of Plymouth Rope

PLYMOUTH CORDAGE COMPANY, North Plymouth, Mass., and Welland, Canada

Plymouth—*more economical:*

the six-point binder twine

1. It's longer—full length to the pound as guaranteed on the tag;
2. It's stronger—less breaking, less wasted time, less wasted grain;
3. It's evener—no thick or thin spots—no "grief";
4. It's better wound—no tangling;
5. It's insect-repelling—you can tell by its smell;
6. It's mistake-proof—printed ball—and instruction slip in every bale.

This milk can test has been made frequently. You can easily duplicate it—test Plymouth's strength against any other binder twine on the market.

Plymouth is last to break. Swings the greatest weight—the most quarts of water. Plymouth wins because it's stronger.

This excellent 4-Color Poultry Book—9 in. x 12 in. —won 1st prize at 1926 Int. Baby Chick Assn. Convention. It is a masterpiece! *Your copy is ready for you.* Describes newest and most successful ways of making money with chickens. Tells why *"Kerlin-Quality"* S. C. W. Leghorns are world's greatest money-makers.

Strong • Active • Hardy
265 to 332 Egg Record Stock

Many customers report flock averages of over 200 eggs per bird. Big lopped comb, clear-eyed, wedge-shape, money-making egg machines. Strong, large, healthy, carefully inspected, northern-grown, free-range stock. Highest quality breeding. Best blood in America. Trap nested stock. Official Egg Contest Winners.

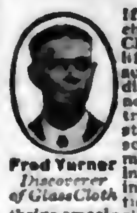
GLASS CLOTH Brings Amazing Success with BABY CHICKS



Fred Turner
Discoverer of Glass Cloth

If you want unusual success with your chicks this year raise them under GLASS CLOTH. This wonder material admits the life giving ultra-violet energy rays of the sun. (Plain glass stops them.) Science has discovered these rays prevent rickets, softness, leg weakness and many other chick troubles. Death loss from these causes is stopped. Ultra-violet rays enter the body, supplying Vitamine D and speeding up the building of bone and tissue. Chicks thrive amazingly and grow very fast. If you want to raise every chick, if you want early broilers and layers, put GLASS CLOTH in your brooder house windows and build a GLASS CLOTH scratch shed where the chicks can run and exercise in real sunlight. It is nature's health remedy. All you need is a roll of GLASS CLOTH and a few scraps of lumber. Millions of yards in use today. Success everywhere. Experts recommend it. Repays its cost many times a season.

The Ames Test

Experts everywhere recommend GLASS CLOTH. In a test at Ames College 25 per cent of the chicks under plain glass died, while all under GLASS CLOTH lived and grew rapidly. The illustration shows the difference in two chicks that had the same start and same care, except that the big one had plenty of ultra-violet light and the runt had none.

Ideal for HOT BEDS

Much Cheaper Than Glass

GLASS CLOTH is the cheapest and best covering for hot beds. Costs a fraction as much as glass and gives far better results. Vegetables and flowers mature weeks earlier and produce bigger yields because GLASS CLOTH admits the life giving ultra-violet rays of the sun. (Plain glass stops them.) Plants grow stronger and hardier and transplant better. GLASS CLOTH holds the heat of the sun and throws it to all parts of the frame. Under glass, plants become weak and spindley for want of violet light.

Patented—Accept No Imitations

Genuine, durable GLASS CLOTH is made only by Turner Bros., under exclusive patents. No other concern can copy our process. No other has the same weather resisting formula. Avoid imitations. Real GLASS CLOTH is a strong fabric specially treated to make it transparent, waterproof and weatherproof. Originated in 1916 and proven by eleven years success. You will know it by its quality. So much cheaper than glass it has won wide popularity all over the United States and Europe.

SPECIAL TRIAL OFFER Send $5.00 for big roll 45 ft. long and 36 in. wide, postpaid. (Will cover scratch shed 9x15 ft.) If, after ten days' use, you do not find it better than glass or any substitute, return it and we will refund your money. For smaller quantity send $3.50 for 30 ft. roll, or $2.25 for 18 ft roll. Common sense instructions, "Success With Chicks," with each order. Catalog illustrating uses on request. (Many dealers sell Glass Cloth.)

Turner Bros. Dept. 639 Bladen, Nebr. Wellington, Ohio

MORE MILK
—Less trouble

ARE you fair to your cows? You drive them to the barn in the Fall, feed them heavy, hard-to-digest concentrated rations. No natural, tender, green pasturage, little exercise—no wonder the milk pail disappoints you, right when milk prices are highest.

Right now—of all times—your cows need help. They need something to help them digest their feed better—turn more of it into milk. Without such an aid, the more you feed the greater the strain on their overworked vitality.

Kow-Kare gives the needed help, in a simple, natural, definite way. It gives needed support to the digestion and assimilation—helps carry the burden of heavy winter feeding. By toning up these vital organs your feed dollars become milk dollars. The cow has summer pep and vitality. No more "off feed"; no more profit threat from disease and disorders. Kow-Kare builds health while it is bringing back to you via the milk pail several times what it costs you. It is a real money-maker in any dairy. A single can will ration a cow for one to two months. Just follow the simple directions on the can.

No More Disease-Loss

Use Kow-Kare to prevent disease—but if you have actual trouble with Barrenness, Retained Afterbirth, Abortion, Bunches, Scours, Lost Appetite, etc., use Kow-Kare as directed on the can and you will be amazed how quickly your cows are able to throw off their trouble and again become productive. Write for our FREE BOOK on cow diseases, "The Home Cow Doctor." Every cow owner ought to have it.

Feed dealers, general stores, druggists have Kow-Kare—$1.25 and 65c sizes (six large cans, $6.25). Full directions on the can. Mail orders sent postpaid if your dealer is not supplied.

Dairy Association Co., Inc., Lyndonville, Vt.
Makers of Kow-Kare, Bag Balm, Grange Garget Remedy, American Horse Tonic, etc.

What Dairymen say:

From A. G. KATZUR, De Lamere, N. D.—"*I find that Kow-Kare is a wonderful aid to increasing milk yield. Had a cow quit milking after coming fresh and would not get with calf. After feeding Kow-Kare for awhile, she came back to milk again and has raised a calf since and is now the best cow in the barn.*"

From C. R. STODDARD, East Rodman, N. Y.—"*I have owned a large dairy of cows for twenty-five years, and I find nothing that will equal Kow-Kare for giving cows an appetite and therefore increasing the milk flow.*"

From HARLOW M. KASTNER, Hammond, N. Y.—"*Have used a great many cans of Kow-Kare in my herd for improving the milk yield and toning up the digestive organs. It is a wonderful medicine in the treatment of retained afterbirth, as Kow-Kare has not failed me in a single instance.*"

Dairy Day at the Farm Products Show

YOUR state dairy breed associations will hold meetings in Harrisburg during the week of the Pennsylvania Farm Products Show, January 17 to 21st. Wednesday, January 19, will be Dairy Day, with general meetings in the morning and afternoon and a banquet in the evening.

Wednesday noon, January 19, the Pennsylvania Guernsey Breeders' Association will hold a luncheon and business meeting. Karl Musser, secretary of the American Guernsey Cattle Club, will address the group. G. W. Koser, Biglerville; R. H. Powers, Glenshaw, and M. T. Grimes, Catawissa, form the executive committee in charge of Guernsey affairs in the state.

Meetings Planned for Thursday

C. T. Conklin, secretary of the National Ayrshire Breeders' Association, will address the Pennsylvania Ayrshire Breeders' Association business meeting, Thursday forenoon, January 20th. L. S. Clough, Jr., Warren, president, and Mrs. E. R. Fritsche, Merion, secretary, will officiate at the meeting.

Members of the Pennsylvania Federation of Holstein-Friesian Clubs will convene Thursday forenoon. Dr. L. M. Thompson, Montrose, will preside, and H. E. Robertson, York, will perform the secretarial duties. Important business before the black and white cattle breeders consists of revision of the bylaws and membership lists and election of officers.

The Pennsylvania Jersey Cattle Club, W. F. Shrum, Jeannette, president, and C. A. Fox, Pocopson, secretary, will meet at luncheon, Thursday noon, January 20th. Business will be conducted and medals will be awarded to calf club winners. M. D. Munn, Minneapolis, Minnesota, former president of the American Jersey Cattle Club, will deliver the principal address of the meeting.

Enzyme Is to Blame

WHEN milk at this time of the year develops an abnormal taste and odor the trouble commonly is caused not by bacteria but by an enzyme which is secreted into the milk and which breaks down the fat to produce the rancid odor.

The common practice in overcoming this difficulty is to cut down the grain ration to the amount needed by the cow and to give two or three doses of Epsom salts at intervals of three days. The milk is brought to the boiling point and then rapidly cooled to check the development of the bitter taste.

The same trouble may occur in the milk of individuals in large herds, but the mixture of milk from the herd will cause the abnormal condition to go unnoticed. The milk from these single cows develops a characteristic bitter or salty taste, particularly when the cow is well advanced in her lactation. It rarely occurs, however, when she is receiving green feed. The milk is objectionable but not necessarily unwholesome. The cream from such milk churns with difficulty and often not at all.—N. J. State College of Agriculture.

An Attractive Pack Sells the Goods

DEALERS in every kind of merchandise know that an attractive package aids in selling the commodity.

The butter market offers an excellent illustration of the value of a clean attractive package. When a dealer is showing several lines of butter to a customer and two or more lots suit him as far as price and quality are concerned he will purchase the lot packed in the most attractive package. If the sale is lost the butter must be carried until a scarcity occurs, or be sold at a lower price than the actual market value of the lot.

Regular Shipper Has Learned

The regular shipper has learned by experience that the package affects the selling price and even when he is shipping on a contract basis the dealer cannot continue to pay more than the sales value of the butter minus a handling charge. The occasional shipper who uses the city markets only as an outlet for his surplus is generally the worst offender. Shipments of this kind are usually made on a consignment basis and the receiver is forced to sell on the open market, since the regular trade will not buy these unattractive lots.

In some cases shipments are received in second-hand tubs which have seen hard service. Even counting the lower cost of used tubs, this practice is not generally economical. Dirty liners and inner circles are frequent defects and always affect the sale. According to buyers the most frequent defect is a poorly finished surface. Often instead of being level across the top, a concave effect is obtained, with the center as much as an inch below the outer edge. In some cases lumps of butter have been slapped on, or gouged out in order to regulate weights.

One dealer told of a shipment which he received. The tubs were dirty and flimsy. The receiver's name was scrawled all over the top with crayon instead of being neatly stenciled. When the tubs were opened the inner circles were missing. The surface of the butter had been leveled off with the hands and the imprint of hands and palms was evident in each tub. The quality of the butter was fairly good but when the sale was finally made it was at a price considerably lower than it would have been had it been properly packed.—W. R. W.

How One Thing Led to Another

IT IS interesting to note how one farm organization in Denmark has led to another. Before the cooperative creamery was established, each farmer was inclined to be satisfied with his own cows. He had no means of comparing their production with that of other cows. He inherited them from his father and was quite content.

When, however, the farmers of a neighborhood joined together and established a cooperative creamery it was unavoidable that everyone should know what his neighbors' cows were doing. He soon learned that some of them whose cows did not appear to be any better than his own were receiving much larger milk checks than he received. This naturally stimulated his interest in improving the quality of his herd. Better herds increased the volume of business of the cooperative and, therefore, the management of the cooperative was likewise interested.

Out of this grew what they call their control associations, which are similar to our cow testing associations. And now for the first time was the Danish farmer able to distinguish between his profitable and his unprofitable cows. He may have found that his unprofitable cows were due to the use of an unsatisfactory bull. If he were a small farmer, of course, he could not afford to own a high priced bull himself. And so another form of organization arose, working along side by side with these two others.—Frank O. Lowden.

Do You Know Just Where You Stand?

START the new year right by starting a systematic record of your farm business. No business man or manufacturer would even attempt to start the new year without keeping a complete and accurate record of his business. Many of them have less capital invested than the average farmer has in his farm, livestock and equipment.

Someone has said that too many farmers do too much work with their hands and feet and forget to use their heads. Every farmer, no matter how large or how small his farm, can keep a farm account to the great profit of his business.

The successful farm is one that maintains its productivity and returns a reasonable wage for the labor of the farmer and his family after paying farm expenses, and deducting a fair rate of interest on the amount of capital invested. Can you prove to your own satisfaction that your farm is doing this? If you know that it is not, can you locate the leaks which are draining your profit? Do you know the actual size of your farm business and what part of your investment is in land, buildings, livestock, machinery, and other capital? Are they properly balanced in their relation to each other? If they are not, can you change them intelligently?

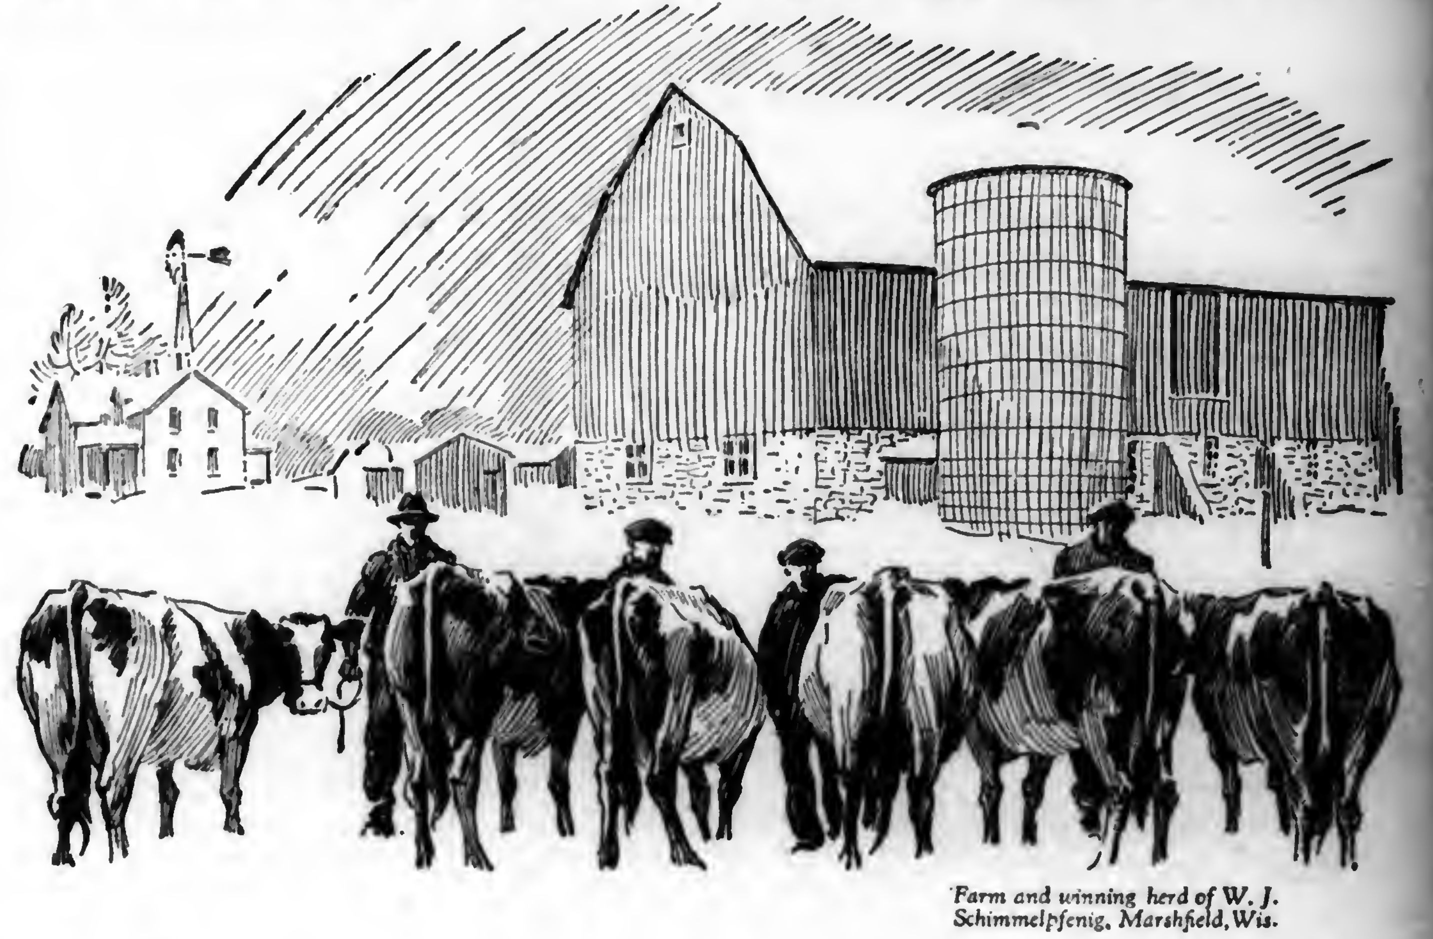
Where Profits Come From

Is your crop area properly proportioned to the various crops to the profit derived from each? Have you given any thought or study to the relative effect, the size of business, yield of the crops, production of livestock, and efficiency in the employment of labor thruout the year upon the profit or loss for the year? There is a direct relation between crop rotation, volume of business, sources of income, size of your farm, type of internal farm organization and your labor income for the year.

Five records are necessary to have a complete record of the farm business for the year. They are: an inventory of the farm, machinery, crops and supplies on hand, livestock at the beginning of the year, a record of all farm receipts and expenses, a labor and complete cost record on the more important farm enterprises, a crop summary record showing acreage and yields of the various crops, and an inventory of all farm property at the close of the year.

The Pennsylvania State College has made up a simple farm account book from nine or ten systems of accounts, that is complete and easily kept. Your county agent will be glad to explain it to you and assist you in starting the record free of charge.—H. S. Sloat.

THIS HERD WON A $1,000 AWARD FOR GOOD FEEDING



Farm and winning herd of W. J. Schimmelpfenig, Marshfield, Wis.

"We fed the *right* feed *liberally*"
And Mr. Schimmelpfenig's profit went up 43%

WHEN W. J. Schimmelpfenig got a new manager for his dairy farm at Marshfield, Wis., last March, his herd of 19 Holsteins got a new ration.

Peter Bushman, the new manager, talked enthusiastically about Corn Gluten Feed. He had fed it for 16 years. So, the next day after he came, a load of it arrived at the Schimmelpfenig barn.

The records of the Marshfield Cow Testing Association take up the story here. From April 1 to October 1, 1926, six high cows produced 53,732 pounds of milk. They ate a grain ration of which 39% was Corn Gluten Feed (see ration).

Compare the two years

Now look at 1925. Five of the same cows were in the herd. A sixth, the high cow of that year, is added to make a fair comparison. These six cows produced 38,638 pounds of milk. They ate home grown grains largely, with small amounts of concentrates. "Stump" pasture both years.

Thirty-nine per cent more milk in 1926; 43% *more profit!* For this record, certified by the official tester of the association, Mr. Schimmelpfenig was awarded first prize of $1,000 in the contest conducted by the Associated Corn Products Manufacturers to encourage better feeding.

Good feed, good feeding

"We fed the right feed liberally," says Mr. Bushman.

There is much meaning in those words. This herd was not superior in productive capacity to thousands of others. It was fed Corn Gluten Feed *liberally*—before pasture came and *with* pasture.

In the great dairy sections of the United States *liberal* feeding of Corn Gluten Feed is paying high returns. Test Corn Gluten Feed, for *results*, in your herd. Your dealer can supply you.

THE RATION
Average ration for 6 months of 1926

Corn Gluten Feed (39%)	300 lbs.
Oats	170 lbs.
Oil meal	100 lbs.
Corn	100 lbs.
Barley and oats	100 lbs.

THE RESULT
(the six cows)

	1925 Apr.—Oct.	1926 Apr.—Oct.	Increase
Milk	38,638 lbs.	53,732 lbs.	15,094 lbs.
Profit over feed cost	$524.23	$751.36	43%

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Results Depend Upon Both Soil and Crop

THE following paragraphs of general interest are taken from a letter written in answer to questions from a Delaware reader.

In considering results obtained from commercial fertilizer, we must take into account the requirements of both the soil and the crop. In the case of sandy or peaty soils, there is almost invariably a response to applications of potash no matter what the crop may be. In the case of heavy silt or clay soils, there is usually a response to phosphoric acid in the growing of any of the field crops. Similarly, in the case of rundown soils, an application of readily available nitrogen fertilizers will result in crop increases. On the other hand, certain crops will respond to applications of nitrogen or phosphoric acid or potash on almost any soil.

It is well known that corn, potatoes, clover, tobacco and beets usually give increases from applications of potash. Corn, turnips and buckwheat almost invariably show a response to applications of available phosphoric acid. In the case of wheat, rye, barley, timothy and other grasses, a response to applications of nitrogen is obtained on almost any soil.

Available Phosphoric Acid

When 100 pounds of 16 per cent acid phosphate is used per acre, there is applied 16 pounds of available phosphoric acid. This will more than cover the phosphoric acid contained in 25 bushels of corn, 1500 pounds of stalks and 250 pounds of cobs. In a fifty-bushel crop of corn, with the corresponding amounts of stalks and cobs, there will be contained about 27 pounds of phosphoric acid, or less than the amount found in 200 pounds of 16 per cent acid phosphate.

In the case of the potash, the amounts used are larger than those of the phosphoric acid. A 25-bushel corn crop will contain the following amounts of potash: in the grain, 5.5 pounds; stalks, 21.0 pounds; cobs, 1.1 pounds; total, 27.6 pounds. For a fifty-bushel corn crop there would, therefore, be required about 55 pounds of potash, equivalent to more than 400 pounds of kainit.

It is to be further remembered that phosphoric acid is held more firmly in the soil than is potash. We know by actual tests and experiments that available phosphoric acid is made insoluble in the soil to water very quickly and that the phosphoric acid is held in the upper four or five inches of the soil. In the case of potash, the transformation of the water-soluble into water-insoluble combinations takes place more gradually, and some of the soluble potash gets down into the subsoil before it is made insoluble. In fact, in very light soils some of the soluble potash is carried away in the drainage water before it is made insoluble.

Land Determines the Amount

The amount of potash, as well as of phosphoric acid, that might be used to best advantage will depend on the productivity of the land. Obviously, where large crops are grown more generous applications of fertilizer should be made. Assuming yields as large as 50 to 60 bushels of shelled corn per acre, 25 bushels of rye, 20 bushels of soy beans, 8 to 10 tons of timothy and 200 to 300 bushels of potatoes per acre, it would pay to use as much as 50 to 100 pounds of actual potash. This would be equivalent to 100 or 200 pounds of muriate or 400 to 800 pounds of kainit per acre.

Land naturally well supplied with potash would not require as large additions since the soil itself would supply a large portion of the potash for large crops. As to phosphoric acid, application equivalent to 300 to 400 pounds of acid phosphate per acre should be sufficient for most purposes, especially when the land is well supplied with humus and lime is applied from time to time. The use of nitrogenous fertilizer in addition to the potash and phosphoric acid would be justified in the case of the tomatoes and potatoes. Nitrate of soda, sulphate of ammonia, or a mixture of the two, might be employed.—J. G. L.

The Voice of the People

This department is reserved for the use of our readers to discuss all problems and matters of general interest. Write your views and comments briefly on any question of social, economic or educational importance and thus share them with others. It will be necessary to limit such articles to 200 or 300 words. Publication of an article in this department does not signify editorial endorsement.

The Rise in Land Values

DEAR EDITOR:—Thank you for the editorial, "Farm Values," appearing in your issue of November 3rd.

In it you have given no endorsement of Single Tax, but you have at least mentioned it as a proposed remedy for our economic diseases. If all newspapers and magazines would do as much, that would draw enough attention to it so that many voters who now think they are opposed to it would study it enough to understand it. A proper understanding of its purpose and operation is all that is required.

I am glad to read in Pennsylvania Farmer that: "It is readily seen that the rental value of land is a big item in reckoning the cost of producing crops." I am glad to hear you ask: "What is to be done about it?" It puts you, as a farm paper, in line with some of the "great dailies" of our large cities in trying to grapple with the "housing situation."

You conclude with the question: "What makes farm land rise steadily in value when farmers are going out of business?" You want an intelligent and satisfactory answer from some one, so I will try and accommodate you.

The landlord, especially he of the speculating variety, figures that this country, rich in natural resources, has at this time 110 million population. If he knew (classing the system of landlordism as an individual) positively or even thought that this population would remain stationary or recede, he would stop speculating in and holding land out of use. This would have the effect of keeping land values stationary with perhaps a reduction, anyhow, as a whole, they would not advance.

But he knows with absolute certainty that except some world-wide catastrophe takes place, that population, especially in the United

(Continued on next page)

States, will not remain stationary, and that no matter how many farmers leave the farm in 1923, a great many more farmers will be required to feed the 200,000,000 of inhabitants this country will have in say 1960.

During all this time, the producers on the farm and the workers and the producers in the big cities will be called to render to the landlord a continuously larger and larger portion of what they produce, not to those who have helped in any way in aiding production, but to those whose business it is to stand in the way of useful producers until they get their price for getting out of the way.

Is it any wonder that farm and city land rise steadily in value when farmers temporarily go out of business, or, outlying sections of the big cities take on "central" values?—Oliver McKnight.

Problem Hard to Solve

NO, WE admit that farmers are not good housekeepers, but even with the most tidy and careful methods, is not their business one that in the very nature of it must resemble in many ways a fertilizer factory? Stock has to be somewhere and the farther it is kept from the buildings the greater must be the work of caring for it. The barn certainly shouldn't be too near the house nor should it be too far away.

Good gravel and cement paths help very materially and every farm home should have a room in which overshoes and outer garments worn in the stables may be kept before entering the dining-room or living-room. It never should be necessary to fill the kitchen with these things. The problem is a complicated one that seems very hard to solve satisfactorily.—Mrs. E. M. Anderson.

Who Can Beat It?

I HAVE been reading reports of the Ton Litter contest and have not seen accounts of any that can come up to mine yet. I had a sow that farrowed 11 pigs on April 1, 1926, of which 10 were raised and entered in the Ton Litter contest. They were weighed on September 28 at the age of 180 days, and weighed 2739 pounds, or an average of 273.9 pounds each. Who can beat it with a 10-pig litter, or can beat the average with more than 10 pigs?—E. A. Farabaugh, Cambria County, Pa.

The Genius of the Big Show

THIS is Henry E. Klugh, of the Pennsylvania Department of Agriculture, the man who is given a large part of the credit for the success of the annual State Farm Products Show at Harrisburg. As manager of the show for many years, Mr. Klugh has won a reputation for efficiency and for good humor in handling difficult situations that has placed him high in the esteem of farmer and commercial exhibitors alike.

The World thinks well of Buick

EACH NEW YEAR finds Buick still more firmly established in public favor.

Old friends remain, new friends are won by this famous motor car. Brilliant achievement is the basis for this high regard.

Today, Buick has an engine *vibrationless beyond belief*, the century's finest contribution to the pleasure of motoring.

And a score of other exclusive features testify to the never-ceasing search by Buick for the new and better thing. The Sealed Chassis, Vacuum-Cleaned Crankcase and Thermostatic Circulation Control are typical examples.

Buick could not offer so much at so moderate a price, if the world did not buy so many Buicks, and if the savings of great volume were not continually poured back into Buick quality.

Look to leadership for value. Only a very satisfactory motor car could have held first place for nine consecutive years!

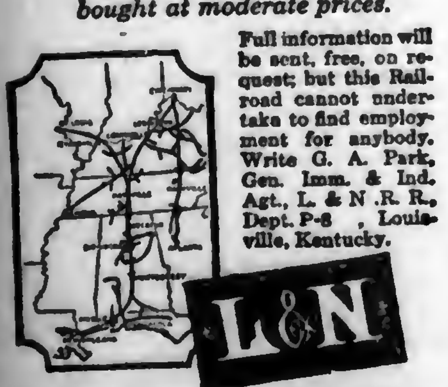
FARM Relief in sight

"The Lord helps him who helps himself". And farmers *can* help themselves in the South—many of them *are doing it*—farmers who have moved from "the frozen North" to "the sunny South".

All kinds of farming can be made pleasant and profitable in this Southland—a land of all-year growing season; of low-cost labor and living conditions; of ample home markets; of fine schools, churches and good neighbors. *And fine farm lands in the South can be bought at moderate prices.*



Full information will be sent, free, on request; but this Railroad cannot undertake to find employment for anybody. Write G. A. Park, Gen. Imm. & Ind. Agt., L. & N. R. R., Dept. P-8 , Louisville, Kentucky.

L&N

Releasing man-power for the many other tasks, the STAR can always be depended upon to furnish ample water for all farm needs. Even in 8 to 10-mile breezes, you will find it on the job, day after day — *for years.*

Timken Tapered Roller, or No-Oil-Em bearings, running in oil, enable the STAR to get all the work out of light breezes, with a very small amount of attention. The famous GALVAZINK Coating, together with the fine mechanical features, means long years of perfect satisfaction.

RADIO DEPARTMENT

The Man Behind the Voice

Editors' Note.—This is the first of a series of short articles about the men whose voices are familiar to every reader of Pennsylvania Farmer who owns a radio receiving set.—the announcers of the famous broadcasting stations. Readers are invited to write us about other announcers whose pictures they would like to see in these columns.

EDWARD A. DAVIES, director and chief announcer of station WIP, Gimbel Brothers, Philadelphia, was one of the pioneers in the radio broadcasting field. He was instrumental in the building of the first Gimbel station back in 1920, then a very small affair of 50 watts. His was the first voice that broadcasted from Philadelphia, and was heard in Trenton, N. J., as the farthest point.

Mr. Davies attended Central High School and the University of Pennsylvania in Philadelphia, and during the war, served overseas with the A. E. F. fourteen months. He was wounded twice in action and cited by the United States Government.

Messages from Ocean Depths

He originated the idea of broadcasting from the bottom of the ocean, and made the idea a reality in August 1924, when his voice was heard from the bottom of the Atlantic Ocean almost a mile off shore in Atlantic City. On this broadcast alone, WIP received over sixty thousand letters from all parts of the country.

His voice has been heard from an airplane flying at a height of six thousand feet from New York to Yorktown, and last May he was appointed Official Announcer for all Stadium events at the Sesqui-Centennial Exposition.

A Trained Musician, Too

Mr. Davies is a trained musician, having appeared in opera and concert for the last twelve years. He is a former president of the Philadelphia Operatic Society.

His experience in broadcasting events held in the Stadium during the Sesqui-Centennial and in announcing football games and other sporting events at the University of Pennsylvania has made his voice familiar to thousands of radio and sport fans.

The equipment and the methods of WIP are constantly being improved under the direction of Mr. Davies. In June this pioneer director and announcer will sail for Europe to study broadcasting conditions abroad.

Edward A. Davies, Director and Chief Announcer of WIP, Philadelphia.

More Peaches Every Year

AT THE annual meeting of the State Horticultural Society in Atlantic City on December 10, Mr. H. B. Weiss, chief of the Bureau of Statistics and Inspection analyzed the recent survey of the peach industry for New Jersey, competing states and for the United States as a whole.

Peach production in New Jersey has trebled during the last fifteen years. The average production for the five-year period ending in 1910 was 700,000 bushels, while for a similar period ending in 1925 it was 1,740,000 bushels. The 1926 crop totaled nearly 3,000,000 bushels.

Over the Whole Country

The trend of peach production in the entire United States has been upward during the same period, the average production in 1910 being 39,000,000 bushels as compared with 47,000,000 bushels in 1925. There has been a considerable increase in production in Georgia and California and a smaller increase in Pennsylvania and New York.

Production in Maryland, Delaware and Virginia has continued at a uniform rate, with a tendency to decline, altho the planting of young trees has been active during the past year or two.

The Elberta is by far the most important variety in New Jersey and competing states. The J. H. Hale variety has increased considerably in popularity during the past three years, while plantings of Carman, Belle of Georgia, Champion and Hiley have slowed up during that period. In New Jersey, there has been an increasing tendency to plant more miscellaneous varieties.

New Jersey has a smaller percentage of non-bearing trees, i. e., under three years, and a larger percentage of trees over ten years, than most of the competing states.—S. D. S.

"How can we get rid of this cook without a fight?"

"Praise her up to the neighbors."

Yours for the Asking

DID someone in the family receive a camera for Christmas? Many owners of purebred livestock use home made photographs in promoting the sale of their surplus stock. Others like to make a record of the growth of their animals by photographing them at intervals against a background ruled off in six-inch squares.

This method of recording the changes that take place in the conformation of an animal from its birth to maturity is described in Circular 371-C issued by the U. S. D. A. A copy of this circular may be obtained free from the United States Department of Agriculture, Washington, D. C.

ATWATER KENT RADIO

The receiver illustrated is the extra-powerful Model 32, with ONE Dial; price, less tubes and batteries, but with battery cable attached, $140; Speaker, Model H, $21.

"ONE DIAL —just what I was waiting for"

"I WAS minded to buy a radio set, but those I had seen were too complicated. My wife and I didn't want to fuss over a thing that looked like the dashboard of an automobile. We didn't want *work*—we get plenty of that. We wanted to *listen*.

"Well, a couple of weeks ago, over at a neighbor's, we found what we were looking for. It was one of those Atwater Kent sets, with only ONE Dial. It looked simple, and was simple.

"When I got my fingers on that ONE Dial, it seemed as if I could go anywhere. I heard a lecture, a fiddling contest and a band concert in the first ten seconds—just by turning that ONE Dial. The band concert suited both families, so I let go the dial and stayed with it until they signed off.

"Then we rounded out the evening by getting the latest news from Omaha, and the next day's weather forecast from Des Moines. All we had to do was to shift the ONE Dial.

"The next Saturday I went to town and got a set just like it. It is even better than I thought it would be. It's what I call the real thing in Radio—just what I was waiting for."

That's what a Middle Western farmer told us. It's the same sort of story we are hearing from farmers everywhere. If *you* thought Radio was complicated—try *your* fingers on an Atwater Kent ONE Dial.

EVERY SUNDAY EVENING:—The Atwater Kent Radio Hour brings you the stars of opera and concert, in Radio's finest program. Hear it at 9:15 Eastern Time, 8:15 Central Time, through:

NEW LAMP BURNS 94% AIR
Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, J. O. Johnson, 642 N. Broad St., Philadelphia, is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him to-day for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Far

JUDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, knew Bayne Trevors, general manager, wasn't square and fired him. Trevors and the men soon realized she meant business.

The men grumbled. Trevors threatened to sell her out to the Western Lumber Company. Fortunately, Bud Lee, horse foreman, said he'd stay and old Carson, who loved nothing better than a fight, promised to help her in the trouble ahead. She couldn't depend upon Pollock Hampton, third owner of the ranch.

That afternoon Judith found that the veterinarian had been fired three days before by Trevors. Instantly she put in a call for "Doc" Tripp. He said he'd be out at once. In the meantime Judith began to check up on the men about the place. Miller, storekeeper and one of the old guard, advised her to hurry over to the milking corrals. She found trouble all along the line. Bill Crowdy in defiance of her orders was still giving sulphur treatment for lung worms and Nelson, sent by Trevors to make trouble, had persuaded the milkers to leave the place for jobs with the lumber company.

Toward evening "Doc" Tripp came. To him the girl confided her troubles but he added more by telling her that Trevors had recently imported sick calves to the ranch. "Has he imported any other outside stock?" she asked. "No. . . unless you count pigeons." Tripp answered. The telephone rang. As Judith hurried into the office an eavesdropper disappeared into the garden. The phone message was from Hampton. He would arrive Saturday with five guests.

Busy days followed for everybody. Shorthanded, Judith bought a milking machine and hired a new foreman. Mrs. Simpson took up her duties caring for the ranch house and Hampton came, a breezy, likable young fellow, with his guests—Major and Mrs. Langworthy and Marcia, their daughter; Marshal Rogers, lawyer, and Frank Farris, artist. Hampton wanted Trevors back, so the first thing he did was to invite him over to meet his friends.

Continued from last week

LAUNCHED upon his first business venture, Hampton went to the telephone. That evening he surprised Judith not a little when he said casually that Trevors had said he'd run over in a day or so, as soon as he could find time.

"What's that?" he asked, breaking off.

For certainly Judith had started to speak. But now she merely shrugged her shoulders and sat in silent thoughtfulness.

Mrs. Langworthy had no liking to bestow upon such as Judith. The girl, she confided every night to the major, was unladylike, unwomanly, outre, horsy, unthinkable, an insult to any woman into whose presence she came. The major agreed monosyllabically or with silent nods for the sake of peace. Personally he was rather inclined to fancy Judith's uncorseted figure, to admire her red-blooded beauty, and he always touched up the ends of his mustaches in her presence.

Judith, having early taken Mrs. Langworthy's measure, found an impish joy in murdering the proprieties for her special benefit. She said "Damn" upon occasions when Mrs. Langworthy was there to hear; she rode her horse at a gallop into the yard and right up to the veranda when Mrs. Langworthy was there to see, swinging down as her mount jerked to a standstill, as "ladylike" about it as a wild Comanche; at table she talked of prize boars and sick calves and other kindred vulgar matters.

But the major admired her; Marcia, as days went by, proved to be a sweet-tempered, somewhat timid, but highly good-natured, affectionate creature generously offering her good-will; and Rogers, the lawyer, and Farris, the artist, both of the sophisticated, self-sufficient type, were little behind the major in interest.

DURING the last week of May, a rumor came to Judith's ears of which, at first, she thought little. Carson, coming to her upon a bit of ranch business, remarked dryly before taking his departure, that a report had got around among his men—Poker Face had mentioned it to him—that Blue Lake ranch was on its last legs; that it was even to be doubted, if the men ever saw another pay-day before the whole affair went into a receiver's hands. Judith laughed at him and told him not to worry.

"Me?" said Carson. "I'm not the worrying kind. But idees like that ain't good to have floating around. A man won't do more'n half work when he's wondering all the time if he's going to get his mazuma for it."

But, when again the rumor came, this time telephoned up to her from the Lower End by Doc Tripp, she frowned and wondered. And she was careful, upon the thirtieth of May, to send Charlie Miller, the storekeeper, into Rocky Bend for the monthly pay-roll money. She gave him her check for one thousand dollars, which, with what was in Charlie's safe at the store and in her own here, would more than pay the monthly wages. Charlie left for Rocky Bend in the afternoon, spending the night in town to get the customary morning start for the ranch. The men were to be paid at six o'clock.

Upon this same day Pollock Hampton told Judith that Bayne Trevors was coming to the ranch to have dinner, spend the night and the following day. Judith made no reply beyond favoring him with a quick look of question. She had not believed that the man would came. What next?

The last day of May came, and true to his promise, Trevors was a guest at the house from which, so short a time ago, he had been evicted. He dined there that night, cool and self-confident, casually polite to Judith, civil and courteous to the other guests, especially to Major and Mrs. Langworthy and Marcia, leading conversations unobtrusively, making himself liked. He watched a game of billiards, but refused to play, saying carelessly that he had a stiff shoulder. He and Hampton strolled out into the starlight and for some two or three hours walked up and down, talking quietly.

"A gentleman!" cried Mrs. Langworthy with spirit. "It just shows that a person can do outdoors work and not sink back into the barbarian!"

The morning after Trevors' arrival, Judith was up betimes and breakfasted alone. Lunching early, noon found her in the office expecting Charlie Miller. She was at work on the pay-roll book when her telephone rang. It was Doc Tripp and there was suppressed excitement in his voice.

"Bad news, Judy," he began. "It sure looks as tho you were getting your share."

"What is it, Doc?" she broke in sharply. "Tell me!"

"It's Charlie Miller. Hurt. No, not bad. Thrown off his horse, back in Squaw Creek canon. And—robbed."

Quickly he told all that had happened. Miller hastening back with the wage money, was riding thru the narrow gorge when a man had sprung out suddenly in front of him. Miller's horse, shying, swerving unexpectedly, had thrown him. Before he could get to his feet the bag of gold under his coat had been torn off, his revolver wrenched away and the highwayman, his face masked with a red bandana handkerchief, had run into the thick timber.

"Charlie just walked in, reeling like a drunken man," Tripp concluded. "His fall and a rap over the head with a gun-butt made him pretty sick. I am sending out a posse of men from this end to try and get the stick-up man. You'd better do the same up there."

For a moment Judith sat staring at the telephone dully. Robbed of a thousand dollars, and in broad daylight! A thing like this had not occurred on the Blue Lake for a dozen years.

"Bayne Trevors!" she gasped. For, suddenly, she thought that she understood the significance of the rumor which had twice in a week come to her. Perhaps, as Tripp himself had said, she was getting nerves. Trevors himself was on the ranch right now. . . . Her two fists clinched. Yes, Trevors was here with triple purpose: To curry favor with Hampton against a possible need of it, to establish an alibi for himself, to witness Judith's discomfiture, when at six o'clock she must turn the men away with an excuse.

Thank Heaven it was just noon! Judith sprang to her feet, her eyes bright and hard, and ran down to the men's quarters. Coming up from the corral were Carson and Bud Lee.

"Miller with the pay-roll money has been held up and robbed at Squaw Creek," she told them swiftly. "Get some men together, Carson, and try to head the robber off."

THE two men, having glanced quickly at each other, stood a moment looking at her curiously.

"That's on the level, is it, Miss Judith?" demanded Carson slowly.

"Of course it's on the level!" she cried impatiently. "Oh, I know what you're thinking. I'm going to phone immediately to the bank at Rocky Bend and have another man sent out with more money. You can count upon getting your pay at six o'clock!"

"I told you, didn't I," muttered Carson, "that I wasn't worrying none personal? But if I was you I'd sure have the money on tap!"

With that he left her, going hastily to round up what men he
find and get them into their
Bud Lee, his eyes still on her,
where he was.

"Well," demanded the girl, "
you going, too?" Suddenly an
by his leisurely air, she added
tingly: "Not afraid, are you?"

"I was thinking," Lee answ
coolly, "that the stick-up gent
most probably figure on a play
that. If he was real wise he'd
along toward Rocky Bend and
off your second man. Two tho
bucks a day would make a real
little draw."

Judith paused, frowning. T
was truth in that. If Trevors
were behind this, he would
chosen his man carefully; he
have planned ahead.

"If you'll do my way," conti
Lee thoughtfully, "I'll have
enough time to roll a smoke and
dle little old Climax. He's in
stable now. You're not afraid of
double-crossing you? Even
smart-headed man had planned
hold-up he wouldn't figure on a
like this. He'd think we'd h
Rocky Bender bring it out or

him the most wonderful, radiant smile that the long horseman had ever seen. She gripped his lean, brown hand hard in hers.

"Bud, you're a brick!" she cried.

Mrs. Langworthy had just come out with Hampton, Trevors and the major.

Judith turned from Lee to Trevors but managed to keep half an eye on Mrs. Langworthy.

"You see, it's pay-day with us, Mr. Trevors," she said quietly. "And when pay-day comes we pay our men at six o'clock in spite of hell and high water!"

Bud Lee, leading his horse away, turned for a word. "A man killed a horse for me today," he said very gently, and his eyes rested steadily upon Trevors. "If I ever get him, or the man who put him up to it, I'm going to get him right."

On the Blue Lake Ranch there was more than one man ready to scoff at the idea of a robbery like this one, frank enough to voice the suspicion: "It's just a stall for time!" So much had last week's rumor done for them, preparing them to expect something that would set aside the customary monthly pay-day. But when they had seen Charlie Miller's bruised head and heard his story; when they had sat on their horses and looked down at the animal which had been shot under Bud Lee, they were silent. And, besides, when long after dark they came in behind Carson from a fruitless quest, their pay was ready for them as formerly, in gold and silver.

Major Langworthy imbibed an unusually large number of cocktails and long before noon of the following day had suggested that the ranch be put immediately under military law, hinting that a military-mustached gentleman be appointed commanding general of the Blue Lake forces, and forming within his own mind the picture of himself in the office, revolver on table, cocktail at elbow, directing the manoeuvres from this point of vantage, not to say safety. Mrs. Langworthy ruffled her feathers and sniffed when Judith's name was mentioned. It was perfectly clear to her that all the ruffians of the West would be quick to take the advantage arising from the ridiculous condition of a rowdy girl assuming men's pantaloons.

"I am rather inclined to think, mama," said Marcia, "that you don't do Judith justice."

TREVORS, with little to say to any one, took his departure in the forenoon, extracting from Hampton the promise to ride over and see the lumber-camp some day soon.

Judith, held at the office by a lot of first-of-the-month details, did not get away until close to eleven o'clock that morning. Then she rode swiftly down the river, a purpose of her own in mind. At the store she stopped for a sympathetic word with Charlie Miller who had long ago forgotten his own hurt in his grief and anger that he had lost her thousand dollars for her.

"What's a thousand dollars, Charlie?" she laughed at him. "We'll lose and make many a thousand before the year dies."

Just below the Lower End settlement she came upon Doc Tripp. He was in one of the quarantine hog-corrals, his sleeves rolled up, a puzzled look of worry puckering his boyish face.

"What's up, Doc?" asked Judith.

"Don't know, Judy. That's what gets my mad up. Just performed an autopsy on one of your Poland-China gilts."

"Found it dead?" asked Judith.

"Killed it," grunted Tripp. "Sick. Half a dozen more are off their feed and don't look right. A man's always afraid of the cholera. And," stubbornly, "I won't believe it! There's been no chance of infection; why, there's not an infected herd this side of the Bagley ranch, sixty miles the other side of Rocky Bend, a clean hundred miles from here. But, just the same, I'm taking temperatures this morning and having my herders cut out all the dull-looking ones and break the herds up."

"Not getting nerves? Are you Doc?" And Judith spurred on down the valley.

BEFORE she came to the spot where Bud Lee's horse had been shot she came upon Lee himself. A rifle across his arm, he was looking up at the cliffs of Squaw Creek canyon.

"Well, Lee," she said, "what do you make of it?"

He showed no surprise at seeing her and answered slowly, that far-away look in his eyes as tho he were alone still and speaking simply to Bud Lee.

"Using smokeless powder nowadays is a handy thing for a man shooting under cover," he said. "Then rig up your gun with a silencer and get off at fair range, half a mile up, with a telescope sight, and it's real nice fun picking folks off!"

"All of that spells preparation," suggested Judith.

He nodded. When he offered no further remark but sat staring up at the cliffs, Judith asked:

"What else have you learned by coming back down here? Anything?"

"There were two men, anyway. I'd guess, three. The one who stuck up Charlie and then drifted while the drifting was good. Then the two other jaspers that tried to wing me."

"How do you know that?"

"My horse that was shot," he explained, "got it in the left side of the neck. Now, look at that hole in the little fir tree yonder."

Judith saw what he meant now. At this point Lee yesterday had heard the second bullet singing dangerously near. It had struck the fir, and plainly had been fired from some point off to the right of the canyon. Her eyes went swiftly after his up the cliff walls.

"I doped it out while I was running," he went on. "Look at the way the trees grow here. If a man was on the cliffs shooting at me, and coming that close to winging me, why, he'd have to be off to the right. These big pines would shut him off from the other side. It's open and shut there were two of them. And darn good shots," he added dryly.

(To be continued next week)

Pines Instead of Line Fences

This typical clump of loblolly pines separates two fertile potato fields on the lower Del-Mar-Va Peninsula, in Accomac County, Virginia.

Did you ever hear this one?—

A Way with Him

A Hebrew salesman at one of the department stores was approached by a lady dressed in mourning and evidently in much distress. She said her husband was dead and she wanted to buy a suit of clothes to bury him in, but did not know what kind to get.

Not only did that salesman satisfy the poor lady in her predicament but he managed to sell her a suit of clothes with an extra pair of pants.—Exchange.

It Isn't Done

One evening the young man went to his uncle's home for a call, and in the course of conversation, asked:

"Uncle, don't you think it would be rather foolish for me to marry a girl who was intellectually my inferior?"

"Worse than foolish, Thomas," was the reply. "Worse than foolish—impossible."—Success Magazine.

Entitled to It

The elderly and somewhat shrewish daughter of a general received a proposal of marriage from a subaltern.

This she announced to her father.

"Dad, Filbert has proposed to me. He's only a second lieutenant. Now you must do something for him."

"I can't promote him over the heads of others," responded dad soothingly, "but I might have him cited for gallantry."

Why Shouldn't There Be?

Two Irishmen were excavating for a proposed building, when an interested spectator inquired: "How is it, Pat, altho you and Mike started work together, he has a bigger pile of dirt than you?"

"Shure," was the quick retort, "he's diggin' a bigger hole."—De-Laval Monthly.

A Logical Reason

Mary—Oh, Mr. Wilkins!

Visitor—Please don't call me Mr. Wilkins.

Mary—But we've known each other such a short time. What must I call you?

Visitor—Call me Mr. Smithers, because that's my name.

Nothing More

"Filbert seems to be getting over his bashfulness in the presence of girls. He's doing the Charleston fairly well."

"That's just his knees knocking together."

Why Not a Can of Salmon?

A Scotchman invited to a golden wedding was told that each guest would be expected to take a golden present.

He took a goldfish.—Good Hardware.

As It Happened

"How did you make out on that deal?"

"They let me in at the bottom."

"Well?"

"Then the bottom dropped out."

Combustion

Boss—Rastus, you certainly do your work quickly and well.

Rastus—Well, I sticks de match of enthusiasm to de fuse ob energy an' it jes' natchally explodes.

OUR YOUNG PEOPLE'S FORUM.

From Forum Members and Friends

Dear Cousin Ruth:—We have 77 White Leghorn hens and I have a hen that laid 26 eggs last month and another hen laid the same number. We got 1535 eggs last month. We have trap nests in our hen house.

I have a dog and cat for pets. The dog's name is Rover.—Donald Hood, (X), Lawrence County, Pa.

Dear Cousin Ruth:—I have a pet dog and two pet cats. The dog is a Collie and his name is Ring. He has a white ring around his neck and is very playful.

We got some Christmas seals yesterday and I have mine all sold already.

I went to the county fair this year. I had a good time but my I got tired. I was there all day. Our school made some things for the fair and they took first prize.—Anna Williamson, thirteen (X), Clearfield County, Pa.

Dear Cousin Ruth:—I live in the country but I don't like country life. I do not go to school. I must stay at home and help my mother and father.

How many of the Forum members have a camera? I do, and I just love to take pictures. I have lots of fun just now. My girl friend is Elizabeth Henry. We go to church together. Last summer I went to Hershey. I think it is a very nice place.

I am sending a picture along. From left to right, Idell Henry, myself and Elizabeth Henry.—Erma B. Lenz, (X), York County, Pa.

I'M IN THE CENTER
Erma B. Lenz, (X), York County, Pa.

Dear Cousin Ruth:—We have five rabbits for pets and a dog. We like to gather leaves in the woods and bring them home for our rabbits. Our dog does many tricks. You can stand in front of him and wave your handkerchief in the air and he will jump at it and bark. When we go to feed him sometimes we hold the feed up above him and he will stand up till he gets it or if we wrap something in paper for him he will put his paws on it and with his teeth unwrap it and eat its contents. We call him "Frisk," because he is so lively and playful.

I used to have a pet pigeon that would come up close to me and I would give it corn and when I was out any place it would leave the rest and come to me. One night an old owl killed it. It was caring for two young ones at the time.

Once there was a bird had its nest in our barn and it had five little birds in the nest. When father had some traps setting for rats the old mother bird got in one of them and got killed so we got the young birds and put them in a little box and fed them bugs and worms, etc., and we soon had them quite tame.

One day we let the little birds out in an old loft and one got out but it did not go away. So then we let the rest out but they didn't go away very far. We would put cracked corn or bread crumbs on our hand and hold it out and call "birdie," and then one by one they would come and light on our hands and shoulders. They roosted each night on a big cherry tree in our backyard. One night there was a very cold rain and the little birds drowned. I like to feed the birds. How many of you realize what the birds are worth to us?—Mary J. Thomas, (X), Franklin County, Pa.

Dear Cousin Ruth:—I am a freshman in the Akron High School and have six books. They are: classics, rhetoric, science, civics, Latin and algebra. I have about three-fourths of a mile to go to school.

Besides my school studies I take music and elocution lessons. I enjoy them very much.

How many of the Forum friends like to go coasting? I do. Our high school organized and now we have lyceum every two weeks. How many Forum members are Grangers? I am. I just took the sixth degree.—Esther Mohler, fourteen, Lancaster County, Pa.

Dear Cousin Ruth:—I live in a mining town. At our place there is a very steep hill and it is just a cake of ice. We go sled riding on it. I take my sled and start at the top of the street and go clear down. Here is a recipe:

MAPLE FONDANT ACORNS
2 cups maple syrup
1½ cups granulated sugar
¾ cup cold water
Confectioner's sugar
2 or more squares of chocolate
1 teaspoon vanilla

About ¼ cup fine chopped almonds, browned in the oven.

Make fondant of the syrup, granulated sugar and cold water, and when it comes to a boil add chocolate. When done take off of fire and add vanilla and almonds. Stir until it thickens and then pour into buttered pans. When cold cut into squares.—Hazel Ogline, thirteen (X), Somerset County, Pa.

SOME OF OUR POULTRY
Nancy Bamberger, Lebanon County, Pa.

Dear Cousin Ruth and Forum Friends:—I received the pin which you sent me and thank you very much for it. I was delighted with it.

I have caught one skunk since I wrote last; tough luck isn't it? At our school we gave each other presents. You picked a name out of a box and the person's name you got you had to give a gift to. It feels good to have a vacation once in a while.—Paul E. Kohler, thirteen (X), Bucks County, Pa.

Dear Cousin Ruth:—I have three cats and two dogs. One of the cats is old and two are young. The old one's name is Felix. She is all black except her paws are white. We have two dogs and while hunting one of them was shot but he was not killed but his feet were very bad. His name is Sport, and the other is Ned. He is a cross dog and when somebody comes to the house he barks and tries to bite.

Ned is a good hunting dog. Sometimes a bunch of boys comes to our place and my brother goes with them hunting at night. They catch skunks and 'coons. My brother has caught six muskrats, five skunks and one weasel. He sold them yesterday at Cross Creek and got $11 for all.

I was at the Burkettstown Fair on the seventh of October. We had a lot of fun and I won a dish and a baby doll. I have been going to school at Cross Creek for a month. Now I go to Lee's school.—Helen Mermon, (X), Washington County, Pa.

Dear Forum Readers:—It is snowing today and getting cold. The ground is freezing hard and the beach close to our place had ice on it. The ice was not very thick.

WHEN DAYS WERE WARM
Ruth Weir, (X), Washington County Pa.

I am sending a picture of my friend and me on the beach. The picture was taken this summer.—Ruth Weir, (X), Washington County, Pa.

Dear Cousin Ruth:—I have an Airedale dog that does two very interesting tricks. One of them he sits upon his hind legs. We call him "begging." The other he stands on his hind legs and walks. About a year ago we used to get him to sing which was very comical to listen to. I do not know whether he will sing now or not.

We had a Christmas entertainment. I was in two of them. One was a club, the other was a room in a house in Russia.

The name of the first was the Podunk Alysium. It is very funny. The other was the Babushka. Isn't it a peculiar name? In Russia they do not have a Santa Claus, they have a Babushka that goes around every year giving out presents to everyone. She is supposed to be looking for the Christ child. I was the Babushka.

We had a Christmas tree this year.—Florence Dunn, twelve (X), Cape May County, N. J.

Dear Cousin Ruth and Forum Friends:—I like my Forum Pin and wear it on my Sunday coat. are the X's after the names th in letters? We have been new home four weeks and lik didn't get many Christmas but am thankful for what I I had a recitation for Sunday also one for school. We all got of candy at school and at school. A Happy New Year to in Ruth and all.—Oscar Smith, eight (X), North County, Pa.

The (X) after your name that you are a member of the Those who have written to the but haven't yet been made don't have an (X) after their

COUSIN R

Suspense a Little Lo

I'M SORRY that I can't the names of the winners title contest this week, but I' to keep you in suspense a little longer. While you are wa hear the verdict why not be ing up some ideas for other If you have any good send them along and if I possibly I'll use them.

Are you all glad to be school after the holiday vac Now please don't all speak at Perhaps some of you don't study very well. In case the any of you in that class you' that there will be lots more th play in the out-of-doors and you'll have a lot better time you are playing if you work have those dreaded lessons your minds. Try it and find yourselves.

A Happy New Year to all.

OUR LITTLE FOL PUZZLE CORN

DEAR LITTLE FOLKS:—Often times we say that we're "all mixed up." But just see what a commotion it makes when ten perfectly respectable states belonging to Uncle Sam get mixed up. Some people say that when you travel far into the West, right while you are in the train, you may eat your breakfast, dinner and supper each in a different state. But I never did that. I suppose it was the trip that Cousin Ruth took last summer that made me think of the West. These states in the mixed slices below are all in the East.

The way you go about solving this puzzle is to try to find the two slices that belong together. The first one says "PENNSYL" and you know right away that the slice which belongs with this one must be "VANIA," and you will find it if you look carefully. When you have straightened out the ten states so that Uncle Sam would recognize them as his, send me the list on a postal card or in a letter so that it reaches me by January 21st. BE SURE TO SAY HOW OLD YOU ARE, and please remember to tell me when your birthday comes, and the name of the county where you live. The prizes go to the ten children, sending in the correct answer, whose cards or letters are best in grammar, spelling, punctuation, penmanship and general ance. Address all puzzle answers Puzzle Editor, Pennsylvania South Third Street, Philadelphia,

The answer to the Christmas zle published in the December of Pennsylvania Farmer, is: SKATES, CANDY, DOLL, SLED ERA. And I hope you all least some of these and other sides.

The prize winners are: Mabel age 9, Hancock, Md.; Josephine age 8, Harrington, Del.; Cather pregher, age 9, Millville, N. J.; Fisher, age 7, Hickory, Pa.; Mays, age 11, Callensburg, Pa. G. Rohde, age 11, Pikesville, Sholl, age 8, Summit Station, Pa.; belle Smith, age 8, Spartan Sylvia Spencer, age 10, Gra Arlene G. Wert, age 6, Gratz, Pa.

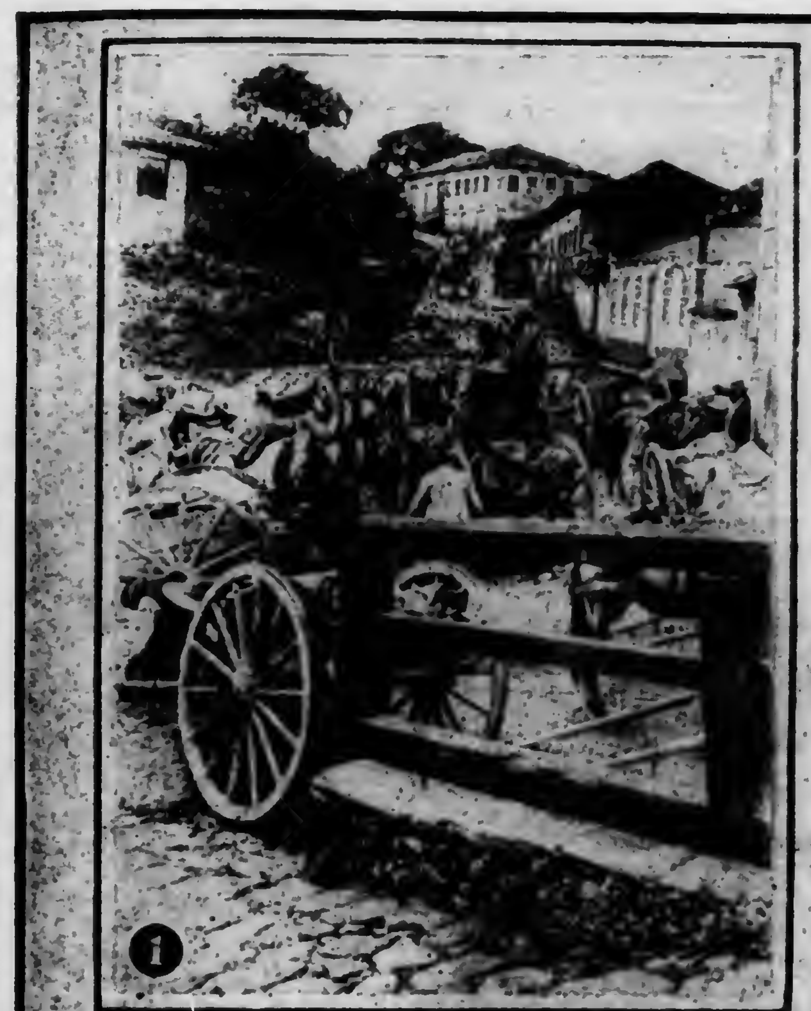
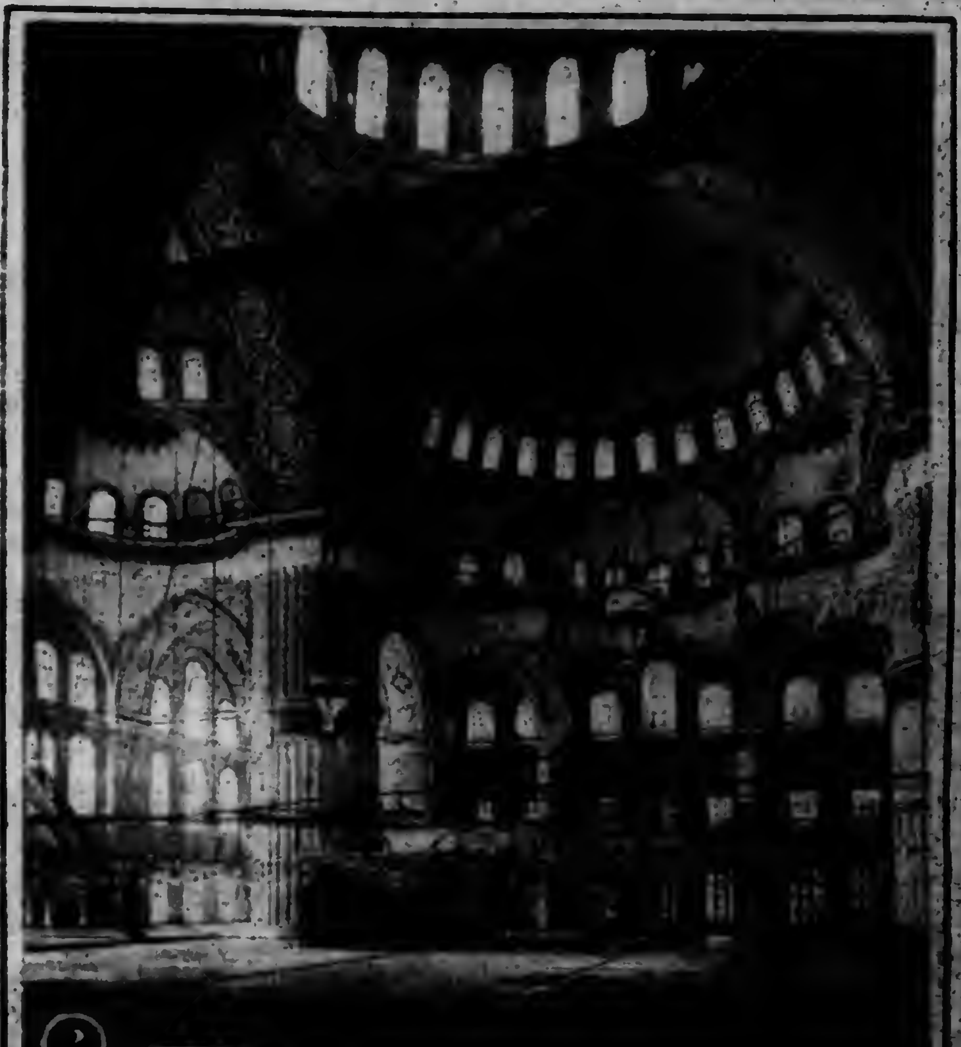
PASSING EVENTS IN PICTURES





(Copyright by Underwood & Underwood)

1.—Near Mendanha, where diamond hunters drive thru the streets in their quaint mule-carts, alluvial deposits containing diamonds have been found. English mine owners have gone to Cape Town to use their influence with the South African Government to pass a law limiting the output, fearing that diamonds may soon become as cheap as imitation pearls.

2.—The beautiful St. Sofia Mosque in Constantinople may be turned into a dance hall by the Turks. Originally a Christian church, built in 326 by Emperor Constantine, rebuilt by Emperor Justinian in the sixth century after being destroyed by fire, it was stripped of all its valuables and converted into a mosque by Mohammed II in the fifteenth century.

3.—The crater of Vesuvius immediately after its recent eruption.

4.—"Hayama Palace," where the late Emperor Yoshihito, of Japan, died.

5.—James Watt, of Scotland, whose name was given to the electrical unit of power he discovered. Like Watt, Ohm of Germany, Volta of Italy, and Ampere of France, gave their names to electricity.

"Keep Them Growing"

Therein Lies the Secret of Success with Plants

THE secret of keeping plants in perfect health can be explained in three words: keep them growing. Plants, like human beings, are responsive and unfurl their most gorgeous tints and tones for those who love them well enough to give them the best of intelligent care.

You must learn to know your plants. Each plant, like each person, has certain peculiarities and certain definite requirements as to temperature, water, soil, drainage, light and ventilation. These needs must be met if we would get out of a plant all there is in it, develop all its possibilities, and have a specimen of which we can be proud.

A plant that is sending forth new growth is rarely attacked by insects but the moment it ceases to grow, trouble begins. The ends of the leaves turn brown and fall off. When its vitality is at low ebb, some insect puts in an appearance and aids in the final destruction of the life of the plant.

Systematic Care Brings Results

To keep up a constant development of new growth is not an especially hard matter. You must be systematic in your care. Watering today and forgetting tomorrow will never lead to anything but failure. Remember, too, that plants in a warm room where the atmosphere is dry require a great deal of water. Therefore, we must wet them thoroly every other day and when I say thoroly, I mean literally soak every particle of earth about their roots.

Then, you must keep the pores of the plant open. A plant breathes thru its pores and when these become clogged with dust, the plant at once begins to show signs of disease. There is only one sure way to keep the pores open and that is to sprinkle the foliage every day. This treatment also adds to the plant's beauty, for dusty foliage is unsightly.

Then, as a preventive treatment, it is well to take a table fork and turn over the surface soil in the pot about twice a week, being careful not to disturb the lower layer of loam. This will go a long way toward keeping your indoor garden in perfect health.

Sick Plants Isolated

One thing that usually benefits a plant that begins to show signs of disease is to remove it to a cool place, away from its fellows. Sometimes when a plant ceases to send forth new shoots, it is a sign that it needs more root-room, and must be transplanted to a larger pot. To be sure that this is the case, examine the roots.

If you notice a fine network of white root fibers in the outer surface of the soil, repot at once—choosing a pot only one size larger than that in which the plant has been growing. When placed in too much soil, a plant never does well. It is not able to make use of all the nutriment available, and soon gets into a condition quite similar to that of a dyspeptic person who is unable to properly digest the food taken into his stomach. Being overfed, the result is a general weakening of the system which often results in death.

When a plant begins to droop, a little stimulant in the form of liquid manure will be just what it needs. Plants, like human beings, require an occasional tonic, and liquid manure is the one best suited to the needs of plants in general.—Jane Leslie Kift.

The Kitchen Cabinet

COLORFUL SALAD

Soak a half box of gelatin in a cup of cold water for one hour. Strain one quart of canned tomatoes and cook gently. Add one teaspoon onion juice, two teaspoons sugar, one bay leaf and one teaspoon finely minced parsley. Add salt and pepper to suit the taste. Simmer together for about twenty minutes, then stir in the gelatin. When thoroly mixed, strain into jelly mold. In five minutes add one cup finely chopped celery. Chill.

This may be made the day before serving and is helpful in being ready at a moment's notice. Arrange the mold on crisp lettuce leaves or a mound of endive. Boiled salad dressing may be passed for those who desire, or the dressing may be heaped over the salad mold, if preferred.—Betsey Ford, Md.

• • •

CRANBERRY JELLY.

Cook 4 cups cranberries in 3 cups water until clear. Crush, pour into flour sack and let drain without squeezing, then strain thru flannel. Measure juice and add half as much sugar. Cook until it sheets or flakes from the spoon. Pour into sterile jelly glasses and cover with paraffin.

Unmold jelly and alternate with pieces of green mint jelly made with commercial pectin, green vegetable color and oil of peppermint. If both jellies are made at the same time, they may be poured into the same jelly glasses, alternating layers, as each cools and sets. A clear yellow apple juice can be used as foundation for the mint jelly.

• • •

APPLE CONSERVE

To make this conserve I use a ten-quart preserving kettle which I set on my scales and weigh. Then I put in seven pounds of tart apples—pared, cored and quartered. I then add five pounds sugar, one pound raisins (chopped), one lemon and one orange, both finely chopped, removing only the seeds. Lastly I add a pinch of salt, and stir the mixture well. If cooked until quite thick, stirring occasionally, you will have a fine spread, easily made and not very costly.—A. B. N.

• • •

BOILED SALAD DRESSING

1 well-beaten egg
¼ cup cream
1 rounding tablespoon sugar
¼ teaspoon salt
½ teaspoon cornstarch
½ teaspoon mustard

Add cream to well-beaten egg. Into a small pan boil up until butter is melted 4 teaspoons vinegar and 1 dessert spoon butter. Blend the two mixtures, and cook until thickened.—E. May Willis, Md.

Tagged for Owners

WHEN buying children's hosiery it is wise to adopt a good brand and not switch from it, so that matching is possible if accidents mar one or more of different pairs.

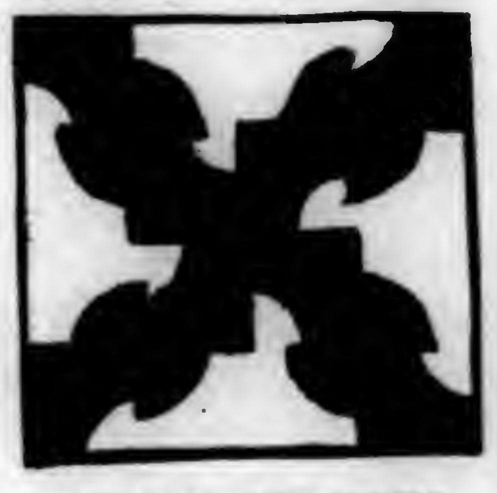
Mark each child's hose if there are several in the family, and save time, for a mere glance shows to whom they belong. I prefer the number system, using for each one his age as his number. Stockings not worn out then are transferred to the younger ones without any change in the marking.

To keep pairs together during the laundry process, sew snaps in the top and teach the child to clasp the before tossing them into the laund basket.

The fine soft wool hosiery ma for small children usually wears quickly in the heels. To make last longer, darn both direct across the heels using soft co yarn and following the shape of heel until all that portion has be strengthened. If toes are thin t may be similarly enforced.—H Manning, Ill.

Quilts Use Up Bright Patches

YOU will need a few interesting quilt patterns to keep you happily busy during the indoor hours that are now upon us. Christmas sewing left us many bright patches which offer gay suggestions for the bedroom quilts or pillows that are so very popular at this time.



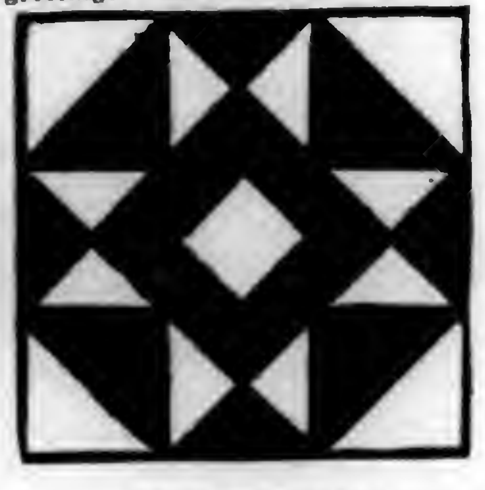
COUNTRY WIFE'S PUZZLE
A ten-inch block in two colors.

Country Wife's Puzzle

This 10-inch block worked out in two colors fascinates every one who sees it. The finished quilt is unusually beautiful. It is a very old pattern and dates back to colonial days when puzzle patterns were very often seen.

The Letter Tray

Another two-color pattern of interest and very good to use up small pieces is the twelve-inch block called "The Letter Tray." It is a happy reminder of our trays at this season when they hold so many cheery greetings from friends all over the country—many of whom we have not seen for years, perhaps.



THE LETTER TRAY
A twelve-inch block in two colors.

If you wish these patterns send 30 cents, if you want only one 15 cents, together with a self-addressed envelope, addressing Quilt Pattern Service, Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa.

Rag Toys Find a Ready Sa

RAISING money to help with club building started my id of making and selling rag toys. I iginated a few doll and animal p terns, and a group of us sewed a sold to the amount of $300 worth rag toys during one summer and fa The need for our group sewing passed, but I continued to make c cheted and rag toys in my spa time.

I am my own housekeeper and assist my husband in his poult business at least three to five h each day. I also find quite a time for club work. I believe in rising and planning ahead for next week or even longer. In f I often catch myself planning wh should accomplish each month ing the year. It is so much when you know ahead what want to do.

My toy-making hobby, besides ing lucrative, has broadened my terest in art and literature.—Mrs. A. Umoselle, N. J.

A Dog's Life

WHEN naming the animals the farm in order of us ness, we must place the dog near the head of the list, but his fulness, or worthlessness, depends a large extent on the care and tr ing given him. The most intelli dogs are the ones most easily ed. Our dog knows the boundary of our farm as well as we know th He chases stray animals to the and no farther. He knows head of stock on the farm and kn when a stray is among them. had a vicious temper when we him, but he responded to fair ment as most dogs do.

Plenty of good food, a warm to sleep, at least one comrade in family, and sensible training ar the average dog requires to mak him an almost indispensable he on the farm.

He Likes His Meals on Time, T

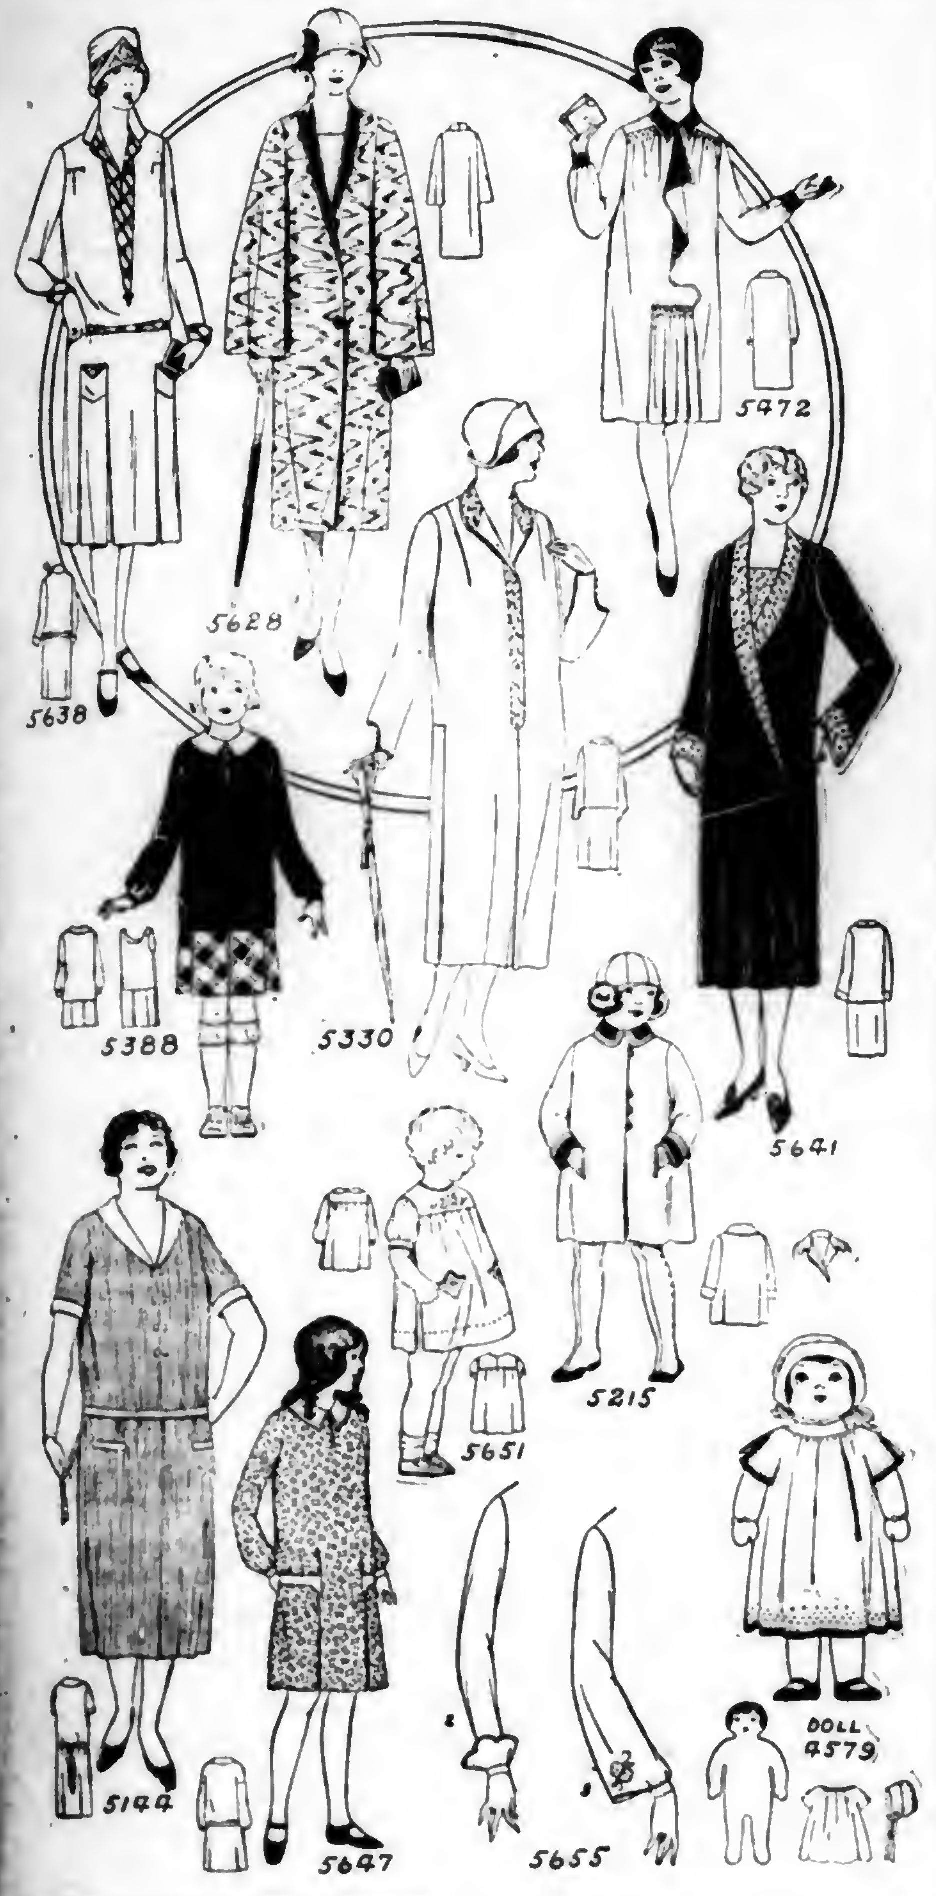
On a nearby farm, a real beauty a dog is petted and kindly t but sometimes he is fed once a sometimes forgotten, and often too much.

I once lived in a double house family occupying the other part a hound for hunting. Sometime was tethered to the leg of the and after he became so warm could scarcely breathe, would tie him on the front porch bitterly cold weather.

Every dog should have its day made happy, to pay for the ligence that often warns us of ger, the love that survives kicks neglect; the faithfulness that fishly rushes into danger when are in peril of flame or flood.—M. C. Smith.

When Winter Wraps You Round

That's the Time to Take a Long Neglected Stitch or Two



Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5638.—With a Touch of Plaid.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 2⅞ yards of 54-inch material with ⅜ yard of contrasting material. Price 10c.

5628.—Ladies' Coat.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 4⅜ yards of 40-inch material, with ⅝ yard of contrasting material. Price 10c.

5472.—She'll Like a Jabot.—Four sizes: 8, 10, 12 and 14 years. A 10-year size requires 3 yards of 40-inch material together with ¼ yard of contrasting for facing on collar, cuffs and jabot. Price 10c.

5388.—Two-Piece Dress.—Four sizes: 4, 6, 8 and 10 years. An 8-year size requires 1⅛ yard of 40-inch material for the blouse and ⅞ yard for the skirt, if made as illustrated in the large view. The underbody will require ½ yard of 36-inch lining. Price 10c.

5330.—Tight Fitting Cuffs.—Nine sizes: 36, 40, 42, 44, 46, 48, 50, 52 and 54 inches bust measure. A 44-inch size as illustrated in the large view requires 4 yards of 40-inch material and ½ yard of contrasting for collar facing and for overlap.

5641.—Slenderizing Lines.—Eight sizes: 38, 40, 42, 44, 46, 48, 50 and 52 inches bust measure. A 42-inch size requires 4⅜ yards of 40-inch material with ⅝ yard of contrasting material. Price 10c.

5651.—Child's Dress.—Five sizes: 6 months, 1, 2, 3 and 4 years. A 4-year size requires 2 yards of 32-inch material. Price 10c.

5215.—Coat for Little Folks.—Four sizes: 2, 4, 6 and 8 years. A 4-year size requires 1⅞ yard of 40-inch material with ⅜ yard of contrasting for collar and cuffs. Price 10c.

5144.—Practical House Dress.—Seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 4⅜ yards of 36-inch material with ½ yard of 27-inch material for collar, cuffs and pocket facings. Price 10c.

5647.—Broken Belt Line.—Four sizes: 6, 8, 10 and 12 years. A 10-year size will require 2¼ yards of 40-inch material with ⅜ yard of contrasting material. Price 10c.

Wash health into your skin with PURE PINE TAR
GENUINE Pine Tar is Nature's skin food and restorer. It soothes, heals, and builds up the skin; restores vital oils burned out by sun, wind, or harsh cleansing.
Obtain its wonderful nourishment for your skin by washing and bathing with Grandpa's Wonder Pine Tar Soap, which is virgin pine tar and rich cocoanut oil. This combination of bland health oils is so soothing that it is ideal for a baby's tender skin. Yet it is so thorough, so antiseptic, that it kills all body odors.
Millions of people, since '78, have relied on Grandpa's Wonder Soap to keep their skin and hair healthy and nice.
Start using it now. If your dealer can't supply you,

The Teacher's Side of It

Mothers Could Learn a Lot in One Day at School

I HAVE been doing some substitute teaching for one of the teachers who is ill. It has been a week full of needed experience. It might be a good thing if all mothers could stand in the shoes of the teacher for a few days occasionally.

How many mothers know the temperature of the school room and dress the children accordingly? Most mothers insist on their children wearing clothes that are too heavy for ordinary schoolroom wear, for the schoolrooms in our modern school buildings are kept at a summer temperature. It surely is wrong to wear clothing that would be comfortable in a zero temperature in a room that is kept at 70 degrees.

Dressed for Comfort

Daughter has this winter dressed just as she does in summer with the exception of wearing serge dresses and flannel middies in the extreme below zero weather.

But she has preferred wearing cotton dresses—and next winter I am thinking her wardrobe will be composed entirely of cotton dresses. She is wearing low shoes and cotton stockings, of course being careful to wear arctics when going out-of-doors. A heavy sweater under a heavy coat has furnished ample protection against all kinds of weather. She has not had a symptom of a cold so far, and I think her way of dressing has something to do with good health.

Brother, 7, has worn his long, heavy underwear, and he has had a number of little colds. Next winter I believe we will try lighter underwear. I realized today in the schoolroom that many of the children were dressed entirely too warm. The room was heated to 70 degrees and some of them were over-dressed so that they simply could not do good work.

The child and teacher are handicapped if the mother does not see that the child comes to school rested. When a child is sleepy before ten o'clock in the morning, he cannot do good work. How many children of the lower grades are in bed by 7:30 at night, and sleep until seven in the morning? The child under eight years needs that much sleep.

It should be part of the job of the mother to see that the child has proper foods—with no candy thrown in between meals to spoil the appetite.

One little boy was annoyed today because one of his elastics was broken. That elastic consumed the time which I might have spent on the other children to advantage.

A little girl was annoyed because the buttonhole on her dress was too large and kept opening. We finally resorted to a safety pin, rather against her will.

I realize that accidents will happen to children's clothing, but the aim should be to dress them in clothing that is serviceable and comfortable and stoutly adjusted, and minimize the danger of accidents.

Physical Care Gives Brains

I thoroly approve of bobbed hair for little girls but it is an injustice to a child to permit that hair to be continually bobbing in the eyes.

If you ever walk thru a schoolroom in the winter you will realize that children's hands get in pretty bad shape if not properly cared for. The child should have hand lotion as well as a tooth brush—and use it after washing the hands. It is not the work of the teacher to manicure the children's nails—but I am sure teachers have ofttimes felt like doing it.

We cannot expect children to do their best work if we do not do our part at home and send them to school, not only in the right frame of mind, but properly cared for physically.—M. H. M., Ohio.

How Folks Do Enjoy Pie!

IS THERE anything nicer than a big delicious pie when there are guests? We have a tin that takes a custard pie made from six eggs, a quart of milk and a cup of sugar. When it is baked it cuts more than an inch thick and looks delicious. The same granite pan is used for a very thick lemon pie that is cut in small slices, but still means as much in actual bulk as the big pieces cut from small tins.

A whipped cream pie is a favorite. Whip cold thick cream till it piles up firmly, and fill a baked shell with it just before dinner. Dot with bits of bright red jelly. The cream should be sweetened just before putting in the shell. If you have the pink sugar crystals that are used for cooky tops use a light sprinkling of them to give a pretty color.

All kinds of soft pies with meringue lightly browned are also good. Pumpkin, butterscotch, chocolate and cream are rich and delicious. If well made and cut with a thin sharp knife they do not look mussy when served. A berry custard is also good. Place a thin sprinkling of berries in crust, cover with custard and bake in a steady oven.

As Good As It Looks

The old fashioned "cross kiver" pies are coming back. I tasted one the other day made of cherries with dainty lattice work, and it certainly was good. A berry or peach pie with rich colored juice oozing from the slits in the cover and served warm is a luscious thing and well liked. Plum pie is also rich and deep colored. The main idea in pie making, as in other cooking, is to make something that looks tempting and tastes just as good as it looks.

The individual pie or tart can be used for guests as well as for home folks. It takes longer to make them but they are easy to serve and good. They can be made of any materials used for the larger pies. Served on small plates, topped with fruit or frosting, they are fine. They should be made quite small. The crust should be delicate, thin and rich and one tablespoon of material is quite enough for a good dessert.—Hilda Richmond, Ohio.

First Aid for Burns

A COUPLE of winters ago a tray of scalding coffee was accidentally poured down my back. Fortunately the doctor lived next door. He immediately covered my back with a good salve, then with cotton, firmly bandaged me, and ordered me to bed for a real sleep. My back healed perfectly, and not a bit of skin came off.

I immediately purchased some of that good salve for my emergency shelf. I have been glad to have it handy a number of times. It is one thing every emergency kit should have.

Of course, after any burn a patient should be kept quiet and gotten to sleep if possible. Even a slight burn may be quite a shock to the system. —May H. Mumaw.

Note.—The editor will be glad to write any one interested in learning what ointment is here so highly recommended. Please send a self-addressed, stamped envelope for reply.

A Good Cold Weather Starter

Now More Dependable than Ever

Probably no single feature of Dodge Brothers Motor Car has been more widely talked about and commended than the power and promptness of the starter.

The *new* two-unit starting and lighting system now advances Dodge Brothers leadership in this important respect still further.

There are now no moving starter parts when the car is in motion—no starter chain—no noise—no wear. The new starter is even more DEPENDABLE than the old, and far simpler and more compact in construction.

Many other major improvements have been added during the past twelve months, all vitally affecting performance and increasing value far beyond the apparent measure of current Dodge Brothers prices.

34 per cent linseed meal

Millfeed in quiet demand with production.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .50½	...	$ .56	$ .44
Eggs, fresh gathered extra firsts (N. Y.)	.45	...	.53½	.41½
Potatoes, 150-lb sack, (Philadelphia)	$4.00	4.25	3.92½	7.25
Steers, good to choice (Lancaster)	9.62½	...	9.25	10.00
Hay, Number 2 timothy, baled (Phila.)	23.50	23.50	23.50	24.50
Wheat, No. 2 red winter (Philadelphia)	...	1.48	1.45¾	1.80½
Oats, Number 2 white (Philadelphia)	.55	.59¼	.57½	.53

Trading After the Holidays

Review of the Week Ending January 8

POTATOES.—Consuming and shipping point markets were dull following the New Year holiday and prices were generally lower. More liberal offerings and a limited demand were the chief weakening factors. In Philadelphia extra fancy Long Island stock continued to sell at $5.25 per 150-pound sack but this is no indication of the real conditions since this stock is purchased by a special trade that is willing to pay a premium for extra fancy potatoes. Pennsylvania stock sold mostly around $4 to $4.25 and was generally rather ordinary. Some of the better stock packed in 120-pound sacks moved at $3.75 to $3.85. Dealers in general were not very optimistic at the close of the week and no immediate advances seem likely.

BUTTER.—Sharp declines of 3½c to 4½c per pound were the feature of the butter market. Buyers apparently had carried over stocks from the holiday and the market fell rapidly. On Thursday the demand improved and the market closed firm with dealers more confident.

EGGS.—The New York egg market improved toward the close of the week. White eggs continued weak but the market on brown eggs was firmer. Cold storage stock was in better demand but some holders refused to sell at present prices and were awaiting a cold wave to stimulate the market. Nearby eggs met a better demand at the close.

HAY.—The market for hay in the East showed a weaker tone due to liberal receipts and a moderate demand. The demand for hay in the South improved and at the close top grades were moving readily altho lower grades were rather dull and weak.

LIVESTOCK.—The Chicago hog market was stronger and prices advanced to 35@50c above last week's level. Beef steers were firmer and prices about 25c higher. Cows were weaker while heifers held steady. Heavy calves declined 50c while stockers and feeders held firm with advances of 25c. Fat lambs, fat ewes and feeding lambs were stronger.

GRAIN.—The market made considerable improvement after the recent holiday dulness and most points reported a better demand. Wheat prices were higher than a week ago but foreign markets were dull. Receipts of corn were more liberal and the market irregular. Oats held generally firm.

POULTRY.—A strike for increased wages by the coop handlers in New York and also in the slaughter houses tied up the poultry market. Most of the time it was impossible to make delivery to slaughter houses and because of this jobbers were bidding almost any price to obtain supplies. At the close of the week the situation was unchanged and the outlook was not promising.

Would Pay Farm Hands Factory Prices

following extract from an article published in a daily was sent us by the auth- Mr. J. B. Haines, Sr. Mr. has a city business but lives and works intensively a big in Montgomery County. His usions as to an effective rem- for the farmer's troubles are ique, and so much at variance the average farmer's ideas that produce them. They are worth ng about.—Editors.

trouble with farming is production, and notwithstanding and ease in which we pro- a crop today—we have not our hours of work com- with that speed—and fifteen or sixteen hours a day, tly longer, for we ride in- of walk, and we haven't our horse to consider.

years ago it was a week's for two men and two teams to plant a twenty-acre field. our three tractors we com- seeding on the second day, am quite convinced that unless our hours of work or go to the old fashioned methods there is no possible way farming can be made to

Some Personal Experiences

advancing the argument that can be saved only by labor tion, I should like briefly to some of my experiences with and manufacturing. Thirty ago I was employed in the ad- department of a large daily I rented an eleven-acre that our children could have of country life and also I was fond of country work. years I moved to a sixty-acre in three years purchased a farm. I afterward added to acres—247 acres in all—it work, indeed, in keeping advertising work and the

"Having both country and city work has given me an inside knowledge of the problems of the farmer and the manufacturer—especially as it was absolutely necessary that we make the farm pay as well as our city business, and, let me say to the farmer who may read this article, that we are dirt farmers—driving our place as long and as hard as we can. We have a thirty-cow dairy, do a certain amount of general farming and specialize in melon growing, for which we have a good market in various cities.

"One might think with all this that we have a very paying proposition, but the fact is, owing to the low prices forced upon us, that we are always pleased when we can clear 2 or 3 per cent upon investment.

Washington Hasn't the Answer

"The President of the United States, the Agriculture Department in Washington, as well as the agriculture departments in the various states, have an unsolvable problem with farming, I think. Protect any particular crop with a price and we are capable of delivering so much of that particular crop in another year that it would be next to impossible to finance it. I can demonstrate this with our methods of growing potatoes, which we only grow in a year following overproduction, when we can purchase seed potatoes for less than the cost of production and transportation. We grow potatoes that year, as invariably a better market follows the coming year; but, let potatoes bring a high price and the year following they will not pay for the digging.

"Naturally, I belong to the employer class and would hesitate in having any labor organization dictate to me just what I should or should not do, but let us be just. I remember when a laborer was paid $1 a day—when good bookkeepers could be employed for $8 to $12 a week, when street-car conductors and drivers worked from six in the morning until they turned in their cars at 11 or 12 o'clock at night; in fact, all labor was poorly paid, with the result that we had hard times for the reason that the great mass of people could only purchase the bare necessities of life and not much of those.

"Let us ask ourselves fairly and frankly what were the causes that shortened the hours of work and increased pay—analyze these and you will find that labor organizations figured largely in this work. To be sure, in the beginning there were strikes, walkouts and fights, but gradually as the manufacturer found that it was to his best interest to shorten the hours of work and increase pay, business commenced to improve.

"It will bring greater prosperity if those who are living and working on the farm receive the same pay as those working in factories, for we who work on farms want a great many of the things that city people have. Our work is hard and rough and, accordingly wears out our clothes and shoes and, if the spending of two-thirds of our population has brought about prosperity, add to this the spending of the other one-third and I reiterate that we will enjoy prosperity beyond our imagination."

County, N. Y.—December showing us what it can do in of blizzards. The thermometer 10 to 20 degrees below for sev- at a time at least three dif- this month. Icing is the the day just at present, due to ble cold weather. Ten-inch "grew" so early before. Before was over apples froze on as soft as puff balls and the snap was so unexpected that froze badly. Very little fall- done. Hundreds of acres of did not get harvested. Corn, t and potatoes were, in a total loss. Butter, 50c; potatoes around $2.—E. M. A.,

County, Pa.—Winter weather even low temperature, snow depth covers the fields and about evenly divided between motor vehicles. Baled hay is market at $28 to $30 per ton, tho most farmers are cautious as to selling roughage as farm animals will require all the short crop to see them thru the winter. Practically all the corn shocks that were snowed in a month ago are yet in the fields, likewise the potatoes that were not dug at that time. Apple market is well filled and prices vary from 75c to $1.25 as per variety and grade, potatoes are going to market slowly and the price in the local market ranges from $1.25 to $2.00. Buyers are waiting for a lower price and farmers unorganized sell as they can in competition with their neighbors. Dressed hogs, 18c; beef, 10@15c; chickens, 25@30c; good print butter, 60c; eggs, 60c; cabbage, 2c; turnips, round globe, $1.—D. H. W., January 1.

Lebanon County, Pa.—Winter weather still prevailing but not as cold as some days in December. Ground is covered with a light covering of snow. Farmers are still butchering. Some corn to be husked in several localities, something unusual for Lebanon County. Farm stock sales being held and fair prices are realized. A few farms are still advertised for rent. The farm products show held in Lebanon from December 14 to 18 was one of the largest and best in recent years. Some of the best exhibits will be shown at the big annual show at Harrisburg. Many radios were installed in the rural districts during the last year. Prices: wheat, $1.40; corn, 70c; oats, 50c; rye, 90c; hay, $22; straw, $14; potatoes, $1.75@2; butter, 58c; eggs, 60c; milk, $2.65 cwt.—P. L. M., January 3.

Northumberland County, Pa.—Winter has been here in earnest since December 5th. The 8-inch snow falling on that date is still with us. Two lighter snows have fallen since. Some 8-inch ice is being cut and stored. Considerable corn remains to be husked because farmers are unable to work on account of the cold and snow. At least 50 per cent of the fodder is in the field. On account of its green, sappy condition much will be hauled to the barn as it is needed for feed. Fodder is much in demand on account of the hay shortage and sells for 8@10c per sheaf. Much manure has been hauled on the corn ground the past two weeks. Market prices: wheat, $1.30; potatoes, $1.50; oats, , milk, for 3 per cent; eggs, 55c; chickens, 24c; pork, 16@18c.—W. C. G., December 30.

Free Trial of Proved Swedish Abortion Treatment

Famous Foreign Formula quickly relieves badly infested herds. Gives amazing results in cases believed hopeless.

Thousands of American Farmers say the Froberg Swedish Abortion Treatment has saved their herds from destruction. This remarkable treatment has been used with complete success in the big dairy herds of Sweden for many years, and has cleaned up whole districts over there literally rotting with contagious abortion.

It was only after great expense of time and money that this secret formula was made available to American Farmers. During the past nine years the treatment in American herds has given all the amazing results that made it so famous abroad. Herd after herd has been rid of this disease. Even cows considered hopeless by veterinarians have yielded to its healing qualities and been restored to health and produced fine vigorous calves.

SAVED HIS HERD

David Mohr, Jackson, Michigan, says: "Last year I raised only one good calf out of 16 cows bred, all other calves were aborted. I was desperate. I used your C.C.C. treatment. This year with the same herd I have not lost a single calf. It's wonderful. My neighbor lost 2 calves in a few days—I gave him some C.C.C. and it stopped the trouble right there."

The fame of Cow Calf Control (C.C.C.) the name of this treatment has spread from breeder to breeder. Today it is put out only on an absolute binding guarantee that it will stop every case of abortion; that every cow treated will deliver a normal calf, or the treatment cost is refunded. Two reliable banks stand behind our guarantee. You can't lose. C.C.C. is practically 100% successful.

SEND NO MONEY

Mr. John W. Froberg, a native of Sweden and a large dairy owner, is responsible for introducing C.C.C. into this country. He has made the treatment easy to give, and at a cost per animal that every farmer will gladly pay.

The New Ferguson Plow FOR FORDSONS

FRESHENING TIME is the most critical period in the life of a cow or heifer. Don't ruin your cows by neglecting a retained afterbirth. If allowed to remain disease and blood poison may follow. The afterbirth should not be removed by force except in rare cases, as under such circumstances some parts will surely remain. These decompose and are absorbed, leaving the cow in a more dangerous condition than before.

COW CLEANER

Has a direct ripening effect upon the afterbirth, assisting Nature to enable it to come away of its own weight. A small investment will save a valuable cow. Avoid all danger by giving Dr. David Roberts Cow Cleaner before the cow freshens.

For sale by dealers or postpaid $1.00. Ask for FREE copy of The Cattle Specialist and how to get the Practical Home Veterinarian without cost.

Cigarettes Played Havoc with Pennsylvania Tobacco Indu

(Continued from page 2)

is consumed in this class is a small part of the whole.

Statistics show that the trend of production of Class A cigars is slowly upward and that of Class B sharply downward while that of Class C is almost constant. The encouraging part of this analysis is the upward trend in production of the 5c cigar in which Pennsylvania tobacco is principally used. It shows that the consumer prefers a 5c or 10c cigar and that the cigars which sell at prices between these are gradually losing his favor.

Figures compiled by the Bureau of the Census show that stocks of leaf tobacco in the hands of manufacturers and dealers are nearly 50 per cent greater than they were a decade ago. Stocks of Wisconsin and Connecticut Valley tobacco are nearly twice as large as they were ten years ago and stocks of Pennsylvania tobacco have increased about 35 per cent in the last decade. Stocks of Ohio tobacco, the chief competitor of Pennsylvania, are about the same as they were ten years ago. The high point in cigar leaf tobacco stocks was touched in 1924; since then there has been a slight decline.

Too Much Produced 1916-1925

During the period from 1916 to 1925 the average annual consumption of Pennsylvania tobacco, based upon production and stock statistics, was 56,123,000 pounds. The average annual production for the same period was 59,314,000 pounds. This shows that during the above period production of Pennsylvania tobacco has exceeded consumption by approximately three million pounds per year.

Preliminary estimates by the Department of Agriculture place the size of the 1926 crop at 43,560,000 pounds. This means that production will be far below the average consumption of the last decade. If 1926 consumption equals this average, and there is every reason to believe it will since the production of Class A cigars for the first ten months of 1926 was greater than during the same period of 1925, then the Pennsylvania tobacco stocks should be considerably smaller in October 1927 than they are now. On October 1, 1926, the stocks of Pennsylvania tobacco held by dealers and manufacturers amounted to 105,261,000 pounds as compared with 113,400,000 pounds on October 1, 1925, a decrease of over eight million pounds or 7.2 per cent.

Five-Cent Cigar May Save Situation

The future of the Pennsylvania tobacco industry is closely linked with that of the manufacture of 5-cent cigars. During the last two years a better quality 5-cent cigar has been on the market than at any the war and the consump class of cigars is increasi the war and for several lowing it the price of tob high that it was nigh im make a good cigar for 5 tobacco prices during the years have enabled manuf produce a good 5-cent cigar can continue to make such only as long as they can tobacco at a low price. turers state (and the tra industry supports the that the margin of profit, is much smaller today than fore the World War and big sales volume can they in business.

Grower and Manuf

Pennsylvania tobacco therefore, should realize welfare is closely bound that of the cigar manufac the manufacturer realizes extent that his welfare is upon the grower is illustrat fact that one of the larges in the Pennsylvania tobacc opened the market for the at 13 cents per pound, crop could readily have bee at a price possibly 2 or 3 per pound.

As some Pennsylvania used in a few makes of cigars, good Pennsylvania suitable for use in the this class and if grower bend their energies to quality, more of our toba be adaptable for use i priced cigars. The grow familiarize himself with grades and insist that the turer or dealer buys by careful handling of tobacco time it is harvested thru preparatory processes for would undoubtedly place sylvania tobacco in the ket grades.

Wholesale Reduction Not

Altho prices of tobacco are low, the Pennsylvani grower would in no wise in abandoning his big and expensive tobacco Wholesale discontinuance growing in Pennsylvania fled by present conditions dication points to a creasing outlet for this war period is closed and th high prices for tobacco that from the war is definitely tobacco grower must striv utmost to cut his costs of tobacco, produce a better crop and hold his acreage consumptive requirements.

Friendly Talks with Farm Folks

By Edgar L. Vincent

IN THE woods on my farm I found a large tree that had a vine climbing up its side. It was a pretty vine, with red and green leaves, and I stopped to admire it, altho I did not touch it, for I was afraid it might be of poisonous nature. But the thing which impressed me most was that while the vine was flourishing, the tree was dead; not a leaf on its branches, only bare, helpless limbs reaching up appealingly toward the sky.

Now, I do not know that the vine had anything to do with the death of that tree in the forest but I can see how that might be the case. By sending its roots deep thru the bark and into the surface of the wood, the plant may have sucked the sap that ought to have been going up into the top, furnishing leaf, wood and life to the tree and so in time brought about its final death.

Not Quite Strong Enough

A farmer I knew came down from the hills where he had been brought up and took a place in a public office. Back home he was known as one of the strong men of the neighborhood. Always interested in things that were good; ever ready to do a good turn when he could; loved and trusted by all.

The day came when I sat in a court room and saw that man brought in by an officer of the law, charged with a serious offense against the public. I never witnessed a more heartbreaking thing in all my life. And that was the end of this man's usefulness. What had happened?

He was not a bad man; his experience had not changed his nature radically. The great trouble was that he was not strong enough to stand up against testing when it came, as it was bound to come. In a day when he was at his weakest, a spirit of evil whispered in his ear that by bending from the right just a little he could swiftly climb to the success for which he was longing; and he gave way to the temptation. The roots of evil began to dig themselves deeper toward the heart of his life. The end was moral death.

When the body of President Garfield lay in state under the rotunda of the Capitol at Washington, I stood on the east front of the great building and talked with a policeman. This is what he said: "I have seen men come here from all over the country. Many of them were good, true men when they came; but they went down."

The Power of Men

They went down! That is the story, and it is a terrible one, and as instructive as it is terrible. Trees cannot help themselves when deadly vines attack them. Men can. The power has been given them to say when the spirit of wickedness leans over and speaks in their ear, "I want nothing to do with you! Leave me and never come back again!" That is the only safe way.

Today men are going down in every direction killed by the vine of love of money. There is no more fatal course than to dally with that root of evil. It sticks up its head everywhere but we need not fall before it.

Once in the life of the Truest Man this world ever saw, the man formed just like you and me, and yet, the man whose spirit was more than human, was face to face with His greatest temptation. You know how He met it. "Get thee behind me Satan!" That was His command and the evil spirit fled! It will flee before you and me if we find our strength where our Great Exemplar found it and say as if we meant it, "Get thee behind me, Satan!"

"Who Pays the Freight?"

EDITOR, Pennsylvania Farmer:—I have read your article in the December 11 issue entitled, "Who Pays the Freight?" and I am of the opinion there will be others beside the Wisconsin farmer who will object to the conclusions of Professor Boyle.

Who pays the freight on any article depends upon where the price for it is established. If it is determined at the place of production the freight is paid by the consumer, while if it is established at the place of consumption the freight is paid by the producer. Hence the statement, "The farmer pays the freight both ways," is, for the most part, correct.

In the Case of Potatoes

To illustrate: The price of potatoes is determined at the city markets. The producer who lives near enough to a given market to make his own deliveries may get the market price for his product, but the grower residing at a distance will receive a price as much less than this as the amount of freight, cartage and commission charges.

As freight rates are raised, as wages are increased, in fact as any of the handling charges are advanced, there must of necessity be an increase in the spread between the market price and what the producer gets.

Another class of computations that may be very misleading is that of computing the percentage of the consumer's dollar that gets into the pockets of the producer. This is affected very much by the price of the article. It may vary greatly while the carrying and handling charges remain the same.

For example: If the cost of getting potatoes from a given producer to the consumer is 70 cents a bushel, then when the consumer is paying $2 a bushel the producer will get 65 per cent of it; but if there is a big crop and the consumer is able to get his potatoes for $1 the producer will get only 30 per cent of it.—J. J. Edgerton.

Distribution Costs

THE small quantity of food bought at any one time by consumers has been found by the U. S. Department of Agriculture Marketing experts to be an important factor in present-day distribution costs in urban centers. A study of distribution costs in New York City, for example, shows the standard retail sale of fruits and vegetables is about 26 cents for each kind of product, of which about 14 cents is the wholesale value landed at New York City.

Carloads of products are broken into smaller lots by wholesalers for the jobbers, the jobbers in turn break up the packages into still smaller lots for retailers, and the retailers further subdivide the shipments for consumers. All this entails service which is paid for ultimately by the consumer.

Time was in New York when consumers bought their fruits and vegetables in bushels, barrels and other correspondingly large packages. Lack of storage space in present-day dwellings, however, limits purchases to the immediate needs of one or two meals.

When you Go to Town
—ask your dealer to show you Dr. Clark's Purity Strainer. He'll tell you why it's the only strainer on the market guaranteed to remove all the dirt from milk or money back. He'll show you how easy it is to clean and how it assures your getting better grades in your milk tests. Take one home with you. Strain your milk with your present strainer then strain the same milk through the Purity. You'll quickly see what we mean when we say it removes absolutely all the dirt! Thousands of farmers, dairies, and condensaries such as Borden's, Van Camp's, Carnation and Mohawk use the Purity Strainer. They can't afford to take chances; neither can you!
Ask your dealer. If he hasn't it, send to us direct for literature, sizes, prices, and give dealer's name.

Six Reasons for Unadilla Leadership
It doesn't just happen that more Unadilla silos are sold each year than any others. Here are six of the reasons:
A Unadilla cures and keeps silage better.
The air-tight fitted staves defy frost and save all the valuable silage juices.
It is strong, durable, well-built of selected lumber.
The famous Unadilla ladder makes for the greatest silo safety and easy use.
Every hoop can be taken up 12 inches at the door front.
Continuous opening at feed level. You just push out the silage.
Order early while the factory is not rushed and effect a real saving of money. Liberal discount for cash.
Write for our silo catalog, containing information on our strongly built storage tanks, water tubs and vats.

W. H. TOMHAVE
Staff Contributor and Adviser
Head of the Department of Animal Husbandry, Pennsylvania State College

Series of Forage Crops

Would you please tell me what two crops to plant besides rape for hogs. I would like you to tell me the amount to plant of different seed.—L. Y., York County, Pa.

A very desirable series of crops as forage for swine can be secured by seeding a field to Canadian field peas and oats early in the season or as soon as the land can be worked in the spring. This combination should be seeded at the rate of one bushel of peas and one and a half bushel of oats per acre. This combination will furnish spring and early summer pasture.

About two weeks after seeding the oats and peas seed a part of the field to Dwarf Essex rape, allowing about eight pounds of seed per acre. Two or three weeks later seed the balance of the field to rape which will make it possible to have continuous pasture.

After the peas and oats have been pastured seed the field to rape as the rape is about as acceptable a crop as you can secure for all summer pasture. Reseed any of the fields to rape that are pastured down. The land used for hog pasture must be in a good state of fertility for the best results.—W. H. Tomhave.

To Fatten Steers

I have some steers for fattening and am feeding ensilage, about all they want to eat, and also some cottonseed, also salt. Would you please tell me how much cottonseed to feed to a steer of about between 400 and 500 pounds? What is the best feed for steers?—C. R. H., York County, Pa.

The combination which you are feeding will give you fair results and is very economical. The ration can be improved by adding some of the corn and cob meal because the cattle are too light in weight to make the best use of a ration consisting largely of roughage. Seven to eight hundred pound cattle would do better on an all silage and cottonseed meal combination.

I would suggest the following ration as being somewhat better suited for cattle weighing from 400 to 500 pounds: An unlimited silage ration as roughage and in addition three pounds of cottonseed meal per 1000 pounds of live weight daily. On this basis the steers should receive about 1½ pounds of cottonseed meal per head daily and the amount gradually increased as the cattle increase in weight so that the ratio of three pounds per 1000 pounds live weight daily is maintained.

The cottonseed meal should be poured over the silage. The corn and cob meal can be fed to advantage. It should be fed at the rate of about one pound per 100 pounds live weight daily at the beginning of the feeding period and gradually increased toward the latter part of the feeding period.

In addition to the combination suggested, allow the cattle all the shredded corn stover they will clean up daily. The salt should be kept before the steers so that they can consume it at will. Also allow them free access to running water.—W. H. Tomhave.

Stock Relish Pumpkins

I would like to know the analyses or feeding value of pumpkins for milk cows. What stock does it pay best to feed them to? J. L. G., Carroll County, Md.

Pumpkins are relished by cattle, horses and swine. They contain a high percentage of water, giving them a low feeding value based upon weight or compared with other feeds. When fed to dairy cows, one ton of pumpkins including the seeds is equal in feeding value to about 350 pounds of good mixed hay or about 800 pounds of good silage.

The pumpkins should be fed raw and the seeds left in because they contain a considerable amount of food nutrients. When fed to pigs or horses they have about the same feeding value as when fed to cattle. They should in every case be fed without cooking as their feeding value is not improved thru cooking. —W. H. Tomhave.

Patient—My wife says that I talk in my sleep, doctor. What should I do?

Doctor—Nothing you shouldn't.—American Legion Weekly.

Lulu—How come yuh is always lookin' fer a job an' neber findin' one?

Mose—Dat's skill, woman. Skill!

GUERNSEY BULL CALF, about 4 mos. old, sire's dam A. R. record 729 lbs. fat. May Rose. Hey Tres. LOCUST LAWN FARM, ELVERSON, PA.

REG. GUERNSEY BULLS ready for service. Calf $5 for immediate sale. Herd tuberculin tested. JOHN C. SARVER, R. No. 1, Millerstown, Pa.

HELP WANTED

WANTED LOCAL SILO AGENTS—Some excellent territory open for well known silo. Help given in selling. Sales work backed by strong advertising. Liberal commissions offered. Big money for active workers. Write today. Harder Silo Co., Inc., Box E, Cobleskill, N. Y.

AGENTS—New plan, makes it easy to earn $50.00 to $100.00 weekly, selling shirts direct to wearer. No capital or experience needed. Represent a real manufacturer. Write now for Free Samples. Madison Shirts, 566 Broadway, New York.

AGENTS—Our new household cleaning device washes and dries windows, sweeps, cleans walls, scrubs, mops. Costs less than brooms. Over half profit. Write Harper Brush Works, 178 3rd St., Fairfield, Iowa.

RELIABLE FARMER WANTED to manage 111 acre farm, suited for dairy; two-thirds share and option to buy. Must be able to invest some money. Gustav [illegible], R. D. No. 1, Berwick, Pa.

SALESMEN—New invention beats vacuum sweeper and all its attachments. No electricity required. All complete only $2.95. Over half profit. Write O. P. Morgan, Mgr., 750 Grimes St., Fairfield, Iowa.

[illegible] OFFER—Fifty Bermuda onion plants or cabbage plants for few minutes your time. Write for proposition. Bell Plant Company, Texas.

MARRIED MAN WANTED to plow and cut wood. [illegible] month and house with garden and firewood. [illegible] Co., Middleville, N. J.

WANTED—Boys to sell flavoring extracts after school; send for free sample. Wakefield Extract Co., [illegible], N. H.

FARM LANDS

IN THE SAN JOAQUIN VALLEY of California [illegible] is now a paying business, feeding millions of people in towns. Dairying, hogs, poultry and fruit should yield a good income. A small [illegible] family farm, with little hired labor, insures success. You can work outdoors all the year. Best crops to [illegible] are well proved. Selling is done co-operatively [illegible] established markets. Newcomers welcome. The Santa Fe Railway has no land to sell, but offers a service in helping you get right location. Write for illustrated San Joaquin folder and get The [illegible] free for six months. C. L. Seagraves, General Colonization Agent, Santa Fe Railway, 914 Railway Exchange, Chicago.

[illegible] 112 ACRE DAIRY FARM only $3500; [illegible] house and barn; convenient good eastern [illegible] village and markets; crops of 200 bu. potatoes, [illegible] bu. oats, 2 tons hay per acre; 60 acres cultivated, spring-watered pasture, wire fences, est. [illegible] worth wood, 50,000 ft. timber, variety fruit; [illegible]-room house, view for miles, 80-ft. hip-roofed [illegible] barn. Will include horses, poultry, furniture, machinery, tools for quick sale at $3500, part [illegible] takes it. Details pg. 42 big illus. Catalog [illegible] free. Strout Farm Agency, 1422-BE Land Title [illegible], Phila., Pa.

[illegible] ACRES BUCKS COUNTY—Remodeled Colonial [illegible] modern conveniences, electric light, bath, [illegible] heat, 8 bedrooms. High elevation. Near station. Within commuting distance of Phila. Barns, [illegible] Good water. More acreage if desired. [illegible], R. D. Newtown, Pa.

[illegible]RFUL OPPORTUNITIES, Southern Georgia [illegible] lands. Write for complete information, Chamber of Commerce, Quitman, Georgia.

[illegible] to hear from owner of farm or unimproved [illegible] for sale. O. Hawley, Baldwin, Wis.

[illegible] ACRES—Oklahoma, contains 150,000 ft. of standing [illegible] timber, $1200. E. Andersen, Watsontown, Pa.

TOBACCO

[illegible] TOBACCO—Smoking or Chewing 4 lbs. [illegible] $1.25. Send no money. Pay postmaster on [illegible]. Pipe free for ten names of tobacco users. [illegible] Farmers of Kentucky, Paducah, Ky.

[illegible]N TOBACCO—Chewing, 10 lbs. $2.00; [illegible] 5 lbs. $1.00; 10, $1.75. Aged in bulk. [illegible] and sweet. Satisfaction guaranteed. Farmers [illegible], Mayfield, Ky.

[illegible] HOMESPUN TOBACCO—Chewing or [illegible] 5 lbs. $1.25; ten $2.00; cigars $2.00 for 50. [illegible] pay when received. Farmers Union, Maxon [illegible], Kentucky.

[illegible]N TOBACCO—Guaranteed. Chewing five [illegible] $1.50; 10—$2.50. Smoking, 10—$1.50. Pipe [illegible] pay when received. United Farmers, Bardwell.

[illegible] from factory, trial 100 Perfectos postpaid [illegible] Co., Red Lion, Pa.

Please Mention Pennsylvania Farmer When Writing to Advertisers.

Hog Sales a Big Event at the State Farm Products Show

THE hog sales held each year at the State Farm Products Show in Harrisburg are one of the big events of the show. Started as an experiment in 1922 they have come to be an established annual feature. Several reasons have contributed to their success.

First: The animals are placed on exhibition and judged in the regular way. This means that each breeder is anxious to have his entries make a creditable showing in order that he may establish a reputation for his herd. Therefore, only animals that are true-to-type for their breed and are of superior quality are entered. Every animal entered for the show is sold and the purchaser automatically becomes the exhibitor.

Second: The breed associations of the state carefully guard against inferior animals. Each association has a committee to pass upon all animals eligible for the show. This committee is composed of men who have the interest of the breed and the organization in mind rather than the mere sale of animals for dollars. Unless the animal to be consigned measures up to the standard for the breed, it does not get into the sale.

It's Good Advertising

Third: There is a friendly rivalry between the breed associations. The secretary of each association wants his men to consign the best individuals so that the general showing may be a good advertisement for that particular breed.

Fourth: Many of the animals which appear at the Harrisburg sales have been prize winners at fairs and shows thruout the state and the sows are invariably bred to the best boars in the state.

Fifth, and most important: These sales have always been run in the fairest and squarest manner possible. Everybody gets a square deal and the purchaser must be satisfied according to the terms of the guarantee.

Remembering these facts it is little wonder that the sows sold at the Farm Products Show have repeatedly produced winners in futurity shows, ton litters and have taken prizes at the county fairs.—S. R. Z.

Cost Limits Use

Is it profitable to feed cod liver oil to gilts that are to be used for breeders? How much should be fed?—I. K. L., Chester County, Pa.

The use of cod liver oil in any form for livestock feeding is not a common practice because of the cost of the product. It no doubt would have some beneficial effect on the development of gilts that are to be used for breeding purposes.

The cost of cod liver oil would hardly warrant its use for livestock unless a supply of a lower grade can be secured from some manufacturer of cod liver oil products where a supply of the lower grade is made available. If such product is available for feeding purposes the amount recommended of the product is usually indicated on the container.—W. H. Tomhave.

A Consistent Winner

PENSTATE'S POGIS HATTIE, a Jersey cow owned by the Pennsylvania State College, has been one of the busiest cows in Pennsylvania during the past three years. In three lactation periods Hattie has qualified for two silver medals and two gold medals.

Calving for the first time on December 31, 1922, as a junior three-year-old, she produced in 365 days 10,611 pounds of milk and 614.79 pounds of butterfat, winning a silver medal. She freshened for her second lactation period less than 15 months after her previous calving, and produced 15,505 pounds of milk and 833.40 pounds of butterfat in 365 days as a junior four-year-old. With this record she won both gold and silver medals and the Pennsylvania Jersey Championship in this age class.

Hattie started her first mature record in May, 1925. She proved her long-distance qualities by producing, with calf, 13,152 pounds of milk and 721.86 pounds of butterfat in 305 days, again winning a gold medal. This is the highest 305-day Pennsylvania Jersey record yet made. Hattie's records have never been equaled by cows of other breeds in the college herd.—C.

Veterinary

Conducted by Dr. J. F. Shigley

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

STOMACH DIGESTION OF THE COW.—We would like to know the process of digestion and how it is carried on in the stomach of a cow. Also, an explanation of the cud.—C. W. H., Big Run, Pa. The digestive process in the alimentary canal of ruminants is a complicated one due to the manner of eating and to the divisions of the canal.

Food is obtained by means of the tongue. During the grazing process food is drawn into the mouth by the tongue and cut off by the lower incisor teeth and the upper dental pad. Only enough mastication is carried on to make it possible to swallow the food thus obtained. It is possible for such animals to swallow foreign bodies such as nails, wires and stones as the first chewing process is hastily carried out.

Most of the food and liquids go to the first compartment of the stomach, the rumen. This structure holds 35-45 gallons. It serves as a store room for the food until rumination or re-chewing of the food has been performed. A process of maceration or breaking down of fibrous substances occurs here. Certain bacteria also break down the cellulose and prepare it for digestion.

The food is again conveyed to the mouth in small amounts or "cuds," thoroly masticated and returned either to the rumen, the reticulum (2nd compartment) or the omasum or 3rd compartment.

The reticulum or honeycomb serves as additional room for liquids and as a means of collecting foreign bodies that have been swallowed.

The omasum or manyplies is a complicated structure having its outlet higher than its inlet. There are many leaf-like structures dividing it and these serve to further macerate and mix the food. From the omasum the food passes into the abomasum or true stomach. It is this structure that furnishes the gastric juice necessary for digestion.

In the healthy cow the process is orderly and regular. In a cow suffering from disease the process is materially interfered with and the one part most noticeable is that dealing with the "cud." Chewing the cud is largely a matter of the will and can be controlled by the animal. Disease, fright or fatigue is evident by the animal failing to chew the cud. This is commonly known as "losing the cud." As recovery from disease occurs, or the animal recovers from fright, or fatigue, it will begin chewing the cud in a normal way. Any remedy having for its object the restoration of the cud must, therefore, be based upon maintaining the animal in health and the provision of suitable surroundings. Briefly, a healthy and contented animal will chew the cud and one that is sick or disturbed will not chew the cud.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 95,000 farm families read Pennsylvania Farmer every week. Rate 8 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department.
Minimum, Ten Words.

POULTRY

SPECIAL PRICES—100 Ferris, English and Tancred Strain Leghorns (yearlings), $1.10. 150 Leghorn pullets 6-8 mo. $1.35. 50 R. I. Red breeding cockerels, March hatched, $3.00. 25 Jersey Black Giants (cockerels and pullets) 8 mo. $2.50. Order from this ad. Orders filled as received. Geo. Davis, Box 101, Huntingdon, Pa.

BIG, STRONG, healthy baby chicks—Brown, Buff and White Leghorns, Barred and White Rocks, Anconas and Rhode Island Reds, from modern hatchery successfully operated twelve years. High quality, reasonable prices. Write today for free catalog, price list and discounts. Portland Hatchery, 510 West Walnut Street, Portland, Indiana.

WHITE LEGHORN CHICKS sired by pedigreed males, records 200 to 293 eggs. Low prepaid prices. Shipped anywhere c. o. d. and guaranteed. Hatching eggs, cockerels, pullets, hens, egg bred 27 years. Winners at 17 egg contests. Write for free catalog and special price bulletin. Geo. B. Ferris, 980 Union, Grand Rapids, Michigan.

FREE BABY CHICKS—"New Premium Plan." Highest quality Black Giant baby chicks and hatching eggs priced reasonably. Free chicks and eggs with each order for 100 or more. Descriptive literature upon request. Your opportunity is now. "The Maples," Box 1335, Pittsfield, Illinois.

PUREBRED BABY CHICKS—Delivery guaranteed. Leghorns, $12; Anconas, $13; Barred Rocks, Reds, Minorcas, $14; White Rocks, Wyandottes, $15; Orpingtons, $16; assorted, $9. Discount on large quantities. Model Hatchery, Box 6, Monroe, Indiana.

"KEYSTONE CHICKS" leaders since 1910. 30,000 chicks weekly, 9 cents each and up. Member I. B. C. A. Catalog free. The Keystone Hatchery, Box 21, Richfield, Pa.

CHICKS—White Leghorns, 12c; Barred Rocks, 14c; Mixed, 9c. Free range. Postage paid. Delivery guaranteed. Also "Special Matings." New circular free. Twin Hatchery, McAlisterville, Pa.

BARRON White Wyandottes, cockerels. Eggs for hatching from stock I imported direct. Records 262 to 313. E. E. Lewis, Apalachin, N. Y.

BARRED ROCKS from selected flocks, R. I. Reds, Wyandottes and Leghorns. Chicks and eggs. Write for catalogue. Byron Pepper, Georgetown, Del.

LARGE stock fine poultry, turkeys, geese, ducks, guineas, Bantams, Collies, pigeons, chicks, stock, eggs, low, catalog. Pioneer Farms, Telford, Penna.

WHITE WYANDOTTES from a heavy laying strain now ready. Chicks, cockerels and pullets. Write for catalogue. Byron Pepper, Georgetown, Del.

BUFF ORPINGTON cockerels. Barred Rock cockerels. Bourbon Red turkeys. Farmers' prices. W. Lothers, Perulack, Pa.

BRONZE TURKEYS—No blackhead for fifteen years. Mrs. Alfred E. Reid, Star Route, Freehold, N. J.

SHEPPARD STRAIN Single Comb Anconas. Cockerels, pullets, $2 to $5. Kie Brown, Mane's Choice, Pa.

MISCELLANEOUS

BIGGER POULTRY PROFITS can be yours by simply mixing a well known ingredient in your poultry feed. Cod liver oil is now used by the foremost poultry raisers in the country and its use is also taught in many of the agricultural schools. It makes more profits because it produces better layers, better eggs, and bigger poultry for market. The cost is small when the oil is bought in bulk. It is packed in tin lined barrels of 30 gallons each. Write for prices. Smith, Kline & French Company, Department 41, Philadelphia, Pa.

FORD TRUCK milk wagon, incubator hovers, cider press, photo camera, Enterprise sausage machines, Remington rifle .22, revolver 44-40, Indian motorcycle side car. Sell, exchange for cows. Reference Tamaqua National Bank. J. M. Ebert, R. D. No. 2, Tamaqua, Pa.

STANDARD HOTBED SASH—Redwood, $1.40 each; white pine $1.75 each, made in four styles; write for circular. Glass, $2.50 per box. C. N. Robinson & Bro., Dept. 2, Baltimore, Md.

INVESTIGATE before buying harness. Send for Wear-More catalog. Pay $5 after thirty days' free trial. Easy monthly payments. John C. Nichols Co., 1858 Erie Ave., Sheboygan, Wis.

A FEW "SUCCESSFUL" demonstrator incubators for quick sale at great reduction. 60 to 300 eggs capacity. Good as new. Des Moines Incubator Co., Box 734, Des Moines, Iowa.

ROOFING REMNANTS—Smooth surface 1-ply $.80; 2-ply $1.10; 3-ply $1.40; 80-pounds slate surface, $1.75. Buffalo House Wrecking and Salvage Company, 477 Walden Avenue, Buffalo, N. Y.

PHELPS CARBIDE gas light and heating plant. Approved by Underwriters. Cheaper than electric. Generator complete, reasonably priced for immediate sale. John A. Millard, Etters, Pa.

WILSON SOY BEANS, $2.25 bushel. Virginia Soy Beans, $2.25 bushel. Bags 12c each. Cash with order. Recleaned. New crop. Joseph E. Holland, Milford, Del.

FURS WANTED—Ginseng, skunks, raccoons, mink, muskrats, $1.75; weasels, $1.50. Postage refunded. Flat prices—list free. Stern's Furriers, New Brunswick, N. J.

DELCO LIGHT PLANT—Large size, used three months, cost $500 sell for $225. P. D. Thompson, R. No. 2, Norristown, Pa.

ALL WOOL YARN for sale from manufacturer at bargain. Samples free. H. A. Bartlett, Harmony, Maine.

PLANTS

FROST PROOF cabbage and Bermuda onion plants. Varieties: Copenhagen Market, Early Jersey and Charleston Wakefield, Flat Dutch and Succession. Prices parcel post paid, 250, $1.00; 500, $1.50; 1,000, $2.50; express collect, $1.50 per thousand. Nothing too small shipped. We guarantee to ship size to please you. Agents wanted. Tifton Plant Co., Tifton, Ga.

PEACH TREES $5.00 per 100 and up. Apple trees $7.50 per 100 and up. In large or small lots, direct to planters by freight, parcel post, express. Plums, pears, cherries, grapes, nuts, berries, pecans, vines. Ornamental trees, vines and shrubs. Free catalog in colors. Tennessee Nursery Co., Box 125, Cleveland, Tenn.

BUY YOUR Grimm alfalfa seed direct from the Introducer and know that your foundation stock is pure pedigreed seed, bred from the original Grimm strain. Acclimated to severe northwest temperatures since 1857. A. B. Lyman, Introducer, Excelsior, Minn. The Home of Grimm Alfalfa.

Here's My new CUT PRICE CATALOG

Fencing
Gates
Steel Posts
Barb Wire
Steel & Ready
Roofing
and Paints

FREE!

YOU can SAVE a lot of Money this Year if you will send for my new big CUT PRICE CATALOG. Don't buy a rod of fence, barb wire, gates, posts, roofing and paint until you get this money-saving book. I'VE CUT PRICES to the bone on my 150 styles of DOUBLE GALVANIZED Farm, Poultry and Lawn Fences — Farm, Drive and Walk Gates; on Corner Posts, Steel Fence Posts, and Gate Posts—Barb Wire, Smooth Wire, Grape Wire—Roofing and Paints. Catalog shows a bigger variety than you'll find in a dozen stores and at prices that save you fully one-third or more. Send for this catalog today — compare my quality and NEW CUT PRICES with what you have to pay elsewhere. You'll SAVE big MONEY.

Jim Brown PAYS the Freight

The new low prices in my catalog are *delivered* prices. I pay the freight right to your freight station. You know when you look in my catalog exactly what your goods are going to cost laid down at your freight station. You've no extras to pay. You'll find a big difference in price and a tremendous difference in *quality* — for instance — my fence is made of Basic Open Hearth Steel Wire and all *double galvanized* by the famous Brown process which puts on twice the usual amount of galvanizing. That's why it don't rust out—why it lasts two or three times longer than ordinary fence. My Gates have Carbon Steel one piece frames—last a lifetime. My Steel Posts are bigger, heavier and much stronger; my Barb Wire and Smooth Wire is the best ever; my Roofing is *asphalt* Roofing with *wool felt* base—not coal tar and paper; my *WEARBEST paint* with its big percentage of Pure White Lead and Pure Linseed Oil is all that its name implies. Just read these letters:

"The 140 rods of fence you shipped me seven years ago is as nice and bright today, with no sign of rust on it. I put up another make of fence about the same time I did yours, and it is very nearly ruined by rust. The Brown Fence is by far the best fence put up in this locality." John Bruce, Cauthron, Ark.

"I received my roofing in good condition. I feel that I saved at least $1.00 on each roll by ordering from you and if I ever need any more roofing I sure will send you my order for I know I would get the worth of my money. I certainly will recommend your roofing to all my friends." A. B. Ingram, Eton, Ga.

"Yours is the heaviest paint I have ever used. It covers better and it goes farther. And my neighbors say it is the whitest paint they ever saw. You saved me $1.30 a gallon." Harry Thomas, Athenia, N. J.

Fill Out and MAIL COUPON NOW!

Everything made in the Brown factories is so unusually high quality that it always gives the best of satisfaction as expressed in the letters above. Besides you take no risk in buying from Jim Brown—my unqualified guarantee makes you safe. You have nothing to risk but lots to gain when you buy from Brown. I ship promptly from my 3 big factories at Cleveland, Ohio, Memphis, Tenn., and Adrian, Mich., also shipping points at Kansas City, Mo., and Davenport, Iowa. Fill out and mail coupon today and get my latest New Cut Price Money-Saving Book before you buy.—*Jim Brown.*

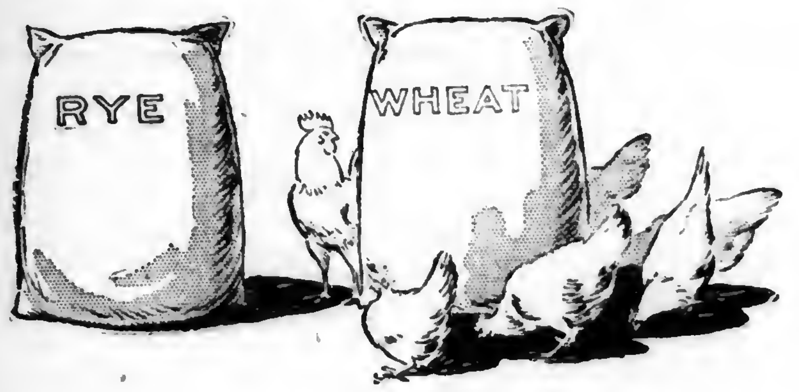
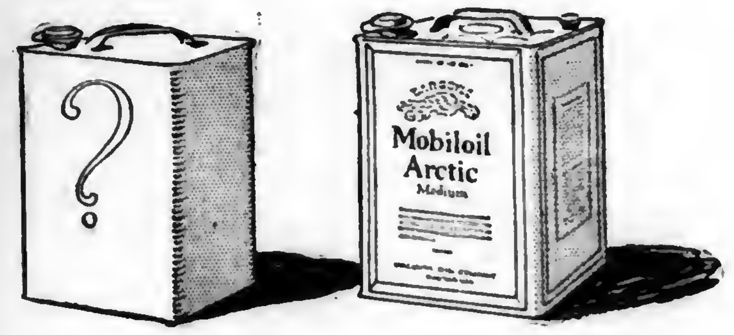
Rye may look like wheat—*but*—



"Rye is the poorest grain you can try to feed a hen," says a prominent farm paper discussing the substitution of rye for wheat as an ingredient in mixed poultry feed. "It looks so much like wheat that it is often a temptation to try it on poultry. Hens do not like rye until starved into eating it, and as plenty of feed is required by hens that lay many eggs *there is no economy in forcing them to eat a grain they dislike.*"

Many oils may look like Mobiloil—*but*—



Appearance is no guide to low-cost running. Many farmers are tempted to use a cheap oil because it *looks* like Mobiloil. They accept "just oil" and forget that Mobiloil is a *specialized* lubricating oil. And with less than Mobiloil lubrication they get less than Mobiloil protection against wear, repairs, over-heating, and carbon troubles. The correct grade of Mobiloil often cuts oil consumption from 10% to 50%—proving the cheapest oil to use on cost alone.

An unmatched cold-weather record

Make this CHART *your guide*

THE correct grades of Gargoyle Mobiloil for engine lubrication of prominent passenger cars are specified below.

The grades of Gargoyle Mobiloil, indicated below, are Mobiloil "E," Mobiloil Arctic ("Arc"), Mobiloil "A," Mobiloil "BB," and Mobiloil "B."

Follow winter recommendations when temperatures from 32° F (freezing) to 0° F (zero) prevail. Below zero use Gargoyle Mobiloil Arctic (except Ford Cars, use Gargoyle Mobiloil "E").

If your car is not listed below see any Mobiloil dealer for the complete Chart. It recommends the correct grades for all cars, trucks and tractors.

GARGOYLE
Mobiloil
Make the chart your guide

Mobiloil is the favorite oil in Canada, Norway, and Sweden, as well as in the United States. And Mobiloil successfully lubricated Commander Byrd's plane on his historic dash to the North Pole—the outstanding cold-weather lubricating job of all time.

The 42 Mobiloil Engineers have studied the cold-weather operating problems of your car, truck, tractor and other farm engines. Their winter recommendations in the Mobiloil Chart are your scientific guide to low-cost winter operation. 609 makers of automobiles and other automotive equipment approve these recommendations.

If your car is not included in the brief Chart at the left, see the complete Chart at any Mobiloil dealer's. It shows the correct grades for automobiles, tractors, trucks, farm lighting and stationary engines.

Now is a good time to talk to the Mobiloil dealer about your season's requirements of Mobiloil. You make a substantial saving by buying Mobiloil in barrel and half-barrel lots.

No Milking Machine—No Cows

That's the Verdict of These Dairymen Who Rely on the Mechanical Milker

"Not One of Them Liked To Milk"

First Prize Letter

EIGHT years ago I bought a milking machine. Since that time it has been on the job twice every day, 365 days in the year,—never anything wrong outside of the normal wear and tear. I keep an average of about 20 good Holstein cows. Some give a flow of 20 quarts and before I got the milking machine it was some task to milk them twice every day and every day.

I have four girls and two boys. Not one of them liked to milk and it was a real job to get them to help, especially in the morning. Again, we were the only family near who kept a herd of cows and while the other boys and girls could "doll up and step out" after supper, at our house those cows must be milked.

Things were becoming so disagreeable that I had about decided that the cows must go.

But then the milking machine came. I kept what cows I had and bought more. I have two double units and with one of my children to carry the milk to the milk house I can milk the herd in 30 or 35 minutes,—no fault finding, no worrying, and the cost is less than $2.00 per month for electricity. The milker is more sanitary, the cows give more milk, and they seem to enjoy the machine far more than hand milking.

Now We Stay Until the Fun Is Over

When the family attended any public gathering, before we had the milker, along about 4 P. M. we all had to go home; "them cows must be milked." Now we manage to get some neighbor boy to turn them into the "cow lot" and we just stay until the doings are over. In a very short time after we arrive home the milking is done.

I really believe that the milking machine will play a greater part in keeping the children and hired help on the farm than any or all other farm labor savers, and it gives father and mother more real comfort and satisfaction.

In haying and harvest after a strenuous day in the hot sun, your strength and patience almost gone, it is a trying job, indeed, to sit between two panting cows and milk and milk. How much more comfort to slip the milkers onto them and sit back on the old milk stool in the cool air and listen to the white stream into the milk pail flow!—Ed. T. Henry, Clearfield County, Pa.

Cows Produce More after Four Years

Second Prize Letter

THE milking machine is the biggest labor-saving piece of machinery used on the average farm. That sounds like a strong statement but let me prove it.

We milk from fifteen to twenty cows and it used to take the hired man and me a good hour to do the milking. Now, in the same time, I milk alone, including the time to get the milker and put it away. And at the end of the milking I do not feel tired.

So first, I reckon the saving in energy to me more than pays the cost of operating the machine, for anyone who milks eight to ten cows, morning and evening, knows that it requires as much or more energy than pitching hay.

Next, it saves two hours of hand labor per day, three hundred and sixty-five days per year, and in leap year one day more. It is a most economical machine to run, costing about fifteen cents per day for power, all repairs and six per cent on the investment. The major parts are built to last a very long time and the rubber parts that need replacement are low in cost.

The milker has helped solve the labor problem as I can manage a twenty-cow dairy alone during the winter, while the boys are in school, and in the summer one does the milking while the others are at other jobs.

This week completes the fourth year I have used a milker. We have many of the same cows we had four years ago and it has not hurt any of them. They respond to hand milking as easily as before. It does not dry up the cows sooner but I feel safe in saying the contrary is true. We have weighed the milk for six years and the same cows are milking more this year than ever before.

The same hired man who swore he would not stay if he had to help to milk has offered many times to do the milking alone with the milker. When we were at State Grange he handled the farm as easily as I.

The Milker Contest Awards

NEVER have the judges of a Pennsylvania Farmer contest found it so difficult to select the winners as it has been to choose the best letter telling "How the Milking Machine Has Helped Us Solve the Labor Problem." The owners of mechanical milkers wrote such interesting letters that nearly every one had to be considered in the final analysis. After careful consideration the judges have made the following awards:

First Prize—Ed. T. Henry, Clearfield County, Pa.

Second Prize—George F. Ruth, Berks County, Pa.

Third Prize—Wilbur F. Barkdoll, Franklin County, Pa.

An an indication of the general attitude of the contestants toward mechanical milking, some of them wanted to find the inventor of the milking machine and help erect a monument in his honor. More of these letters will be published in later issues.

With a little care, cleaner milk can be produced than by hand milking. The washing takes only a few minutes and if a clean germicidal solution is used the hose will look and smell clean with a thoro cleaning once a week in summer and every two weeks in winter.

Would we go back to hand milking? Not on your life.—George F. Ruth, Berks County, Pa.

It Took the Women out of the Barn

Third Prize Letter

IN MARCH, 1915, we purchased and moved to the farm where we now live. Our aim was to run it as an up-to-date dairy farm, which meant a general overhauling of barn and surroundings. It necessitated a great deal of help as the milking of thirty cows by hand was no small task, especially on Sunday when the help "wanted off."

That meant a double portion of work for our own family, which I felt was not fair to them as they had done their part during the week.

Courtesy Used to Cost a Lot

If anyone wanted to see me on business they would always try to get to the farm between four and five P. M. as that was milking time and I was sure to be there at that time. What was the result? In order to help out I would send to the field, have one man unhitch his team and come to help with the milking. Many times it meant quite a loss to have a team taken from the field when it should have been at work.

After going thru the summer of 1915 in this way, we felt something must be done. Help was getting independent and unsatisfactory, as they felt you must have them regardless of cost or how they worked. To keep on dairying was what we meant to do. We felt a milking machine would help out, so we purchased a three-unit outfit.

Did it solve the labor problem? Well, I'll tell you what it did. In a very short time we found we did not need the ladies at the house to help at the barn. Next, in a very polite manner, I told one of my reliable men that he could tell the other men of the neighborhood that I was not beholden to any man for help, as one son, who was about twelve years of age, could operate the machine. He and I could do the milking in the same time that required five to do it before, and do it much easier and more satisfactorily. What was the effect on our help? One man has stayed with me twelve years. No one dreads milking time. One boy, thirteen years old, and I, often milk forty cows if other folks are busy in the field.

Not a Single Cow Has Been Injured

Now, as to the effect on the cows, I have not had a single cow injured by the machine from 1915 to the present time. One cow was in the herd for eight years. Her udder was in fine shape when she was sold. The nervous cow will stand better for machine milking than she will to be milked by hand. The machine is more regular and good cows respond to regularity. How about a real hard milker? Well, I never yet heard our machine complain about being tired. The machine will not irritate sore, cracked teats like hand milking.

Not only does the milker save labor for herdsmen in these direct and indirect ways, but it will help him keep a sweet temper which is so much needed in the dairy barn. I feel it is the most needed piece of machinery on a dairy farm. What other machine do you use, or can you use 730 times each year?—Wilbur F. Barkdoll, Forest View Dairy Farm, Franklin County, Pa.

Saved the Price of a Hired Man

OWING to the labor shortage I was forced either to sell some of my cows, buy a milking machine, or neglect my crops. After a thoro inspection and study of the make-up of the different kinds I bought a milking machine. I was milking 18 cows myself and not being a fast milker it required from one and one-half to two hours. With the machine it required thirty to forty-five minutes. It saved me the price of a hired man, which is from fifty to sixty dollars per month in this locality.

The milker also eliminated sore teats and many kicks. The cows really like to be milked in this manner and many kickers will not offer to kick when milked by the milking machine. I have milked this way for three years and had no expense more than for new rubber goods, which I replace every year at a cost of about $10.00. Gasoline and oil do not cost over ten cents per day.

The idea of keeping the milker clean was the largest in my mind, but have learned that it requires less than ten minutes a day to keep it in a clean, sterile condition by placing the rubber goods and teat cups in a solution of equal parts of chloride of lime and common salt, about one-half pound to eight gallons of water. Machine milking will produce a cleaner milk than the hand milking. The milk will stay sweet much longer. I know, because I retailed all my milk and that will tell the tale.—C. J. Maust, York County, Pa.

Make Farming a Business

ONE of our Contributing Editors sends his approval of a recent editorial on this page in the following words:

"I liked the editorial, 'Can the Overhead be Reduced?' very much, because it concerned something which has been very much neglected in the past, viz., the business and management side of farming. Farming right now is trying to emerge from a family enterprise to a real business. If it doesn't we are going to have inevitably an inferior out-and-out peasantry. I think it is the duty of every farm paper to tell its readers early and often that farming is in the dumps, not because of the tariff or the machinations of Wall Street, but because, in the larger view, the farming business is most unbusinesslike. Perhaps that's a paradox. The farmer is at present competing with Business and Labor for his share of the nation's prosperity on the same basis that a naked Indian with his bow and arrow would compete with an army tank. That certainly doesn't need amplification."

Trouble in Central America

IT IS most unfortunate, just at this time especially, that events in Mexico and Central America should develop along lines which make a threat of armed intervention seem imminent. Not only will it increase the suspicion and distrust which is always present in a more or less active state in that territory, but it gives credence to the charges of greed and imperialism made against us by some of the citizens in European countries. Whether real intervention will take place cannot, of course, be known at this time. The great majority of citizens in this country are earnestly hoping that events will shape themselves so that nothing more overt shall occur. There are several things which help to increase the friction and disagreement between the United States and Mexico. Some of them possibly are legitimate matters for arbitration at least, and some of them may be dismissed as the fomentations of disturbers. Some of the latter kind have disturbed the government of this country for twenty years, but fortunately we have had men in the White House who have thoroly understood the situation, and we believe that President Coolidge is of like mettle. The landing of marines in Nicaragua by this government has been vigorously criticised and as vigorously defended in Congress.

A Point of Big Difference

IN COMMENTING upon the favorable condition of business and the good outlook for the future, a monthly bulletin issued by one of the big New York banks includes this paragraph:

> "The profits of business, as shown by the corporation reports have been better than in the preceding year, notwithstanding the declining trend of prices. This is accounted for by the economies resulting from a larger volume of business, and the downward trend of prices is the natural result of increased production and lower costs."

We are ever on the lookout for suggestions from the industrial world which may be applied to the agricultural field. Here we have an analysis which shows that economies in production were realized and bigger profits made because of the increases made in production. We think it entirely logical. The world has never before seen a time when the whole population was able to and did buy so many things. The big wages made in producing them largely go for the purchase of things which the average person never had before. There is no end to the amount of clothing, luxuries, and equipment which people feel they may buy if they have the money. We know of one prosperous manufacturer in Philadelphia who has forty automobiles and four chauffeurs. An ordinary working man we know has five suits of clothes where, ten years ago, he had but one. But it is unnecessary to cite examples, they may be seen on every hand. For this reason manufacturing, transportation and allied industries have been made prosperous by making and handling immense volumes of business.

But we cannot apply the suggestion to agriculture. People, in the main, are not eating much more than they did ten years ago. The demand for food is more or less stationary, and people do not buy more than they actually need. There is no possibility of making more money on the farms by greatly increasing the volume of production. In fact, with even a slight increase over the necessary amount there is sure to be a calamitous fall in price. Consumers do not buy forty bushels of potatoes simply because they can, when four or five bushels will meet their needs.

But there is room for improvement and a consequent increase in profits on the farm by revising production methods so that what is produced will cost less when it is ready for the market. Here is where farmers may well take a lesson from the manufacturer.

How Is It to Be Helped?

EVEN if those who are trying to devise a workable system of farm relief succeed in their efforts only the more non-perishable products will be materially affected. Theoretically at least, it would seem that crops such as wheat, corn, cotton, etc., might be handled and marketed in a way to prevent glutting the markets. But with the chief products of the eastern states,—potatoes, apples, dairy and poultry products, and vegetables,—the case is not so clear. An over-production of things which cannot be exported easily, and which can be kept in storage only a short time, produces a condition which no kind of legislation can remedy. For this reason, the farm press, the farm organizations, and the farmers themselves have never been "het up" much over the proposed relief measures. Eastern farmers have problems peculiar to themselves, and they can be solved only by themselves. Intelligent production and businesslike marketing methods seem to be the chief openings for improvement at present.

But even when these are done by the most approved methods, Nature has a few disconcerting tricks which she sometimes plays. This year, the fruit growers found that she had played no favorites and had turned out a bumper crop thruout the United States. The result is that there are more apples in the country than it is possible to sell profitably. One of the best orchardists in Pennsylvania said recently that never in his experience had he done so much work, produced so much fruit and made so little money. But what can be, or even Congress, do about it?

What Are You Learning?

THEORETICALLY, the process of education never stops while there is life. Practically, it stops with a good many people with their last day of school. Unfortunately the idea has been fastened in many minds that mental training and the acquirement of knowledge is the business of children and young people only. It would be interesting and probably mortifying to know how many people past thirty years of age have taken up and mastered a new subject, or have studied a technical book, in the last ten years. Farmers in particular are following a calling in which most of the scientific knowledge concerning it has been made available since their fathers were active. While it is not possible nor necessary for everyone to go to an agricultural college, it is possible to learn the essential facts at home. It requires only a desire for the knowledge and a systematic use of spare time to become acquainted with the facts which would greatly increase the chances for success.

It is unfortunate that the public has moved so slowly in providing the opportunity for continuing education in adult life. Public libraries are the best means. Investigation has shown that over 50,000,000 of this country's population are out of reach of any public library, and that ninety-three per cent of this number live in rural communities.

Editorial Sidelights

SIX or seven years ago we met a prophet. He was also a dairyman, and two of the things we heard him prophesy about were milking machines and tractors. He was perfectly sure, and tried to convince us, that both would have gone out of use in five years. He based his theory on his observation of a few careless owners who tried to operate milkers without cleaning them and expected tractors to function without lubricating oil. We hope he sees the letters on Page 3 of this issue.

WHY should farmers stop going to school just because they are grown up? Frank O. Lowden, president of the Holstein-Friesian Breeders' Association of America, thinks they shouldn't. On page 28 he tells about the adult high schools that help Danish farmers enjoy the close relationship that should exist between culture and agriculture.

"BABY HAS HIS RIGHTS," says a Home Page contributor (Page 19). But babies, like grown-ups, don't always get their rights. A Philadelphia trolley, cab and bus company displays posters saying that "Safety is a By-Product of Courtesy." When one stops to think about it, nearly everything desirable in human relationships, including the right treatment of babies, is a by-product of courtesy. Courtesy doesn't mean superficial politeness; it means honest consideration for the other person's rights and feelings.

HEARINGS NOW ON

Relief Schemes Bob Up Like Mushrooms—Debenture Plan Hasn't a Chance—Aim to Combine Programs.

Washington, D. C.

HEARINGS on the various farm relief bills are in progress before the House Committee on Agriculture. There are many of these bills and the number is increasing rapidly as this or that farm organization or a member of Congress evolves a new scheme. Two or three have been introduced within the past few days. Of these new proposals the Crisp-Curtis bipartisan farm bill is the more important, with the Jacobstein farm relief plan a close second. To the man looking on, this multiplicity of bills appears to be a scheme to divide the support and stall off action on any one measure.

Taber Backs Grange Plan

The Grange export debenture plan was ably supported by National Master L. J. Taber in a statement before the House Agriculture committee. "The National Grange," said Mr. Taber, "would use the Adkins bill as a basis. It would favor the passing of the Adkins bill." It is unfortunate for the Grange proposal that Representative Adkins, who introduced it in the House last winter, is now backing the McNary-Haugen bill. It is well known that the Grange export debenture plan has no chance of being reported out by the House committee.

More Effective if United

Closer cooperation of the National Grange, the American Farm Bureau Federation and the National Farmers' Union in the preparation of future legislative programs was planned by representatives of these farm groups, representing more than 2,000,000 farmers. They met in conference as a result of a resolution adopted by the National Grange requesting its executive committee to call a conference of farm organizations to agree upon a united legislative program.

The National Grange was represented by National Master Taber, E. A. Eckert, Illinois; Leslie R. Smith, Massachusetts, and A. S. Goss, Washington state, members of the executive committee; Dr. T. C. Atkeson, retiring Washington representative, and Fred Brenckman, his successor; John A. McSparran, past master of Pennsylvania State Grange, and P. H. Dewey, master of Pennsylvania State Grange.

Agree Upon Some Proposals

There are a number of legislative proposals upon which there is complete agreement. It is planned to make these the basis of a program to be announced after another conference to be held soon. It is proposed that in the future the organizations will work harmoniously on legislative programs, threshing out their various differences in conference, and presenting a single program to Congress. Each year the executive committees will meet jointly and decide which measures shall be brought before the individual organizations for indorsement at their annual conventions.

Toll Bridges Increasing

Hardly a day passes that from one to a half dozen bills are not introduced in Congress granting the consent of Congress to private corporations to construct, maintain and operate a highway toll bridge across a river. Hundreds of these bills are now in committee. There is now a proposal that all toll bridge companies in the United States unite in a national association for the purpose of promoting such legislation. If the toll bridge companies could persuade Congress to grant permits to construct toll bridges by the wholesale the people who travel would be held up at many river bridges, and compelled to pay toll to a private corporation that is profiting from the investments made by the government in building and maintaining hard surfaced automobile roads. This is regarded as a matter which vitally affects the welfare of the public.

Would Regulate Imported Milk

The bill H. R. 11768 to regulate the importation of milk and cream into the United States is making slow progress in the Senate, being held up by one or two eastern Senators, who appear to have more care for the welfare of the Canadian dairyman than they have for the American dairyman and consumer. The purpose of the bill, according to Senator Gillett, of Massachusetts, is mainly to insure the purity of milk which is imported from Canada.—E. E. R.

WILLITS HONORED

Employes Present Gifts to Secretary and Mrs. Willits—Pinchot Sends President Giant Power Plan.

Harrisburg, Pa.

AS A MARK of their esteem, the employes of the Department of Agriculture presented to Secretary of Agriculture F. P. Willits a beautiful engraved gold watch and chain, and to Mrs. Willits an attractive sterling silver pitcher, at a gathering of the employes in the auditorium of the South Office Building. Governor Pinchot attended and made a short talk.

Has Farmed 40 Years

Mr. Willits has been a farmer in Delaware County, Pennsylvania, and has lived on the same farm for 41 years. He has been especially interested in the dairy business during these years, and in 1916 was instrumental in the formation of the Interstate Milk Producers' Association at Philadelphia of which organization he served as president for five years. He is prominent in Grange work, having been a member for thirty years, and serving as treasurer for the past thirteen years. Mr. Willits is now making a specialty of growing mushrooms, asparagus and peonies, in addition to general farming.

Pinchot Submits Power Plan

One of the last acts of Gifford Pinchot as Governor was to place before President Coolidge his much-discussed Giant Power plan, the drawing up of which he evidently considers one of the outstanding pieces of work accomplished during his administration. In a letter accompanying the plan he said: "The plan stands alone in four respects: A sound and practical scheme for stimulating private enterprise to mass production of electric current by steam at the source (in or near the coal fields); effective provisions to secure a state-wide power pool, with all the great economies resulting from the fullest use of equipment; a safe but thorogoing and new system for the regulation of power service in the state; regulation of interstate commerce in electric power by the states on their own initiative."—W.

NEW CHIEF SELECTED

Man Well Qualified Offered Leadership of State Bureau of Markets—Fertilizer Pool Now Open.

Trenton, N. J.

THE State Board of Agriculture at its annual convention on January 12, announced that the office of Chief of the State Bureau of Markets had been offered to A. E. Merker, of Rochester, N. Y. Mr. Merker has been with the federal government in market work, chiefly relating to fruits and vegetables. He has a wide acquaintance and a broad experience in cooperative and individual marketing problems. He knows the New Jersey situation. He is a graduate of the New Jersey State College of Agriculture at Rutgers University and has had intimate contact thruout the state on New Jersey farm problems. It is expected that Mr. Merker will accept the appointment and start his connection with the New Jersey State Bureau of Markets at an early date.

Poultry Night School

The experiment of conducting a poultry school one night a week for a period of six weeks is gaining favor in South Jersey. The program at the Glassboro High School started early this month was well attended. The classes are conducted as roundtable discussions and the Glassboro School is held under the supervision of R. E. Culberson, instructor in agriculture. Topics for the discussion include culling and selecting of breeders, prevention of losses in the rearing of young stock, feeding of the layers and housing and general management problems.

Grange Installs Officers

Secretary James B. Kirby, of the New Jersey State Grange installed the officers of the Mullica Hill Grange last week, assisted by Willard Gardiner, of Mullica Hill, in performing the ceremonies. Those installed were: Master, Elbert Kirby; overseer, Edward Gaunt; steward, Asa Moore; assistant steward, Robert Duffield; lady assistant steward, Mary H. Heritage; secretary, Anna Tonkin; treasurer, Howard Avis; flora, Abbie Duffield; ceres, Mable Kirby; pomona, Elmira Duffield; chaplain, Wilmer Kester; gatekeeper, Frank Driver, and lecturer, Emma Packer.

Atlantic County Pool

Members of the Atlantic County Farmers' Exchange are opening a fertilizer pool this year from January 15 to February 15, during which time orders will be taken for fertilizer needed for the coming season. The Exchange made arrangements to purchase for its farmers at carlot prices and to distribute small as well as large sales to the members taking part in the pool. The work is in charge of Lawrence Kienzle, secretary of the organization. The South Jersey Farmers' Exchange of Woodstown, N. J., will hold its annual meeting on January 20 at which time directors for the coming year will be elected.

Area T. B. Plan

The Morris County Board of Agriculture will accomplish its aim for an opportunity to adopt the area plan of bovine tuberculin testing if a bill being introduced in the New Jersey Legislature becomes law. Morris County dairymen have cleaned up their herds under the accredited herd plan in excellent shape during the last year or two, and many of the leading dairymen are anxious to adopt the area plan so that Morris County milk, as well as livestock, may be marketed to advantage. The area plan cannot be adopted unless an enabling act allowing such procedure has been passed by the Legislature. The New Jersey Federation of County Boards of Agriculture is likewise behind the plan.—W. H. B.

EXPERTS BAFFLED

Cause of Sheep Disease Unknown—League Has Stabilized Dairy Industry—Deliver Milk in Afternoon.

Ithaca, N. Y.

A SHEEP disease of unknown cause, known by breeders as "stiff lambs," is baffling the experts of the Animal Husbandry Department at Cornell State College. No germ has been found which may be held responsible for the symptoms exhibited by lambs of two to eight weeks of age. The muscles under post-mortem show fibrous matter formed in the leg muscles. The disease does not seem to be infectious. The only remedy so far discovered is careful nursing and feeding.

Beekeepers' Short Course

A six-day course of advanced instruction in beekeeping will be given at Cornell, beginning January 24th. The first two days will review the courses of the two previous years. A special study will be made of locations suitable to the industry, and of marketing, the latter being the big problem. E. R. Root, of Medina, Ohio, and state officials from the Empire State Honey Association, also state and federal specialists, will be among the speakers.

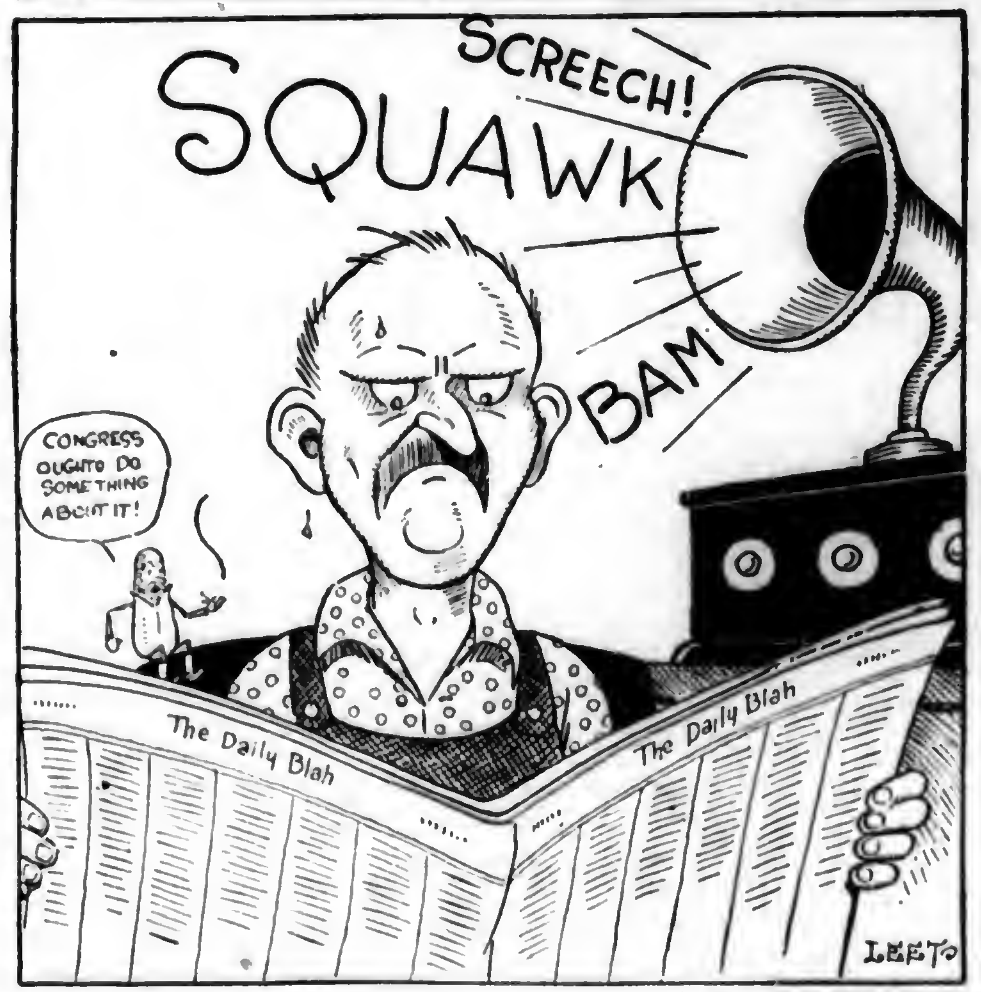
Dairymen Finish Best Year

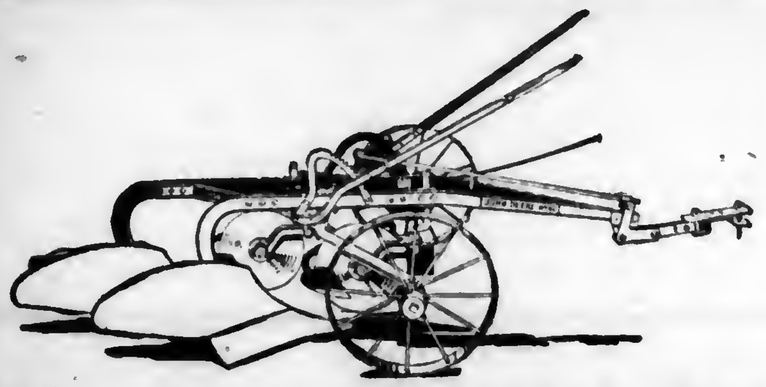
While farmers of the South are struggling with the burden of surplus cotton, and farmers of the West are appealing for government aid, the forty odd thousand producers of the Dairymen's League have just completed the best year in the history of their organization. The favorable conditions include all other producers in the New York Milk Shed, as the League has stabilized the whole industry in this territory. Not much more than half the producers belong to the cooperative. Leaders believe that if the entire industry were united at least $11,000,000 could be added annually to the income of producers.

Afternoon Delivery of Milk

The Gedney dairy of Solvay, near Syracuse, is the first to inaugurate afternoon delivery of milk to its patrons with much satisfaction to all concerned. This prevents freezing of the milk and the milk is fresher, as morning milk is supplied. Grade A milk is supplied, also cream, buttermilk, and chocolate syrup. Morning customers are also served, where desired.—M. G. F.

THE RADIO FAN LEARNS OF A NEW STATION





You Can Always Get a "40" for Your Fordson

You protect your own interests when you insist on a John Deere "40" for your Fordson. You may be urged to buy some other make. You may be told that some other plow is "just as good". But remember—

You Want These Plowing Advantages

Lighter draft that saves fuel costs and tractor wear. The "40" pulls lighter because its rear weight rolls on a rolling landside and its hitch adjusts itself to the right line of draft.

Better work. The "40" is equipped with the genuine John Deere bottoms famous for scouring, good work and long wear.

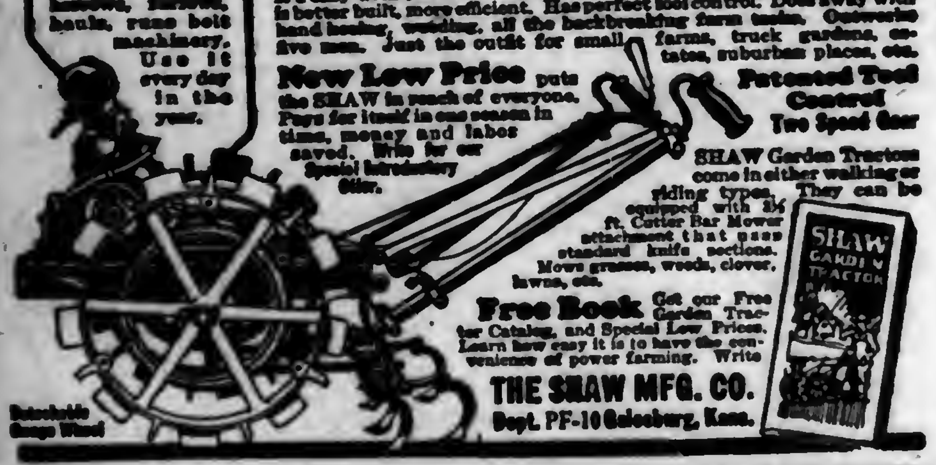
Great strength. The "40" has beams guaranteed not to bend or break; and its frame connections are hot-riveted—no "give" anywhere.

Insist on getting the "40". No other plow for the Fordson can give you the combination of advantages insured by the "40". That's why it will pay you to insist on getting a "40". And you can easily make sure of getting it. If it isn't in stock in your town, just write us, and we'll see that you get a "40" promptly.

Write today for free booklet telling all the facts about the popular John Deere No. 40, for the Fordson tractor. Address John Deere, Moline, Illinois, and ask for booklet FE-736

JOHN DEERE

THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS



Easy to Own a SHAW GARDEN TRACTOR

Saves Time, Money, Labor! Buy Direct from Factory!

Does Every Farm Job! The Shaw plows, plants, cultivates, harrows, furrows, hauls, runs belt machinery. Use it every day in the year.

Now you can own a real power garden tractor—the 1927 Model SHAW. It's easy with our Low Direct-From-Factory Price. The new SHAW is better built, more efficient. Has perfect tool control. Does away with hand hoeing, weeding, all the backbreaking farm tasks. Outworks five men. Just the outfit for small farms, truck gardens, estates, suburban places, etc.

New Low Price puts the SHAW in reach of everyone. Pays for itself in one season in time, money and labor saved. Write for our Special Introductory Offer.

Patented Tool Control Two Speed Gear

SHAW Garden Tractors come in either walking or riding types. They can be equipped with 3½ ft. Cutter Bar Mower attachment that uses standard knife sections. Mows grasses, weeds, clover, lawns, etc.

Free Book Get our Free Garden Tractor Catalog, and Special Low Prices. Learn how easy it is to have the convenience of power farming. Write

Detachable Grape Wheel

Wonder Healing Compound FOR MAN or BEAST

-It's **CORONA WOOL FAT**

Soothing Healing Ointment That Works Like Magic

Corona Wool Fat is made from the oil extracted from sheep's wool. It's different from any salve or ointment you ever tried. It heals and soothes, but will not smart or blister the most sensitive wound. It has healed thousands of stubborn wounds where other lotions have failed.

Hardly a day passes but what you'll find some use for Corona. For sore shoulders, sore necks, collar boils, split hoofs, scratches, sore teats on cows, caked udders, cuts, wounds, burns of any kind on man or beast it is unequaled.

LIBERAL SAMPLE FREE Corona is sold by nearly all druggists or direct from us on receipt of price—8 oz. tins 65c, 20 oz. tins $1.25, postpaid. If you will send your name and address, we'll mail you a liberal sample and book of uses Free. We want you to see for yourself the wonderful healing properties of Corona.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS.

BY R.P.KESTER

IN SPITE of the cold weather, work on the new house at Neshaminy Gardens is going on rapidly now. It has taken shape and we can foresee the change it will make in the landscape, and anticipate the thrills to be experienced by viewing the scenery from there. The building of a new home,—the planning, the developing, the trying to see ahead,—is a work which would be a good experience for every family. Edward Guest truly says that it "Takes a heap o' livin' " to make a real home, but it also requires a good setting and a pleasant environment to enable the family to live happily.

◆ ◆ ◆

THE main part of the cellar wall is built of stone and good mortar. The last three tiers are concrete blocks,—good imitations of cut stone. It is said that concrete blocks make a cheaper wall than stone, but we were advised to use stone for the underground part. Planed matched boards are used for the outside sheathing of the house walls, put on diagonally at the corners. Heavy sheathing paper will be put on over this and the weatherboards on that. The roof will be of asbestos shingles.

◆ ◆ ◆

A FEW weeks ago I asked for the experience of others in using glass substitutes for poultry houses, hotbeds, etc. Some of the letters were favorable to it and said it was very satisfactory. Others told of failure and disappointment. In sifting out the matter I find that the kinds which are reinforced with wire are best. A friend in Montgomery County sent a sample of the kind he is using. It is wire screen, about ten meshes to the inch, coated with some transparent substance and it looks as if it would be serviceable. It can be bent double without breaking. The cost is about ten cents per square foot.

◆ ◆ ◆

CATALOGS from seed houses and nurseries have begun to arrive again and add their quota to the evening entertainment at home. I notice that one's interest and enthusiasm in fruit growing and gardening begin to germinate and grow with the arrival of the catalogs. A comparison of the descriptions of varieties given by different firms shows greater uniformity than they did some years ago. In fact, modern business methods of reliable houses include the policy of giving reliable information instead of exaggerations.

◆ ◆ ◆

THE beginner will do well not to take as absolute fact the statement often given as to the time in which a given variety of fruit or vegetable will come to maturity. For instance, while it is not impossible for an early kind of cantaloupe to produce ripe melons in 75 days, the chances are that it will be 90 or more days. If the soil, fertility, temperature, sunshine, etc., are exactly right, the lower figure may be realized. But under average conditions and in the average season the higher number of days will be the average. The unfavorable weather of last year delayed the growth and ripening of melons at Neshaminy Gardens so much that it was 120 days from the time the seeds were planted until the first ripe melon.

◆ ◆ ◆

WE THINK we found the ideal variety of peas last year in the Laxatonia. This variety is a dwarf in growth of vine, growing about fifteen to eighteen inches in height, but it bears large pods of delicious peas in profusion. Sticking peas with brush in the old-fashioned way may be done in the home garden, but it is impracticable to do it in a commercial way, hence the value of a variety that does not require it. The Laxatonia is as good as the Gradus, is a better bearer, and does not require brushing. The Little Marvel we found to be good also.

The Cheerful Plowman

Waiting in the Outer Office

I CALLED at the office of Lawyer McCray on matter important one summery day. "He's busy right now!" said the young lady clerk, "In a moment or two he'll be thru with his work!" I waited, I waited, I waited some more; kept busy by counting the boards in the floor; I read six diplomas and ninety-two books, then counted the panes, and the nails, and the hooks! Distracted I said to the girl, with a sigh, "It's sad how the years and the decades go by, so please call that lawyer while yet I have breath; 'twill be difficult talking, I fear, after death!"

"A girl," did I say? She was middle-aged now with silver appearing on temple and brow! "Still busy!" she said with a matronly smile, "But he will be thru in a very short while!" I limped to the window, looked down on the street! My, the city had grown since I made my retreat! The buildings I saw when I drove into town had themselves been replaced, and successors torn down! The children I'd seen by the roadsides at play that day when I came to see Lawyer McCray were now men of business with families full grown! I felt myself slipping, I felt all alone!

I turned to the girl—no, the withered old dame who had been a girl on the day when I came—"Still busy," she croaked, "but he soon will be thru; he'll see you, I'm sure in a moment or two!" "No use!" I replied as I hobbled away, "No good now in seeing your Lawyer McCray! The matter in question is outlawed, I vow, and the documents yellow and faded by now! All parties concerned in the matter, I know, are under the willows, or under the snow! The problems which worried us back in the day when I came to the office of Lawyer McCray have long been forgotten, been put on the shelf,—in fact, I've forgotten the matter myself!"—J. Edw. Tufft.

Amco Feeds put into practice what the Colleges teach

A M CO

The American Milling Company was the first commercial feed mixing concern to tell exactly how its feeds were mixed. This was done (and still is) by attaching a tag to each bag showing the amount of each feed used in making a ton of the mixture.

This is the Mark of Amco-Mixed Open Formula Feeds

Later when the colleges of agriculture began to recommend formulas for mixed feeds the American Milling Company alone of all commercial feed concerns recognized the recommendations of the colleges and put them into practice in Amco-mixed feeds.

Today thousands of farmers are feeding their livestock better and more profitably than ever before because through Amco Agents they are buying feed which enables them to follow on their own farms without any additional trouble, the good feeding principles which the agricultural colleges are teaching.

As a result of feeding according to correct scientific principles cows are lasting longer, giving more milk, and producing stronger and livelier calves; hens are laying when eggs are high; and beef, pork, and poultry are being grown at a minimum cost.

If you can't get Amco-mixed open formula feed in your town write us and we will see that an Amco Agent is established there. Dairy, poultry, horse, calf and hog feeds are available, all mixed on open formulas.

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

Influence of Fads on Acreage and Income

WE HEAR much concerning "the change of fashions" as related to matters of dress and not a little of the influence these changes have on the prosperity of the wool industry, silk industry or some other industry as the wave of approbation turns from this fad to that. In the vegetable industry similar changes are continually taking place.

Today we have been washing and packing for market cut off carrots that have been buried in pits. A comparatively few years back they were sold with practically no competition except that furnished by gardeners within the county. Today they went to market and were set down in the wholesale house alongside Texas bunched carrots which, with their brilliant green tops, must bring to the retail producer a conscious or subconscious reaction to their spring-like freshness that results in a purchase.

The same story applies to beets. It is a matter of appearance rather than flavor. Besides, these products of the rich Rio Grande Valley soils and cheaper labor than around our northern industrial centers sell in midwinter at prices which are seldom higher and often lower than we or our fathers secured in June.

Crispness a Selling Point

On the other hand, celery, lettuce and spinach all seem to be enjoying an increased consumption. There are vegetables with which quality and condition mean a great deal, placing the advantage with the grower who trucks to market crisp, fresh, well-grown and well-graded stuff.

The enormous development of the vegetable canning industry has had a profound influence on plantings. With lower labor costs my father used to sell at remunerative prices great quantities of late tomatoes to home canners. Now the tomato cans are bought with the tomatoes inside and it is the early summer slicing trade which must be reached. On my own roadside market I can actually sell more bushels of tomatoes when they are 10 to 20 cents a pound than when the market is 75 cents a bushel.

Similarly, the canned product of good average quality and at reasonable prices has cut very heavily into the demand for pumpkins and squashes in some sections. Other changes could be noted. To keep up-to-date requires constant study of market trends and it is the fellow who gets on the market "with the goods" that wins. It is possible to make or lose very easily when determining planting plans.

At Your Service

As the planting season approaches we hope readers of the Garden and Truck Crops column will remember this is a service department and that their questions mailed to Pennsylvania Farmer will receive an answer by mail. Here is a question on northern vs. southern grown seed, and another on celery growing, which are published because of their general application.

> I receive catalogs from seedsmen in a half dozen states, North, South, East and West. Having heard so much about the supposed superiority of northern-grown seeds as to earliness and vigor, I wonder just how much consideration this factor should be given in making up my order.—T. E. D., Allegheny County, Pa.

Generally speaking investigators have come to the conclusion that within reasonable limits climate in itself has no particular influence on the inherent qualities of seeds. No doubt the idea that northern-grown seeds produce earlier crops has come from the tendency of Nature thru early frosts to prevent late maturing plants from ripening seed. Likewise certain diseases are not rampant in the North.

It's Integrity That Counts

Where the southern seed grower is conscientious in "rogueing" or removing undesirable plants and effectually controls disease, the seed produced should be satisfactory. After all the most important factor to consider is the character and integrity of the seedsmen.

> I am not much of a market gardener but have tended market for years with the common vegetables and farm products. I think I could increase returns and draw extra customers by having some good home-grown celery each week during the summer and fall. I have been buying my other vegetable plants but would like to try growing my celery plants so that I would know good seed was used.
>
> (1). What variety should I plant?
>
> (2). For one-quarter acre how many plants must I grow and how much seed should I buy?
>
> (3). Having no greenhouse can good plants be grown in a hotbed and how deep should the manure be?
>
> (4). Suggest dates for sowing seed and other details such as transplanting for I have had no experience with this crop.—F. M. R., Lancaster County, Pa.

In regard to celery varieties, I am not familiar with your market but expect you will make no mistake with a good strain of Golden Plume as your mainstay for summer and fall. Easy Blanching, a standard green sort suitable for both summer use and storage, should also be tried.

Plants and Seed Required

If you plant 4 to 6 inches apart in rows spaced 30 inches apart about 11,000 plants will be required for the quarter acre. With care to secure good germination 2 ounces of seed should be ample when sown under glass.

A good plan is to just barely cover seed with soil and then place burlap over the ground. Watering may be done thru the burlap without danger of washing out the seed and an even degree of moisture will be more easily retained. Do not use fertilizer sacks without first washing them as the residue which will be leached thru may kill the tender sprouts. Also be sure to remove the burlap as soon as plants appear.

It may be more troublesome but first-class plants can be grown in hotbeds. You might make two or three sowings between February 20 and March 20 in a hotbed 2 feet deep with 6 inches of soil on top of 14 inches of hot horse manure well packed, damp enough to settle well but not so wet as to be soggy.

About the time the seedlings are nicely up, start the rest of your hotbed with a foot of hot manure and 6 inches of soil and transplant 1½ inches apart each way, when the second or true leaves appear. You will need 12 standard 3 by 6 foot sash to grow the plants. Transplant to the field as the plants gain sufficient size but after severe frosts are past, perhaps May 10 in your locality.—Gilbert S. Watts.

Here's to Your Health

By Dr. FRANK McCOY
Copyright, 1926, McCoy Health Service

HAVE you, who are so concerned about investing in valuable real estate, ever considered what a fine piece of property you possess in that body of yours?

Our capabilities for accomplishing things and enjoying life depend almost entirely upon the health of the physical body. No wealth we can obtain, or honor we can receive, can make us happy any further than we have health with which to enjoy them, and the value of all we possess diminishes in proportion as we become sick.

The efficiency which we develop and our ability to commune with our fellows depends upon the way we can express ourselves thru the physical body. We speak with our mouth; we see with our eyes; we hear with our ears, and thru these mediums of expression we are able to make our contact with the world about us.

Who would take a million dollars for the loss of an eye? And yet, every day we thoughtlessly do things which hurt our eyes. Bad habits and practices which impair our sight cut down the enjoyment of the things about us, which we might see and understand.

Our ears become stuffed up with catarrhal diseases, so that we cannot hear and learn as much thru the sense of hearing. When in health, we enjoy delicious food with zest, which only nauseates when disease has destroyed our appetite.

Health Is Wealth

All who are healthy are, therefore, rich because their fund of life turns all surroundings to means of enjoyment. The poorest servant who is healthy is much richer than his feeble millionaire master, who, without health, cannot enjoy his riches.

If you were sure that you were going to die tomorrow, how much would you not give for one more year of health and happiness? You would, no doubt, give every dollar and every piece of property you own, if when sick you could again regain health.

Health is a fortune at interest, the income from which economically used will support you. Spending health foolishly draws on the principal and you will soon find yourself bankrupt. The more you draw on the principal, the sooner you will exhaust it. So all over-eating, overworking, loss of sleep, improper habits and whatever injures your health will expend your fund of life, and death will summon you to a final reckoning.

If you are actually using your muscles a great deal in doing farm work, it is also essential that you do certain physical culture exercises for developing those muscles which you do not use so vigorously. The abdominal muscles are usually not exercised much by the farmer, whose greatest physical strain comes in doing so much lifting.

Limbering Up Unused Muscles

No matter how tired you are at the end of the day's work, it is a good plan before dinner each evening to lie on the floor and take a few of the "setting-up" exercises to bring the blood into the abdominal muscles and encourage their development.

These exercises are taken while lying on the floor on your back, and consist in doing such movements as coming to a sitting position and touching your toes—raising your legs at right angles to the body, etc. These will rest the muscles of the back, overworked during the day.

We have departed so from natural living, that it is necessary to make a scientific study of health building, if we obtain the highest possible mark of perfection.

The Mark of Quality
RED RANCHER
A buckled non-leak boot to wear over your leather shoes. Built of tough snag-resisting rubber, reinforced at every point of strain.

For All Weather Wear

Your tiresome work is finished in half the usual time when you wear Firestone Red Ranchers, because warm, dry feet make days seem brighter and burdens not so heavy. Wear Red Ranchers and be comfortable in all kinds of weather. They are the farmers' ideal all year 'round footwear for work requiring protection to leather shoes.

The Firestone Red Rancher is built by the manufacturer of Gum-Dipped Tires; maker of highest quality products for twenty-six years.

HORTICULTURE

DR. S. W. FLETCHER,
Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

Packing and Advertising Pennsylvania Apples

DURING Horticulture Week at State College discussions brought out many complaints about the color of Grimes this year. Frequently it is an unattractive green instead of a rich golden, which hurts the sale of the fruit. Primarily this is due to the season, especially the late, wet fall. On heavy soils, Grimes often colors poorly even in a favorable season. This is true, also, of Stayman. Open pruning, and thinning the crop of an over-loaded tree help somewhat.

Green Grimes put into cold storage at around thirty-two degrees come out still green and unattractive. In the higher temperature of a common storage that has proper humidity and ventilation, green Grimes ripen and yellow gradually, taking on the higher flavor that accompanies normal development.

Coloring Up for Market

Grimes may be yellowed for market by exposing them to a higher temperature for ten to fourteen days, being careful to maintain a high humidity, for the Grimes shrivels badly in a dry cellar.

About a hundred students, as well as the fruit and vegetable growers present at the State College during Horticulture Week, attended the demonstrations on proper car loading of fruits and vegetables conducted by representatives of the Pennsylvania Railroad in a refrigerator car on the college siding.

End to end offset loading was recommended as a means of avoiding breakage in transit, and the superiority of the straight side, flat-bottom bushel over the common round bottom bushel was emphasized, because of greater rigidity and less rolling in the car. The straight side bushels cost more and are heavier, but are safer for carlot shipment.

The railroads are doing a commendable piece of work in calling attention to the conditions that invite breakage and waste in transit, which are a source of loss to the carrier as well as to the shipper. Penn State is the first institution in the country to secure the cooperation of the railroads in the training of its students in proper car loading.

Box-packing of Pennsylvania apples, once advised as a means of meeting competition from the West, seems to have made comparatively little headway. Probably fewer Pennsylvania apples are boxed today than ten years ago, chiefly because an equal grade of fruit usually sells for as much in baskets as in boxes, and the cost of packing is less. Box apples do sell considerably higher than basket apples, on the average, but not as to equal grade. Here and there, however, are men who have made the box pay. These are mostly growers who sell locally.

There were about 50,000 bushels boxed in York County this year, according to Stewart Bear. These are selling now for around $1.50 a bushel, when the round-bottom bushel brings about $1.00. Several growers questioned if there is any profit in boxing with this differential in price, considering that box fruit is likely to be superior to basket fruit.

More attention is being given, and more money spent, by Pennsylvania fruit growers for advertising than ever before, according to Porter R. Taylor, of the State Bureau of Markets. The past summer a group of peach growers, shippers and cooperative associations secured a half page in "The Packer" jointly, assessing the cost on per car basis. This advertising cost forty-four cents a car, or one-tenth of a cent a bushel. Every one who participated had many inquiries and was put in touch with new buyers.

Growers Use State Posters

The advertising material distributed by the State Horticultural Association is being used more widely. Over 2500 of the colored apple posters were sold this year, as compared with 1400 in 1925, and 1000 in 1924. These sell for five cents each in quantity. Over 20,000 of the apple recipe books were sold, as compared with 7000 in 1925. These cost two and a half cents each, in quantity.

In the "Apples for Health" advertising, funds are derived from a two-dollar membership fee, one-half cent a bushel from growers and fifty cents a car from dealers. It is similar to

(Continued on next page)

Strawberry Time Is Not Far Away

This is the way some leading strawberry plant growers prepare their plants for shipment. There are 26 vigorous plants in each bunch. The 26th doesn't count but is thrown in for good measure.

the successful advertising program of the Philadelphia Inter-State Dairy Council, except that in the latter case only one organization is represented.

"Apples for Health" will not help the 1926 crop at all, because not enough growers and dealers have lined up with it. In spite of all the publicity given to it during the last three months, only 750 memberships have been received. Unless there is a more general response during the next two months, when the State Horticultural Society meetings occur, the most promising movement in recent years to help pull the apple industry out of the doldrums will fail.

The operating expense of the first year has been guaranteed by dealers,—basket manufacturers, spray concerns, nurserymen, etc. This shows that they are interested—and worried—about the future of the apple industry.

Dealers to Carry Overhead

According to Mr. Taylor, the funds contributed by growers will be used entirely for advertising, the overhead being carried by dealers. The scheme of advertising mapped out is, approximately, as follows:

50% in magazines and city newspapers.

15% in bill boards, car cards and display ads.

15% in educational publicity, (radio talks, demonstrations, etc.).

10% in dealers' helps (store window displays, etc.).

10% in miscellaneous advertising.

Pennsylvania money will be spent for advertising where it will do the most good for Pennsylvania growers, somewhat in proportion to the amount of money that comes in from these growers. Altho it is too late to help in moving the 1926 crop, it is time now to begin selling the 1927 crop.

Orange advertising is now in its twenty-first year, and is financed on a per box basis. Orange advertising is refined and localized to a degree wholly unheard of among apple growers. For example, if any city has an epidemic of influenza the orange advertising agency is ready immediately to fill the local newspapers with publicity about the value of oranges in combating this disease.

In view of the apparent apathy in the 1926 apple market, it is interesting to note that in 1926 between $90,000 and $100,000 was spent in Pennsylvania alone advertising Sunkist oranges. In other words, about fifty times as much was spent in advertising this direct competitor of the Pennsylvania apple as Pennsylvania growers spent in boosting the sales of their own product.

Can't Sit Back Idly Trusting

Competition from the West will become keener. The eastern apple grower cannot wrap himself in a mantle of self-complacency, and trust blindly to his advantage of nearby markets.

Ten years ago western pear growers were threatened with over-production. Even before the thousands of acres of young trees came into bearing they started to create an advertising fund to enlarge the outlet for the pears. This foresight is paying dividends today.

It will cost a minimum of $50,000 to start the "Apples for Health" campaign. The sum seems small enough when we consider that the Pennsylvania Inter-State Dairy Council spends $175,000 a year for advertising milk as a food in the Philadelphia district alone. This money is contributed one-half from the farmers and one-half from the dealers. The apple trade, likewise, will cooperate with the apple grower in putting over this proposition.

The annual meeting of the State Horticultural Association will show whether Pennsylvania growers are going to improve this opportunity to better their business.—S. W. Fletcher.

FOR twenty-five years the definite purpose of J. C. Penney Company Department Stores has been to supply unexcelled VALUE for every shopping dollar — not in so-called "sales", but every day throughout the year!

People often ask us, "How can you offer such high quality merchandise at such low prices?" The answer lies in Volume Buying, in intelligent selection of the things we know are wanted by farm families and then in being satisfied with a Reasonable Profit.

Large savings can be effected when shoes, for example, are bought by the million pairs or when clothing, dry goods and furnishings are bought in similar large quantities. We buy in just such large quantities—for CASH! We effect proportionate savings—*and then pass them on to you!*

But these modern Department Stores offer you something more than mere savings. Convenient locations bring Personal Shopping within reach of millions of farm families. Thus, when you shop at one of these stores you can examine quality, you can judge color and texture and satisfy yourself on the important details of workmanship, style and fit. All these features, plus our low prices, are your assurance of unexcelled VALUE for every dollar you have to spend.

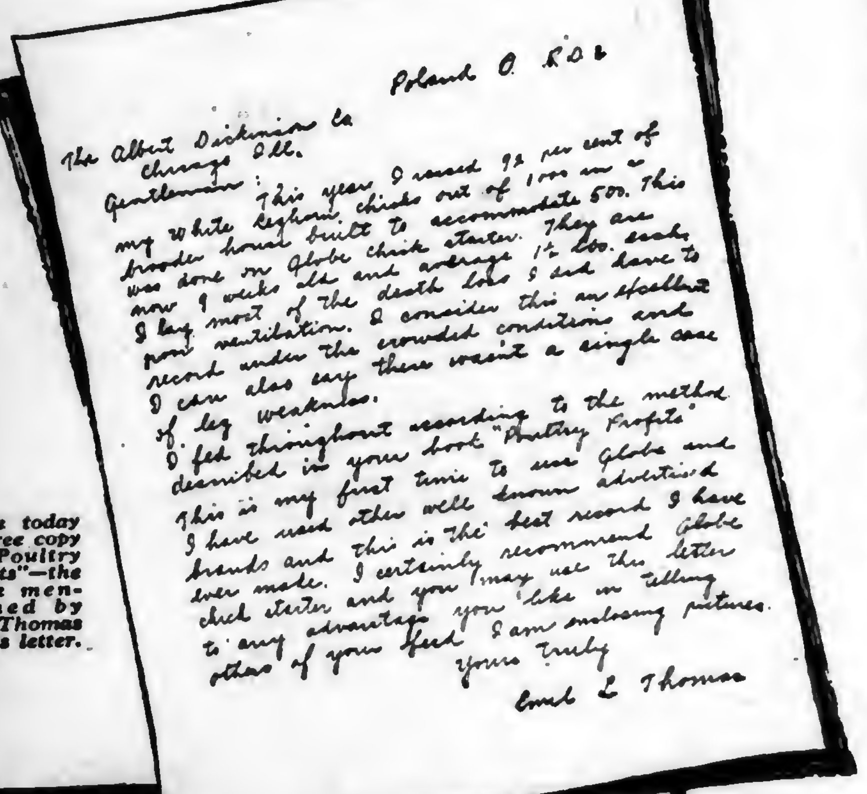
"The best record I ever made!"



Poland O. R.D. 6

The Albert Dickinson Co
Chicago Ill.

Gentlemen: This year I raised 92 per cent of my white leghorn chicks out of 1000 in a brooder house built to accommodate 500. This was done on Globe chick starter. They are now 9 weeks old and average 1½ lbs. each. I lay most of the death loss I had have to poor ventilation. I consider this an excellent record under the crowded conditions and I can also say there wasn't a single case of leg weakness.

I fed throughout according to the method described in your book "Poultry Profits" This is my first time to use Globe and I have used other well known advertised brands and this is the best record I have ever made. I certainly recommend Globe chick starter and you may use this letter to any advantage you like in telling others of your feed. I am enclosing pictures.

Yours truly

Emil L Thomas

Write today for free copy of "Poultry Profits"—the book mentioned by Mr. Thomas in his letter.

Mr. Thomas' letter is typical of hundreds that report new records made with Globe Chick Starter, following Globe methods of feeding.

Results are what count. Whether your poultry operations are large or small you naturally want to make them as profitable as possible.

We Sell DICKINSON'S GLOBE FEEDS GLOBE FEEDS for Poultry, Cows and Hogs

Globe Feeds and *Globe Methods* are economical in the truest sense of the word, not because they are cheap, but because they give the *greatest returns per dollar invested.*

That's why you find so many successful poultry men using Globe Feeds exclusively.

If you want to make the biggest profit out of your chicks this season, follow Globe Methods and start them off on Globe Chick Starter.

POULTRY

R. L. SCHARRING-HAUSEN
Staff Contributor and Adviser
Glenview Farm

The Poultry Editor welcomes inquiries concerning poultry problems and will reply promptly by personal letter to all questions sent in to him. Correspondents should give as much information as possible, stating age and breed of birds and method of feeding, in order that the most help can be given. Address: R. L. Scharring-Hausen, Care of Pennsylvania Farmer, 261 S. 3rd St., Philadelphia, Pa.

Why Paralysis?

I have a flock of 100 White Wyandotte pullets, March hatched, that are laying fairly well. Lately some of them became paralyzed in one leg or side. I have opened several and looked for worms but cannot find anything wrong.—P. E. H., Montgomery County, Pa.

Reports of paralysis not due to worms, such as you mention, are becoming more frequent, but according to the latest information I have, little is known about the cause. I do know, however, that accumulated protein wastes, absorbed thru the intestines, are a potent source of trouble.

I would suggest that you keep your Wyandottes on a laxative diet, giving some form of leafy green feed daily, and perhaps feeding a pound of condensed buttermilk per 100 birds per day. Also be sure that your meat scrap is of good quality.

You had better physic your flock at once, giving one pound of Epsom salts per 100 birds in the drinking water. Withhold water until 10 A. M., give the salts as directed, and give fresh water when the other is gone.—R. L. Scharring-Hausen.

Four to Twenty

I have Mammoth Pekin ducks which I wish to keep for breeding purposes. How many drakes should I have for 20 ducks? Also, kindly tell me what to feed them. Should ducks be kept indoors during cold weather?—R. A. B., Chautauqua County, N. Y.

One drake is commonly mated with five or six ducks. You will be safe in choosing four good males to run with your breeding flock of twenty ducks.

Pekin ducks are fed for egg production about the first of the year. A laying mash can be mixed as follows: 100 pounds corn meal, 100 pounds flour middlings, 100 pounds bran, 50 pounds beef scrap.

This ration is fed night and morning as a moist mash, to which green feed and a little oyster shell and grit have been added. Feed about eight quarts at a time. At noon feed a scant quart of wheat and cracked corn, mixed.

Ducks should have plenty of drinking water in a pan deep enough to let them wash out their nostrils. I would keep these breeders in a dry well-littered house by themselves. They will do well if given range in all but severe weather, and the eggs will be more fertile if they have water to swim in during the breeding season.

They will make their own nests in the straw and should be kept in until 10 A. M. so that they will lay in the house. Ducks can be readily trained to come back to the house at night.—R. L. Scharring-Hausen.

Anyone who wants to hatch only a few dozen eggs will find the old fashioned setting hen the most reliable way to bring out the chicks. When more are to be hatched on the farm, an incubator is the better way. I think that a machine holding twenty or thirty dozen eggs will be found more satisfactory than a smaller size. It takes no more time to operate the larger machine than the small one, and enough chicks can be brought out at a hatch to make use of a small colony house and brooder stove. If more pullets are raised than are needed, they usually find a ready sale in the fall.

• • •

If a machine is to be bought, it pays to get one of a reliable make. A cheap incubator is certain to be unsatisfactory.

Animal Protein for Eggs

AMONG the sources of animal protein commonly used in laying mashes, meat meal ranks very high. Farm flock owners who raise their own grain can often produce a very good laying mash thru the purchase of only one article—a good grade of meat meal.

The mash can consist of 100 pounds ground corn, 100 pounds ground oats, 200 pounds ground wheat and 100 pounds meat meal. To each 100 pounds of the mash mixture add 1 pound fine table salt, 2 pounds ground limestone and 2 pounds bone meal and you give the hens valuable mineral elements to stimulate egg production.

The 200 pounds of ground wheat in the mash take the place of 100 pounds of bran and 100 pounds of middlings. When we have substituted ground wheat for the middlings and bran in our home made laying mash we have found the results satisfactory and it saved considerable hauling and proved economical. Of course, much depends on the value of wheat in the neighborhood and other factors which may vary from year to year.

It is very difficult to produce fall and winter eggs without animal protein in the ration and while it is the most expensive item by the pound, every pound of laying mash requires only a fifth of a pound of a product like meat meal. Four sacks containing 400 pounds of meat meal, plus the ground grains, can be made up into a ton of laying mash. Farmers with plenty of skimmilk or buttermilk can reduce the meat meal one-half and give the poultry all the milk they will drink. This cuts down the cost of egg production and the milk seems to help in keeping up the vigor of the flock. It also tends to improve the hatchability of the early spring eggs.

A Misleading Term

The term "meat scrap" used in poultry rations is sometimes misleading to beginners with poultry. They wonder if it means trimmings, bones and waste meat products just as they come from the waste barrel of a meat market.

The term "meat meal" better describes the commercial meat product which is sold for poultry feed. It has been thoroly cooked and dried and will not spoil if stored in a dry place. It is powdery and like dust and mixes so thoroly with the ground grains that the hens cannot pick out the meat and disregard the ground grain.

For this reason meat meal enables the poultryman to feed a uniform ration each day. When ground raw bone and home cooked meat trimmings are used as a source of protein it sometimes results in a too heavy feeding of meat one day followed by no meat at all for several days.

(Continued on next page)

Such a method of feeding may upset the digestive system of the hen and reduce her egg production to such an extent that it becomes the most expensive method of feeding. I have known hens to be entirely thrown off feed by the liberal use of pork cracklings in an effort to save money on meat meal.

The best grades of meat scrap contain about 60 per cent protein while the poorer grades may contain as low as 35 per cent protein. Usually the best grades are a better investment for the poultryman. If there is doubt as to the quality of meat scrap it should not be used. Pour a little boiling water on a sample of the meat scrap and if it gives off a strong odor of spoiled meat it is not safe to use. Nothing will cut down egg production and make fowls sick more quickly than spoiled meat products in the laying mash.

Flies Do Not Respect Quality

The fact that meat scrap will draw flies in the summer does not indicate that it is spoiled. Any animal product will attract flies in hot weather if they can reach it. The best way is to store the meat scrap sacks in a feed room in darkened bins where it will not be located by flies.

An examination of meat scrap under a small hand lens will give some idea of its quality. If it contains many bits of material like brownish glass that may be small pieces of horn and hoof which are not useful in a poultry ration. If there is much hair in the material, it is apt to be low grade scrap. The poultryman cannot afford to pay four cents or more a pound for filler and indigestible material which does not aid in the manufacture of eggs.

Some poultrymen use high grade tankage in the home made laying mashes but it does not rank as high as meat scrap or meat meal. Low grade tankage is manufactured only for fertilizer and should never be used for poultry feed.

If the sacks of meat scrap or tankage have slightly hardened from resting in one position for several weeks, it pays to loosen the material before opening the sacks. Bounce the sacks a few times and walk around on them to powder up the contents. This prevents a lot of fine marbles appearing when the sacks are dumped over the ground grain. It is quicker to break up the lumps while in the sacks than after they are dumped into the bins.

Worm Supply Not Constant

It is wise to continue the use of meat products of some kind thruout the year. Even in the spring when worms are abundant after rains it is risky to change the contents of the laying ration. A day after the rains the worms may be scarce and on a limited range where many hens are hunting, the number of bugs and worms per hen per day is rather limited.

Of course, the hens will eat less mash when the foraging is good but it is always best to keep mash before them at all times. When the days are rainy and windy and the birds are staying all day in the protection of their houses they will still obtain the materials needed for continued egg production.

When the weather is dry the worms go deep in the soil and the farm flock receives little animal protein if it is not supplied in the laying ration. If the farmer who is making his own mash can afford to buy only one outside product it should be some form of animal protein. With that to build upon he can combine the home-grown grains into a ration that will produce a profitable egg production if other conditions are right.—R. G. Kirby.

Are your egg-making machines in order?

YOUR hens are your egg-making machines. They turn your mashes, grain and green stuff into high-priced eggs.

These machines must be kept in order.

Dr. Hess Poultry Pan-a-ce-a puts hens in laying trim. First of all it conditions and keeps them in good, vigorous health. Then

- —it whets the appetite, makes hens hungry
- —they scratch and exercise for their feed
- —it is a valuable aid to digestion
- —it tones up the egg organs and makes them active

Pan-a-ce-a is not a feed and not a stimulant, but a tonic. Please remember that your laying hen is a bundle of nerves, and that the nerves control her every act, including the production and laying of eggs. Pan-a-ce-a has a most beneficial effect upon the hen's nervous system.

Pan-a-ce-a costs very little to use—a mere trifle. One egg pays for all the Pan-a-ce-a a hen needs for six months. But if you do not find it profitable, it costs you absolutely nothing. That is our guarantee. Simply return the empty container and your dealer refunds your money or cancels the charge. We reimburse him.

FEED-BUYER'S GUIDE

JAN. 1927

Brief facts about Unicorn Dairy Ration
By CHAPIN & COMPANY

Dip your measure into a sack of Unicorn and it comes out full more times than it will with any other 100-lb. sack of feed.

Unicorn is the "old-reliable" of mixed feeds. Made for the past 21 years by a company established in 1874.

Unicorn is light and bulky. Can be fed straight without harm to the cow. Prevents impaction.

Keeps cows in good condition. No stomach trouble at any time. No udder trouble when freshening.

One qt. (dry measure) of Unicorn, weighs 13.5 ozs.; 1 bushel weighs 27 lbs. Each 100-lb. sack contains 3⅗ bu.

No glass, nails or other refuse in Unicorn. Before sacking, it is run over a magnetic roll and given a final screening.

Unicorn is made of cottonseed meal, corn gluten meal, linseed meal, corn gluten feed, dried brewers grains, corn oil meal, wheat bran, hominy meal, bone charcoal, calcium carbonate, salt.

Unicorn is always the same. No change ever made in analysis or ingredients. This means that fed straight, or mixed with your own grain, you always get the same results.

The analysis of Unicorn is: 24% Protein, 5% Fat, 50% Carbohydrates and 10% Fiber.

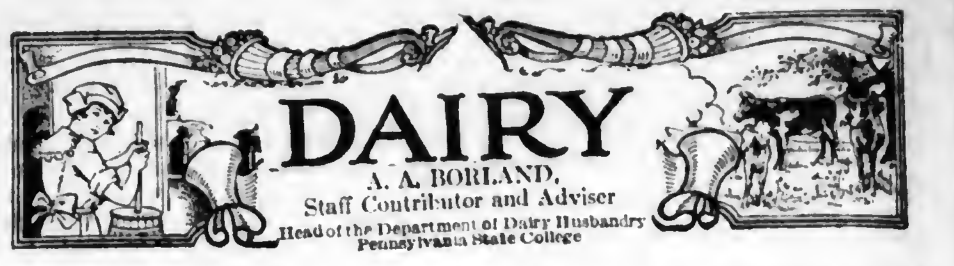
Cows take to Unicorn quickly; they like it's taste. Every bit of every feeding is eaten up clean.

Unicorn can be fed with your own grains—corn, oats, barley, corn-and-cob meal. No need to use any other protein or wheat feed.

With Unicorn, you can count on cutting your present grain cost 20c to 50c on each 100 lbs. of milk your cows produce.

Unicorn contains the right amount of lime to insure against shortage of lime in poor roughage.

Ask your feed store man for Unicorn. If he can't supply you, write us at Chicago for name of nearest Unicorn store.



DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

Beets Will Take the Place of Silage

What grain, if any, is required when feeding beets and the best alfalfa hay with fodder?—G. W. M., Fayette County, Pa.

Beets will take the place of silage very nicely. If you feed your cows approximately 25 pounds of beets daily and what alfalfa hay and corn stover they will eat up clean two or three times daily you could formulate a good grain mixture to accompany the roughage as follows: 100 pounds of corn meal or corn and cob meal, 100 pounds of ground oats or wheat bran, 100 pounds of cottonseed meal or gluten meal, 100 pounds of linseed oil meal or soy bean meal or peanut oil meal.

Feed the cows one pound of grain for every three and one-half pounds of milk they produce if they are Jerseys or Guernseys. If they are Holsteins or Ayrshires, feed them one pound of grain for every four to four and one-half pounds of milk they produce.—A. A. Borland.

Records That Count

I should like to have your opinion of the comparative merit, credence among breeders of dairy cattle and value in selling asset of production records by means of (1) Daily weighing of milk and monthly butterfat test by the dairyman himself (if competent). (2) Cow testing association. (3) Advanced registry officials.—E. H. H., Cumberland County, Pa.

I would consider the three methods of keeping records valuable in the order you have listed them as a selling asset and for general credence among breeders.

The first method, that of having private records of production, is of some value, but is probably more valuable to the dairyman himself in determining which are the profitable and which the unprofitable cows in his herd, than as a means of adding to the sale value of the cows. Private records are looked upon with suspicion by purchasers of dairy cows, because of the possibilities for inflation of these records. There was so much of this sort of thing in private records in former days that they fell into disrepute as an index of the real productive value of dairy cows.

The second system, that of cow testing association records, is of considerable value in the sale of dairy cows. These records are kept by an independent person rather than by the dairyman himself. The records are held in considerably higher estimation by prospective buyers than are private records. It has been estimated that good cow testing association records add $25 to $50 to the average sale value of dairy cows. Of course, cow testing association records are not made under the strict supervision which takes place with advanced registry records. They, therefore, have more possibilities for error or for dishonesty than an average advanced registry record.

Individuals Rated on Merit

The primary purpose of cow testing association records is to furnish the owner the individual record of the production of each cow in his herd, so as to give him an opportunity to weed out the low producers and retain the high producers for breeding purposes. The more emphasis that is placed on cow testing association records for sale purposes, the more likelihood there is that dishonesty may enter into the making of the record.

The third method, or advanced registry record, is held in the highest estimation by prospective purchasers. These records are made under the supervision of the representative of the state agricultural college. He acts more or less as a policeman and it is part of his duty to see that no undue advantage is taken by the owner or herdsman in the making of the record.

The test runs from one to two days each month. The test period must be exactly 24 or 48 hours in duration according to the type of the test. The supervisor inspects the milk pail before the milking begins. He remains in position to see the milking process so that nothing may be introduced into the pail to add to the amount or richness of the milk. Immediately at the close of milking the supervisor takes the pail and weighs the milk. He takes a sample of it, which is kept under lock and key until he tests it a little later in the day.

Surprise Test Checks Owner's Record

The owner does not usually know when the supervisor is coming so that there is very little opportunity for dishonesty. The milk production for the two days is then checked against the production weights kept by the owner for the other 28 days in the month. If there is any discrepancy, another surprise test may be made. If evidence of dishonesty is found, the record is thrown out by the breed association and not recorded.

While once in a while evidences of

(Continued on page 17)

What Is Being Done About the Borer

FEDERAL and state officials held a two-day conference in Washington early this month to lay plans for still more intensive war against the European corn borer. The following projects are already under way:

General clean-up programs are being advocated.

Parasites are being introduced.

Machinery for low-cutting is being developed.

Resistance of varieties of corn is being studied.

Means of utilizing stalks for industrial purposes are being investigated.

The life history of the insect is being studied in this country and in Europe.

Rigid quarantine regulations are enforced.

In spite of efforts that have been made thus far to check the borer its natural spread continues at the rate of 20 to 30 miles a year. The Corn Belt states are now aroused to the danger and it is believed that they will join in a unified control program.

Lost 11 Calves from Contagious Abortion
Used B-K—No More Losses

Before he realized what was wrong, Peter Shallow had lost 11 beautiful Guernsey calves from contagious abortion. Then he began using B-K on other cows of the herd due to calve in about 100 days. All came out healthy.

Wonderful for Removing Retained Afterbirth

Mr. Shallow also says: "I also found B-K the greatest thing out for cows that do not clean readily after calving. This is a job I always had to do by hand, but now I use B-K by injecting about a gallon of water and B-K solution, at the rate of 1 oz. to 4 quarts of water, and have never known it to fail in bringing all things right before the fourth day."

Calf Scours

[illegible]

Retained afterBirth

[illegible]

On thousands of Farms B-K is kept on hand constantly for retained afterbirth, abortion, calf scours, dairy sterilizing, disinfection for poultry and similar uses. It is non-poisonous, clean, and leaves no odor. Dependable and cheap.

Write for valuable book about the use of B-K for live stock. The information it gives has saved farmers many thousands of dollars. Address

P. A. revises all your pipe-ideas

TAKE that any way you like. If you have always wanted to smoke a pipe, but felt you didn't dare, Prince Albert will convince you that you *can* . . . and enjoy it! If you are already a pipe-smoker, but don't know the joys of P. A., this tobacco will be a revelation.

Beginners and old-timers alike are amazed that any tobacco can be so mild and still have that satisfying body that men demand in a smoke. They revel first of all in its fragrance, promise of a wonderful taste to come. And when they light up and pull in—ah . . . !

Buy yourself a tidy red tin of P. A. today. You'll find it cool, as a dip in the surf is cool. You'll find it sweet, with a sweetness that never cloys. You'll find it mild as Indian summer . . . a mildness that lets you smoke to your heart's content.

You may think your present brand is the last word in pipe-tobacco. Don't stop there. Be inquisitive. It will bear repeating: P. A. revises all your pipe-ideas. Make the test today—the only test that counts: a tidy red tin, a jimmy-pipe, and a match!

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

FEED-BUYER'S GUIDE

JAN. 1927

Brief facts about Unicorn Dairy Ration
By CHAPIN & COMPANY

Dip your measure into a sack of Unicorn and it comes out full more times than it will with any other 100-lb. sack of feed.

Unicorn is the "old-reliable" of mixed feeds. Made for the past 21 years by a company established in 1874.

Unicorn is light and bulky. Can be fed straight without harm to the cow. Prevents impaction.

Keeps cows in good condition. No stomach trouble at any time. No udder trouble when freshening.

One qt. (dry measure) of Unicorn, weighs 13.5 ozs.; 1 bushel weighs 27 lbs. Each 100-lb. sack contains 3⅔ bu.

No glass, nails or other refuse in Unicorn. Before sacking, it is run over a magnetic roll and given a final screening.

Unicorn is made of cottonseed meal, corn gluten meal, linseed meal, corn gluten feed, dried brewers grains, corn oil meal, wheat bran, hominy meal, bone charcoal, calcium carbonate, salt.

Unicorn is always the same. No change ever made in analysis or ingredients. This means that fed straight, or mixed with your own grain, you always get the same results.

The analysis of Unicorn is: 24% Protein, 5% Fat, 50% Carbohydrates and 10% Fiber.

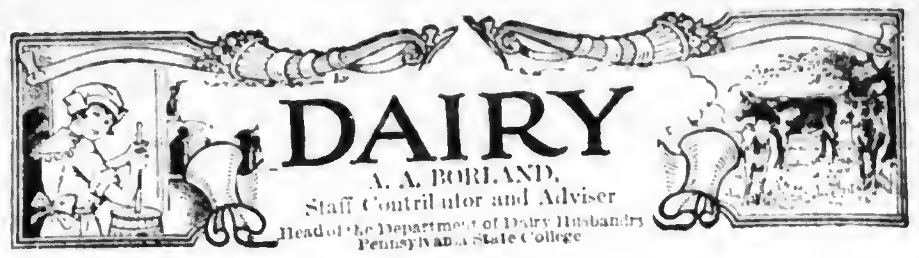
Cows take to Unicorn quickly; they like it's taste. Every bit of every feeding is eaten up clean.

Unicorn can be fed with your own grains—corn, oats, barley, corn-and-cob meal. No need to use any other protein or wheat feed.

With Unicorn, you can count on cutting your present grain cost 20c to 50c on each 100 lbs. of milk your cows produce.

Unicorn contains the right amount of lime to insure against shortage of lime in poor roughage.

Ask your feed store man for Unicorn. If he can't supply you, write us at Chicago for name of nearest Unicorn store.



DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

Beets Will Take the Place of Silage

What grain, if any, is required when feeding beets and the best alfalfa hay with fodder?—G. W. M., Fayette County, Pa.

Beets will take the place of silage very nicely. If you feed your cows approximately 25 pounds of beets daily and what alfalfa hay and corn stover they will eat up clean two or three times daily you could formulate a good grain mixture to accompany the roughage as follows: 100 pounds of corn meal or corn and cob meal, 100 pounds of ground oats or wheat bran, 100 pounds of cottonseed meal or gluten meal, 100 pounds of linseed oil meal or soy bean meal or peanut oil meal.

Feed the cows one pound of grain for every three and one-half pounds of milk they produce if they are Jerseys or Guernseys. If they are Holsteins or Ayrshires, feed them one pound of grain for every four to four and one-half pounds of milk they produce.—A. A. Borland.

Records That Count

I should like to have your opinion of the comparative merit, credence among breeders of dairy cattle and value in selling asset of production records by means of (1) Daily weighing of milk and monthly butterfat test by the dairyman himself (if competent). (2) Cow testing association. (3) Advanced registry officials.—E. H. H., Cumberland County, Pa.

I would consider the three methods of keeping records valuable in the order you have listed them as a selling asset and for general credence among breeders.

The first method, that of having private records of production, is of some value, but is probably more valuable to the dairyman himself in determining which are the profitable and which the unprofitable cows in his herd, than as a means of adding to the sale value of the cows. Private records are looked upon with suspicion by purchasers of dairy cows, because of the possibilities for inflation of these records. There was so much of this sort of thing in private records in former days that they fell into disrepute as an index of the real productive value of dairy cows.

The second system, that of cow testing association records, is of considerable value in the sale of dairy cows. These records are kept by an independent person rather than by the dairyman himself. The records are held in considerably higher estimation by prospective buyers than are private records. It has been estimated that good cow testing association records add $25 to $50 to the average sale value of dairy cows. Of course, cow testing association records are not made under the strict supervision which takes place with advanced registry records. They, therefore, have more possibilities for error or for dishonesty than an average advanced registry record.

Individuals Rated on Merit

The primary purpose of cow testing association records is to furnish the owner the individual record of the production of each cow in his herd, so as to give him an opportunity to weed out the low producers and retain the high producers for breeding purposes. The more emphasis that is placed on cow testing association records for sale purposes, the more likelihood there is that dishonesty may enter into the making of the record.

The third method, or advanced registry record, is held in the highest estimation by prospective purchasers. These records are made under the supervision of the representative of the state agricultural college. He acts more or less as a policeman and it is part of his duty to see that no undue advantage is taken by the owner or herdsman in the making of the record.

The test runs from one to two days each month. The test period must be exactly 24 or 48 hours in duration according to the type of the test. The supervisor inspects the milk pail before the milking begins. He remains in position to see the milking process so that nothing may be introduced into the pail to add to the amount or richness of the milk. Immediately at the close of milking the supervisor takes the pail and weighs the milk. He takes a sample of it, which is kept under lock and key until he tests it a little later in the day.

Surprise Test Checks Owner's Record

The owner does not usually know when the supervisor is coming so that there is very little opportunity for dishonesty. The milk production for the two days is then checked against the production weights kept by the owner for the other 28 days in the month. If there is any discrepancy, another surprise test may be made. If evidence of dishonesty is found, the record is thrown out by the breed association and not recorded.

While once in a while evidences of

(Continued on page 17)

What Is Being Done About the Borer

FEDERAL and state officials held a two-day conference in Washington early this month to lay plans for still more intensive war against the European corn borer. The following projects are already under way:

General clean-up programs are being advocated.

Parasites are being introduced.

Machinery for low-cutting is being developed.

Resistance of varieties of corn is being studied.

Means of utilizing stalks for industrial purposes are being investigated.

The life history of the insect is being studied in this country and in Europe.

Rigid quarantine regulations are enforced.

In spite of efforts that have been made thus far to check the borer its natural spread continues at the rate of 20 to 30 miles a year. The Corn Belt states are now aroused to the danger and it is believed that they will join in a unified control program.

Lost 11 Calves from Contagious Abortion
Used B-K—No More Losses

Before he realized what was wrong, Peter Shallow had lost 11 beautiful Guernsey calves from contagious abortion. Then he began using B-K on other cows of the herd due to calve in about 100 days. All came out healthy.

Wonderful for Removing Retained Afterbirth

Mr. Shallow also says: "I also found B-K the greatest thing out for cows that do not clean readily after calving. This is a job I always had to do by hand, but now I use B-K by injecting about a gallon of water and B-K solution, at the rate of 1 oz. to 6 quarts of water, and have never known it to fail in bringing all things right before the fourth day."

Calf Scours

"Had 23 calves with scours [illegible] with B-K saved them all."—W. McClary, [illegible], Wis.

"I especially value B-K for 'white' scours among calves. We have 48 calves under 6 months and have not lost one since I got B-K."—Mrs. Julia Stevenson, San Antonio, Texas.

On thousands of Farms B-K is kept on hand constantly for retained afterbirth, abortion, calf scours, dairy sterilizing, disinfection for poultry and similar uses. It is non-poisonous, clean, and leaves no odor. Dependable and cheap.

Write for valuable book about the use of B-K for live stock. The information it gives has saved farmers many thousands of dollars. Address

General Laboratories
Dept. 145A

Records That Count

(Continued from page 14)

dishonesty are found and the records are accordingly cancelled, yet the strict police methods under which the advanced registry records are conducted naturally makes them by far the most reliable index of the producing ability of cows. An advanced registry record adds to the sale value of the cow in accordance with the size of the record. A good yearly advanced registry record would probably add $100 or more to the sale value of a cow and often much more than this. It also adds very decidedly to the sale value of the sons and daughters of the cow.

For instance, we sold a bull calf from one of our good Holstein cows in the college herd for $35. The cow then made a record of 22,247 lbs. of milk and 681 lbs. of butterfat in a year. Her next bull calf, after she made the record, brought $300. This additional sale value may be unusual, but it is at least an indication of the increased value of the offspring after a cow has made a good advanced registry record.

Cows with outstanding registry records are likely to command thousands of dollars, whereas the same cow, without an advanced registry record might bring only a few hundred dollars.—A. A. Borland.

The Ayrshires of McKean

AT THE time of its origin there were 105 purebred Ayrshires in the herds of members of the first cooperative Ayrshire bull association of America, located in McKean County, Pennsylvania. Now the 16 members have 213 purebreds. Grade cattle have decreased from 233 when the organization was started to 85 now. There are eight bulls in service in the association. At the recent annual meeting it was decided to add three more blocks of membership with a bull for each one.

Of the 298 head in the association, 127 of them are purebred daughters of association sires. Besides this number in the herds, 32 daughters have been sold to breeders and 37 bull calves have been disposed of to McKean and Potter County dairymen for use as herd sires. Fortunately for the members, 196 of the 302 calves born since organization have been heifers. Of these 165 were purebreds.

Elk County Luncheon

ONE hundred and eighty farmers, Kiwanis and business men of Ridgway attended the luncheon in connection with the seventh annual meeting of the Elk County Agricultural Extension Association held in the county club rooms at Ridgway on Wednesday, January 5th.

The meeting was called to order at 10:00 A. M. by O. G. F. Bonnert, president, when the local reports of the project leaders were given. At the election in the afternoon the following officers were elected: President, O. G. F. Bonnert; vice president, Otto Dill; secretary, G. B. Straub; treasurer, Andy Anderson. H. M. Worthley discussed the corn borer and showed a motion picture illustrating its life history and the damage it has done in other places. Ernest Mahan, a local poultryman, who ships to the New York market, gave a very interesting talk on marketing eggs.

Mr. M. S. McDowell, state director of agricultural extension, and Hon. D. J. Driscoll, of St. Marys, were the principal speakers. They both stressed the importance of a closer cooperation between agriculture and industry. Mr. Driscoll discussed the importance of agriculture in the county. Mr. McDowell also discussed the importance of a well-planned local program for the improvement of agriculture in a community.—P. H. McD.

Feeds are made to serve one of two objects:

To help the manufacturer, or To help the feeder.

Every manufacturer of feed must decide between these two, which policy he will follow.

This problem came home to us forcibly a good many years ago. We had always tried to give good service and feeds at right prices, but like other manufacturers at that time, we were making feeds to sell. There was a supply of feeds from different industries available and we tried to get them to the users for the profit to be had.

With this object in view, we installed equipment to use molasses in making a cheap feed. That plan didn't last long, but it was worthwhile, for it set us to thinking and the result of that thinking was the adoption of a policy that gave first consideration to what was best for the feeder.

It was obvious that feed of the best quality would make more profit for the feeder even if it cost more money.

That was about thirteen years ago and since that time, we have given first consideration to the feeders interest and the manufacture of the best quality feeds that can be made, feeds intended to help the user make more profit.

In succeeding issues, we plan to use this space to tell you more of the way in which we have carried out this policy, but I wish here to assure you that wherever you get a Tioga-Empire Dairy Feed or Poultry Feed, you have assurance that it is made to give you the best results, and to help you make more profit.

A good yearly advanced registry record would probably add $100 or more to the sale value of a cow and often much more than this. It also adds very decidedly to the sale value of the sons and daughters of the cow.

For instance, we sold a bull calf from one of our good Holstein cows in the college herd for $35. The cow then made a record of 22,247 lbs. of milk and 681 lbs. of butterfat in a year. Her next bull calf, after she made the record, brought $300. This additional sale value may be unusual, but it is at least an indication of the increased value of the offspring after a cow has made a good advanced registry record.

Cows with outstanding registry records are likely to command thousands of dollars, whereas the same cow, without an advanced registry record might bring only a few hundred dollars.—A. A. Borland.

The Ayrshires of McKean

At the time of its origin there were 105 purebred Ayrshires in the herds of members of the first cooperative Ayrshire bull association of America, located in McKean County, Pennsylvania. Now the 16 members have 213 purebreds. Grade cattle have decreased from 233 when the organization was started to 85 now. There are eight bulls in service in the association. At the recent annual meeting it was decided to add three more blocks of membership with a bull for each one.

Of the 298 head in the association, 127 of them are purebred daughters of association sires. Besides this number in the herds, 32 daughters have been sold to breeders and 37 bull calves have been disposed of to McKean and Potter County dairymen for use as herd sires. Fortunately for the members, 196 of the 302 calves born since organization have been heifers. Of these 165 were purebreds.

Elk County Luncheon

One hundred and eighty farmers, Kiwanis and business men of Ridgway attended the luncheon in connection with the seventh annual meeting of the Elk County Agricultural Extension Association held in the county club rooms at Ridgway on Wednesday, January 5th.

The meeting was called to order at 10:00 A. M. by O. G. F. Bonnert, president, when the local reports of the project leaders were given. At the election in the afternoon the following officers were elected: President, O. G. F. Bonnert; vice president, Otto Dill; secretary, G. B. Straub; treasurer, Andy Anderson. H. M. Worthley discussed the corn borer and showed a motion picture illustrating its life history and the damage it has done in other places. Ernest Mahan, a local poultryman, who ships to the New York market, gave a very interesting talk on marketing eggs.

Mr. M. S. McDowell, state director of agricultural extension, and Hon. D. J. Driscoll, of St. Marys, were the principal speakers. They both stressed the importance of a closer cooperation between agriculture and industry. Mr. Driscoll discussed the importance of agriculture in the county. Mr. McDowell also discussed the importance of a well-planned local program for the improvement of agriculture in a community.—P. H. McD.

Feeds are made to serve one of two objects:

To help the manufacturer, or To help the feeder.

Every manufacturer of feed must decide between these two, which policy he will follow.

This problem came home to us forcibly a good many years ago. We had always tried to give good service and feeds at right prices, but like other manufacturers at that time, we were making feeds to sell. There was a supply of feeds from different industries available and we tried to get them to the users for the profit to be had.

With this object in view, we installed equipment to use molasses in making a cheap feed. That plan didn't last long, but it was worthwhile, for it set us to thinking and the result of that thinking was the adoption of a policy that gave first consideration to what was best for the feeder.

It was obvious that feed of the best quality would make more profit for the feeder even if it cost more money.

That was about thirteen years ago and since that time, we have given first consideration to the feeders interest and the manufacture of the best quality feeds that can be made, feeds intended to help the user make more profit.

In succeeding issues, we plan to use this space to tell you more of the way in which we have carried out this policy, but I wish here to assure you that wherever you get a Tioga-Empire Dairy Feed or Poultry Feed, you have assurance that it is made to give you the best results, and to help you make more profit.

TI-O-GA FEED SERVICE

"My Walsh Cost Me 10¢ in FOUR YEARS"

"Not so bad, eh," says Edwin C. Oliphant, Carrington, S. D., regarding repairs for his Walsh No-Buckle harness. Why so low? Because Walsh harness has no buckles or rings to cut and tear straps, no holes in straps to weaken them. 12 years hard usage proves Walsh harness to outwear two sets of buckle harness.

30 Days On Your Team FREE

Pay nothing. Test it yourself. Ship back at my expense if you don't find it the handiest, strongest harness you ever saw. Write today for my astonishingly low terms.

Hold Your Oats!

THE IOWA OAT HULLER

Don't sell a bushel when you can get nearly TWICE market value by hulling your oats at home and feeding this nearly 100% digestible feed. A large % of whole or even ground oats not digestible and wasted. These facts proven by users.

New Invention

Greatest invention for oat crop since the self binder. It also cracks corn and barley, hulls spelts without any adjustment. No knives, burrs, screens or sieves to wear out. Small engine will run. Does work rapidly. Made in three sizes.

Soon Earns It's Cost

Better Pig and Chick Feed

Unexcelled for pigs, baby chicks, poultry and calves. Very simple. By impacked method removes the positively harmful hulls, leaving valuable and suitable feed portion better than ground oats or oat meal. Soon saves price. Have a better feed. Designed for farm use—priced low.

Free Sample of oats, hulled by this huller, also free circular and letter explaining our special introductory offer. Write NOW and this offer will be held open *without obligation.*

Gladbrook Oat Huller Co. Dept. 4811 Gladbrook, Ia.

BURSAL ENLARGEMENTS

Absorbine reduces thickened, swollen tissues, curbs, filled tendons, soreness from bruises or strains. Stops spavin lameness. Does not blister, remove hair or lay up horse. $2.50 at druggists, or postpaid. Valuable horse book 1-S free. Write for it today.

Read this: "Horse had large swelling just below knee. Now gone; has not reappeared. Horse good as ever. Have used Absorbine for years with great success."

Mrs. GERTRUDE S. STEWART

Only Two Cold Lunches Convinced the Doubting Fathers

I RECENTLY heard of a community where the mothers were battling with that great problem of a better lunch for school children. They had met and decided to buy for the local school such equipment as was required to provide the twenty-six children with a warm bite at the noon hour. They wanted to give a good neighborhood frolic and raise the funds needed. The support and interest of the men seemed essential, but these good fathers thought it entirely unnecessary, and entirely too much trouble to monkey with.

One clever woman of the group passed the word along among her sister neighbors that they talk no more but use strategy. Her plan won the day, and the men as well, for those women decided to serve to those self-same husbands for several days a lunch exactly like the one packed in the youngster's lunch basket. These men-folks sat at the table with only cold food before them. It did not need a third day to convince them that just one hot dish or hot drink would add satisfaction and health to the school sandwich.

The Expense Needn't Be Great

The expense is really not much if the community resources are studied. Many farm homes have large kettles idle for more than 300 days of each year. They would be just the thing for the noon-day soup or hot cocoa. The school stove is often large enough and hot enough to furnish room and fuel. For five years in a big city school, my good friend, the janitor, watched my baked potato or pudding pan from recess time till the noon hour.

Very often a call for equipment will bring donations of home pans and kettles only occasionally used—perhaps in summer threshing or silo-filling days. Some one might even have a small oil stove not frequently needed. Mothers may take turns planning the hot dish and the few cents cost per child each week is trifling when compared with the improved health which means more interest and better work in school.

All Sorts of Good Things

Many teachers are willing and anxious to manage the entire performance after the movement is well launched. One fortunate country school with a deep-silled stove, boasts of a teacher who skilfully uses the door-shelf to roast potatoes, squash and apples, toast bread, bake au gratin potatoes or macaroni-tomato dishes. The top of this same stove helps with the cream-vegetable soups, the cocoa or the hot milk toast.

There are twenty-two kiddies enjoying these twelve o'clock picnics and all are anxious for their turns to help with the preparation and serving—both of which furnish fine chances to teach courtesy and thoughtfulness for others. Each month in this district the meals are planned with the parents and the supplies donated.

A village under my observation has a different phase of the problem, but is handling it in a very successful way. The parent-teacher association built a corner kitchen in the large school hall. Here the stove, work table, dish cupboard and serving counter have been arranged for convenience and quick work. Each mother has two days a year to help with the lunch which is planned and cooked for one cent per child. Either a cup of cocoa or a bowl of soup is provided.

In Your Own Community

Study your own situation and work out plans to suit the conditions—but do give the children a hot sip of something all thru the frosty months and pack the lunch that goes from the home pantry with greater care. Remember that youthful development and healthful energy that should accompany happy childhood need proper food. Keep these proportions in mind as you plan each lunch. A healthy child needs his food to be about one-fifth fruits and vegetables, one-fourth protein (eggs, meat, fish, cheese, milk), one-fourth cereals (breads, bran cookies and porridges), not more than one-tenth of sweets, and about one-fifth fats and fat foods (butter has a prominent place here).

A list of suggestive foods for the hot lunch will be gladly mailed to any one interested if a stamped, self-addressed envelope is sent with each request to Home Page Editor, Pennsylvania Farmer, 261 S. 3rd St., Philadelphia.—Gertrude S. Stewart.

Note.—The United States Government has some very helpful bulletins relating to food for the growing child. No. 712 on School Lunches, 1207 on Milk and 717 on Food for Children are free and will be of great help to you. Write to U. S. Public Health Service, Washington, D. C., for any or all of these you wish. They are free for the asking.

Buttonholes and Buttons and Fun

I HAD a wonderful sewing party the other day, and feel sure you will be interested in hearing about it. Twelve of my best friends were the guests, and the good man of the house rigged up the old bob sled and the tinkling bells and went after the women at eight-thirty in the morning, bringing the little tots, too. They spent the day busily stitching and merrily chatting. After supper a moonlight sleigh ride home completed a joyous day.

I couldn't begin to tell you of the tremendous amount of sewing they did for me. I do know they made eighty-five buttonholes and sewed on the corresponding buttons. And my summer's supply of house dresses, aprons, slips and underwear is complete. The night clothes are ready for another year. My little son's suits and underclothing for spring and summer are entirely finished. Husband's shirts and night shirts are all made.

It took me one entire day to prepare the good things to eat, and another day of strenuous clearing up after the affair, but what a good time everybody had, and how greatly I have been helped. If you plan well in advance and buy and cut carefully, many hours of tiresome sewing will flit speedily by in a good old-fashioned sewing "bee."—N. F., Pa.

The Kitchen Cabinet

AMONG our interested readers is a young girl of fourteen who lives with her father and does all the cooking. She has written to tell me how greatly she is helped by the cooking hints and recipes on these pages. She says she has found our recipes reliable and good to eat. Now she wants to bake some chicken pies, and asks how to do it.

Chicken Pie

I have not the slightest doubt that there is as much variety in chicken pies as in kitchen aprons. Chicken of itself is so delicious that I say "Never make it into pies unless you have an abundance of bones about and the folks have grown tired of 'just chicken'." Pie is then a friend in need and can be easily and quickly made and will be appetizing.

Into a baking dish, casserole or deep pie dish, cut up the cooked chicken into bits. Pour over it chicken gravy to half fill the pan. Place over the top a cover made of biscuit dough or pie pastry. Make plenty of openings for steam to escape. Bake in a hot oven till nicely browned.

Many good things may be added to the gravy according to the family tastes. You might try a few carrots, potatoes, peas, mushrooms, or rice—all of which have been previously cooked tender. Vegetables should be uniformly diced. Individual pies are often made when baked pastry shells are filled or the pies are baked as above using individual baking dishes. —G. S. S.

Wise Daily Counsel

WHEN in sorrow read St. John 14.

When men fail you, read the 27th Psalm.

When you have sinned, read Psalm 51.

When you are worried, read St. Matthew 6:19-34.

Before attending church service, read Psalm 84.

When you fear danger, read Psalm 91.

When you have the blues, read Psalm 34.

When God seems far away, read Psalm 139.

When utterly discouraged, study Isaiah 40.

If you want to be fruitful, read St. John 15.

When you feel lonely or fearful, read Psalm 23.

When doubts come to beset you, read carefully St. John 7-17.

When you cease remembering your blessings, find Psalm 103.

To know Jesus' idea of a Christian, read St. Matthew 5.

For James' idea of religion, turn to James 1:19-27.

When your faith requires stirring, read Hebrews 11.

When feeling all down and out, study Romans 8:31-39.

When you require rest and peace, read St. Matthew 11:28-30.

To learn Paul's secret of happiness, read Colossians 3:12-17.

When leaving home for labor and travel, read Psalm 121.

When you feel bitter, cynical or critical, read First Corinthians 13.

If your prayers grow selfish, read Psalm 67.

When thinking of investments, read St. Mark 10:17-31.

For Jesus' idea of prayer, read St. Luke 11:1-13 and St. Matthew 6:5-15.

For a great invitation and a great opportunity, read Isaiah 55.

Search the Scriptures daily, for then you find peace and happiness.—Clarice Raymond, N. Y.

Passing the Word Along

I GREATLY enjoy the household columns of this good paper and am especially grateful for the helps on equipment and labor-saving methods.

One of the handiest things I have purchased recently is a double action egg beater. It saves much time and labor. It costs so little that it is within reach of everyone. If you whip cream and eggs in your kitchen, you should have one. It means so much to me that I could not resist passing the good word along.—Mrs. L. B., Pa.

A Dual-Purpose Press

A SMALL, inexpensive, hand fruit press is excellent for making pressed apple sauce. After the apples are well cooked, force them thru the press. Add sugar as necessary, then a dash of cinnamon, if liked, and you will have a smooth apple sauce.—Gertrude Shockey.

Editor's Note.—I find this same press useful weekly for riced potato. Cook the potatoes with the jackets on. Let them steam dry, peel and press a few at a time. Add butter and seasoning or heat in heated milk as desired.

Baby Has His Rights

But Grown-ups Learn Slowly to Respect Them

THE children came trooping home from school, and grandmother, who was visiting in the home, fully expected to see them pounce upon the baby in high glee. They had taken their noon lunch to the little schoolhouse and had not seen the baby since the night before, as he was not awake when they left in the morning. "Don't you love the baby?" grandmother asked rather reproachfully as they lingered near the fire warming themselves.

"Yes, we love him," piped the eldest of the flock, "but mamma says we must always wash our hands and faces with warm soapy water and get warm before handling the baby." Grandmother agreed that was a wise precaution and said she wished that she had known of the various ways to protect babies when her children were little. She was thinking of three little mounds in the churchyard—her three who went, during one terrible week.

But in spite of all the aids and instruction on taking care of children there are still parents and others who think they can be handled like kittens or puppies.

Callers, Sunday—Doctor, Monday

Some months ago a young mother sent for the doctor, frightened at the strange way her baby was acting. She stressed the point that on Sunday they had had visitors all day, and the baby was lively and active then. "Yes," said the provoked physician, "and everybody tickled him in the ribs, tossed him in the air, and interrupted his nap and otherwise put him to the extreme test of physical endurance." Then he proceeded to say that a doctor's Monday calls were always frequent where misguided young parents showed off their offspring, particularly the first baby, on Sunday.

Few people kiss a baby any more but they do many other things as bad. An elderly lady was quite peeved when a young relative ignored every hint to wake the baby, and if she had seen what happened when she left the vexation would have deepened. The young mother had watched the approach of the visitor and had seen her stop at a home where there was a mild case of scarlet fever, tho the parents were keeping quiet lest it should force them into quarantine. Then, thoughtlessly, she had made her way to the next home where a little baby was making a fight for existence, because it had been delicate from birth.

When her visitor had gone the mother aired the house, changed every bit of clothing she wore and was careful to wash hands and face with antiseptic soap and hot water. Then she covered her hair with a tight bathing cap and attended her child. Of course, the visitor did it all carelessly, but the mother knew the danger of the so-called mild case, or any case, of scarlet fever.

Chatty Neighbors Chill the Child

Children also must be protected from sudden gusts of cold air. Many careful mothers remove the baby from the living-room before letting visitors out, particularly those who have the bad habit of lingering at the door for a prolonged chat. No woman can be easy when thinking of an unprotected child exposed to the cold so the better way is to put it up warmly in another room. The same is true of people who come to the door to talk but will not enter. The first thing is to make the baby comfortable and warm and then transact business.

Winter is a treacherous time for little children, even tho over a year old, and once you learn to take proper precautions you will never regret it. The baby is entitled to first attention and visitors second. Even the family must be taught to respect the baby's rights, as noise and confusion and careless handling are all bad no matter who is guilty.—Hilda Richmond, Ohio.

Timely Tips

When only a small amount of meat, celery, parsley, etc., are to be chopped for the salad, the getting out of a bowl and later washing it seem a waste of labor. Keep a pair of sharp scissors in the kitchen and if you are cutting chicken for salad use the shears and snip off the portions of meat. The pieces are much evener than when cut in a bowl. Snip the celery and the parsley in the same way, and cut the onion and pepper in tiny ribbons with a sharp knife. Scissor salads are one of the time savers of the kitchen.—L. M. Thornton, N. Y.

* * *

A stiff brush makes a good duster for wicker furniture.

* * *

A low bowl of fruit is an attractive centerpiece for the dining-room table.

* * *

A cupboard between the dining-room and kitchen with doors on either side saves time and space.

* * *

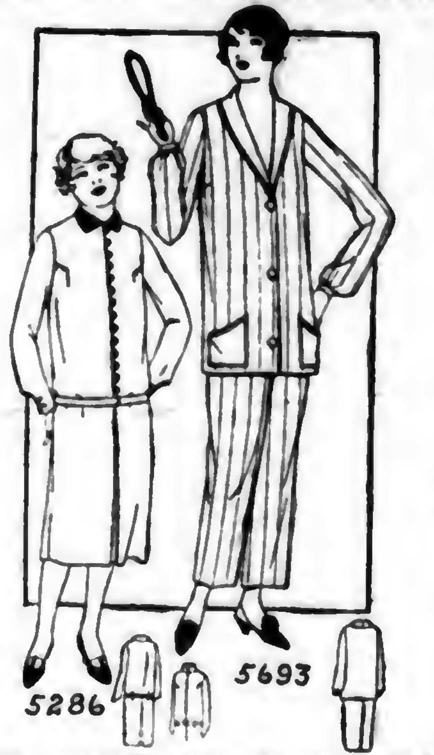
When the family washing has to be dried in the house, wooden coat hangers will more than double the capacity of the line.

Day and Night

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5286.—For Every Occasion.—Flannel, wool rep, wool crepe, velveteen or crepe de chine could be used. Four sizes: 8, 10, 12 and 14 years. A 14-year size requires 2⅛ yards of 54-inch material and one-eighth yard of contrasting material for the collar. Pattern, 10 cents.

5693.—Trim Pajamas.—Crepe de chine, radium silk and batiste are suitable materials. Four sizes: small 34-36; medium 38-40; large 42-44; extra large 46-48 inches bust measure. A medium size will require 4½ yards of 36-inch material together with one-half yard of contrasting material for facings. Pattern, 10 cents.



Send 10c in silver or stamps for our up-to-date fall and winter 1926-1927 Book of Fashions.

You never tasted **MUSTARD** *like this*

SO MANY mustards have a harsh, biting tang. In Gulden's the choicest, sun-ripened mustard seeds are tempered by a blending of rare, delicate spices from the Far East. It's delightfully smooth and mellow. Buy a bottle—you will enjoy its more delicious appetizing flavor! Send 10 cents for 2-oz. sample bottle and book, "Seasoning Secrets" with 53 new recipes. Or send for *free* book only. Charles Gulden, Inc., Dept. D-9 000, 52 Elizabeth St., New York.

OUR YOUNG PEOPLE'S FORUM

Wintry Days Are Fleet of Wing

DEAR FORUM FRIENDS:—Here are the winners in the Title Contest at last. Sorry I couldn't tell you who they were sooner. When I read your title suggestions I was a bit disappointed because so few of you sent in original ideas or ideas short enough. The best titles for stories or pictures are usually short and very much to the point. That means they say a lot in a few words like the very good one which Martha Richter, first prize winner in the over twelve group, sent in—"Bound for Turkey." Three cheers for your idea, Martha.

Prize Winners

Group 1—Over Twelve

1. Martha Richter, Trumbull County, Ohio.
2. Florence Watson, Bucks Co., Pa.
3. Pauline Landis, Lancaster County, Pa.

Group 2—Under Twelve

1. Frank J. Breslin, Salem County, N. J.
2. Frances Flockerzi, Venango Co., Pa.
3. Joseph DePuy, Warren Co., N. J.

Honorable Mention

Margaret Atkinson, Armstrong Co., Pa.
Samuel S. Yorkes, Bucks Co., Pa.

A Picture Contest This Time

Winter is here in earnest now and before we know it spring will be peeping around the corner. Let's hustle up and take some pictures while sleighing and snowballing and skating and sledding days are with us; while bushes and vines and trees are covered with snow and ice.

For the best six pictures illustrating "Winter Days" prizes will be awarded, three for friends and members over twelve and three for those twelve and under. Even tho you don't win a prize, if the picture which you send in is good and clear it will be used on the page sometime and if you aren't already a member it may win a membership pin for you. The more pictures the merrier and the better looking our page will be.

If there is something interesting to tell about the picture which you send in write a letter, too. I'll try to print it with the picture tho I shall not consider the letters when I'm deciding who the contest winners are. Awards will be made on the subject matter and clearness of the picture.

Names and Addresses, Please

Before mailing your picture "Winter Days" be sure that you have indicated in some way that you wish to have it entered in the contest and have given your name, age and address, including county. Lately, several have forgotten to tell who they are or where they live! How can I ever send you a membership pin, or a prize, if you keep your whereabouts a secret?

If you want a picture returned mark on the back "Please return" and it'll come back to you after it has been used.

All pictures illustrating "Winter Days" should be addressed to Cousin Ruth, care of Pennsylvania Farmer, 261 S. 3rd St., Phila., Pa., and should reach me on or before February 5th. And while you are keeping your cameras busy I'll get out mine and see what I can find to fit that contest title. Oh, don't worry, I shan't claim a prize even tho I think my picture is the best!

COUSIN RUTH.

From Forum Members and Friends

Dear Cousin Ruth:—We have a little kitten. It is very mischievous. It climbs in chairs and goes to sleep.

We have a radio in our house. I like it very much.—Myrtle Steffy, thirteen, Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—I am having grand times this winter. I am the oldest girl in the family. I have four brothers older, two younger, and I have three sisters. I am sending a picture of myself when we first moved to the farm. The cow's name is Clover. She broke her leg some way since we moved.—Elizabeth Virginia Holland, Frederick County, Md.

CLOVER AND I
Elizabeth V. Holland, Frederick Co., Md.

Dear Cousin Ruth:—I received the membership pin and my prize harmonica. Gee, but I was glad when you announced me as a winner in the contest. I was wondering what would be in the package when it came. The package came just before Christmas and I had a good time with it. I thank you very much for it.

How's the snow down there, Cousin Ruth? It was snowing here very hard and then the wind started to blow. The piles of snow are very high. Before the snow, sleigh-riding was good. Do you like to go sleigh-riding?

Our school had a good time before Christmas. We had a tree in the school and we got lots of presents, some from the teacher and others from my friends. At night we had a program at church. There were many people who listened to us. I hope you enjoyed your feasts and presents.

I wish you a Happy New Year and also all the Forum members and friends.—Mike Spewak, (X), Wayne County, Pa.

Dear Cousin Ruth:—I received the pin and pencil box and I like them very much. Thank you very much. They are so nice. I feel as if you have given me a couple of Christmas gifts.

I hope your Christmas was a merry one and that 1927 will be filled with success and happy times for you and the Forum Club.

Won't you sometime have an original story or verse contest? I like to write stories and I have won two small prizes for an essay and play.

I do not live on a big farm like some of your admirers but our place is in the county and we have always called it a farm.

The sleet storm has made the world look like fairyland, and the trees like Christmas trees. I suppose the rain will destroy most of it. —Mary Scott, thirteen (X), Bucks County, Pa.

What title would you suggest for an original story contest? Send it along and perhaps I can use it sometime. Thanks.

COUSIN RUTH.

MOTHER AND HER PETS
Emma R. Rupp, (X), Lehigh County, Pa.

Dear Cousin Ruth:—I live on a farm of 100 acres. We raised about 200 chickens this summer and had 75 old ones. I have one chum and he lives about a quarter mile away. I have been trapping and had good luck so far.—Newton Monte, Bucks County, Pa.

Dear Cousin Ruth:—I receiv
membership pin and I cannot
you enough for it.
I must tell you what our
Scottie does. Every time my
comes home with the truck
waits till the automobile is
driveway and then he runs
it barking and chases the
pigeons or other animals that
the way. He does not want
be run over.—Miriam Weidlich
Monmouth County, N. J.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—You know how nice and comfortable we all feel, having this cozy corner at the bottom of Cousin Ruth's page, and how glad we are to get together each week because we enjoy working out the puzzles. Well, there is a famous saying that means something of that sort and you will find it in the little square below. I mustn't tell you too much about it or the fun will be spoiled. Just begin with the letter "B" on the second row in the little black frame and follow the letters along, going up or down, right or left but never diagonally. The "R" on the third line is the last letter in the sentence.

When you have found what this saying is send it to me on a postcard or in a letter so that it reaches me by January 28th. BE SURE TO SAY HOW OLD YOU ARE, and please tell me your birthday and the name of the county in which you live. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the puzzle published in the January 1, 1927, issue of Pennsylvania Farmer is: HAPPY NEW YEAR.

The prize winners are: Emma Chronister, age 12, Harrisburg, Pa.; Nora M. Garland, age 10, Plainfield, Pa.; Kathryn Hill, age 12, Flemington, New Jersey; Kenneth Myers, age 13, Marion Center, Pa.; Ralph Roe, age 12, Amyville, Pa.; Marie Steigerwalt, age 9, Carbon, Pa.; Margaret E. Warner, age 8, New Windsor, Md.; Mary E. Wiles, age 9, Chambersburg, Pa.; Clarence Williams, age 10, Charleroi, Pa.; Glenn Williams, age 9, Martha Furnace, Pa.

Has anybody a favorite kind of puzzle they'd like to have in Our Corner? Let me hear about it, won't you?

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Far

JUDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, knew Bayne Trevors, general manager, wasn't square and fired him. Trevors and the men soon realized she meant business.

The men grumbled. Trevors threatened to sell her out to the Western Lumber Company. Fortunately, Bud Lee, horse foreman, and old Carson promised to stay. To "Doc" Tripp, veterinarian, and friend of her father, the girl confided her troubles but instead of lightening her burden he added others when he told her that Trevors had recently imported sick calves to the ranch.

Busy days followed for everybody. Nelson, sent by Trevors to make trouble, had persuaded the milkers to leave the place for jobs with the lumber company. Short-handed, Judith bought a milking machine and hired a new foreman. Mrs. Simpson took up her duties caring for the ranch house and Pollock Hampton, part owner of the ranch, arrived with his guests—Major and Mrs. Langworthy and Marcia, their daughter; Marshal Rogers, lawyer, and Frank Farris, artist. Hampton wanted Trevors back, so the first thing he did was to invite him over to meet his friends. In May he came, just when the rumor was circulating among the men that the ranch was on its last legs and it was doubtful whether there would ever be another pay day.

On the thirtieth, Charlie Miller, returning from Rocky Bend with the pay-roll, was robbed and to avert disaster the money must be in Judith's hands at six that night. With eighty miles to cover in six hours Bud Lee set off for Rocky Bend. On the way back smokeless powder and a silencer put his horse out of business. But that didn't stop Bud Lee. He handed the money over to Judith seven minutes before time to pay the men as he had promised. Riding to Squaw Creek canyon next day, Judith met Lee going over the scene of his holdup of the day before.

Continued from last week

BRIEFLY Lee went on to give her the rest of the results of his two-hour seeking for something definite. If she'd ride on she'd come to the spot where his horse had been killed; she would see in the road the signs where, at Tripp's orders, the carcass had been dragged away. From there, looking off to the left, up the cliffs, she would see the spot which Lee believed had harbored one of the riflemen. High above the canyon rose the rocky pinnacle he had marked yesterday, with brush standing tall in the little depression.

"Indian Head," broke in Judith, gazing upward. "Bud Lee, I'll bet a horse you're right. . . ."

"And," said Lee, swinging from the saddle, "I'm going up there to have a little look around."

In an instant the girl was at his side.

"I am going with you," she said simply.

He looked at her curiously. Then he shrugged his shoulders. An angry flush came to the girl's cheeks, but she went on with him. Not a word passed between them during the entire hour required to climb the steep side of the mountain and come under Indian Head cliffs. Here they stood together upon a narrow ledge panting, resting. Again Judith saw Lee glance at her curiously. He had not sought to accommodate his swift climbing to a girl's gait and yet he had not distanced her in the ascent. But in Lee's glance there was nothing of approval. There were two kinds of women, as he had said, and . . .

"Pretty steep climb from here up," he remarked bluntly.

"For a valley man or a cobble-pounder, maybe," was Judith's curt rejoinder.

Thereafter they did not speak again until, after nearly another hour, they at last came to the crest of Indian Head. And here, in the eagerness of their search, rewarded by the signs which they found, they forgot, both of them, to maintain their reserve.

IN THE clump of brush, close to the outer fringe, behind a low, broad boulder, a man had lain on his belly no longer ago than yesterday. Broken twigs showed it, a small bush crushed down told of it, the marks of his toes in some of the softer soil proclaimed it eloquently. And, had other signs been required, there they were: two empty brass cartridges where the automatic ejector had thrown them several feet away. Lee picked up one of the shells.

"Latest thing in an up-to-the-minute Savage," he told her. "That gun is good for twice the distance he used it for. I'm in tolerable luck to be mountain-climbing today, I guess!"

While Judith visualized what had occurred, saw the tall man—he must have been tall for his boot toes to scratch the earth yonder while his rifle barrel lay for support across the boulder in front—resting his gun and firing down into the canyon—Lee was back at her side, saying shortly:

"What do you think? There's a plain trail up here, old as the hills, but tip-top for speedy going."

"And," said Judith without looking up, "it runs down into the next saddle, to the north of that ridge, curves up again and with monuments all along the way, runs straight to the Upper End and comes down from the northeast to the lake."

Lee looked at her, wondering.

"You knew about it all the time, then?"

"If we hadn't been on our high horses," she told him quietly, "I should have told you about it. It's the old Indian Trail. If the man we want turned east, then he went right on to the lake before he stopped putting one foot in front of the other. Unless he hid out all night, which I don't believe."

"What makes you think he went that far?"

"There's no other trail up here that gets anywhere. If he left this one for a short cut he'd know, if he knows anything, that he'd have to take a chance every ten steps of breaking his neck in the dark. Now," and she rose swiftly, confronting him, "the thing for you to do, Bud Lee, is to get back to your horse, take the road, make time getting to the Upper End and see what you can see there!"

Hurrying back to their horses, they rode to the ranch-house where Judith, with no word of adieu, left Lee to go to the house. Lee made a late lunch, saddled another horse, and when the bunk-house clock stood at a quarter of four, started for the Upper End.

"That girl's got the savvy," was his one remark to himself.

Blue Lake, while but three miles farther eastward, flashed its jewelled waters into the sun from a plane fully five hundred feet higher than the tall chimneys of the ranch-house. About it stood the most precipitous granite cliffs to be found hereabouts. They rose, sheer and majestic, still another five hundred feet, here and there eight hundred and a thousand. The lake, half a mile in diameter, circular like some polished mirror presented by an ancient giant to his lady-love, was shut in everywhere by these crags and cliffs save at the west, where the overflowing water, going to swell the turbulent river, poured like molten crystal thru a wide gorge. The farther cliffs marked the eastern boundary-line of the ranch. Beyond them lay a small plateau rimmed about on three sides by still other steep precipices.

Lee, coming to the water's edge sought to guess where the old Indian Trail came down. And here again, startling him for a second time, Judith rode up.

She, too, had a fresh horse; she too now carried a rifle across her arm. Bud Lee frowned.

"What makes you so certain, Bud Lee," was her abrupt word of greeting, "that Bayne Trevors is back of this deal?"

"When did I say that?" he countered.

"Yesterday, when I told you Charlie Miller had been held up, you intimated that a long-headed man had planned the whole thing. That means Trevors, doesn't it?"

"One of us," said Lee calmly, ignoring her question and looking her straight in the eyes, "is going back. Which one?"

"Neither!" she retorted promptly. She even smiled confidently at him. "For I won't. And you won't."

"Do you need to be told," he asked her coolly, "that this is no sort of job for a girl? You'd only be in the way."

"If you want glittering generalities," she jeered at him, "then listen to this: A man's job, first, last, and all the time, is to be chivalrous to a woman! And not a bumptious boor!"

WITH that she spurred by him, taking the trail which led off to the right, and so under the cliffs and to the mouth of a great ragged chasm. In spite of him, Bud Lee grinned after her. And, seeing that she was not to be turned back, he followed.

They left their horses and followed the old footpath, made their way into the chasm deeper and deeper and little by little climbed upward. The climb was less difficult than it looked, and fifteen minutes brought them to the upland plateau and to the door of an old cabin, made of logs, set back in a tiny grove of cedars.

"I haven't been here for a year," cried the girl, forgetful of the constraint which had held them now. "It's like getting back for the first time! I love it."

"So do I," Lee said with self.

"Look!" exclaimed Judith. one has been repairing the in! He's made a bench yonder the big tree, too. And he has in the spring with rocks, and Who in the world can it be? even a little garden of wild

Bud Lee, for no reason himself, flushed. He offered planation at first. Here he many an hour when the time for idling, lying on the grass ing out over the immensity wilderness; here he came night to sleep under the from the other boys, when craved solitude; here upon Sunday, when work was slack, come to smoke alone, loaf from the few books on the shelves.

"Maybe," he suggested when it was clear that Judith going straight to the door, where our stick-up gents Choice place for a cutthroat nate, huh?"

"I don't believe it," Judith positively. "The made his hermitage here has

Behind her back Lee smiled

"We've got something to said hastily, "without poking into old shacks. Indian Trail you talked

"Shack!" cried Judith ly. "You make me sick, Bud rather own this cabin and than have a palace on Fi nue!"

SHE knocked at the door, silence would answer hoping to have a man, gentle-voiced, a romantic all of his picturesqueness, the door.

"Going in?" asked Lee simulated carelessness.

"No," she told him "Why should I? Would you people poking about into yo just because it was in the the wilderness and you to drive them out?"

"No," answered Bud "Now that you ask me, I Let's go find that trail."

"But," continued Judith, ing a fool, and realizing the men we want might in hiding in here, I am going in."

"Not being a fool," he after her, adding gently, a girl, which means filled osity."

A disdainful shoulder his answer. The door was after immemorial western and Judith opened it. Lee little gasp of pure delight.

"He's a dear, the man here!" she announced "You can just tell by home."

Looking in over her Lee wondered just what room shanty had caught siasm. He was secretly it had done so, tho the somewhat vague in his mind. There was the with an iron hook each side for coffee-pot and a bunk with a blanket smoothed over cedar-boughs; a shelf with a dozen books; little else, so far as he could see or remember, to catch at Judith's delight. Yet she, looking thru woman's eyes, read in one quick "peek" the character of the dweller in this abode. One who was content with little, who loved a clean, outdoor life, and who was tranquilly above the pettiness of humanity. Judith closed the door softly.

"I'd like to look inside his books!" she confessed. "But I won't."

The lean horse foreman chuckled. Judith sniffed at him.

"You haven't any curiosity about such things as books," she retorted. "To be sure, why should you have?"

Again, leaving the cabin, she went before him. Going straight across the plateau, she showed him where one could clamber up a steep way to the ridge. Once up there, it was but ten minutes until, in a hollow, they found the monument marking a trail, a stone set upon a boulder.

It was after five o'clock. When, following the trail back and forth in its winding along the side of the ridge, they found the signs they sought, it was fast growing dark. But there, in a narrow defile where loose soil had filtered down, were tracks left by a large boot. Lee went down on his hands and knees to study them in the dusk. He got up with a little grunt and moved down the trail. Again he found tracks, this time more clearly defined. So dark was it now that they had lighted several matches.

"Two men," he announced wonderingly. "Fresh tracks, too. Made this morning or last night, I'll bet. One coming east from Indian Head. The other coming west from the plateau behind us. Who's he? Where'd he come from?"

"He's the second of the two men who shot at you," said Judith quickly. "Don't I know every trail in this neck of the woods, Bud Lee? He followed another old, worn-out trail on the south side of the ranch. They met here just as I knew they would!"

"What for?" Lee frowned thru the darkness at her eager face. "What would they want to get together for? If they had any sense they would scatter and clean out of the country."

"Unless," Judith reminded him, "they don't intend to clean out at all! Unless they mean to stick to the cliffs and try their hands again at their sort of game. They'll figure that we will expect them to be a long way from here by now, won't they? Then where would they be safer than right here in these mountains? Give me a rifle and something to eat and I'll defy an army getting me out there. And think of it: If this is Trevors' work, if he means business, think what two gunmen on these heights could do to us. They could pick off a three-thousand-dollar stallion down in the pens; they could drop more than one prize bull or cow," she added sharply. "If they thought about girls as some men think, they could take a chance on scaring Judith Sanford out of the country."

LEE stared at her a long time in silence.

"I wouldn't have said," he offered finally, "that Bayne Trevors would make quite so strong a play as that."

"You wouldn't! Then look him in the eye! And where's his risk, if he's picked the right men, if he sees them thru, keeping the back door open when they want to run for it? I'd just gamble your boots, Bud Lee, that Bayne Trevors . . ."

Without warning, without a sound of explosion came a wiry whine into the still air, a little venomous ping, and a bullet sped by just over their heads. But, thru the gloom, they both saw the flash of the gun as it spat fire and lead, and, as tho one impulse commanded them, Judith's rifle and Bud Lee's went to their shoulders and two reverberating reports rang out in answer.

"Lie down, darn it!" cried Bud Lee to the girl at his side, as again there came the flash from the cliffs off to the right and as again he answered it with his rifle.

"Lie down yourself!" snapped Judith. And once more her rifle spoke with his.

For one instant, framed against the darkening sky along the cliff some five hundred yards away to the right, they saw the silhouette of a man, leaping from one boulder to another, a man who looked gigantically big in the uncertain light. They fired; he jumped again and passed out of sight.

"Got his nerve," grunted Lee as he pumped lead at the running figure.

As an answer there came the third flash, the bullet striking the trail in front of them. And then the fourth flash, from a point a hundred yards to the left of the other.

"That's Number Two," muttered Lee. "They've got us in the open, Judith. Let's beat it back to the cabin."

"I'm with you," said Judith, between shots. "It's just foolishness" . . . bang! . . . "sticking out here" . . . bang! . . . "for them to pop us off." Bang! Bang!

THEY ran then, Bud slipping in front of her, his body looming darkly between her and the cliffs when the shots came. He slid along the sharp slope to the plateau, putting out his arms toward her. And as she came down, Bud Lee grunted and cursed under his breath. For there had been another flash out of the thickening night, this one from the refuge toward which they were running. A third man was shooting from the shelter of the cabin walls. And Lee had felt a stinging pain as tho a hot iron had scorched its way along the side of his leg.

"Hurt much?" asked Judith quickly. Without waiting for an answer, she pumped two shots at the flash by the cabin.

"No," grunted Lee. "Just scared. And now what? I want to know."

Bud Lee, in the thicker darkness lying along the edge of the plateau, sat with his back against the rocks while he gave swift first aid to his wound. He brought into requisition the knotted handkerchief from about his throat, bound it tightly around the calf of his leg, and said lightly to Judith:

"Just a fool scratch, you know. But I've no hankering to dribble out a lot of blood from it."

Judith made no answer. Lee took up his rifle and turned to the spot where she had been standing a moment ago. She was not there.

"Gone!" he grunted, frowning into the blackness hemming him in. "Now, what do you suppose she's up to? Fainted, most likely."

He got up and moved along the low rock wall, seeking her. A spurt of flame from the east corner of the cabin drew his eyes away from his search and he pumped three quick shots in answer.

"Little chance of hitting anything," he muttered. "Too blamed dark. Just fool's luck that I got mine in the leg."

Again he sought Judith, calling softly. There was no answer. Once more came the spurt of flame from the shelter of the cabin wall. Then fifty yards off to Lee's right, some fifty yards nearer the cabin, another shot.

The first suspicion that one of the men from the cliffs had made his way down to join issue at close quarters, was gone in a clear understanding. That was the bark of Judith's rifle; she had slipped away from him without an instant's delay and was creeping closer and closer to the cabin.

"Darn the girl!" cried Lee angrily. "She'll get her fool self killed!"

But as he ran forward to join her, he realized that she was doing the right thing—the only thing if they did not want to lie out here all night for the men on the cliffs to pick off in the morning light. He knew that she could shoot; it seemed that she could do everything that was a man's work and which a woman should know nothing about.

A fresh thought locked his hand like steel about his gun-stock. Suppose that Judith, in the mad thing she was attempting, should actually succeed in it, that she should bring down the man she was attacking? How would Bud Lee feel about it when the boys came to know? What would Bud Lee answer when they asked what he was doing about that time? "Nursin' a scratched leg? Mos' likely! Huh!" He could hear old Carson's dry cackle.

Frowning into the night, he thought that he could make out the dim blur of Judith's form. The girl was standing erect; shooting, too; for again the duel of red spurts of flame told where she and the quarry stood.

Meantime Lee ran on, changing his original purpose, swerving out from where Judith was moving forward, turning to the left, hopeful to come to close quarters with their assailant before she could go down under that sharp rifle fire or could bring down the other. For certainly, if she kept on that way, the time would come when some one would stop hot lead.

Lee shifted his rifle to his left hand, taking his revolver into his right. From the cliffs came a shot and he grunted at it contemptuously. It could do nothing but assure those below that there was still some one up there.

"Three of them to our two," he estimated, "counting the two jaspers on the cliff. Two of us to their one, counting what's down here. And that's all that counts right this minute."

A shot from Judith; a shot from the cabin; two shots from the cliffs. The two shots from above brought fresh news; not only were they closer together, but they indicated the men up yonder were coming down. Lee hurried.

Then, at last, his narrowed eyes made out the faint outline of that which he sought. Close to the cabin, low down, evidently upon his knees, was the most important factor to be considered now. Still Lee was too far away to be certain of a hit and he meant with all of the grim determination in him to hit something at last. He ran on drawing the fire away from Judith. A rifle-ball sang close to his side, another and another.

"Why the devil doesn't he run for it?" wondered Lee.

(To be continued next week)

Traveling Eastward

The combine has long been considered a machine for the great wheat growing sections of the West, but it is gradually making its way into Pennsylvania and other eastern states. Smaller models of the outfit pictured are being used on medium-sized farms. They cut, thresh and bag the grain in one operation, leaving the straw and chaff on the field.

Did you ever hear this one?—

A Slow Cure

A frog, having a headache, asked another frog to fetch aspirin. Frog No. 2 refused. A turtle volunteered. A month, two months, passed. Said Frog No. 1: "My head has ached for two months. I knew that turtle would never come back." Just then the turtle raised his head over a stone wall. Said the turtle: "Now just for that I won't go and get your aspirin at all!"

Human Nature

"Jim, how is it that you get better service from that itinerant iceman than I do? I give him a quarter every Sunday. You give him a quarter one Sunday and maybe ten cents the next."

"It's the uncertainty that keeps him happy."

A Habit He Had

"Good-by," said the little boy. "And I've had a very good time, thank you."

"You don't say so," replied his host, playfully.

"Yes, I do," said the little boy, very seriously. "Always."—London Daily Express.

Why Teachers Age

Teacher (to class)—Work this sum. Two eggs at 5c each, a pint of milk at 6c a pint, and half a pound of sugar at 10c a pound. What do they make together?

Small Girl—Please, miss, a custard.—The Progressive Grocer.

Not His Fault

Judge—What is your occupation?

Hobo—I used to be an organist.

Judge—A man of your talents come to this! Why did you give it up?

Hobo—The monkey died.

He's Still Waiting

First Englishman—Charlie, did you hear that joke about the Egyptian guide who showed some tourists two skulls of Cleopatra, one as a girl and one as a woman?

Second Englishman—No, let's hear it.

Something She Needed

Duncan—What did your wife give you for Christmas, old chap?

Jimpson—I'm not sure whether it's the electric toaster or the vacuum cleaner!

Sure Cure

Hiram—One of th' pigs is sick, so I give 'em some sugar.

Si—Sugar! What for?

Hiram—Medicine, of course. Haven't yu heerd of sugar-cured hams?

Using Her Brains

"Look, Mary, we have an auto! I bought a used car."

"Oh, goody! Now all we have to do is to move to another community so people will think we're the ones that used it!"

Some Hunter, Too

Eva — Nimrod was a mighty hunter.

Ted—How about the man who has had the same collar-button for forty years?

Like Taking Insurance on Your Farm Buildings and All they Contain

GLOBE BRAND The Serviceable Sheet Steel

USING "GLOBE" Sheet Steel to roof and sheathe your farm buildings is like taking out a blanket insurance policy against costly mishaps. You are guarding your possessions against lightning and storm. You are making your buildings fire resistant and proofing them against vermin. You are protecting your stock from disease caused by leaky, drafty, unsanitary quarters. You are even assuring better and cleaner cistern water.

Good Sheet Steel

is one of the most economical investments you can purchase. Poor sheet metal is scarcely worth the labor of putting up. There is no question about the quality of

NATIONAL SPORTSMAN

NATIONAL SPORTSMAN is a 68-page monthly magazine for good fellows, young or old, who love the great outdoors. Each issue is crammed full of interesting stories and fascinating pictures of Hunting, Fishing, Camping and Trapping experiences and valuable information about guns, rifles, fishing tackle, camp outfits. Tells how to cook grub, how to build camps, how to train hunting dogs, where, when and how to catch fish and a thousand and one helpful "How to" hints for sportsmen.

And here's the REMINGTON SPORTSMAN'S KNIFE shown in actual size, with stag handle and two long slender blades, just what you need for skinning and cleaning fish and game. Blades are of superior quality steel just right for a good clean job of slitting and skinning.

Friendly Talks

By EDGAR L. VINCENT

ONE of our little apple trees did not seem to be doing very well t we did not cut it down. We got the pickaxe and dug about the oots, loosening up the earth. We a lot of good barnyard manure und the base of the tree and mix that in with the soil and because weather was dry, we carried a ple of pailfuls of water up to the hard and gave our little tree a drink.

And you ought to see how that responded to this care and atment. Seemed as tho it fairly for joy. Its branches began take on a healthier look. The stretched up and soon had the other young trees, that we did not turn our backs the trees, but kept digging and and watering the earth in they grew. For we had learn that it pays to be kind even to

Not of Much Account Until—

One of the dearest little girls I knew had her home in the fam a man and woman that had been having a very good time in They were poor. They often around from one farm to an Folks had never thought they of much account in the world, it may be they were not up to time the baby came.

But after that—why, everything to change for them. They be kinder. There was a look in faces that we never had seen because, don't you see, they had a little one that must be and cherished and made lovely. she really was a sweet little like a rose growing up in the of what used to be a bed of

They say things are not as they to be in this old world of ours. and women seem to lack some their lives. Even the young are charged with being far they ought to be, and are those who feel like cutting unhealthy growths in of life. Cut them down! and strike them hard! out root and branch and away! That seems to be the decision men come dealing with the weak mem

Worth More Than Trees?

is not what we do with the tho. We do not strike or cut them off or dig out. We pour out our love them; and are not men worth than trees? The thing that is more today than any else is that we have not in our enough real, true, honest lov kindness. If we had more of that, boys and girls would not be up wild; they would want keep close to us, and we would our highest joy in our fellow with them.

it may be that the place to this great reformation is right home and mine. Few of us well as we might and ought to life is a long journey, anyway, the good to the better and on best. It will be a good while we reach the best; but if we trying and turn our faces to the sunshine we will at last to our life's desire. And when and I set out on this long jour we shall not have traveled very we find that we have com The road will be full of folks, journeying with us in search of Best There Is! And we shall all

The McCormick-Deering P & O Little Genius 3-furrow plow is shown here pulled by the sturdy 4-cylinder McCormick-Deering 15-30 Tractor. The little Genius is built in 2, 3, and 4-furrow sizes for tractors of various power ratings.

McCormick-Deering—the mark of quality manufacture

THE McCormick-Deering dealer in your community offers you tractors and tractor plows developed by one builder for your satisfaction. The dealer, who is expert in gauging the machine needs of his community, has chosen his stocks from the McCormick-Deering line with your soil, crop, and climatic conditions closely in mind. If you are interested in turning your soil in the shortest possible time and with the smallest expenditure of man labor, we urge you to study the McCormick-Deering combination of power and plows.

McCormick-Deering Tractors are sturdy, modern, 4-cylinder units, built in three types,—10-20 h. p. and 15-30 h. p. regular tractors, and the two-plow Farmall designed for planting and cultivating row crops in addition to doing all regular tractor work. All three embody the same basic 4-cylinder engine design and are built according to Harvester quality standards for long years of economical, labor-saving operation.

McCormick-Deering P & O Tractor Plows—moldboard and disk types—are up-to-the-minute in every detail. Designed to plow with minimum power and to operate with minimum human effort. Power lifts, accessible levers, quick adjustments, easily removable shares, etc., are features.

Ask the local dealer for specific information on tractors and plows for your requirements.

P & O

For more years than most of us can remember, the name P & O has meant absolute plowing satisfaction. Today, the McCormick-Deering line of tractor plows bearing this name upholds the P & O tradition with incomparable tractor moldboard and disk plows for open field, orchard and vineyard use. Built by the makers of the famous 4-cylinder McCormick-Deering Tractors for every kind of soil and power. Also, a complete line of horse-drawn gangs, sulkies, and walking plows.

McCormick-Deering 4-cylinder FARMALL
The new all-purpose tractor for planting and cultivating corn, cotton, and other row crops. Leads the way to real horseless farming.

Weather Put Premium on Best Eggs

Review of the Week Ending January 15

POTATOES—The eastern markets were rather quiet and supplies were fully ample for the demand. In Philadelphia there was a slightly stronger tendency for strictly fancy stock but this was very scarce. Buyers appeared to be holding off in anticipation of lower prices. Shipping point markets were dull under very light trading. The latest estimates on the 1927 early potato crop in Florida are for an acreage of 27,000 compared with 23,000 last year. The Hastings section will run about 19,000 acres, compared with 16,500 last season. For states following Florida it is too early for estimates but all interested parties expect an increase acreage.

POULTRY—The live poultry market in New York was dull toward the close of the week due to heavy supplies. Fowls and chickens declined in price and broilers were weaker. Dressed poultry was weak under light supplies and slow trading.

EGGS—Cold weather in producing sections stimulated the New York egg market. Prices held steady on fresh-gathered stock. Nearby Pennsylvania and New Jersey white eggs were in fair demand with the finest stock bringing a premium.

FEEDS—The market was quiet thruout the week with offerings of wheat feeds more than ample for the demand. Prices were slightly lower at the close. Linseed meal sold slowly in the East but was steady in central-western markets. Cottonseed meal was about steady while gluten feed was higher. Hominy feed was irregular and varied with local conditions.

GRAIN—Wheat prices advanced slightly due to a good domestic demand. Corn prices were irregular but showed a stronger tendency. Oats held firm.

HAY—Prices held generally firm under moderate receipts and a fair demand. The best grades of hay moved readily. Dairy hays were in active demand and the finest dairy hay brought considerable premiums.

LIVESTOCK—Hog prices held steady in Chicago while beef steers, heifers and cows were steady to 25c higher. Stockers and feeders and heavy calves sold at unchanged prices. Fat lambs were lower at the close of the week and fat ewes were stronger.

BUTTER—Butter prices dropped sharply on all markets under moderately heavy receipts. Buyers were purchasing for immediate needs only and this had a depressing effect on the market. At the close of the week prices in Philadelphia and New York had declined 3c but the market was steadier under a more active demand. The future market is uncertain at present and dealers exhibit wide differences of opinion.

County News and Comment

Crawford County, Pa.—After a green Christmas it began to snow that night and has snowed some every day since until there is about 14 inches. The new milk plant which was established in Titusville last summer and began operations early in the fall has made good, paying the patrons during November 63c per pound for butterfat and 50c per hundred for skimmilk. The other milk plants which ship whole milk paid $2.59 per cwt. for 3.6 test. Other farm produce prices: butter, 60c; eggs, 55c; potatoes, $1.75; apples, $1; veal, 17c; pork, 16c; chickens, 25c.—O. W. G., January 7.

Frederick County, Md.—Most farmers are busy killing and packing meat. Fat hogs are still high, local butchers offering 17c lb.; beef cattle command a good price but cattle for feeding are exceptionally high. Eggs and butter prices remain steady. Turkeys were high during holiday season bringing around 45c per lb.—R. J. W., January 3.

Lackawanna County, Pa.—There was considerable snow during December. Farmers are threshing, hauling and cutting wood and some are doing their butchering. Some corn stalks standing out yet. Snow and high winds make it difficult for mail carriers to cover their routes. Potatoes are retailing for 63c pk. Prices for dressed poultry during holidays were as follows: turkeys, 60c; ducks, 40c; geese and chickens, 35@38c.—E. A. K., January 6.

Lancaster County, Pa.—Pleasant weather two weeks ago enabled farmers to finish corn husking. A poultry clinic was held in the eastern end of the county under the auspices of a local dealer and a poultry remedy company. It was well attended. The expert in charge described the common poultry diseases and gave advice for prevention and cures. The meeting seemed to be so helpful that the folks have asked for a second one before spring. Prices: eggs, 50c; lard, 20c; butter, 45c; potatoes, $1.60; corn, 60c; oats, 50c; wheat, $1.30; hay, $20.—H. C. H., January 5.

Lehigh County, (Upper), Pa.—There is snow and a crust of ice on the ground. Chickens, as a rule, have not been laying very well. The potato market has been very dull since the holidays. Very few shipments are being made. Prices at shipping points, $1.10@1.20. Apples seem to be even duller. There is hardly any demand at any price. Wheat, $1.25; corn, [illegible]; eggs, 48c; butter, 26c.—G. J. R., January 10.

Lycoming County, Pa.—So far we have been having hard winter weather with snow about six inches deep in the valleys and about double that in the higher places. Many little saw mills are now taking stock in to be sawed later. Not very much butchering has been done. Hay selling at the barn for from $12 to 16, depending upon the quality. Hogs on foot, [illegible]; dressed 20c; fresh eggs, 45c; butter, 50c; beef, 12½c, dressed; straw, [illegible] $12; corn, shelled, 60c; oats, 50c; wheat, $1.25; potatoes, $1 up.—C. I. C., January 6.

Monroe County, Pa.—Thirteen-inch ice is being stored, cutting began last week on small ponds. The thermometer registered 8 below zero on January 9th. The farmers' apple show was held on January 6 and 7, also the tenth annual meeting of the Monroe County Agricultural Extension Association was held on the [illegible] S., January 10.

Montgomery County, Pa.—County Agent Walz is arranging programs of work in the different communities for the coming year. Farmers are busy butchering, cutting wood, hauling manure and some still have corn to husk. We have had a lot of snow, sleet and ice but fields are now bare. Prices: wheat, $1.30; oats, 50c; corn, 85c; bran, $2; middlings, $2; gluten, $2; cottonseed meal, $2.10; [illegible] meal, $2.70; butter, 60c; eggs, 55c; [illegible] hogs, 18c; chickens, 25c.—C. N. [illegible], January 7.

[illegible] County, Pa.—Many potatoes are in storage, few having been shipped. Buyers are paying $1 bu. The price for milk delivered at local plants is $2.75 cwt. for 3.5 per cent butterfat test and a differential of 4c for each one-tenth of one per cent above or below 3.5 per cent butterfat. Eggs, 40c; butter, 50c.—M. C. S., January 8.

[illegible] Agricultural Week

ONE of the important educational features conducted during New Jersey's Agricultural Week is the [illegible] exhibit held in Trenton. This year the exhibit was bigger and better than usual, partly because the exhibits made by the State Experiment Station and the State Department of Agriculture were more than usually instructive and attractive; and because the exhibits included a display of farm and orchard machinery and equipment of latest design.

The New Jersey Guernsey Breeders held their annual meeting for the election of officers and to distribute the herdsmen's cups won by many Guernsey owners for high-yielding cows as shown by the cow testing associations' figures.

The State Board of Agriculture held its annual meeting on Tuesday and received newly elected members. They included J. W. Miller, of Princeton; Clarence Dillon, of Fair Hills; Arthur C. Wadley, of Newmarket; Charles D. Cleveland, of Eatontown; H. H. Pope, of Madison; E. T. Gill, of Haddonfield, and Gordon Hall, of Cranford.

Some of the notable men who addressed the board were: William M. Jardine, U. S. Secretary of Agriculture; former United States Senator J. S. Frelinghuysen, president of the board; Governor Moore, Mayor Donnelly, and Congressman Franklin W. Fort.

Secretary Jardine said that New Jersey is one of the states which has put into practice most of the scientific information relating to good agricultural practice. He complimented the state on its progressive agricultural institutions and made special mention of Dr. J. G. Lipman's work and international reputation.

Practically all the different state associations held meetings during the week, and most of them were fairly well attended.—K.

LEADCLAD FARM FENCE

How will your fence stand the winter?

Your mower, spreader or hay-rake have the protection of the shed or barn, but you can't bring in the fence. Fence must stand the gaff of frost and ice, thawing and freezing, expansion and contraction.

That's why we recommend to you Leadclad fence. Its ductile coating of pure lead contracts and expands with every freeze and thaw without cracking or peeling.

It stands the weather many years longer than any other wire fence made. Costs no more to erect than a short-life fence.

Write for sample of Leadclad wire.

The Agricultural Schools and Colleges of Denmark

By FRANK O. LOWDEN

I VISITED the Royal Agricultural College and had a delightful day there. Professor O. H. Larsen, Director of Agricultural Economics, a little over a year ago, visited the United States. He came to give a course of lectures at the summer session of the Agricultural College of Cornell University. Professor Larsen gave us much interesting information upon the economic status of the Danish farmer.

While we were there he was receiving reports from farmers as to their last year's earnings. Enough reports had come in to indicate that the earnings last year were below the earnings of the preceding year, due, as Professor Larsen explained, to the deflation of the Danish currency which was then going on.

It is interesting to note, tho, a comparison of the earnings upon capital employed by the farmers in Denmark and America during the depression following 1920. The latest figures I have been able to obtain are for the four crop years ending 1922-1923. During this time the agricultural depression was common to both countries.

Quite a Difference!

While the average earnings of the Danish farmers upon capital employed were 4¾ per cent, the average earnings of the American farmers approached the vanishing point.

At the college we also had a very interesting visit with Prof. L. Frederiksen, head of the Department of Animal Husbandry. Prof. Frederiksen was most kind and helpful. He told us, among other things, that he regarded the work of the Holstein Friesian Association of America in perfecting true type models of the bull and cow as a most important contribution to animal husbandry.

In Denmark, however, they are not content to have merely an agricultural college. In addition, they have agricultural schools scattered over the country. There are 24 of these. I visited the one at Dalum.

The Purpose of the Schools

These schools are intended for short courses for the sons of farmers and for the training of managers for cooperatives and of cow testers. The sessions are held chiefly in the winter time when there is little work upon the farm. The students are sons of farmers of small farms as well as of large farms. Except those who become managers of cooperatives or cow testers, most of them return to the farm at the close of the course.

I observed, while visiting this school, flowers in the windo a general air of neatness and ness everywhere. I commented this to the director. He replied teach beauty, because a farmer out a sense of beauty is a farmer, and therefore not a ful farmer."

I know of nothing like these cultural schools in America in Minnesota. In that state three. I visited last winter at Crookston, of which Prof G. Selvig is the head, and found most stimulating experience.

Furnish Practical Knowle

The agricultural school as guished from the agricultural lege, brings home to the farm the college of agriculture ca the practical knowledge whi farmers should have if they elevate their farming to a I am wondering if we could itably in America extend this to other agricultural states.

We visited, too, some of the mous "Folk High Schools." had their inspiration in Grundtvig during the first the last century. Bishop G visioned the possibilities of a life. He saw no reason why should be limited to the citi had faith that a more satisfying could be had by those who li the open countryside than else. He believed in human ness and he wanted to see the try so transformed as to incr piness to those who lived the so he championed the caus broader rural education.

Men and Women Also Att

As a result of this agitation first "Folk High School" wa lished in 1844. Now there a scattered over the Kingdom.

These schools are not f young alone. Men and wome ages attend. There is an large attendance of men and from 25 to 40 years of age. Danish history and Danish ture are taught. Music is an tant part of the curriculum. tures upon all subjects of are given by men eminent in several fields. Whatever life or adds to the joy of living a place in the "Folk High

Agriculture is not specially and yet out of the "Folk Schools" of Denmark have large part of the agricultural ership of today. For it seem ed in Denmark that culture and culture are so closely related each reacts upon the other.

Boys' Watch

Boys, here's a watch that will stand the hard usage a boy's watch usually gets. This watch is not a toy or tin watch, but a genuine boy's watch made by a well-known manufacturer of good watches.

Size 16, open face, stem wind. Full nickel octagon case.

We will send one of these watches to every boy who will send us four 3-year subscriptions to Pennsylvania Farmer at $1.00 each.

Subscriptions may be new or renewal.

PENNSYLVANIA FARMER,
261 So. 3rd St., Phila., Pa.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

HYSTERIA OR FRIGHT DISEASE.—We have a dog that has fits. Froths at mouth. If a dog once has hydrophobia does it ever get over the first attack?— L. N., Chicora, Pa. The causes of this condition are parasites, a dietary deficiency, such as excessive feeding of corn meal, a meatless or nearly meatless diet and an excessive allowance of carbohydrates such as potatoes, white bread or macaroni, over-loaded stomach, indigestible material, foreign bodies in the stomach or intestines and constipation. Dogs need meat, as that forms an essential part of the diet if the dog is allowed its choice of feed. Your veterinarian should be consulted and an attempt made to determine the cause of the trouble. If it is due to faulty diet this can be changed. If due to parasites these can be controlled by the use of the proper worm medicines. Dogs do not recover from hydrophobia. The condition of your dog is not related to hydrophobia.

Yours for the Asking

"STANDARD Breeds and Varieties of Chickens, American, Asiatic, English and Mediterranean Classes," is the title of a new U. S. D. A. publication. The bulletin describes each breed, gives the standard weights and proportions, makes suggestions on mating different varieties, and brings out important points about quality and type in poultry. Information about the market preference is given to aid the poultryman in meeting buyers' demands.

Copies of the publication may be obtained, while the supply lasts, from the United States Department of Agriculture, Washington, D. C. Ask for Farmers' Bulletin 1506-F.

SOW HAS LARGE TEAT.—I have a young sow which had one litter of pigs several months ago. After weaning the pigs I noticed quite a large lump about the center of her belly. One teat was about the size of a pint measure and was open at several places where pus was coming out. I took my knife and opened it thinking that was a good thing to do. There was quite a lot of pus came out of the incision but it is not any better.—I. H. R., Landisburg, Pa. The enlargement from which pus is coming has been the result of a mammitis or garget. It will probably be necessary to have your veterinarian remove the gland. Sometimes the abscess which forms destroys the secreting tissue and when healing takes place the swelling goes down. The tendency is for new tissue to grow, however, and cause considerable trouble.

COW HAS SWELLING ON FACE.—About a year ago one of my heifers had one nostril swell about twice its normal size about half way between the nose and eye. Her eye on the side of the swelling waters. Sometimes the nostril runs.—W. P. B., Quarryville, Pa. It would be difficult to advise treatment until one could be assured as to the presence of a new growth of bone. This may come from an infected sinus or injury to the bones of this part of the face. An examination by your veterinarian may disclose need of surgical treatment. Local applications are likely to increase rather than decrease the size of the part. The eye is watering due to pressure on the duct or tube which carries the tears to the nasal passage.

Poultry Equipment Book

If you are going to build or remodel a Cow Barn, Poultry House, Horse Barn or Hog House—if you are thinking of putting in Labor Saving Equipment in your present buildings — or installing a Ventilating System — by all means send for these FREE BOOKS before you buy. They will show you how to save a lot of money and help you get started right.

Get the Latest Ideas

How to get the most in farm buildings for the least money is a subject Jamesway has specialized in for years. How you can benefit by these money-saving, money-making plans is told in these Books. Get the latest ideas—benefit by this actual experience and thus avoid costly, annoying mistakes. Profit by the short cuts and save money. These Books tell you how.

It took years of experience to gain the knowledge found only in these practical Books. Over 300 illustrations of Cow and Horse Barns, Poultry and Hog Houses—pictures of the best farm buildings in the land. Two Books packed full of valuable information—send for one or both today.

Jamesway Costs Less

By all means let us send you proof that Jamesway Costs Less—that it will pay for itself in a short time and continue to make money for you year after year. It is within easy reach of the man who wants to start in a small way and the RIGHT way. There's nothing better.

These Books tell all about Jamesway Equipment—Stalls, Cups and Carriers for Cow Barns—Hay Racks, Grain Boxes for Horse Barns—Heated Waterers, Mash Feeders, Brooder Stoves for Poultry Men—a full line of Sanitary Steel Equipment for cows, horses, hogs or hens at prices that will save and make you money.

Helpful Aids for Those Who Build

Here are only a few of the many helpful aids found in these books for those who expect to build or remodel:

—How to save on materials and labor
—Why specifications get lowest bid
—Why planning on paper saves money
—7 essentials of farm buildings
—How to arrange equipment
—What is the best wall material
—What is the best floor material
—How to pick the right equipment
—Why walls and ceilings get wet
—80 pages of Ventilation facts

Why wall construction and heat loss are the two most vital factors in farm building construction.

W. D. JAMES, Pres.

Why Jamesway Costs Less

Our extensive experience in designing and building equipment for Cow and Horse Barns, Hog and Poultry Houses, enables us to build BETTER designed—MORE practical—LONGER lasting—MORE Sanitary equipment for the Cow, the Horse, the Hog and the Hen. Being so much better made, they last much longer; being BETTER designed, they do the work better—save you time and labor and give more comfort to your animals. Jamesway Equipment Costs Less because it lasts longer and does the work so much better.

"I have been looking in the dictionary for a word that will express what I think of Jamesway. 'perfect' approaches it. This little paper is not large enough to tell you how pleased I am with my outfit." John B. Scott, Pittsford, Michigan.

"Not only did your cups pay for the equipment but they put a few dollars away every week in the increase in milk checks. I can't say enough for the Jamesway."
John Signer, Monroe, Wisconsin

"I have used the Jamesway for nine years. After nine years of service they have done what I expected and I know they will be here for nine years more."
Fred Wainberg, Rush City, Minn.

"I ordered Jamesway in 1915—lost everything by fire in 1918 and have Jamesway again and like them best of all." Paul Lytinen, Cloquet, Minn.

"Jamesway is the most dependable labor saving device I have on the farm so far." Alex Turick, Anamoose, N. Dak.

"Just a word in regard to our stanchions purchased in 1909—they are as good as new and have given good satisfaction." W. E. Rabe, Oakdale, Wis.

Harvest time in the French Alps, six thousand feet above the sea.

THIS photograph was taken in the French Alps, near Briancon, not far from Mont Blanc. Beyond the mountains in the background is the Italian frontier. The elevation is high, about six thousand feet, so little is grown except pasture grasses and hay, which this French farmer is harvesting. The hay is cut and gathered by hand, mostly by women, and very often the land is so steep and inaccessible that the hay is made up into large bundles, like those on the cart, and carried to a loading point on the backs of donkeys or on the heads of women.

New Secretary of Agriculture and New State College President Address Opening Meeting of State Farm Products Show.

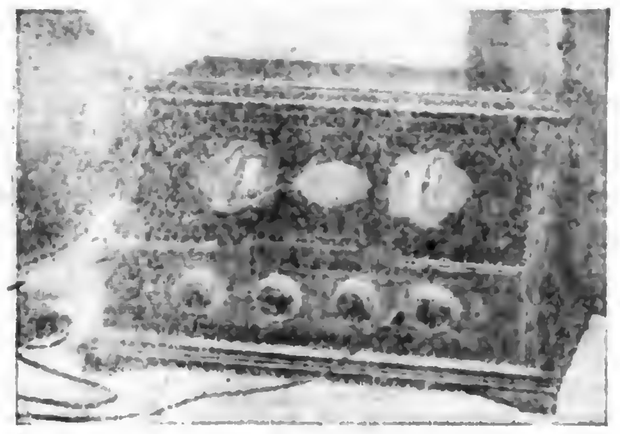
The set you can depend on for steady performance

The important thing to know about a radio set is that you can count on it, always, to be clear and dependable. The farmer needs—not an ordinary set built for a price—but one of finest quality, to get distance clearly—to tune out interference—to perform *steadily* without attention—yet economically.

A Radiola 20 has *proved* it can be depended on. It brings in the lectures and the news clearly. The sporting events are real and live. And music comes through with a clear, full tone that is true to the finest artist's playing.

With its special "amplification," its five tubes have the distance reach of sets having *more* than five tubes. This same amplification helps to make it twenty times as selective as the ordinary set, because it amplifies *only the station you are tuned to.*

A single control brings in all the near stations, with the simplest one-finger tuning. And for far stations, there are verniers, too, to make distance tuning accurate and clear.



Radiola 20, with Radiotrons . $115
RCA Loudspeaker 100 . . . . . $35

Radiola 20 has a power Radiotron that helps to keep the tone clear—even at big volume. This set can magnify a faint, far signal to natural voice volume—amplifying it one million times—yet keeping it clear and real. Test its tone quality against even far higher priced sets. You will not match it.

These are not mere claims, for they have been proved in the stern "road test" of experience. Every Radiola has the best skill of RCA—of General Electric—and of Westinghouse—behind it. And in Radiola 20, this background of long experience has proved itself in quality that stands up! It is just what the farmer needs—the finest set that has been built for antenna operation and low upkeep cost.

Pennsylvania Farm Products Show

Highlights from Addresses Made Before Gatherings in Harrisburg Last Week

OPENING MEETING TUESDAY

Dr. Jordan and Dr. Hetzel Make Debuts As Newly Appointed Leaders

THE eleventh annual State Farm Products Show opened at Harrisburg on Tuesday, January 18, with an unusually large attendance from the start. No doubt the fact that the inauguration of Governor Fisher fell upon the opening day made the attendance on that day unprecedented. The growth of this annual exhibit is almost phenomenal and brings deserved praise for the management and the cooperative spirit of the farmers of the state.

The floor space required to accommodate the first Products Show ten years ago was 10,000 square feet. The show this year required more than 120,000 square feet. The need for an adequate place in which to hold the exhibit and the meetings was never more apparent than this year. In order to cover this show it is necessary to hunt up many places and tramp from one to another. Either the city of Harrisburg or the state of Pennsylvania should take up this matter and provide adequate accommodations for this, the most useful, as well as the most spectacular, annual event held in the state.

One of the first meetings of the week was that of the ex-members of the old State Board of Agriculture and Farmers' Institute force. This gathering was held for the first time last year and is intended to provide an opportunity for those who did the pioneer work in agricultural advancement to get together and renew old friendships and ideals. This year about forty were present and enjoyed a modest banquet in the evening.

Opera House Filled with First Nighters

The first meeting of the many connected with the Products Show is always held on Tuesday evening. This year, as usual, the meeting was well attended,—the old Chestnut Street Opera House being filled. The chief features of the meeting were the entertaining music furnished by the Lampeter High School's orchestra, and addresses by the new Secretary of Agriculture, Dr. Charles Jordan, and the new President of State College, Dr. Ralph D. Hetzel.

Dr. Jordan, who has had a wide experience before the public, having been a minister, a Chautauqua lecturer, a member of the legislature, and a farmer, pledged his undivided efforts and most earnest zeal to carrying out the duties and fulfilling the opportunities of his new office. He directed a part of his address directly to the members of the representatives of the Boys' and Girls' Clubs who were present in a body, and encouraged them to continue studying and practicing the best scientific methods of farming and stock raising. He prophesied for them and all intelligent, wide-awake farmers of the future unquestioned success.

Science Is the Key

Dr. Hetzel said this was his first opportunity to meet any considerable number of the farmers from the state at large and expressed his pleasure and inspiration in seeing them. He spoke in part as follows:

"It is no exaggeration to say that the greatest single factor in contributing to the material well-being of this present luxurious age has been and is science. There are new diseases of crops and animals to be overcome, new pests to be defeated. The need for better plants and animals and methods to meet new competition and keep the standard of living in the country up to that of the cities has forcefully been brought to our attention. These considerations go to the very vitals of our agricultural well-being, and what applies to agriculture applies as well to all our industries and to our health."

He expressed himself as deeply conscious of the fact that Pennsylvania "has fallen sorely behind in the development of one of her most vital public institutions" in referring to State College.

"I have no word of adverse criticism but I hope that soon the Commonwealth will awaken to her error and remedy it in the interest of her own true well-being. I hope that the time has now come when considerable progress can be made in this direction.

"I hope we have reached the point where we are beginning to see that money put into the work of institutions of higher learning does not represent public expenditure, but rather public investments."

NO ONE WAS SLIGHTED

Those Interested in Every Line of Work Had a Chance to Get Pointers

ONLY a few of the many interesting and valuable points brought out by speakers at the various association meetings held in Harrisburg during Show Week follow. A more detailed account of the Show will appear in future issues.

MARKET MASTERS' ASSOCIATION

MARKET house companies in Pennsylvania are not abreast of the times in the handling of food products, and curb markets have lived their day of usefulness according to H. Seidel Throm who addressed the Pennsylvania State Association of Market Masters at their meeting in Harrisburg.

To meet successfully competition in the proper handling of food products, it is imperative that operators of markets make alterations and modernize their equipment and buildings. Several changes and improvements were suggested in order to make it possible to cooperate with the Pennsylvania State Bureau of Markets, under their rules and regulations.

DAIRYMEN'S ASSOCIATION

C. T. CONKLIN, secretary of the American Ayrshire Breeders' Association, addressing the annual meeting of the Pennsylvania Dairymen's Association, January 19, declared that "the unprofitable cow, regardless of how rich a pedigree she may have, is a menace to society and should be slaughtered.

"The dairy cow and man are in competition for the use of the same land and many of the same crops, and only when the dairy cow can improve the quantity or quality of the nutrients from this land is her owner justified in keeping her."

Secretary Conklin asserted that all purebred cattle breeders are becoming more enthusiastic about the herd test plan. In the past there has been a tendency to test only the best producers, but with the herd test plan the poor producers are found and eliminated.

Dairying under ordinary conditions is not a self-supporting industry, according to T. E. Woodward, superintendent of the United States Dairy Bureau Farm at Beltsville, Maryland. With first-hand facts and figures he proved that anyone buying all his feed, having all his work done, and selling the product of his dairy at current wholesale prices would make little or no profit.

The dairy farmer must grow part of his own feed and the more productive his farm and the more feed he produces, the cheaper will be the costs of feeding his herd. The most successful milk producers are those men who are the best farmers, for economical milk production is just about as much a matter of crop production as of proper handling and feeding of dairy cows.

Dairy research work done at the Pennsylvania State College Experiment Station, that is of great benefit to the farmers of the state, was discussed by Dr. S. I. Bechdel, in charge of that branch of experimental endeavor. In some of the recent practical feeding experiments it has been found that silage composed of mixed corn and soy beans has but little higher feeding value than straight corn silage. Sunflower silage is much inferior to corn silage for milk production. Silage made from Canada field peas and oats is recommended for summer feeding in the absence of good pasture or corn silage.

Hay in the Silo

It is advisable to store red clover in the silo to take the place of an inadequate supply of corn silage. Soy bean hay and alfalfa hay of good quality are of equal feeding value for milk production. Results of experiments to date indicate that good calves may be raised on a dry ration after the age of about one month when dry skimmilk powder is fed in connection with a grain and hay ration.

Recent results obtained in technical experiments were also reported by Doctor Bechdel.

Dairying contributes nearly one-fourth of the total agricultural income of the nation, A. J. Glover, editor of Hoard's (to page 22)

From Roast Beef to Lightning Flashes

"FARM better, eat better," was the message of the Pennsylvania State College agricultural extension exhibit at the show. The display pictured everything from roast beef to lightning destruction of farm buildings. Lightning flashed and thunder rumbled as the visitor read on posters that lightning causes a $12,000,000 loss annually and that of every hundred buildings so destroyed 98 are unrodded.

Common, medium and good roast beef, raw and roasted, passed in review in a show case as part of the home economic extension exhibit. In the same booth the spectator learned that for the seven months when there is no garden he should have for his own use 15 pints of leaf greens, 16 pints of tomatoes, 36 pints of other vegetables and 60 pints of fruit canned, and 12 to 15 pounds of raw vegetables, 15 pounds of onions, 8 pounds of turnips, 6 pounds of beets and carrots, and 125 pounds of potatoes.

He also learned that every child should have a quart of milk daily while each grown-up should drink a pint a day. The virtues of nutritious foods like butter, ice cream, eggs and fruit were emphasized.

Farmers with wet spots in good fields were shown the advantages of tile drainage and colored pictures revealed the development of stinking smut. One of the home made copper carbonate dust mixing machines used for treating seed wheat to prevent smut was on display. The testing of seed corn to determine its germination possibilities was urged in posters and apple displays taught lessons to fruit growers.

The set you can depend on for *steady performance*

The important thing to know about a radio set is that you can count on it, always, to be clear and dependable. The farmer needs—not an ordinary set built for a price—but one of finest quality, to get distance clearly—to tune out interference—to perform *steadily* without attention—yet economically.

A Radiola 20 has *proved* it can be depended on. It brings in the lectures and the news clearly. The sporting events are real and live. And music comes through with a clear, full tone that is true to the finest artist's playing.

With its special "amplification," its five tubes have the distance reach of sets having *more* than five tubes. This same amplification helps to make it twenty times as selective as the ordinary set, because it amplifies *only the station you are tuned to.*

A single control brings in all the near stations, with the simplest one-finger tuning. And for far stations, there are verniers, too, to make distance tuning accurate and clear.

Radiola 20 has a power Radiotron that helps to keep the tone clear—even at big volume. This set can magnify a weak, far signal to natural voice volume—amplifying it one million times—yet keeping it clear and real. Test its tone quality against even far higher priced sets. You will not match it.

These are not mere claims, for they have been proved in the stern "road test" of experience. Every Radiola has the best skill of RCA—of General Electric—and of Westinghouse—behind it. And in Radiola 20, this background of long experience has proved itself in quality that stands up! It is just what the farmer needs—the finest set that has been built for antenna operation and low upkeep cost.

Pennsylvania Farm Products Show

Highlights from Addresses Made Before Gatherings in Harrisburg Last Week

OPENING MEETING TUESDAY

Dr. Jordan and Dr. Hetzel Make Debuts As Newly Appointed Leaders

THE eleventh annual State Farm Products Show opened at Harrisburg on Tuesday, January 18, with an unusually large attendance from the start. No doubt the fact that the inauguration of Governor Fisher fell upon the opening day made the attendance on that day unprecedented. The growth of this annual exhibit is almost phenomenal and brings deserved praise for the management and the cooperative spirit of the farmers of the state.

The floor space required to accommodate the first Products Show ten years ago was 10,000 square feet. The show this year required more than 120,000 square feet. The need for an adequate place in which to hold the exhibit and the meetings was never more apparent than this year. In order to cover this show it is necessary to hunt up many places and tramp from one to another. Either the city of Harrisbuig or the state of Pennsylvania should take up this matter and provide adequate accommodations for this, the most useful, as well as the most spectacular, annual event held in the state.

One of the first meetings of the week was that of the ex-members of the old State Board of Agriculture and Farmers' Institute force. This gathering was held for the first time last year and is intended to provide an opportunity for those who did the pioneer work in agricultural advancement to get together and renew old friendships and ideals. This year about forty were present and enjoyed a modest banquet in the evening.

Opera House Filled with First Nighters

The first meeting of the many connected with the Products Show is always held on Tuesday evening. This year, as usual, the meeting was well attended,—the old Chestnut Street Opera House being filled. The chief features of the meeting were the entertaining music furnished by the Lampeter High School's orchestra, and addresses by the new Secretary of Agriculture, Dr. Charles Jordan, and the new President of State College, Dr. Ralph D. Hetzel.

Dr. Jordan, who has had a wide experience before the public, having been a minister, a Chautauqua lecturer, a member of the legislature, and a farmer, pledged his undivided efforts and most earnest zeal to carrying out the duties and fulfilling the opportunities of his new office. He directed a part of his address directly to the members of the representatives of the Boys' and Girls' Clubs who were present in a body, and encouraged them to continue studying and practicing the best scientific methods of farming and stock raising. He prophesied for them and all intelligent, wide-awake farmers of the future unquestioned success.

Science Is the Key

Dr. Hetzel said this was his first opportunity to meet any considerable number of the farmers from the state at large and expressed his pleasure and inspiration in seeing them. He spoke in part as follows:

"It is no exaggeration to say that the greatest single factor in contributing to the material well-being of this present luxurious age has been and is science. There are new classes of crops and animals to be developed, new pests to be defeated. The need for better plants and animals and methods to meet new competition and keep the standard of living in the country up to that of the cities has forcefully been brought to our attention. These considerations go to the very vitals of our agricultural well-being, and what applies to agriculture applies as well to all our industries and to our health."

He expressed himself as deeply conscious of the fact that Pennsylvania "has fallen sorely behind in the development of one of her most vital public institutions" in referring to State College.

"I have no word of adverse criticism but I hope that soon the Commonwealth will awaken to her error and remedy it in the interest of her own true well-being. I hope that the time has now come when considerable progress can be made in this direction.

"I hope we have reached the point where we are beginning to see that money put into the work of institutions of higher learning does not represent public expenditure, but rather public investments."

NO ONE WAS SLIGHTED

Those Interested in Every Line of Work Had a Chance to Get Pointers

ONLY a few of the many interesting and valuable points brought out by speakers at the various association meetings held in Harrisburg during Show Week follow. A more detailed account of the Show will appear in future issues.

MARKET MASTERS' ASSOCIATION

MARKET house companies in Pennsylvania are not abreast of the times in the handling of food products, and curb markets have lived their day of usefulness according to H. Seidel Throm who addressed the Pennsylvania State Association of Market Masters at their meeting in Harrisburg.

To meet successfully competition in the proper handling of food products, it is imperative that operators of markets make alterations and modernize their equipment and buildings. Several changes and improvements were suggested in order to make it possible to cooperate with the Pennsylvania State Bureau of Markets, under their rules and regulations.

DAIRYMEN'S ASSOCIATION

C. T. CONKLIN, secretary of the American Ayrshire Breeders' Association, addressing the annual meeting of the Pennsylvania Dairymen's Association, January 19, declared that "the unprofitable cow, regardless of how rich a pedigree she may have, is a menace to society and should be slaughtered.

"The dairy cow and man are in competition for the use of the same land and many of the same crops, and only when the dairy cow can improve the quantity or quality of the nutrients from this land is her owner justified in keeping her."

Secretary Conklin asserted that all purebred cattle breeders are becoming more enthusiastic about the herd test plan. In the past there has been a tendency to test only the best producers, but with the herd test plan the poor producers are found and eliminated.

Dairying under ordinary conditions is not a self-supporting industry, according to T. E. Woodward, superintendent of the United States Dairy Bureau Farm at Beltsville, Maryland. With first-hand facts and figures he proved that anyone buying all his feed, having all his work done, and selling the product of his dairy at current wholesale prices would make little or no profit.

The dairy farmer must grow part of his own feed and the more productive his farm and the more feed he produces, the cheaper will be the costs of feeding his herd. The most successful milk producers are those men who are the best farmers, for economical milk production is just about as much a matter of crop production as of proper handling and feeding of dairy cows.

Dairy research work done at the Pennsylvania State College Experiment Station, that is of great benefit to the farmers of the state, was discussed by Dr. S. I. OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

"Today is the tomorrow you worried about yesterday—nothing happened."

Governor Fisher's Cabinet and Platform

THE selection of a cabinet by an executive is one of his first official acts and a measure of his ability. It is looked upon by the citizenry as an indication of purposes and policies. Governor Fisher, who was inaugurated Tuesday, January 18, appointed the following heads of departments:

Attorney General, Judge Thomas J. Baldridge, of Blair County.

Secretary of the Commonwealth, Charles Johnson, Montgomery.

Secretary of Highways, John L. Stewart, Allegheny.

Secretary of Welfare, Mrs. E. S. H. McCauley, Beaver.

Superintendent of Public Instruction, Dr. John A. H. Keith, Indiana.

Secretary of Health, Dr. Theodore B. Appel, Lancaster.

Secretary of Labor and Industry, Charles A. Waters, Philadelphia.

Secretary of Agriculture, Dr. Charles G. Jordan, Lawrence.

Secretary of Forests and Waters, Charles H. Dorworth, Centre.

Insurance Commissioner, Col. Matthew H. Taggart, Northumberland.

Secretary of Property and Supplies, Benson E. Taylor, Jefferson.

Banking Commissioner, Peter G. Cameron, Tioga.

Commissioner of Fisheries, Nathan R. Buller, Lancaster.

Adjutant General, Frank D. Beary, Lehigh.

All these officials were inducted into office on Tuesday, January 18, except Dr. John A. Keith, who was named as Superintendent of Public Instruction. Uncertainty as to the time which Dr. Haas, the present head of the department, has to serve under the law makes the exception.

The inauguration of the new Governor was conducted in a dignified, orderly manner and was witnessed by many thousands of people. The unusual clearness with which the mammoth megaphones amplified the voices of the speakers, enabling the outer fringe of the immense crowd to hear every word distinctly, was a new experience to many.

The inaugural address of Governor Fisher was well received, altho in silence. His outline of policies to be followed during the coming four years will, we believe, be approved by the great majority of citizens. A few extracts follow:

Taxes

"I am opposed to new taxes unless justified by emergency and caution against any new public undertakings requiring additional imposts. Of course, I recognize the prerogative of the Legislature to provide ways and means, but it will be my duty to keep the expenditures within revenues so that the credit of the Commonwealth shall not be impaired. The old fashioned deficiency is outlawed. . . .

Budgeting

"Accurate budgeting is of such supreme importance to the conduct of the public business that I strongly urge constitutional amendments to correct the situations to which I have referred. . . .

Public Service Commission

"The Public Service Commission of our Commonwealth is the agency established by the Legislature to deal with public utility problems, and should be organized, sustained and equipped to carry out its functions of assuring to the people adequate service at reasonable rates. . . .

Safety and Protection

"More stringent measures must be enacted for the safety of the highways and protection of the people. The number of accidents and the resulting loss of life are appalling. Drunken drivers, criminal carelessness and disregard for the rights of others are menaces which must be eliminated.

"State roads were not designed as trunk lines for heavy freight. There must be no monopoly of the people's highways and neither shall they be destroyed by improper use. . . .

Education

"Education deserves special reference. William Penn's original plan of government was based upon the theory of universal education. We have been long in realizing his ideal, but Pennsylvania now has a complete and comprehensive system of free schools. The law has done all that can reasonably be expected of it. There remains only the making of proper provision for support and intensive administration of the Department of Public Instruction.

"The aim should be to make education practical and easily available to the communities benefited. I shall continue to encourage and develop institutions of learning that the youth of Pennsylvania shall be trained effectively for the duties of life and our country be served by the highest standards of citizenship. . . .

Law Enforcement

"I believe in law observance and law enforcement. The Eighteenth Amendment and attendant prohibitory laws will be respected by all law abiding citizens and made effective by every public official. I shall do my duty and I expect the cooperation of the judiciary, all civil officials charged with the maintenance of law and order and the police departments of all communities.

"Those who are guilty of making and distributing for beverage purposes alcoholic liquors containing deadly poisons will be subjected to every rigor of the law. It is just as much murder to kill with poisoned beverages as to kill in any other way. The law should be made adequate to the offense.

The Primary System

". . . . The state-wide primary was adopted and has been in effect since 1913. In the main I think it must be admitted that it has been satisfactory to the people. I doubt the advisability of making any change until the system has been further tested and public opinion has directly expressed itself on this vital and fundamental matter. It is easily within the possibilities to amend the law so as to obviate, or, at least, minimize the faults which have developed under extreme conditions.

"The ballot is the most sacred privilege of democracy. Thru it is expressed the final will of the people. It should be guarded as something priceless to our perpetuity. I favor the enactment and enforcement of such laws as will insure the free use and fair count of the ballot of every qualified voter."

We have devoted more than the usual amount of space to the inauguration of the new state administration because there has been more than the usual interest in the politics of the state during the past year. If Governor Fisher stands heroically by his guns during his term he can carry out his program. We are wont to believe that he means just what he said in his inaugural address and that it was not said with mental reservations. The popular backing which he had at the election is too strong for any clique of politicians to overthrow even if they should try. Some of the appointments he made are surprising to many people, and the reason for displacing others is not clear in all cases. But we believe the majority will suspend judgment and withhold criticism until the new administration has had time to prove itself and its program.

Editorial Sidelights

ANOTHER Pennsylvania State Farm Products Show has come and will soon be gone. We are writing this just an hour after seeing the boys and girls of the baby beef clubs line up their animals in one of Harrisburg's dirtiest back alleys to have them judged for grand championship honors.

That muddy alley was the best place the men in charge were able to provide for the judging. The city of Harrisburg and the state of Pennsylvania offered that setting for the event that was to be the event of the year for the fine group of boys and girls who have been working for months in preparation for this morning.

WE WENT from the beef cattle exhibit to the sheep and swine show in a nearby building. A very important swine sale was in progress, yet the best sales ring that could be provided was so small that only a fraction of those interested could get near enough to see the animals that were up for sale.

IN THE DAIRY BUILDING we met Mr. Gearhart, in charge of cow testing association work in Pennsylvania. We commented on the crowded quarters but he had no complaint to make, for this year's facilities for the dairy cattle exhibit were vastly better than last year's.

"Where is the cow testing association exhibit?" we asked. "We have none this year," Mr. Gearhart explained. There wasn't room for both so the purebred bull associations were given a chance this year. They put on a very remarkable exhibit, but that didn't make one forget that these two great lines of extension work have to "take turns" because the second richest state in the Union doesn't provide space for both.

A FEW of the principal prize winners among the many exhibitors at the 1927 Pennsylvania Farm Products Show appear in this issue as follows. Other winners will appear in future issues.

THEY WANT ACTION

House Committee Reports Favorably on New Haugen Bill—Opposition Blocks Vote Once More.

Washington, D. C.

A FAVORABLE report on the Haugen equalization fee bill for farm relief has been ordered by the House Committee on Agriculture and an effort is being made to get the bill onto the floor of the House for action at the earliest possible moment.

The Senate Committee on Agriculture has begun hearings on the various farm relief bills, but they will be given brief consideration. The committee would have reported favorably on the McNary bill, the companion measure to the Haugen bill, without further hearings, but Senator McNary insisted on giving proponents of other bills an opportunity to present their claims. The decision of the House and Senate Committees on Agriculture that the McNary-Haugen bill is the only farm relief bill that will receive consideration in this Congress, has not stopped the flood of new farm relief bills. If the McNary-Haugen bill becomes a law, it will require an extensive organization of salaried officials, experts and specialists to make it effective. The $500,000 appropriation asked for in the bill for salaries and administrative expenses is only a small beginning.

New Bill Is Unlike Old One

The new bill differs from the old McNary-Haugen bill in several points. In the new bill the equalization fee can be imposed at the time of the transportation, in lieu of the processing or sale of the basic agricultural commodity. The old bill provided for the collection of the equalization fee from the producer. The new bill provides definitely for dealing with the surpluses of wheat, cotton, corn, rice and hogs. It provides for assistance to cooperative associations in handling surpluses of any agricultural commodity. It provides for loans to help cooperative associations construct or purchase facilities to be used in the storage or processing of any agricultural commodity. It is not expected that the McNary-Haugen bill will get thru this Congress without a hard fight. It can be held up indefinitely in the Senate, and there are senators who will oppose it to the bitter end.

Honest Fabrics Bill Again Delayed

The Capper truth-in-fabrics bill has a favorable position on the calendar. A day or so ago Senator Capper undertook to secure action upon it. But every parliamentary objection that could be devised was brought to bear against it. Finally a vote of the Senate favored consideration of the bill. The report of the committee on Interstate Commerce favoring the bill, and a statement urging its passage, signed by representatives of four national farm organizations were read. Senator Fess, of Ohio, Senator Norris, of Nebraska, and others spoke for the bill. But the opposition insisted that it be put over, owing to lack of time and press of other legislation. This move was resisted by Senator Willis, of Ohio, who said he had seen the bill kicked around three or four years, but the opposition won out.

Would Grant Right to Search

Any employe of the Department of Agriculture designated to carry out the provisions of the plant quarantine act of 1912 would have power to search without a warrant all vehicles of transportation that he believes to be moving or to have been moved in interstate commerce, or to have been brought into the United States, in violation of the act, if a bill just introduced in the House by Chairman Haugen of the House Committee on Agriculture is enacted.

In hearings before the committee, Dr. W. A. Taylor, chief of the Bureau of Plant Industry, said that the appropriation in the agricultural bill and the $10,000,000 emergency appropriation for control of the European corn borer would be ineffective unless this "permission to search" bill becomes a law.

County Agent Force Grows

There is a steady increase in the number of county extension workers in the United States. The number of county agricultural agents and assistants December 1, 1922, was 2284, and on the same date in 1926, it was 2385. On December 1, 1922, there were 880 county home demonstration agents and assistants at work. On December 1, 1926, a total of 1001 women were employed as county home demonstrators.—E. E. R.

NO TIME LOST

Governor Preparing Two-Year Budget—Secretary Jordan Will Continue to Speak for His Chief.

Harrisburg, Pa.

THE Fisher administration is losing no time on the finishing touches to the budget for the two years commencing June 1st. For eight weeks prior to the inauguration work on the budget was in progress in an unofficial way, but the new Governor had not been in office twenty-four hours before he was in consultation with the fiscal officers in regard to the details of the document to be laid before the lawmakers the last day of the month. The final work will be done in the next few days. It is understood the budget makes liberal provision for continuation of the regular and special work of the State Department of Agriculture and that the cattle testing and pest fighting will be facilitated.

New Secretary on Job

Dr. Charles G. Jordan, Lawrence County, the new Secretary of Agriculture, was sworn in late Tuesday, inauguration day, and assumed charge of his office. Appointments to various places will come along shortly. A deputy may be named any day. Dr. Jordan served as chairman of the House Committee on Agriculture during his term as a member of the lower branch of the legislature. Owing to Governor Fisher's determination to work on the budget and duties of office and not to make speeches for the present, Dr. Jordan has spoken and will speak for him upon a number of occasions. The Governor may not appear as a speaker for weeks to come.

Chairmen Renamed

Chairmen of the Senate and House Committees on Agriculture of the session of 1925 have been named again and there are not many changes in the personnel as far as old members are concerned. Every legislator professing connection with farming has been placed on the committees together with some not active in agriculture or allied branches. The committees will begin work immediately, some bills for consideration having been referred to them. The great bulk of the bills, however, will not appear until next month. There will not be so many it is thought.

Short and Snappy

Decision of the General Assembly to adjourn in April appears to have been well received in the state and apparently has the hearty support of the new administration. Governor Fisher in his address warned against piling new laws on the books and with his experience as a legislator and department head he is in a position to deal with measures which may be crowded thru. It is not probable there will be many amendments to the administrative code. The administration will have its proposals in one bill.—R.

EXCHANGE A SUCCESS

Farmers' Organization Has a Good Year—Owners of Livestock Are Wondering What Cruelty Is.

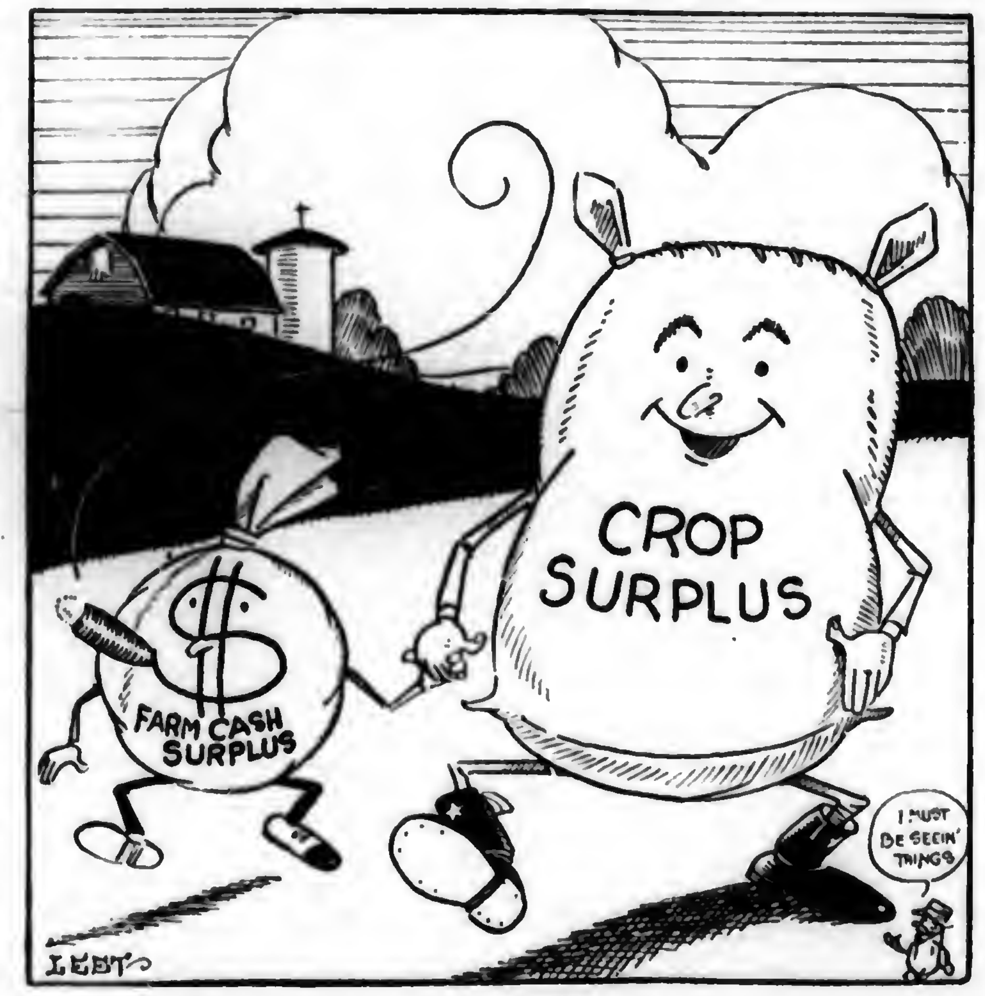
Trenton, N. J.

THE South Jersey Farmers' Exchange at its annual meeting in Woodstown, on January 19, reported the second best year in its history. A review of last year's business showed that the sale of potatoes was the smallest in the history of the organization, due not only to reduced acreage but to an increase in the truck movement to market. The organization added $31,000 to its surplus account. The total volume of business transacted in 1926 was $1,125,000. The Exchange handled 9850 tons of fertilizer, 10,544 of feed, 1194 of lime, 465 of coal, 155 cars of table potatoes, 7275 sacks of seed potatoes and 850 cars of tomatoes.

S. P. C. A. Protest

The State Farm Bureau entered a formal protest last week with the New Jersey Society for the Prevention of Cruelty to Animals, for what it states are "exaggerated activities" of the society's agents with reference to livestock. The subject came up for discussion during Agricultural Week. The farmers maintain that they are best able to judge what constitutes humane and proper care of their animals, and that the payment by the society of a special fee to its agents to find instances which may be construed as cruelty to animals is working an injustice to livestock owners. In making protest the Farm Bureau also called attention to the fact that methods of caring for livestock may be construed as entirely proper in one section of the country but classified as cruelty in another. It believes there should be a definition of what constitutes cruelty.

TWO THAT NEVER GO HAND IN HAND ON THE FARM



Study Intermediate Credits

In order to make use as fully as possible of the Intermediate Credit Act operated in an allied way to the Federal Farm Loan Bank, L. A. Cooley, general manager of the Atlantic Coast Poultry Producers, and Asa Moore, of Mullica Hill, N. J., conferred with loan bank officials in Springfield, Mass., last week. Both of the representatives went as official delegates from their associations and with the recommendation of the New Jersey Federation of County Boards of Agriculture that they make a careful study of the Intermediate Credits Act to see to what extent it may be used more fully by organized groups of New Jersey farmers. The short time feature of the loans under this act is of particular interest to New Jersey farmers and the borrowing privilege under the act may prove to be more advantageous than that offered by local banks.

Poultry Inspection Work

The State Bureau of Animal Industry is now active in making inspections of poultry flocks under the certified flock plan originated two years ago by the department. During the month of December the bureau examined 36,856 birds. Mercer County led in the number of individual hens inspected with 9100 from 43 flocks. Gloucester County came next with 8950 from 50 flocks and Somerset was third with 6672 from 17 flocks.—W. H. B.

AFTER THE FACTS

Experts Present Facts Dealing with Milk Production and Marketing Before State-Wide Committee.

Ithaca, N. Y.

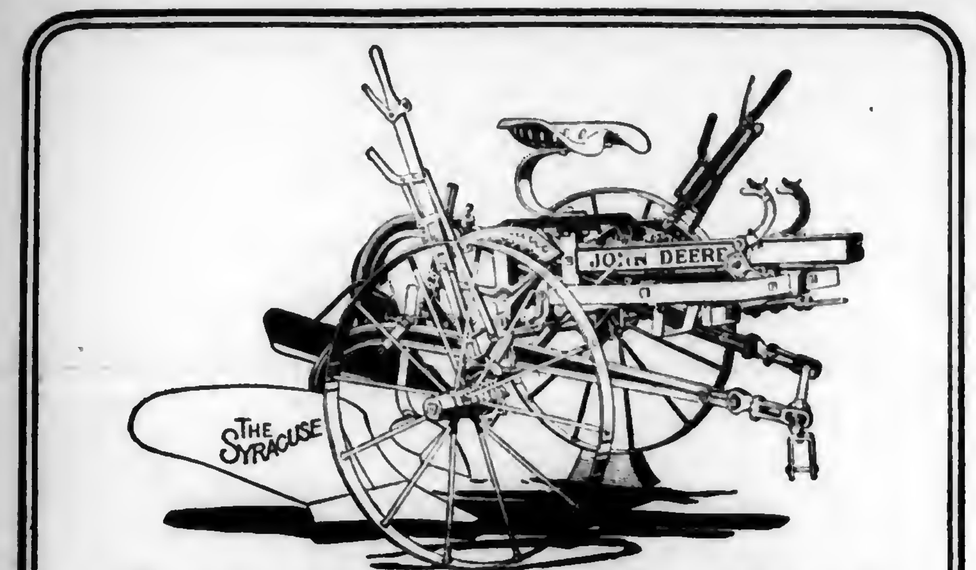
THE state-wide dairy farmer Committee on Program for Dairy Unification has held the first of its three two-day sessions. Farm economists and dairy experts from the State College of Agriculture at Cornell University were among the first to appear before the committee. The hearings are aimed at assembling all the facts available on milk production and marketing. Prof. E. G. Misner, dairy expert, presented studies in cost of milk production and Prof. Leland Spencer pointed out that the unnecessary duplication of shipping stations resulting from competition between existing producer marketing organizations means great economic losses. Commissioner of Agriculture B. A. Pyrke presented figures showing the value of all cattle in the state amounts to about $189,000,000. Many others testified before the committee.

Snow Causes Delays

Farmers have been hauling cabbage to the cars of late for $12 a ton. Eggs are 45 to 55 cents a dozen. Hay is in poor demand at low to moderate prices. Potatoes bring about $1.50 a bushel. Milk and mail deliveries and motor traffic generally have been held up seriously all over the state by deep snow, with some sections of the trunk lines of highway not open yet.

Dairy Contracts Increase

During the month of December the Dairymen's League Cooperative Association accepted 289 renewals or 53 more than in December of last year. From April 1 to January 1 a total number of 3636 or 853 more than in the same period of the previous year were accepted. Dairy day at Farmers' Week at Cornell on Thursday, February 10, is offering unusually attractive events for farmers.—M. G. F.



Just Work the Foot Levers to Control It

Have you irregular fields, cut up by creek, or ditch or hills; fields you have never been able to plow without leaving furrows and back furrow ridges? Such fields need the

John Deere Two-Way Plow with Auto Foot Frame Shift

You can plow back and forth across the field with this plow, using the right-hand and left-hand bottoms alternately.

You can maintain a full width and uniform furrow on hillsides and around curves by means of the Auto Foot Frame Shift.

This shift gives your feet absolute control of the plow. The slightest foot pressure on either lever causes the frame to swing and moves the working plow the exact degree desired. The plow locks automatically as the pressure on the lever is removed, and the bottom then is held rigidly in position.

It's so simple, any boy capable of managing a team can operate it.

All steel and malleable frame and steel arch.

Extra wide bearing base insures against the possibility of the plow tipping. Automatic shifting hitch and horse lift. Long, malleable beam clamp and adjustable jointers.

Write today for folder describing this plow. Address John Deere, Moline, Ill., and ask for folder TS-736

PAPEC

The Cutter That Does Not Clog

"THE Cutter never clogged and we had no trouble with it whatsoever," writes P. C. Petersen, Johnston, R. I., after two years' use of a Papec Cutter. The Feeding mechanism has been so perfected that a man is no longer needed at the feeding table, saving the wages of one man, and doing a better job.

Needs Less Power—Lasts Longer

Any good two-plow tractor will run a No. 81 or No. 127 Papec Cutter to capacity without danger of clogging. Where there is no tractor, the Size "R" Papec can be used with any farm gasoline engine developing 3 h.p. or more. The Papec lasts a great many years with very little upkeep cost. J. B. Johnson, Southboro, Mass., bought his Papec Cutter in 1917, cut from 25 to 30 acres of corn every year, also lots of hay and straw for bedding and after eight years writes: "To date have not spent one cent for repairs."

Write for FREE Catalog

It shows why the Papec has won the praise of men who know machinery. It demonstrates that a Papec will pay for itself in one or two seasons under favorable conditions.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS.

BY R. P. KESTER

PROPER names, whether of people or place, seem difficult to most people when it comes to pronouncing them, especially names which are not common in their own neighborhood. Several people, far from the eastern part of Pennsylvania, asked me at the late State Grange, "How do you pronounce the name of your place, and how did it get that name?" Answering the last question first, it is named from the stream which runs thru the neighborhood. The Indians named the creek in the long-ago as they did most of the beautiful streams of Pennsylvania. Neshaminy is syllablized as follows: Ne-sham-i-ny, with the accent on the "sham," altho we try to keep the wits from punning on that fact when referring to Neshaminy Gardens.

◆ ◆ ◆

ONE of the pleasant features about winter gardening and fruit growing, that is, the reading about them, is the ease with which one may grow the highest priced stuff, and how easy it is to control all plant diseases and insect pests. It is all made so clear in the catalogs and advertisements. One learns that it is not necessary to have a wormy apple or peach, nor have any plant eaten by bugs or withered by disease. Just use this-and-that according to directions and success is sure to follow.

◆ ◆ ◆

BUT laying all joking aside, there is truth in the optimistic statements. The facts concerning the successful warfare against diseases and insects are well established, but the trouble is that many people do not practice them. The scientists and experimenters have solved most of the troublesome problems of farming. The farmer's difficulty lies in his inability to recognize and anticipate them, or in not having time to apply the remedies. The pests have multiplied so fast during the last quarter-century that the work-a-day farmer has trouble in keeping up with them.

◆ ◆ ◆

IT IS only necessary to compare the questions which appear for discussion on a farm meeting program today with the questions of a generation ago to see how far we have traveled. The first farmers' institutes which I attended discussed questions such as, "Should manure be plowed down or used on top?" "Is it safe to haul manure out in winter?" "How much manure should be applied per acre?" "Do commercial fertilizers pay the average farmer?" "When should the apple orchard be pruned?" (It seemed that many farmers were not sure, so they did not prune at all) "Who should raise the garden vegetables,—the husband or the wife?"

◆ ◆ ◆

ABOUT twenty years ago the San Jose scale was the one big bugaboo to the orchardist. It had lately been recognized and tens of thousands of trees died from it before any one knew what to do. Lots of farmers gave up in despair and made no effort to save their trees even after a remedy was found, and thousands of orchards became firewood. Yet, after the scale was brought under control, it was said that it was a blessing because real fruit growers had been stirred into activity and the better care improved the general care so that better fruit resulted and more money was made than before.

◆ ◆ ◆

JUST now, we are in the dumps from newer enemies. The Jap beetle, the Oriental moth, the corn borer, etc., are in the stage the San José scale was twenty years ago. Will they be controlled as effectively? Let us hope so, but in the meantime, no doubt there will be many who will give up in despair and quit. I believe these pests will be conquered. The experimenters and scientists never stop and they are making progress. The reading and study of literature, whether bulletins or advertising, is a helpful pastime at this season of the year, and the more we know, the greater will be our success.

The Cheerful Plowman

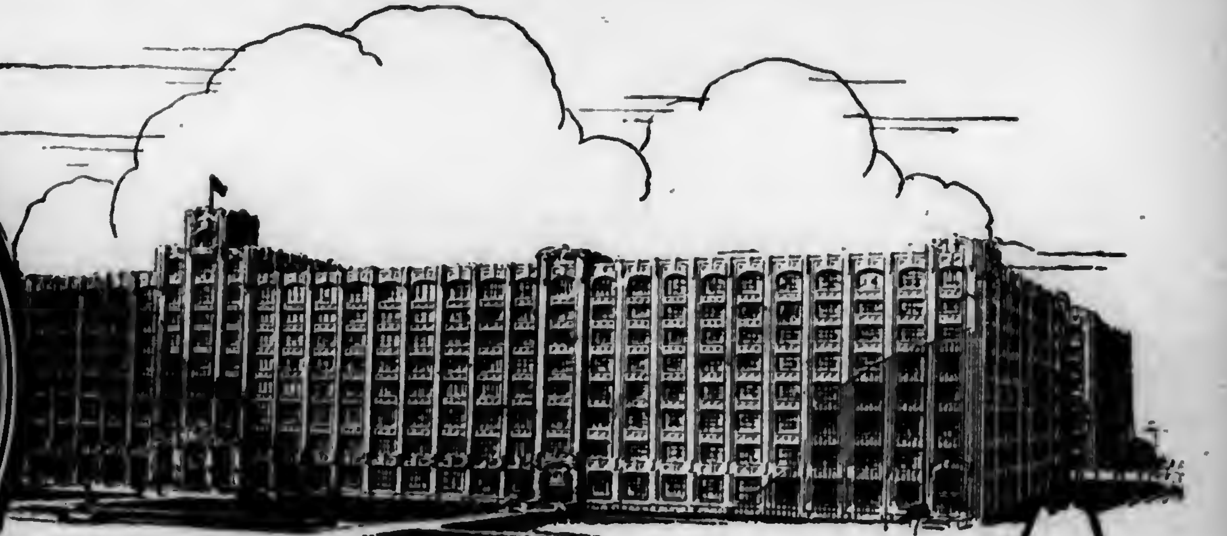
Removing the Chance Work

"THIS farming game," says Mildew Steve, "is purely guesswork, I believe. You throw your seed into the ground and watch the season roll around. If everything is up to snuff your crops are likely good enough, but just one slip in cloud or rain, one error in the weather-vane, and then, my friend, the jig is up and you have acid in your cup! We farmers, mark my solemn word, are just a speculative herd, we're at the mercy of the wind with hopes too insecurely pinned,—we're gamblers, that is what we are, we follow dim uncertain star, we follow rainbow, roulette wheel,—ah yes, we're poker fiends, I feel!"

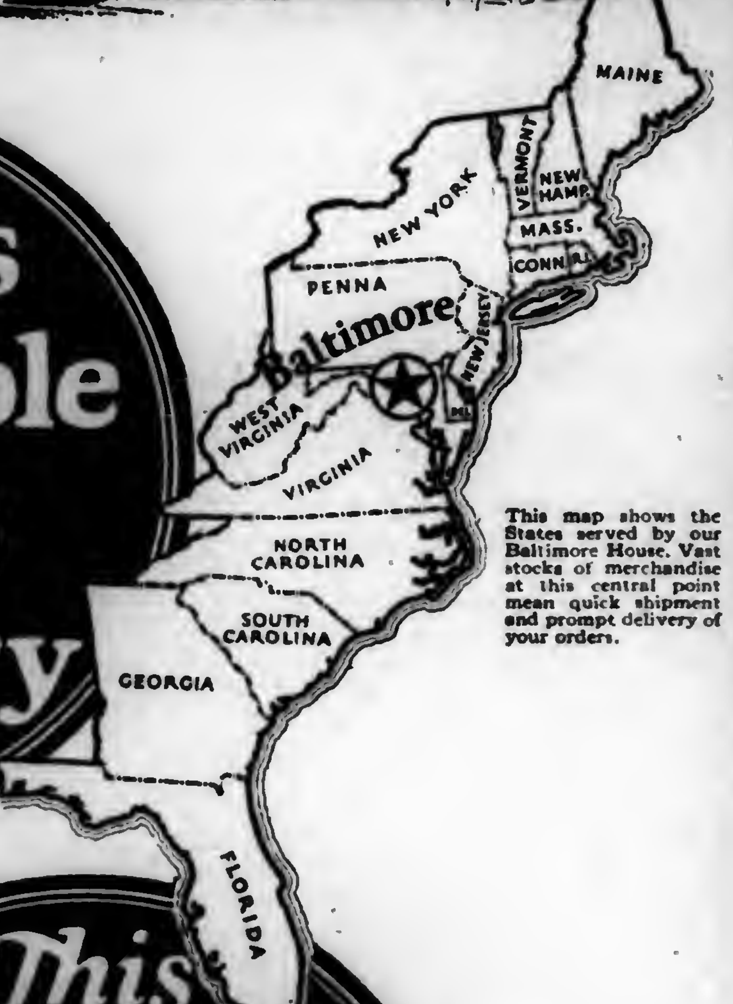
"We're gamblers, what?" says I to him, "Your reckoning is out of trim! I've heard this gambling stuff for years, I've heard it till it burns my ears, but I would have the world to know I'm not a gambler here below! For listen, Steve, I aim to rear two dozen different crops per year, and no year ever yet has come to put my line-up out of plumb. If one is slack because of drought I am not battered down and out, for I have other fruit or grain that thrives on small amount of rain. If one is bad another's good, my wood-box never lacks for wood!

"I've found thruout a term of years there is no cause for doubt or tears, at least no gambling, not at all, in spring, or summer or in fall! I've learned to reckon, hark to me, with fair degree of certainty the real per cent of concrete gain I make on my assembled grain thruout a period of years,—it's close enough to banish fears! Don't be so limited, old top, don't place all hope in one big crop, but mix them up in sanest way; then don't plan just from day to day, but cast your vision o'er the span of many years at once, old man, then in the law of give and take risk will be small and you'll be Jake!"—J. Edw. Tufft.

Ward's Big Baltimore House



Serves the people of this Territory



This map shows the States served by our Baltimore House. Vast stocks of merchandise at this central point mean quick shipment and prompt delivery of your orders.

This big Baltimore House was built for *YOU*—you who live in the states shown on this map. It was built to bring *near to you*, vast stocks of fresh new merchandise—ready for immediate shipment to you.

At Baltimore your orders reach us quicker, your goods reach you quicker, there is less postage and freight to pay—if you send all your orders to Ward's at Baltimore.

If you write for this big Spring and Summer Catalogue, if you study its 624 pages showing bargains in everything you need, you will begin a new era of saving in your home; you will find a new delight in wiser, more economical buying.

A Book of Interest to Man, Woman and Child

When the new suit is needed, what a satisfaction to a man to study and compare the greatest possible values. What a pleasure to find full information on shoe prices and shoe quality; to find the lowest prices in everything he needs for personal wear, or for farm or home use.

A woman's best opportunity to study everything new for personal wear, or for home decoration or use, is presented in the pages of Ward's Catalogue. And with all the interest in seeing everything new, there is always the advantage of the largest possible saving.

$100,000,000 of New Merchandise Bought for This Catalogue

What does this tremendous buying mean to you? How does it bring you the lowest prices? Goods bought by the thousand dozen, by the car load, are bought for less than if bought by the single dozen. That is our buying advantage—the power of big buying that creates your savings. And at Ward's these savings are always passed along to you.

Ward's low prices are created by big volume buying—by paying ready cash, by the use of millions of dollars in cash to make low prices. We never make low prices by a sacrifice of quality.

Ward's High Quality Assures Complete Satisfaction

For fifty-five years Ward's has done business under a Golden Rule Policy, of guaranteeing complete satisfaction. We buy and sell only reliable goods—goods that will stand *your inspection and your use.*

At Baltimore we are ready to serve YOU. Ready to bring you the biggest savings and to give you the most prompt service. The Catalogue is yours free. The coupon is printed here for your convenience. Send for the book and start a new era of Saving and Satisfaction in your home.

Logan Spring Farm

Happy Plants Repay the Gardener

JUST as the old wood-chopper observed that he was warmed twice by the wood which he cut, so gardeners both young and old are doubly benefited thru the healthful hours of exercise which the garden affords and the wholesome food, brimful of vitamins, which it provides.

The measures of enjoyment and of success to be realized from our 1927 gardens will depend to a very large degree upon the foresight, and thought which we put into planning.

Planning the garden involves a great deal more than sketching in outline the garden plot with so many parallel lines for rows, perhaps 3 representing cabbage, 5 sweet corn and so forth. Possibly this actual drawing is least important of all. A moment ago we mentioned foresight. What does this include? Anticipation of demand first of all and certainly most important of all. How many of us have seen misfit gardens, gardens that served their owners no more satisfactorily than a grotesquely fitting suit of clothing, perhaps too large or too small all over or, only slightly better, a little short in the sleeves and long in the legs. A long supply of beans does not make up for a short supply of celery.

Youth has a glorious time.

Includes the Whole Season

Furthermore, anticipation of demand must include the whole season. Late season and succession crops must be provided to keep the garden working late as well as early. Altho we can never expect to secure perfect adjustment of supply and demand at home or market, close observation and past experience will bring us closer and closer to the ideal, will enable us to eliminate the unneeded or unprofitable and substitute that which the kitchen or market demands.

Again, foresight includes preparedness. The rush of spring planting operations on the farm may be likened to a great military offensive, a "spring drive," a movement which depends for its success upon the "massing" of men, machines, materials and every needful supply in order that once the start has been made there can be no hindrance or delay.

Just as the "general staff's" plans for the army drive form a basis for checking up preparations so our garden plan will make it possible for us to have ready in advance the tools.

There is no better example of the importance of the spring drive than the strawberry. Thruout Pennsylvania, when everything is in readiness and plants are set in late March or early April, failure is almost unknown. Careful settings late in April usually do well, whereas those planted in May are frequently unsatisfactory.

After, or rather along with foresightedness in planning the garden, thoughtfulness has its place. We commonly think of folks as being thoughtful to their fellow men and to animals. I often wonder whether the term has not almost equal application in the world of plants. We all know that plants react favorably or unfavorably to treatment which they receive at our hands and that they are sensitive to heat and cold, to light and darkness, to wind and rain and to soil variations. A few investigators even feel that they have discovered a sort of heart beat in some plants and that a tree attacked by certain parasites may experience a degree of fever. However that may be, we will be well repaid for thoughtfulness in planning our gardens. It will go far toward making our plants "happy" and thus profitable.

Crops Respond to Thoughtfulness

Crops must be rotated from side to side of the garden or from plot to plot to avoid soil borne diseases. Thoughtfulness in providing for an adequate and liberal food supply is just as much a part of the garden planning as the selection of varieties. With intensive culture, one ton of high grade fertilizer per acre is commonly used; in the small garden one pound to 20 square feet. Where variations in soil exist it is thoughtful to locate each crop where it will be most at home. Generally speaking the root crops will thrive best and be more perfectly formed in the lighter, more easily penetrated soils. Cabbage, tomatoes and corn may be delegated to the heavier locations where drainage is satisfactory. Celery, lettuce and onions above all want high fertility.

Old age enjoys it, too.

And lastly, in this matter of thoughtfulness, we must not forget ourselves. If the garden is sizable, grouping together of the early, rapidly-growing lettuce, spinach, radishes, etc., will often make it possible to use the plow rather than the spade in preparing for late cabbage, celery, spinach, beans or other succession crops.—Gilbert S. Watts.

HORTICULTURE

DR. S. W. FLETCHER,
Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

Off-Grade Fruit Utilized to Advantage

AT HORTICULTURAL WEEK, Pennsylvania State College, J. F. James, of the State Bureau of Markets, reported that in 1926 there was shipping point inspection of fifty-two loading points, in eleven counties. Of the 800 cars of peaches shipped in this state, 435 were inspected. This service has found increasing favor with apple growers, also, as the record shows:

1923	234 cars
1924	109 cars
1925	304 cars
1926	1002 cars

The distribution of the different grades in percentages by years, was:

	1923	1924	1925	1926
U. S. No. 1....	71	64	79	77
U. S. No. 2....	29	36	21	2
U. S. Commercial				19
U. S. Fancy...				2

Twice as much fruit is thrown out of grade because of lack of color than any other factor, including insect or disease injury, or other blemishes. This points strongly to the general need for more open pruning, and sometimes later harvesting.

In peaches, 84 per cent of the cars inspected were No. 1, and none fancy, in 1924; while in 1926, 70 per cent were No. 1 and 5 per cent fancy. There were 16 per cent off grade in 1924 and 25 per cent in 1926. About one-third of all rejections in 1926 was due to softness, caused by excessive rains. Injury by Oriental moth was next in importance.

Cider More Popular

F. G. Reiter, of Mars, has found a way to dispose of his off-grade fruit to advantage. Formerly he trucked cull apples to Pittsburgh, getting around thirty-five cents a bushel, which barely paid expenses. Now they are made into cider and apple butter. The pasteurized sweet cider retails for a dollar a gallon. Ordinary sweet cider, unpasteurized, sells for seventy-five cents a gallon, and there is more profit in it than in the pasteurized at these prices. The pasteurized "apple juice," however, can be used to extend sales thru the winter, when sweet cider is not available.

The demand for sweet cider is far greater than for the pasteurized. This year he sold over 2000 gallons, mostly at a roadside market. He is not as enthusiastic about the pasteurized article as he was at first. Sometimes it molds, causing considerable loss; and a demand for it has to be created. The pasteurized cider retains more of the natural flavor if it is not filtered. He will push the sale of fresh cider more, perhaps reducing the price a little, and use the pasteurized only as a safety valve.

All the apples are thoroly washed whether to be made into fresh cider or pasteurized juice. All wormy and very scabby apples are fed to hogs. The cider cloths are washed after each pressing and all the equipment is kept as clean as a kitchen. Customers are invited to inspect the plant and are willing to pay seventy-five cents a gallon for the output when ordinary cider (which usually is partly worm juice) can be bought for about half that price. Some of the cider is sold at other roadside stands and by dealers, a commission of twenty-five per cent being allowed.

Quarts and Quarts of Apple Butter

Apple butter finds a ready sale at fifty cents a quart. Mr. Reiter has sold 3000 quarts this year, and has 1400 quarts yet to sell. With copper steam coils in barrels, 300 quarts may be made in a day. The calyx end of each apple is cut out, also worm injury, scab and other defects, and the fruit is ground, as in making cider. Five bushels are put in a barrel with ten gallons of fresh cider, cooked until soft, put thru a colander, then put back into the barrel with more cider, sugar and spices. It is sold in a quart glass jar with screw top.

If a source of live steam is available, the cost of equipment for making fresh cider and apple butter ought not be over $600. The equipment for pasteurization is expensive.

Figuring apples at a dollar a bushel and cider at fifty cents a gallon, apple butter shows a profit. The past season, when so many peaches went soft because of the protracted rains, Mr. Reiter realized $1.50 a bushel for these softs in peach butter and marmalade. He believes that the market for good home made fruit by-products, including canned fruits, is bound to increase. City people are doing less and less canning and preserving at home, and the products of the big commercial concerns do not appeal to them as much as the farm-packed article.

L. M. Marble, of the Marble Laboratory, Inc., Canton, Pa., showed some very fine specimens of Wealthy apples out of common storage. They were still in excellent marketable condition; usually the Wealthy is of the market before November 1st. His experiments indicate that thruout the normal marketing term of the variety, apples will keep in common storage, under the right conditions of temperature, humidity and aeration, just as well as in cold storage. They soften much more quickly in common storage, reaching full softness in six to eight weeks af ordinary cellar temperatures, but these ripe apples will keep just as long and sell just as well in local markets as the hard, greener fruit from cold storage. On the wholesale markets, however, this cellar-ripe fruit may be penalized somewhat.

Mr. Marble sees little future for common storage in the carlot shipping districts; they should rely on cold storage. In a local market he sells his common storage Wagener to advantage in competition with cold storage stock of that variety.

Common Storage Costs Less

The great advantage of common storage, where it can be used, is that it costs scarcely half as much as cold storage. We have been taught that a thirty-two degree temperature is essential to keep apples in the best marketable condition. This is not true, especially in a local market state like Pennsylvania.

In England, France and Germany apples are kept very successfully in commercial common storage, and the temperature recommended is forty-five degrees. The humidity of these European storage cellars, however, is very high, usually from ninety-five to ninety-eight per cent.

Humidity is fully as important as low temperature in the keeping of apples; this factor has been neglected in most common storages. A simple apparatus in determining humidity is as necessary in a farm storage as a thermometer. It costs $7 to $15. If the humidity is high enough and the ventilation frequent enough—at least one air change an hour—apples will keep well at 45 degrees, or even higher.

This opens up the usefulness of common storage to the warmer apple growing districts of the South. High humidity is secured by building the storage on moist soil if possible; by soaking the ground floor frequently with water; and sometimes by running spring water thru the storage; also by not ventilating too freely. In Pennsylvania common storages, a humidity of 85 to 90 per cent should be maintained.

The Happy Mean

The more ventilation, the lower the humidity, but ventilation is necessary to carry off the end products of fruit respiration, and keep the surface of the apples dry, and the color bright. There is a happy mean—ventilation in moderation.

When ventilation is excessive—four air changes per hour or more, some varieties shrivel. The Baldwin is a very difficult variety to handle in common storage, not only because of shriveling but also because of the danger of storage loss from Baldwin spot. One reason why New York growers prefer a tight barrel as a storage package for Baldwin is its extreme sensitiveness to low humidity. The same is true of Northern Spy.

So we must learn in storage investigations not to draw general conclusions from the results secured with one or two varieties; each variety reacts differently to storage conditions.—S. W. Fletcher.

Practicing Principles

Schoolboys of Blair County laying a concrete pavement. They learn the theory indoors and then go outdoors to put it into practice.

A REGULARLY ORGANIZED subordinate Grange is maintained by students in agriculture at the Pennsylvania State College. State Master Dewey recently installed the student officers for 1927.

Gleanings from Poultry Meetings Held During Jersey Agricultural Week

NEW JERSEY Agricultural Week, held in Trenton from January 11 to 14, was marked by a very interesting and enthusiastic meeting of the New Jersey State Poultry Association on Thursday. The annual poultry show was held in the Armory in conjunction with other exhibits of interest to farmers in general.

I attended all the meetings of the association and looked over the show and special exhibits in the Armory. It certainly was a day well spent. The show was good, the exhibits interesting and instructive, while at the meeting some new things were brought out that are of great importance to all practical poultrymen.

The meeting was first addressed by Dr. E. L. Brunett, poultry pathologist at Cornell. "The Average Poultryman Loses from Five to Ten Per Cent of His Adult Fowls in the Course of the Laying Year. Why? What Are the Causes?"

Causes of Normal Mortality

In his paper Dr. Brunett mentioned the various ailments, accidents and diseases which might be responsible for normal mortality in a laying flock without causing alarm.

Next, Mr. F. H. T. Clickner, of the New Jersey Station, spoke on "The New Jersey Chick Ration and Its Use," outlining the new methods lately discovered at the New Jersey Station for the feeding and management of baby chicks. This information is of great practical value to poultrymen, and will be published soon in Pennsylvania Farmer in an article on brooding chicks.

"The Ventilation of the Poultry House" was the title of the next talk, given by Prof. E. L. Gross, Department of Rural Engineering, New Jersey Station. Professor Gross stated that there is a widespread interest in the problem of ventilating poultry houses but that not much has been done along that line. He showed lantern slides of a ventilating system which has been devised at the station and operated successfully in poultry buildings. This system will be described in the near future.

The first talk in the afternoon meeting was given by Dr. F. R. Beaudette, poultry pathologist at the New Jersey Station. His subject was "The Concrete Slab Method of Rearing Healthy Pullets for Next Year's Flocks." This method of rearing chicks was devised to overcome the tapeworm and roundworm infestations which present very serious problems wherever poultry keeping is done intensively. This method will be taken up at some length in the brooding article.

Egg Laying Contest Reported

"Facts and Figures from the New Jersey Farm Egg Laying Contest Records and their Significance," was next presented by Prof. W. H. Allen, state poultry extension specialist. Professor Allen, familiary known as "Bill" Allen to his friends about the state, had some very interesting material taken from the records kept by poultrymen in New Jersey who are cooperating with the Experiment Station.

From the accounts of some of these men, it was shown that a well-bred bird properly managed could be expected to return $4 above the cost of her feed in the course of a year. Such returns are far beyond the average, but they are actual results obtained from birds of a good egg-laying strain given the best of care.

Professor Allen also had figures to show that pullets give greater returns in the course of a year than hens, and stated that hens should be kept for breeders rather than for layers. He also showed that the summer months should be the most profitable of the entire year. To be sure of this profit the pullets should not be forced into over production during the winter, and when laying heavily in the spring should be kept in good flesh, in order to prevent an early summer molt and consequent loss of production. Pullets properly cared for should lay right on during the summer, declared Professor Allen, producing eggs during the period of advancing prices.

The last talk of the afternoon was given by Professor Willard C. Thompson. His topic was "A Program Looking Toward Improvement in Quality Production in the New Jersey Poultry Industry." Professor Thompson spoke of the desirability of better fleshed birds, and of strains that would not only be heavy producers, but also lay large eggs as well.

Just Like Her Ancestors

In this connection he told of a pullet that had a high production record; but it was found that she laid many small eggs. In looking up her ancestors, who had also been heavy layers, it was found that they too had laid many small eggs, so that the pullet had to be discarded on that account as a breeder.

Anyone who attended this meeting must have been impressed by the possibilities which a successful poultry business offers. Equally impressive are the problems confronting the poultryman. It is a mighty good thing for Jersey that the poultry department at the Experiment Station is in such good hands, in the field of investigation as well as extension.

The exhibits at the Armory included a booth showing methods of certifying and testing flocks for white diarrhea, with birds that had been passed and others that had been rejected because of defects; another showing eggs of various market grades, with an opportunity for visitors to candle them; and a third with live chicks that were being raised under the New Jersey plan.

The show occupied about one-third the total floor space, being somewhat larger than usual because of the Utility Class which it contained for the first time.

Coventry Farms was awarded a silver cup offered by Mayor Donnelly, of Trenton, for the best female bird exhibited. The entry which won the trophy was a Silver Comb Minorca.

Governor Moore's cup, offered for the best male bird exhibited, was won by A. S. Harle, of Washington. This entry was a White Wyandotte cock.

Samuel Price, five-year-old son of E. D. Price, of Brielle, carried off the award for the best Bantam.—R. L. Scharring-Hausen.

Which to Select

I have purebred White Rocks nearly six months old. I would like to have full instructions on how to select roosters for breeding purposes.—Mrs. G. W. A., Potter County, Pa.

Roosters selected for breeders should be well-grown, mature, vigorous and healthy. They should possess no physical defects such as a wry tail, crooked back or breastbone, have a deep abdomen and well-rounded breast. Only active males that mate well with the hens should be chosen.

I do not think it would be advisable to use the pullets from your flock as breeders, if that is your intention. Females that have gone thru at least one full year of laying produce the best and largest chicks. However, the cockerels would make good breeders if well-grown.—R. L. Scharring-Hausen.

An Oft Repeated Tale

MATCHES, kerosene and death. It's the same old story. We read it in the headlines almost every day, yet it goes on and on. The mother of this child, like thousands of others, often has made a fire with matches and kerosene in the presence of her little girl without warning her of the danger. Mother had to go out and help with the milking and the child, wanting to do something for her while she was gone, tried to light the fire as she had seen mother do it. The upset kerosene can with a puddle of deadly fluid on the floor, matches scattered everywhere and blue smoke pouring from the clothing of the child—these tell the story.

Children are quick to copy the ways of grown-ups. Your example may bring tragedy like this into your own home unless you are careful with matches and kerosene.—C. C. Conger, Jr.

Grand Prize Four Color Poultry Book FREE

This excellent 4-Color Poultry Book—9 in. x 12 in. —won 1st prize at 1926 Int. Baby Chick Assn. Convention. It is a masterpiece! *Your copy is ready for you.* Describes newest and most successful ways of making money with chickens. Tells why "*Kerlin-Quality*" S. C. W. Leghorns are world's greatest money-makers.

Strong • Active • Hardy
265 to 332 Egg Record Stock

GLASS CLOTH
Est. 1916—Pat'd
for Wonderful Success with Baby Chicks

Never keep chicks behind glass. It stops the sun's ultra-violet energy rays, causing rickets, leg weakness and death loss. Build a GLASS CLOTH scratch shed onto your brooder house to admit these rays. Put GLASS CLOTH in the windows. Produces amazing health and growth. Experts everywhere recommend it. In a test at Ames College 85 per cent of the chicks under window glass died, while all under GLASS CLOTH lived and grew very rapidly.

Ideal for Hot Beds
GLASS CLOTH is the cheapest and best covering for hot beds. Violet rays make plants grow stronger and hardier. They transplant better, mature earlier and yield bigger crops. Holds heat. More than pays for itself.

SPECIAL TRIAL OFFER Send $5.00 for big roll 45 ft. long and 36 in. wide, postpaid. Guaranteed. Book, "Success with Baby Chicks" with each order. Catalog illustrating uses on request. (Also sold by many dealers.)

Those Who Carried Home the Prizes for Best Egg Exhibits

LANCASTER COUNTY was awarded a cup for the largest and best county exhibit of eggs in the State Farm Products Show. P. T. Kistler, Towanda, was the largest winner of sweepstakes and won the Pennsylvania Farmer cup.

The first, second and third prize winners in the show featuring 555 dozens of eggs are:

Class 1—Boys and Girls

One Dozen White Eggs.—1, Dorothy Graybill, Lancaster County, $10; 2, Ruth A. Engle, Dauphin County, $9; 3, Frank Dieter, Lancaster County, $8.

One Dozen Brown Eggs.—1, Paul Dunlap, Lancaster County, $10; 2, Clyde Shenk, Lancaster County, $9; 3, Reseno Nelt, Lancaster County, $8.

Class 2—Backyard Class

One Dozen White Eggs.—1, Frank Gardner, Lycoming County, $6; 2, Allen A. Shade, Dauphin County, $5; Mrs. A. H. Young, Lancaster County, $4.

One Dozen Brown Eggs.—1 and 2, Mrs. Rudy S. Herr, Lancaster County, $5 and $4; 3, Allen A. Shade, Dauphin County, $3.

Class 3—Farmers' Class

One Dozen White Eggs.—1, E. G. Zimmerman, Lancaster County $7; 2, Andrew Winters, Berks County, $6; 3, Harry E. Otto, Schuylkill County, $5.

One Dozen Brown Eggs.—1, Mrs. J. B. Fisher, Lancaster County, $6; 2, Mrs. Charles K. Fertig, Dauphin County, $5; 3, Charles Sheffer & Son, York County, $4.

Five Dozen White Eggs.—1, Jason M. Eby, Lancaster County, $10.

Five Dozen Brown Eggs.—3, J. H. Mallison, Elk County, $6.

Class 4—Commercial Class

One Dozen White Eggs.—1, P. T. Kistler, Bradford County, $8; 2, P. D. Zimmerman, Dauphin County, $7; 3, Horace DiLuzio, Mercer County, $6.

One Dozen Brown Eggs.—1 and 3, P. T. Kistler, Bradford County, $5 and $3; 2, Marcus A. McKnight, Cumberland County, $4.

Five Dozen White Eggs.—1 and 3, P. T. Kistler, Bradford County, $10 and $6; 2, W. W. Kerlin, Centre County, $8.

Class 5—Sweepstakes

Cups were awarded as follows:

Best Dozen White Eggs in the Show.—P. T. Kistler, Bradford County.

Best Dozen Brown Eggs in the Show.—Mrs. Rudy Herr, Lancaster County.

Best Five Dozen White Eggs in the Show.—P. T. Kistler, Bradford County. Mr. Kistler received the cup awarded by Pennsylvania Farmer.

Best Five Dozen Brown Eggs in the Show.—J. H. Mallison, Elk County.

Largest and Best County Exhibit.—Lancaster County.

School Making Largest and Best Exhibit.—West Lampeter, Lancaster County.

Nest Box Notes

WHEN a hen is seen with a purple comb, gasping for breath, open her mouth and see if there is a whitish growth at the entrance to the windpipe. If so, it can often be removed with a quill in time to prevent suffocation. Birds are often found dead in the houses as a result of this disease, which is diphtheretic roup. Bronchitis causes death in a similar fashion, altho the growth is lower down in the breathing passages.

• • •

A great many people who keep barnyard flocks like Leghorns better than heavier breeds. They mature earlier, lay better and stand confinement in better health. A well-fattened Leghorn hen, weighing around four pounds, makes a nice table fowl for a small family, as the breed is small-boned.

• • •

It is a good idea to look over the incubator some time ahead to see if new thermometers or any other new equipment must be ordered.—R. L. Scharring-Hausen.

Medal Winners in Project Work

TWENTY-FIVE hundred boys and girls taking vocational agriculture in the vocational schools of Pennsylvania conducted projects during the past summer. Those making the highest scores in their projects were awarded medals on Wednesday, January 19, during Farm Products Show Week in Harrisburg.

The Pennsylvania Farmer gold medal for the best fruit project was won by Alvin Hall, Westmoreland County.

Following are the gold, silver and bronze medal winners in the senior projects. The gold medal winner is named first, then the silver and bronze medal winners. Following each winner is the name of his school and the county in which it is located.

Corn.—Benjamin M. Herr, West Lampeter, Lancaster; Arlo Medice, Allegheny Township, Westmoreland; John Gesner, Bloserville, Cumberland.

Bee.—Milford H. Cassel, Lower Paxton, Dauphin; Howard Beard, Avondale, Chester; Carlyle Sheldon, Conneautville, Crawford.

Dairy.—Elmer Kile, Greenwood, Columbia; Leon Ballard, Troy, Bradford; Ernest Vilage, Coneautville, Crawford.

Farm Home Improvement.—Charles Welshouse, Ligonier, Westmoreland; Herman Kinsey, Ligonier, Westmoreland.

Sheep.—Daniel Coveney, Towanda, Bradford.

Fruit.—Alvin Hall, Latrobe, Westmoreland.

Poultry.—Wayne Wood, Newville, Cumberland; Frank Stewart, Latrobe, Westmoreland; Riley Ross, Latrobe, Westmoreland.

Potato.—David Nelley, Towanda, Bradford; Arthur Daub, Porter Township, Schuylkill; Bennie Truax, Ulysses, Potter; Arthur Updegrove, Porter Township, Schuylkill.

Swine.—O. B. Savage, Benton, Columbia; Lucille Jerrett, Hughesville, Lycoming; Graydon Hess, Fishing Creek, Columbia.

Truck.—Wm. Earl Benedict, Conneautville, Crawford; Lloyd Morris, Conneautville, Crawford; Edwin Kane, Murraysville, Westmoreland.

Winner's Class.—William Markle, West Newton, Westmoreland; Sarah Fox, Youngwood, Westmoreland; Ronald Hyskell, Dayton, Armstrong.

Small Grains.—Carlton West, Brooklyn, Susquehanna; Ross Graham, Conneautville, Crawford; David Reno, Edinboro, Erie.

The following junior project winners were awarded silver medals::

Swine.—J. Harold Ranck, West Lampeter, Lancaster.

Poultry.—Harry Brown, Cuddy, Allegheny.

Truck.—Clare Bogue, Buena Vista, Allegheny.

Dairy.—Lloyd Sheen, Dimock, Susquehanna.

Corn.—Carl Rosensteel, Elders Ridge, Indiana.

Potato.—Earl Schreffler, Berrysburg, Dauphin.

Dead or Alive?

up the ladder of UNADILLA satisfaction and safety

The Unadilla door fasteners make an ever-ready permanent and safe ladder from base to roof. The rounds, 15½ inches apart, stand out 5 inches from the doors and are 13 inches wide—as *easy* to climb, up or down, as your front stairs.

The Unadilla goes together easily—any handy man with a little help can erect it. It is exceptionally strong, lasting, and well constructed. It is air and water tight—frost-repelling and storm-defying. It is the most convenient, safe and workable silo we know how to build and we've spent a good many years on just this job.

Write today for our handsome, illustrated catalog showing why a Unadilla is the silo *you* need. It also shows Unadilla water tubs, storage tanks and vats.

If you want to take advantage of a special discount that is worth having—order early. Or, you can, if you wish, pay for your Unadilla on easy terms.

Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

Regulations Governing Milk Production

Would you please tell me the requirements or laws for a dairy barn where milk is sold in Pennsylvania?—V. C. McG., Jefferson County, Pa.

There is no law in Pennsylvania concerning the requirements for the dairy barn where milk is sold in the state. However, most of the municipalities have certain requirements concerning the stable in which the milk is produced for that particular municipality. These milk ordinances in municipalities usually provide for three grades of milk. First, certified; second, Grade A raw milk, and third, pasteurized milk.

Certified milk is the product from dairies operated in accordance with rules or regulations adopted by the American Association of Medical Milk Commissions. The County Board of Health provides for a medical milk commission which determines whether milk is produced in compliance with the rules and regulations of the association. These regulations provide for the inspection of the buildings, their proper location and surroundings and the construction of milk stables such as will provide for the best of sanitation.

The stable must be kept scrupulously clean, and it must be well ventilated, with a minimum of 600 cubic feet of air space per cow. Windows must provide four square feet of glass per cow. Children are not allowed in the dairy building or in the stable during milking. The dairy building must be located at such a distance from the stable as prescribed by the local commission. No hog pen, privy, or manure pile is allowed at a higher level or within 300 feet from the dairy building. Water supplies to be free from contamination.

Herd Must Be Isolated

No horses, hogs, dogs, or other animals or fowls are allowed to come in contact with the certified herd. Manure must be hauled at once to the field or placed in a container screened against flies. Manure must not be stored even temporarily within 300 feet of the barn or dairy building.

Cows are to be kept scrupulously clean. Udders are to be wiped with a clean, damp cloth or washed and dried prior to milking. The herd is to be tuberculin tested. Employes are to be medically inspected. Milk is to be cooled below 50 degrees promptly after milking and kept at a temperature below 50 degrees until delivered to the consumer. The bacterial count at the time of delivery shall be below ten thousand per cc. The milk shall contain an average of four per cent butterfat with the minimum of 3.5.

These and many other regulations

(Continued on next page)

Friendly Talks with Farm Folks

By Edgar L. Vincent

ALONG the road which led past our home in the country on a warm day in spring, three young fellows were tramping. They looked hot and tired. On the bank just beyond our house they sat down and rested and talked to themselves in a language none of us understood. After a while one of the young men ventured up to the door and said something that sounded like "milch" and "brod." That was enough for our mother. She knew what boys ought to have when they are tired and in a strange land. She brought out a big pitcher of milk and a loaf of bread, with good butter to go with it; and you ought to have seen those boys eat! Grandma said it seemed to her they must be hollow to the end of their toes.

They had only thanks to pay for mother's kindness, but they did their best to make us know that they were very grateful; and then the three Danish lads went on. But we heard of them again. One of them located near us and worked for sometime as a month hand. Another had a taste for carpenter work and learned that trade. The third soon had a small farm of his own, and he did his work well, so his place was one of the best in that part of the country.

Kindness Paid Dividends

But the fine thing about it was that those Danish boys never forgot to be kind and friendly to my mother. Whenever they saw her a smile swept over their faces and they showed their gratitude for the kindly act she had done for them in the days when they were strangers in a strange land. In the gold of their hearts they paid many a dividend on the stock of kindness our mother had deposited in the bank that warm spring day.

A man I used to know went away off into an almost deserted part of the country and put up a little house. All around that house he set out trees and shrubbery so thick that after the branches had reached full size they locked and interlocked so thickly that you could not get even a glimpse of the house from the outside. And there he lived. What for! Why, he thought the world had not treated him right. He wanted nothing more to do with men, so he withdrew to that solitary place and denned up like a hunted animal.

Friendliness Draws' Friends

But that did not help matters any. There is a mine of truth in that old saying, "A man that hath many friends must show himself friendly." Money in the bank draws interest. Stock invested brings a dividend. Loving kindness gathers to itself pity and mercy and sympathy in the day when the need is greatest.

I have before now found big rocks in the field or the woods that had grass and moss growing on their hard surfaces. I always like to see it so, for I know that it is because even those hard rocks seize upon and hold the grains of dust that come sifting down out of the wind-swept sky. They cling to the tiny seeds that God scatters in His own way. They drink in the dew and the raindrops and help them to moisten the germs of the seed, so that the day comes when those tufts of moss and grass come to make the heart of the passerby glad.

And I doubt if there is a heart in this world that will not respond to love. Why should we not put a bit of money in this bank and see whereunto it will grow? Heaven will take care of it. Our labor never will be lost!

govern the production of certified milk. The complete rules may be secured from the American Association of Medical Milk Commissions, 360 Park Place, Brooklyn, N. Y.

The usual requirements for Grade A raw milk include: first, that each member of the herd shall be free from communicable disease as determined by physical examination and the tuberculin test conducted in accordance with the rules of the Pennsylvania Bureau of Animal Industry. The milk shall contain not more than 100,000 bacteria per cc. when inoculated into standard agar.

Sanitary Precautions

The milk must be delivered in bottles. The cap shall be uncolored and shall have the name Grade A raw milk and the name of the dealer clearly printed on the outer side of the cap. Employes must be examined for communicable disease at least semi-annually. The sanitary conveniences on the dairy farm such as privy vaults, cesspools, etc., shall be fly-tight and kept in a sanitary condition. The water supply shall be abundant, easy of access and free from contaminations.

Pasteurized milk is milk that has been subjected to a temperature of not less than 145 degrees or more than 148 degrees F. for a period of not less than thirty minutes. It must contain not more than 50,000 bacteria per cc. when inoculated with standard agar. It must be delivered to the consumer within 24 hours after pasteurization.

The bottle caps must be printed with the words "Pasteurized Milk," and the name of the dealer clearly printed on the outer side of the cap. All persons who come in contact with the milk must be medically inspected and found to be free from communicable disease.

A copy of the milk ordinance recommended by the Pennsylvania Department of Health for use in cities and boroughs may be secured by writing directly to the Department of Health, Harrisburg, Pennsylvania. —A. A. Borland.

Milk Exhibit Awards

THOMAS AND HOWELL, Chester County, won first place and a gold medal for exhibiting the best four pints of raw market milk from tuberculosis-free cows at the State Farm Products Show. B. D. Carter, Lancaster County, exhibited the best raw market milk; the Lenker Farm Dairy, Dauphin County, took first place in Certified Milk, and the Abbotts Alderney Dairy, Philadelphia, was awarded first place in the pasteurized milk class. The principal prize winners follow:

Class 1—Milk from tuberculosis-free cows

A. Raw Market Milk.—1, Thomas & Howell, Chester County, gold medal; 2, S. H. Markey, Bedford County, silver medal; 3, P. W. Smith, Chester County, bronze medal.

B. Raw Market Milk.—1, B. D. Carter, Lancaster County, $8; 2, Meyer Hess, Lancaster County, $6; 3, J. H. Longenecker, Blair County, $4.

C. Certified Milk.—1, Lenker Farm Dairy, Dauphin County, gold medal; 2, Abbotts Alderney Dairies, Philadelphia, silver medal.

D. Pasteurized Milk.—1, Abbotts Alderney Dairy, Philadelphia, gold medal; 2, Woodlawn Dairy, Lackawanna County, silver medal; 3, Supplee-Wills-Jones, Philadelphia, bronze medal.

THE HOLSTEIN-FRIESIAN ASSOCIATION of America has appropriated $25,000 to be awarded as prizes for Holstein cattle exhibited at fairs thruout the United States in 1927.

Broadway has nothing on Main Street!

THE brightest spots on Broadway are the motion picture theatres, with no less than five of the largest showing Paramount Pictures regularly!

But Broadway has nothing on Main Street!—not when you can see right in your own town or somewhere nearby the same Paramount Pictures that thrill millions in New York.

"Behind the Front," "The Campus Flirt," "Born to the West," "Tin Gods," "Fascinating Youth," "Aloma of the South Seas," "Mantrap" are some of the pictures. Maybe you've already seen them, or you will soon.

Paramount is first in the hearts of all America because it means the *most* pictures, the *best* pictures, and *making them available to every theatre whose patrons express the wish to see them.*

Broadway's right around the corner from you, or only a few miles away!

"If it's a Paramount Picture, it's the best show in town!"

FREE TO FARMERS
The Cutaway Harrow Company, Higganum, Connecticut, are sending free to farmers two well-known books, "The Soil & Its Tillage" and the Clark "Cutaway" Catalog of disk harrows and plows. The first book contains much valuable information about modern farming methods; it tells how to get bigger and better crops with less time, labor, and money.
The Clark "Cutaway" Catalog describes the "Cutaway" line of disk harrows from the Baby Cultivator and One Horse Harrow to the Double Action Tractor Harrows. It tells about special machines for special work such as the Bush & Bog Plow and Harrow, Orchard Plows, Single Action Extension Harrows, Smoothing Harrows, and others. The catalog also explains why disks with edges forged sharp, a feature found only on genuine Clark "Cutaway" harrows, stay sharp and last longer.
Send for these two books today. A Postal will do. Address The Cutaway Harrow Company, 97 Main Street, Higganum, Conn.

CONTAGIOUS ABORTION can be Prevented
Farmers and dairymen all over the U.S., say that since using the Aborno Treatment their losses from the Abortion Disease have stopped. Easily administered.

Mrs. GERTRUDE S. STEWART

One Group of Country Women Points the Way for Others

PICTURE, if you can, thirty-seven excited country women all talking at once, as they reflect the stirring enthusiasm of their new president. The New Year's meeting was formally ended and these chattering women were munching little holiday cakes, mingling the merry tinkle of silver spoon and tea cup with the lively gossip about their great venture for 1927.

This is just one group of live rural women planning a loving service in their community. They have decided to furnish and equip a beautiful room in the new hospital nearing completion. Each club member has been given one week in which to study her talents. "What can you, and you, and you do the very best?" is the question to be answered.

The president is converting one side of her fine large garage into a salesroom, a typical roadside market, where on Friday of each week the offerings of the group will be sold. The products will be varied for the talents vary, as well as equipment and the possibilities at home.

Yours for the Asking

IF YOU are in need of some new window curtains this spring, you will want to study a government leaflet on "Principles of Window Curtaining," that has been prepared by Mary Aleen Davis. Her suggestions will help you to plan artistic curtains that are also practical for every room in the house. The bulletin contains drawings also. Address Office of Publications, U. S. Dept. of Agriculture, Washington, D. C., asking for Farmers' Bulletin 1516-F.

Already reports are coming in and Mrs. President knows she will have needlework and fine foodstuffs to sell. There will be aprons and towels, hooked rugs and pieced quilts, woven rag rugs and braided mats; fashionable quilted pillows, baby bonnets and stout rompers. On the food shelves you may find cottage cheese, baked beans, potato chips, fresh eggs, jellies and marmalades, cakes and cookies, doughnuts, spicy peaches and delicious fudges; there will be noodles, too, and tasty whipped cream. Other foods will appear in season. Among the craft articles will be unique bird houses, and a blind girl will make perfect flower baskets.

And Here's the Answer

When it comes to imitation, we do resemble the apes after all, for every single thing we know has been learned from others. Either we mimic someone we saw or heard, or we follow something we have read. Can we not profit by the inspiring plan of this group of sisters? During the past year we have had many letters asking "What can I do to earn a little extra money?" Our answers depend a little on what you give us to build upon, but what each one does depends entirely upon herself. You and you only must decide.

You must have courage in yourself. You must have faith in your undertaking. You must have ability to choose what you can do the very best. You must have imagination enough to plan wisely. You must have perseverance enough to buckle on the armor tightly and make good. What do you cook or bake that causes folks to say, "That's the best I ever tasted"? What can you sew or paint, sing or carve, that wins the applause of the community? These are the things to help you decide on the talent which may bring you honor as well as pin money.

The Safer, Simpler Way

Many letters have come in from folks who already know what they can do, and their problem is how and where to sell their wares. They repeatedly ask for addresses of exchanges and salesrooms. This is indeed a problem, and my best advice is to keep the selling in your own hands if possible. If not keep it at least under your eye. Not that I am distrustful, but that I think it much safer and simpler. The city exchanges have creaking shelves of goods so soiled from age and handling that their only returns must be disappointment.

Advertise in some forceful way what you have. You can do this thru the press—local and county papers and any paper whose readers might show need for what you have. The nearest tea house or your neighbor's roadside stand might be good places. Your own attractive sign might be best of all, but do advertise.

Fairs offer good opportunities to energetic women not only to win prizes on choice goods, but to bring what they have before the public in a forceful way. Plan a worth while exhibit at your county, district or even state fair. Spend as much time as possible nearby, that you may meet interested folks, give samples and other information.

Let this New Year be one of remarkable opportunity for woman. Use your latent possibilities and do better than ever before the "things thou lovest."—Gertrude S. Stewart.

"Thank You" Notes

CHRISTMAS and the New Year have come and gone leaving a trail of gifts, letters and cards behind them. How many make a practice of acknowledging every one of these every year? Sometimes it takes effort but it is worth while. Someone has put time and thought into these things and it is only fair to let them know they are appreciated. There is something nice that may be said about every gift.

Practice for the Children

Let the children write their own letters of appreciation. Even those who can only scrawl a "thank you" and sign their name should be encouraged to do so. It gives them excellent practice in their writing, spelling and language; beside forming a habit they should carry thru life. The boy or girl who comes to high school age and fails to acknowledge the gifts sent him or her at the time of graduation has lacked something in upbringing.—Mrs. Perley W. Lawton, Pa.

All-Round, Friendly Gingham

THERE is no more all-round useful fabric for the home than gingham. One may pay anywhere from fifteen cents a yard (on sale) to a dollar and a quarter, according to the use for which it is intended.

One of the uses which the farm woman will find most practical is the making of breakfast sets of a heavy grade of gay gingham, with small napkins to match. If a good quality is bought—about forty or fifty cents a yard—the set becomes as durable as linen and much cheaper. The table looks well, too, especially if small checks are chosen. A little cross stitch or blanket stitch makes an easy and durable finish.

If you wish to give a bride a set or pass one on as a birthday gift, choose a grade of gingham guaranteed to launder without fading, blanket stitch the edge in two harmonizing tones and stencil a design with oil paints in the corner of each piece. These stencils wash as nicely as does the gingham and make the set most attractive. Stencil and oils and a small pattern may be bought for less than a dollar—enough to make a number of sets.

Curtains for the kitchen of the checked gingham are always cheerful and stand many launderings. An inexpensive grade does nicely for this. The finer ones in lighter, more neutral shades if ruffled give color and charm to a living room.

Ruffled covers for the couch—ones which may be used without fear of soiling—are a boon to any tired man. Keep these of gay but well chosen shades to add decoration in the room.

Bloomers and slips for the school girl are quite in order, especially since Paris permits such slips to be worn under so aristocratic a material as georgette. A bright colored gingham slip worn under sheer voile gives a pleasing effect.

Out of the cheapest grade on the bargain counters, covers may be made for one's best dress. However deep and clean the closet, clothes hanging there will take up dust. Just cover them and see how soiled the cover gets. Make these covers large enough not to crowd the garment. One can often find remnants suitable for this at very little cost and the saving on the dress is well worth the short time spent in running it up.

One may even make dresser scarfs, trim bedspreads and make lamp shades of gingham—these latter quite charming and colonial if the edge is scalloped.

Don't scorn gingham—it is a friend indeed and a most inexpensive asset to the sewing basket of any home.—Effie Maurine Paige, Pa.

The Kitchen Cabine

USE 1 quart tomatoes cooked seasoned to taste with salt, pepper and a few broken leaves. Blend with one cup of ly cooked oatmeal. Bring to point 1 quart rich milk, and before adding the milk to the toes, stir into the tomato mix teaspoon soda. Then gradually the milk, stirring all the while. thru a sieve and serve with cr or toast. Don't forget the bay —Mary Stewart Shuman, Pa.

• • •

CHICKEN-WAFFLE

Save stock from cooked or chicken to make this delicious over dish. Remove chicken bone, cut in tiny bits. To one stock add three of water. Let to boiling point, beating in a thickening made from flour and water. Cook one minute. Add ded chicken and season with pepper and dash of celery salt. on crisp baked waffles.

• • •

WAFFLES

1 pt. of sweet milk
2 eggs
1 teaspoon baking powder
1 tablespoon melted butter
1 tablespoon sugar
Pinch of salt

Beat yolks of eggs. Add milk, ter, sugar and salt. Beat and add flour enough to make a thin ter. Last fold in the stiffly whites of eggs. Bake in hot waffle irons.—Mrs. L. D.

• • •

ITALIAN SUGARLESS CAND

Put thru food chopper ½ pound coanut, ½ pound seedless raisins, pound prunes, ½ pound citron and pound shelled peanuts or al Mix all ingredients thoroly. Lin small tin box with waxed paper fill with the fruit mixture, pr it in firmly. Let stand five or hours, lift from box and cut in half-inch slices.—L. M. T.

One I Welcome— One I P

MY DEAR friend, one whom know is a friend, came to on me this morning. We about the babies, the chickens, boys and girls. We walked in the garden, talked of flowers and vegetables. We laughed and chatted minutes away all too rapidly. left a bright spot in the day, she departed. I shall be glad when see her coming again, even the might be busy I know her little and chat will cheer me.

Later on another visitor came, was not interested in our children She thought too much about Johnny Green imposing on her Willie, how Susie Brown snubbed her Sally Instead of thinking of flowers and vegetables she was more concerned about how Mrs. Black had borrowed her waist to go to a funeral and brought it back with a bedbug on it.

Surely—I invited her back, will I enjoy having her come? I her and will try to get her interested, if possible, in the worth while things with which we come in contact; and forget about the little petty grievances in life.

There are too many good, beautiful and kind things in this world to make us happy. Why should we let the petty, sordid, unkind thoughts mar our happiness?—Kate.

Over on the Jersey Side

The Extension Service Does Many a Good Turn

OVER here in New Jersey we have unusual opportunities to learn millinery and sewing under the expert help and advice of Miss Mildred B. Murphy, Home Demonstration Agent at Large.

Last fall I joined the hat class and on the day we started them, we finished our hats. It was my first attempt at millinery, and the very next day I went to the Sesqui wearing a hat that "fits." My friends, who know I am much fonder of a pen than a needle, hardly believe that I fashioned every stitch of it.

Since that time I have been in another class and have made the famous New Jersey permanent pattern, which is a pattern modeled to your own figure. From it I have already made a smock and one dress.

Mrs. Sheppard wearing the first hat she ever made.

The farmers can secure help if they want it from the well-known county agent, and the farmers' wives have equal opportunities thru the Division of Extension under the county agent. Ask him to tell you about it. You help pay for it whether you avail yourselves of what it offers—or just let the other fellow get all the benefit.—Mrs. Cora J. Sheppard, N. J.

Fifty Cents a Plate

WHEN the Farmers' Club of Craven County, North Carolina, holds its monthly meeting, the women's clubs serve dinner at fifty cents a plate. The women's clubs in the various communities where the farmers' meetings are held try to outdo each other in putting a meal on the table that can be served at fifty cents. Needless to say this kind of rivalry makes a hit with members of the farmers' club.

The idea originated a year ago when twenty-three home demonstration women met at the county fair grounds to serve dinner to 40 farmers who had volunteered to repair the exhibit hall for the women.

"The day proved so pleasant," says Jane S. McKimmon, assistant director of extension, "and the dinner so good, that the president of the farmers' club asked the home demonstration agent why the farm women's clubs could not serve suppers to the farmers at their monthly meetings.

The Men Were Pleased

"The agent agreed to try this, and picked a strong club to serve the first supper. The men were so pleased with the food and the women with the fun that all the home demonstration clubs made a bid for the farmers at the next meeting.

"When asked about profit, the women laughed and said they came out anywhere from one to five dollars to the good. 'It is not a money-making scheme,' they said, 'but a get-together project.'

"No woman donates anything. A fair price is set on all the things she brings from her farm and the fifty cents charge per man covers the cost. Not the least of the benefits of these meetings is the experience the women get in planning meals for large groups, teamwork in preparing and serving, and accuracy in keeping accounts."

When warm weather came last summer, the farmers' club gave a picnic inviting all the club women to go with them on the U. S. S. Pamlico on a trip down the river. As a result of this cooperation, the home agent says: "I need not tell you that the attendance at the farmers' club is much better now, and the fact that men go from one part of the county to another for these meetings is doing much to promote good fellowship among our people."—E. A. K.

"Tubbing" in Winter

THERE was a time when personal cleanliness and the Saturday night bath were synonymous. Mother prepared a lot of hot water and she and father and the children all took turns at the tub. That was during the "Age of Innocence," before there were huge industrial cities and before we knew much about the germ theory.

Nowadays personal cleanliness is a part of what is called "personal hygiene" and it includes at least two thoro baths a week, teeth brushed twice a day, clean hands before meals, spotless finger nails, and frequent shampoos. It also eliminates one of those ancient customs that still persist in some circles; namely, sewing up the baby and small child in heavy underwear for the winter.

A Scientific Fad

Modern fastidiousness is not merely a fad, but has the sound backing of scientists. "Cleanliness," so the National Tuberculosis Association tells us, "is an excellent health preservative. The germs of many infectious diseases lodge on the hands, and are easily carried to the mouth where they enter the system. Clean teeth not only help to prevent decay, but also prevent the growth of harmful bacteria in the mouth."

It is a timely warning, for this is the season of colds, grippe, and other minor infectious illnesses which may lead to others more serious, if they are neglected. We are also within the months of chilly bathrooms, when it is an investment in good health to equip oneself with extra heaters in order to make tubbing as pleasurable in winter as in May.

Piecebag Gifts

WITH very little time and practically no expense, the piecebag may provide many delightful gifts for the small girl who enjoys needlework.

Fascinating "undies" for dolly require but small remnants of sheer material and wee flower designs will transform them. There may be enough bits of lace to whip neck and armholes. Cutting lines should be indicated or little patterns made from strong pliable paper. These patterns may be purchased if desired but almost anyone with a knowledge of sewing will be able to make them.

If dolly entertains, luncheon sets, centerpieces, buffet sets, tea towels and guest towels may well be added.

Perhaps you will find scraps of unbleached muslin, checked gingham, or crepe for a bedroom set—spread and bolster cover, a scarf, and possibly matching curtains, if dolly has a house of her own. White material for tiny sheets and pillow covers may be stamped with scallops.

Pieces of gingham, percale, etc., will make the patchwork quilts or pillow tops so much in vogue. The pieces should be cut or the pattern furnished. Be sure to include all the necessaries for finishing the quilt, linings, paddings, etc.

Floss for embroideries and remnants of cotton and silk for sewing, we are sure to have left from our own work. Having all the supplies at hand is half the gift and the making of these tiny, attractive articles will give splendid practice in needlework and provide many happy hours for the small girl.—Ethel Lyons.

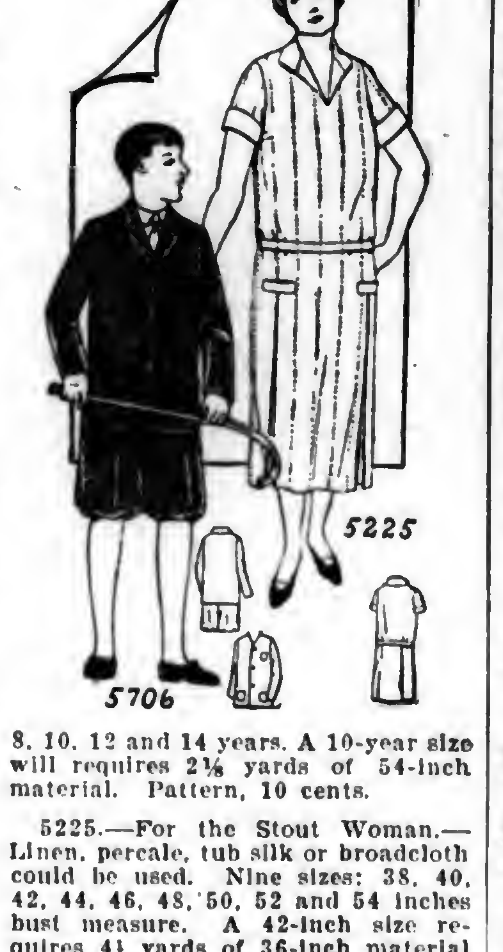
Now Is the Time

ONE of my friends has just finished a marvelous doll house for his two little girls. He has been a shut-in since Hallowe'en and that accounts for such industry. This city man has done his utmost to inspire and amuse those girls for many years of wholesome play. What do we rural folk do for our children?

These wintry months furnish just the time for father to tinker away a few hours of each blustery day making some useful thing for the home. If there are children, what about the backyard playground? Have your children any equipment for healthy play. Soon the sunny days of spring will find them out-of-doors, and we will be too busy with all sorts of jobs to do such work. Let's do it now. Backyard Playgrounds, Folder No. 2, is ready with free help—measurements, drawings, suggestions. Free to you if you write Children's Bureau, United States Department of Labor, Washington, D. C.

Sonny Likes New Togs, Too

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.



5706.—Boys' Suit.—Serge, flannel, corduroy and tweed are suitable materials for this model. Five sizes: 6, 8, 10, 12 and 14 years. A 10-year size will requires 2⅛ yards of 54-inch material. Pattern, 10 cents.

5225.—For the Stout Woman.—Linen, percale, tub silk or broadcloth could be used. Nine sizes: 38, 40, 42, 44, 46, 48, 50, 52 and 54 inches bust measure. A 42-inch size requires 4¼ yards of 36-inch material with one-half yard of contrasting material for facings. Pattern, 10 cents.

OUR YOUNG PEOPLE'S FORUM.

From Forum Members and Friends

Dear Cousin Ruth:—I live on a farm but we haven't any animals but have the land all planted in little apple trees. My grandmother lives on the next farm to us and the houses are very near together. I have very far to go to school.

We had a fine Christmas. We are waiting for the doctor to come today. My sister and I are sick.—Edith Renner, (X), Carbon County, Pa.

Dear Cousin Ruth:—For a pet I have "Laddie," my Collie dog. When he is hungry he will get up in a chair and put his front feet over the back. He has to be real careful or it will tip over with him. One of his ears is up and the other is down most of the time and he is always teasing our cat, Tom, or chasing chickens or something he knows he hadn't ought to do.—Alice Irvine, (X), Bradford County, Pa.

Dear Cousin Ruth and Forum Friends:—How many of you boys like to trap? That is one thing which I enjoy. I trap for muskrats and skunks but this year I haven't caught much yet, only two skunks and one muskrat. One time my cousin caught a raccoon and put it on a chain but it broke the chain and got away.

How many of you went to see the Sesqui? I have been there twice and saw a great deal each time. I have been in almost all the buildings. I wanted to go again but didn't get there.—Paul Kohler, (X), Bucks County, Pa.

Dear Cousin Ruth:—I live on a farm of about seventy-two acres. My father was a miller once. He has about 1300 chickens now. I have three sisters, one older than I am. We all enjoy playing with our new Christmas gifts. I got a set of toys. My oldest sister, Florence, got a clown game, it is lots of fun. My younger sister got a fishing pond and my very youngest sister got a seesaw that never stops.—Titus Weaver, nine (X), Lancaster County, Pa.

SARAH ANN STEWART
Burlington County, N. J.

Dear Cousin Ruth:—I have a pet dog whose name is Ring. I called him that because he is yellow with a white ring around his neck. Whenever my father and brother go to the field to work he always goes with them. He likes to catch mice. This is not very nice weather for the little birds. They cannot find much food when the ground is covered with snow.—Freda F. Ruoss, nine (X), Berks County, Pa.

Dear Cousin Ruth:—I have not taken any trips that are far away, altho I went to Hershey Park just below Harrisburg, to a family reunion, where I had a recitation to say. We got there just before eleven o'clock. When we first got there we walked around thru the park and then we ate dinner.

After dinner we went to the zoo and thru the greenhouses. At two o'clock the concert began. It was held in the theatre. I did not stay in the theatre till the concert was over.

There are many amusements in the park. There are merry-go-round, a little train, a scooter, a little airplane, a ferris wheel and a roller coaster. We started home about four-thirty o'clock. I have not taken any other trips this summer.—Helen Kelso, eleven (X), Cumberland County, Pa.

Dear Cousin Ruth and Forum Friends:—For a pet I have a chicken. Her name is Pigie. I gave her this name because I think she is half pigeon. The other hens boss her around so if she does not want to stay in the lot she flies right out. She can hardly see feed so I always put some in the mash hopper for her.

We have a big Collie dog, and two cats. My brother gave me a flock of chickens this spring. They are all big now.—Margaret Tomer, (X), Westmoreland County, Pa.

Dear Cousin Ruth:—I am going to tell you about the trip I took this summer. My father was the superintendent of the stone quarry to build a cement road over the Allegheny Mountains, at Oglestown in Somerset County. So mother and my sister and myself went along.

We rented a cottage. There were five cottages. They were called twin-spring cottages. They were on the top of the Allegheny Mountains. It is the highest mountain in the state of Pennsylvania. There is frost there every month of the year. There were two springs where we got our water. We saw as high as eight deer out in the open field eating and playing.

There was a trout stream that ran down thru the mountain back of the cottage where we lived. We went fishing in it.

Thru July and August the Camp Fire Girls came out from Johnstown and camped. They built camp fires. It was surely nice. We played croquet and tennis. We came home to our farm November 6th.—Verna Brubaker, fourteen (X), Chester County, Pa.

Dear Cousin Ruth and Forum Friends:—My oldest sister is married and has a dear little boy named Raymond. My oldest brother works away from home.

We have a black pony named Fred. I like to ride him when my brother is cultivating corn or potatoes. We also have a buggy and harness and like to drive him. I am sending a picture of my brother, Glenn, and my sister, Mildred, and their pet kittens.—Margaret Atkinson, Clarion County, Pa.

BROTHER AND SISTER
Margaret Atkinson, (X), Clarion Co., Pa.

Dear Cousin Ruth:—I will tell you about the trip to the Sesqui-Centennial. We left about half past six and got there about half past nine. I enjoyed the trip very much. We went first to the Navy Yard and went thru many ships and then to the Government Building.—Edna M. Denlinger, twelve, Lancaster County, Pa.

Dear Cousin Ruth:—I am just getting over pneumonia and whooping cough. I have a brother in bed with whooping cough.

We have one cat and one kitten. We have a cat named Timmy. He is black and white. When we are sick in bed he comes to the bedroom window and mews until somebody comes and lets him in. Then he comes and jumps up on our bed and goes to sleep. We have a kitten named Maltie. She is gray. She does many tricks.—Alice Duvall, ten (X), Carroll County, Md.

Dear Cousin Ruth and Forum Friends:—I wish I could have written before. My father and I were busy in the fields.

We have a seven-room house and a big barn and a few buildings.

I have a pet dog, her name is Tricksie. She is a good coon dog. I got seven coons with her. I have a big brother who works in Plymouth, Pa.—Nick Balog, Washington County, Pa.

Dear Cousin Ruth and Forum Friends:—I am in the fourth reader and am getting along fine. I missed eight days when I was ill. I had pneumonia.

I have 54 head marks. I have three classmates. It is very cold here at present. It is good coasting now.—Helen M. Heck, nine, Centre County, Pa.

Dear Cousin Ruth and Forum Friends:—I live on a farm and I have two kittens. Their names are Tabby and Dot. They like to run and play. They stay in the barn. I have a little pen for them. As soon as I get home from school I go to the barn and do my work then I sledride with my brother.—Howard Liegey, Clearfield County, Pa.

"Winter Days"

WALKING into a snow storm the other day, head down, arms full of packages—one of hundreds who had little snowflakes creeping inside of coat collars—I thought of our contest. What a chance to take a picture for "Winter Days," and I didn't have a camera within ten miles! But I hope you've had better luck—that when you found a chance to snap a good picture you had your camera tucked under your arm or squeezed into your overcoat pocket all ready for action.

Any picture that belongs to the title I gave you last week, "Winter Days," may be entered in the contest. Even tho it wasn't taken this year, if it's good send it along. Prizes will be awarded for the clearest and most interesting snapshots contributed by members and friends of the Forum.

Remember—pictures to be counted in the contest should reach me on or before February 5th. Address them Cousin Ruth, care of Pennsylvania Farmer, 261 S. 3rd St., Phila., Pa. then there won't be any delay in my getting them.

COUSIN RUTH.

OUR LITTLE FOLKS PUZZLE CORNER

DEAR LITTLE FOLKS:—If it's as cold the day you work out this puzzle as it was the day I made it for you, I think you'll all be glad this animal has a good warm fur coat. A number of you said you liked to draw from dot to dot, so here's a puzzle you will be glad to see, and here's a little rhyme to help you know what you will find.

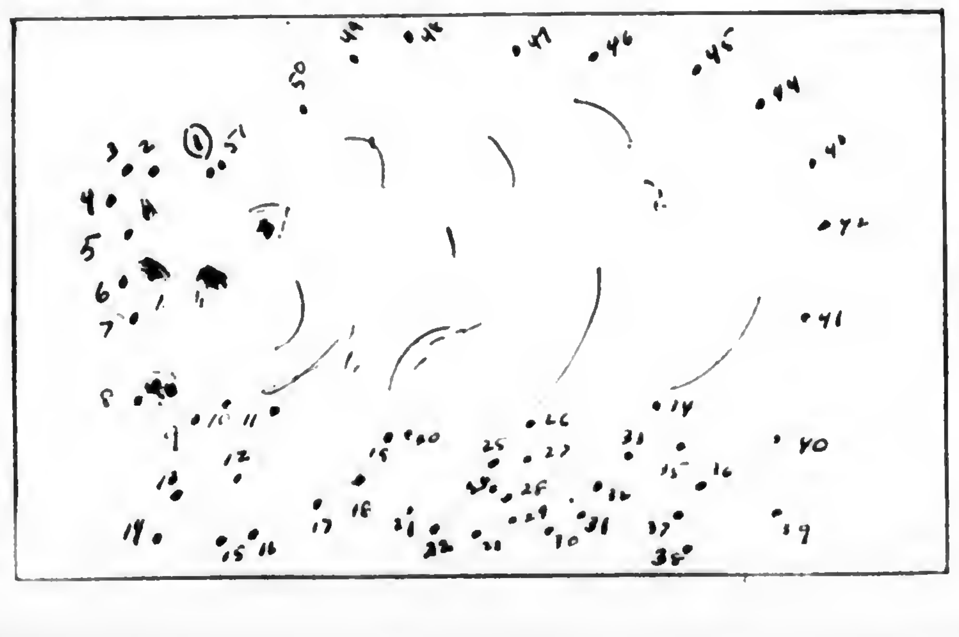
The animal you will draw
Is a great BIG BEAST.
But, like most Little Folks,
He thinks honey is a feast.

Just begin with the dot beside the figure one (I've put a circle around the "1"), and draw to the dot beside the figure two, and so on, drawing from dot to dot until you come around to the dot beside "51." I think you will recognize the animal you have drawn, with the hints I have given you about his coat and one of the things he likes to eat.

When you have found out what animal it is send me the answer on a postcard or in a letter so that it reaches me by February 4th. BE SURE TO SAY HOW OLD YOU ARE, telling me your birthday and the name of the county in which you live. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to the Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the puzzle published in the January 8 issue of Pennsylvania Farmer is: 98 MINUS 76 EQUALS 11 PLUS 11.

The prize winners are: David Boyer, age 9, Danville, Pa.; James Bressler, age 12, Hegins, Pa.; Isabel Emery, age 10, Lewisburg, Pa.; Ruth Naomi Horst, age 11, Ephrata, Pa.; Miles Kerr, age 8, Smicksburg, Pa.; Mary Grace Lutz, age 9, Wick, Pa.; Herbert E. Mearig, age 10, Leacock, Pa.; Violet E. Maurer, age 8, Klingerstown, Pa.; Willard Schultz, age 8, Lansdale, Pa.; Beatrice Umstead, age 11, Edgemoor, Del.



PASSING EVENTS IN PICTURES

(Copyright by Underwood and Underwood)

1.—Washington A. Roebling, builder of the Brooklyn Bridge, who died recently, willed his collection of precious and semi-precious stones to the Smithsonian Institution, Washington, D. C. Here are shown the only black diamond of its kind, the second largest topaz in the world, the Grand Duke's malakite from Siberia and the largest known black opal.

2.—Tobogganing in Quebec, Canada, gives plenty of thrills.

3.—The Boy Scout Home in San Antonio, Texas, said to be the only large building in the world devoted exclusively to Scouting.

4.—On January 7, 1927, the transatlantic radio telephone system between London and New York opened officially by a conversation between Mr. W. S. Gifford, president of the American Telegraph and Telephone Company, and Sir G. Evelyn P. Murray, Secretary of the Post Office in London. Mr. Gifford is seated in the center of the New York group pictured.

5.—Prince William of Sweden, poet, critic and explorer, arrived in New York early this month for a lecture tour.

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Far

JUDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, knew Bayne Trevors, general manager, wasn't square and fired him.

The men grumbled. Trevors threatened to sell her out to the Western Lumber Company. Fortunately, Bud Lee, horse foreman, and old Carson promised to stay. To "Doc" Tripp, veterinarian, and friend of her father, the girl confided her troubles but instead of lightening her burden he added others when he told her that Trevors had recently imported sick calves to the ranch.

Busy days followed for everybody. Nelson, sent by Trevors to make trouble, had persuaded the milkers to leave the place for jobs with the lumber company. Shorthanded, Judith bought a milking machine and hired a new foreman. Mrs. Simpson took up her duties caring for the ranch house and Pollock Hampton, part owner of the ranch, arrived with his guests—Major and Mrs. Langworthy and Marcia, their daughter; Marshal Rogers, lawyer, and Frank Farris, artist.

On May thirtieth, Charlie Miller, returning from Rocky Bend with the pay-roll, was robbed. To avert a walkout the money must be in Judith's hands at six that night. With eighty miles to cover in six hours Bud Lee set off for Rocky Bend. On the way back smokeless powder and a silencer put his horse out of business. But Bud Lee handed the money over to Judith seven minutes before time to pay the men. Riding to Squaw Creek canyon next day, Judith met Lee going over the scene of his holdup of the day before. Together they climbed Indian Head cliffs searching clews. That afternoon, continuing his search, Lee was again surprised at the appearance of Judith. He objected to any girl doing the job on hand but objections didn't stop Judith.

Much to the girl's delight an old cabin up on the plateau had been repaired and Bud Lee didn't tell her it was he who often came here to be alone, not even when she declared the man who had fixed it "a dear." In a hollow nearby they found fresh footprints of two men and at that instant a bullet sped over their heads. They ran for the cabin, firing as they ran, and a third man started shooting from the cabin walls. Lee felt a stinging pain in his leg.

Continued from last week

EVIDENTLY, the man by the cabin had no intention of running. A bullet cut thru Bud Lee's sleeve. At last Lee answered. He ran in closer as he fired and, running, emptied his revolver, jammed it into his waistband, clubbed his rifle . . . and realized with something of a shock that there were but the two rifles on the cliffs to take into consideration. That other rifle, at the cabin, was still. Out of ammunition? Or plugged? Or playing 'possum? Which?

"Stop shooting!" he shouted to Judith.

"I'm coming!" she cried back to him.

Almost at the same instant, their two rifles ready, they came to the cabin. Between them on the ground a man lay at the corner, moving helplessly, groping for his fallen gun, falling back.

"Open the door," said Bud. "I'll get him inside and we'll see who he is. Hurry, Judith; those other jaspers are working down this way as fast as they know how."

Judith, taking time to snatch up the fallen rifle, ran around to the door. Lee slipped his hands under the armpits of the wounded man and dragged him in Judith's wake. In the cabin, the door shut, Lee struck a match and went to a little shelf where there was a candle.

"Bill Crowdy!" gasped Judith.

Almost before Lee saw the man's face he saw the canvas bag tied to his belt, a bag identical with the one he himself had brought from the bank at Rocky Bend.

"The man that stuck up Charlie Miller," he said slowly. "And there's your thousand bucks, or I'm a liar. I get something of their play now; those two fellows up there were waiting to meet him and split the swag three ways. And I've got the guess they'll be asking a look-in yet!"

HE DROPPED a heavy bar into its place across the door and then went to the two small windows and fastened the heavy oaken shutters. When he came back to Judith she was bending over the wounded man. Crowdy's eyes were closed; he looked to be on the verge of death. The girl's face was almost as white as Crowdy's.

Lee knelt and with quick fingers sought the wound. There was a hole in Crowdy's chest, high up near the throat, that was bleeding profusely. At first that seemed the only wound. But in a second Lee had found another. This was in the leg, and this, like Lee's was bound tightly with a handkerchief.

"Got that, first rattle out of the box!" commented Lee. "See it? That's why he stuck on the job and didn't try to run for it. Looks like a rifle-ball had smashed the bone."

He didn't look up. His fingers busy with the string at Crowdy's belt, brought away the canvas bag. There was blood on it; it was heavy and gave forth the mellow jangle of gold.

"You win back your thousand on tonight's play," he said, holding up the bag to Judith, lifting his eyes to her face.

But Judith shrank back, her eyes wide with horror.

"I don't want it! I can never touch it!" she whispered. Suddenly she was shaking from head to foot, her eyes fixed in terrible fascination upon Crowdy's face. Lee tossed the bag to the bunk across the room, where it fell clanking to the floor.

"Now she's going to faint," was his thought. "Well, I won't blame her so darn much. Poor little kid!"

But he did not look at her again. He tore away Crowdy's shirt to discover just how serious the wound in the chest was. The collar-bone had been broken; the ball had plowed its way thru the upper chest, well above the heart, and could be felt under the skin of the shoulder. Unless Bill Crowdy bled to death, he stood an excellent chance of doing time in the penitentiary. Lee stanched the flow of blood, made a rude bandage, and then, lifting the body gently, carried it to the bunk. Crowdy's lax arm, extended downward at the side of the bunk, seemed to be reaching again for the canvas bag; the red fingers touched it with their tips.

"Now," said Lee, speaking bluntly, afraid that a tone of sympathy might merely aid the girl to "shake to pieces," "we've got a chance to be on our way before Number Two and Number Three get into the game. Let's run for it, Judith."

Judith went to the bench by the fireplace and sank down upon it. For a moment she made no reply. Then she shook her head.

"We'll stay here until morning," she said finally, her voice surprising Lee, who had looked for a sign of weakening to accord with her sudden pallor and visible trembling.

"What for?" he wanted to know. "We'll have another fight on our hands if we do. Those fellows, this deep in it, are not going to quit while they know that there's all that money in the shack!"

"I don't care," said Judith firmly. "I won't run from them or anybody else I know! And, besides, Bud Lee, I am not going to give them the chance to get Crowdy away. . . . Do you think he's going to die?"

"No. I don't. Doc Tripp will fix him up."

"Then here I stay, for one. When I go, Bill Crowdy goes with me! He's going to talk, and he's going to help me send Bayne Trevors to the pen."

Bud Lee expressed all he had to say in a silent whistle. He'd made another mistake, that was all. Judith wasn't going to faint for him tonight.

"Then," he said presently, setting her the example, "slip some fresh carrridges into your rifle and get ready for more shooting. I'll put out the light and we'll wait for what's next."

Judith replenished the magazine of her rifle. Lee, watching from under the low-drawn brim of his hat, noted that her fingers were steady now. Crowdy moved on his bunk, lifted a hand weakly, groaned, and grew still. Presently he stirred again, asking weakly for water.

Lee went to the water-bucket standing in a corner. It happened to be half full. He filled a cup, and lifting Crowdy's head, held it to the fevered lips.

"Not exactly what you'd call fresh, is it, Crowdy?" he said lightly. "But the spring's outside and I'm scared to go out in the dark."

Crowdy drank thirstily and lay back, his eyes closed again. Lee rearranged his bandage.

"Put out the light now?" he asked Judith.

"No," she answered. "What's the use, Bud? There are no holes in the walls they could stick a gun-barrel thru, are there?"

NO ONE knew better than he that there were not.

"You see," said Judith, with a half-smile, heroically assumed, "I'm a little afraid of the dark, too! Anyway, since we've got to spend the night with a man in Crowdy's shape, it will be more cosy, won't it, with the light on?"

She even put out her hand to one of the books on the shelves which she could reach from her bench.

"And now," she added, "I'm sure that our hermit won't mind if we peep into his library, will he?"

"No," answered Lee gravely. "Most likely he'll be proud."

Lee found time to muse that life is made of incongruities, woman of inconsistencies. Here with a badly hurt man lying ten feet from her, with every likelihood of the night stillness being ripped in two by a rifle-shot, Judith sat and turned the pages of a book. It was a volume on the breeding and care of pure-blooded horses. Odd sort of thing for her hermit to have brought here with him! Her hand took down another volume. Horses again; a treatise by an eminent authority upon a newly imported line from Arabia. A third book; this, a volume of Elizabethan lyrics. Bud Lee flushed as he watched her. She turned the pages slowly, came back to the fly-leaf page, read the name scrawled there, and turning swiftly to Lee, said accusingly:

"David Burrill Lee, you are a humbug!"

"Wrong again," grinned Lee. "A hermit, you mean! 'A man with a soul.' . . ."

"Scat!" answered Judith. But, under Bud Lee's teasing eyes, the color began to come back into her cheeks. She had been a wee bit enthusiastic over her hermit, making of him a picturesque ideal. She had visioned him, even to the calm eyes, gentle voice. A quick little frown touched her brows as she realized that the eyes and voice which her fancy had bestowed upon the hermit were in actuality the eyes and voice of Bud Lee. But she had called him a dear. And Lee had been laughing at her all the time—had not told her, would never have told her. The thought came to her that she would like to slap Bud Lee's face for him. And she had told Tripp she would like to slap Pollock Hampton's. Good and hard!

FROM without came the low murmur of men's voices. Judith laid her book aside and drew her rifle across her knees, her eyes bright and eager. At infrequent intervals for perhaps three or four minutes the two voices came indistinctly to them in the cabin. Then silence for as long a time. And then a voice again, this time quite near the door, calling out clearly:

"Hey, you in there! Pitch the money out the window and we'll let you go."

"There's a voice," said Judith quietly, "to remember! I'll be able to swear to it in court."

Certainly a voice to remember, just as one remembers an unusual face for years tho it be but a chance one seen in a crowd. A voice markedly individual, not merely because it was somewhat high-pitched for a man's, but rather for a quality not easily defined, which gave to it a certain vibrant, unpleasant harshness, sounding metallic almost, rasping, as tho with the hiss of steel surfaces rubbing. Altogether impossible to describe adequately, yet, as Judith said, not to be forgotten.

Judith noticed a puzzled look on Bud's face. He called out: "What did you say out there?"

Word for word came the command again: "Pitch the money out of the window and we'll let you go."

"Lee turned triumphantly to Judith.

"I've got his tag!" he whispered to her. "I played poker with that voice one night not four months ago in Rocky Bend!

"Who is he?" Judith whispered back. "With Crowdy down, if we know who one of these men is, the rest will be easy. Who is he?"

"A bad egg," Lee told her gravely. "He's done time in the state pen. He's been out less than a year. Gunman, stick-up man, convicted once already for manslaughter . . ."

"Not Chris Quinnion, Bud Lee!" she cried excitedly. "Not Chris Quinnion!"

"Sh!" he commanded softly. "There's no use tipping our hand off to him. Yes; it's crooked Chris Quinnion. You don't know him, do you?"

HE HAD never seen her eyes look as they looked now. They were as hard and bright as steel; no true woman's eyes he thought swiftly. Rather the eyes of a man with murder in his heart.

"Then, thank God!" whispered Judith, her voice tense. "Can you keep a secret with me, Bud Lee? Were it not for the man calling to us now, Luke Sanford would be here in our stead. Crooked Chris Quinnion served his time in San Quentin because my father sent him there. And he had not been free six months before he kept his oath and murdered my poor old dad!"

"Well?" came the interrupting snarl of Quinnion's voice, like the omnious whine of an enraged animal. "What's the word?"

"Give us five minutes to think it over," returned Lee coolly. And, incredulous eyes on Judith's set face, he said gently: "I was on the ranch when the accident happened. He must have driven that heavy car a little too close to the edge of the grade. The bank just naturally gave way."

Judith, her lips tightly compressed, shook her head.

"You didn't find him under the car, did you? And the blow that killed him might have been dealt with some heavy weapon in the hands of a man standing behind him, mightn't it? I know, Bud Lee, I know!"

"How do you know?" he demanded insistently. "You weren't here even."

"No. I was in San Francisco. But the day before I had a letter from father. He expected me home very soon. He was going out, he said in his letter, to look at the road over the mountain. He wrote that the grade was dangerous, especially at the very place where the car went over! He wanted me to know so that in case he could not get the work done on it before I came, I would be careful. On top of that would he go and run his car into such danger as that? Oh, I know!" she cried again, her hands hard upon her rifle. "I know, I tell you! From the first I suspected. I knew that Chris Quinnion had threatened a dozen times to 'get' father; I knew that soon or late he would try. I wrote Emmet Sawyer, our county sheriff, and told him what I believed, asked him to go to the spot and see what the signs told. A square man is Emmet Sawyer and as sharp as tacks."

"And he told you that you were mistaken?"

"HE DID nothing of the kind! He reported the tracks of the car showed it had kept well away from the bank, that evidently it had stopped there, that again it had gone on, swerving so as to run close to the edge! I know what happened: Father got out to look at the dangerous spot and to put up the sign he had brought with him and that was found in the road. Chris Quinnion had followed him, perhaps to shoot him down from behind, Chris Quinnion's way! Then he saw a safer way. He came up behind poor old dad and struck him in the head with something, rifle-barrel or revolver. He started the car up and let it run over the bank. He—"

She broke off then. Bud Lee felt that he knew what she would say if she could bring herself to go on; that she would tell how crooked Chris Quinnion had thrown the unconscious man down over the bank to lie, bruised and broken, by the wrecked car.

"You've got to be almighty sure before you make a charge like that," he reminded her. "If Quinnion had done it, why didn't Emmet Sawyer get the dead-wood on him?"

"Because," she whispered quickly, "a man fooled Sawyer! Yes, and fooled me! Quinnion established an alibi. A man whose word there was no reason to doubt said that Quinnion was with him at the time of the murder. And that man was—Bayne Trevors!"

"Trevors?" muttered Lee. He shook his head. "Trevors is a hard man, Judith. And he's a scoundrel, if you want to know! But frame up a murder deal—plan to murder Luke Sanford—No. I don't believe it!"

"Is he the man to miss a chance that lay at his hand? The main chance for him? The chance to hold a man like Chris Quinnion in the hollow of his hand, to make him do his bidding, to set him just such work as he is doing now? Answer me! Is Bayno Trevors above a deal like that?"

Bud Lee's answer was silence.

"And there is one other thing," went on Judith swiftly, "known to no one but Emmet Sawyer, whom I told, and me and Chris Quinnion: In father's letter he told me that a man had paid him some money the day before, and that he was going to drive to Rocky Bend to bank it. 'There are some tough customers in the country,' he wrote, 'and it's foolhardy to have too much money in our old safe.' That money, several hundred dollars, was never banked. It was not found on his body. Where did it go?"

"Even that doesn't incriminato Quinnion, you know."

"No. The rest is pure guesswork on my part. Guesswork based on what I know. Not enough to hang Chris Quinnion, Bud Lee. But enough to make me sure. He's working at Trevors' game right now. If we can prove that it is Trevors' game, it will go to show how worthless his alibi was."

"Well?" called Quinnion, the third time. "What about it? We ain't goin' to wait all night."

"Tell him," whispered Judith, her hand on Lee's arm, "to come and get it if he wants it! One of us can hold the cabin against the two of them while the other slips out in the dark and rides back to the ranch-house for help. If we're in luck, Bud Lee, we'll corner the bunch of them before daylight!"

LEE stood a moment looking down into her face, his mind filled with uncertainties. With all his soul he wished that Judith had not come with him tonight, that he had only himself to think of now. Quinnion, not to be further put off, called again, the snarl of his voice rising into ugly threat. Still Lee, thinking of Judith, hesitated.

"It's the only way," she insisted. "If we gave them the money they'd want Bill Crowdy next. If they got Crowdy away with them into the mountains I am not sure that they could not hide until they got him safe in Trevors' hands. Then we'd have the whole fight still to make, sooner or later. It's our one bet, Lee!"

And Bud Lee, seeing no better way ahead for them, blew out the candle, forced Judith to stand close to the rock chimney of the fireplace, took his station near her, and answered Quinnion, saying shortly:

"Come ahead when you're ready. We're waiting."

Quinnion's curse, the crack of his rifle, the flying splinters from the cabin door, came together like one implacable menace.

"And now, Bud Lee," cried Judith quickly, "I don't mind telling you, not seeing the end of the string we are playing, that you are a man to my liking!"

"My hat's off," said Lee, with grave simplicity. "And in any old kind of a fight a man wouldn't want a better pardner than I can reach now, putting out my hand. He'd want—just a thorobred! And now, little pardner, let's give them—fits!"

Judith, even as Quinnion's second shot tore into the door, laughed softly.

"Finish it as you began it, Bud Lee! Even George Washington swore at Monmouth, you know!"

So Bud Lee amended his words and spoke his thought:

"Then, pardner, let's give 'em hell!"

Crouching in the dark, reserving their own fire while they waited for something more definite than the bark of a rifle to shoot at, their hands met.

IT CAME about, quite as matters often do, that at the three-mile-distant ranch headquarters it was **one who knew** comparatively little of the ways of this part of the world **who was first to suspect** all was not well with Judith Sanford. To Pollock Hampton her failure to appear at dinner was significant.

Together with the other newcomers to the ranch from the city he had been deeply moved by yesterday's outlawry. Drawing upon a vivid imagination, he peopled the woods with desperate characters. When after dinner an hour passed without bringing Judith, he began to show signs of nervous anxiety. Without making his fears known to his friends, he went to the office and telephoned to Doc Tripp. All that Tripp could tell him was that he didn't know where Judith was and didn't care; she could take care of herself. Tho the veterinarian didn't say as much, he was at the moment puzzled by the new sickness among the hogs and his irritable concern in this matter allowed him scant interest in other people's affairs.

(To be continued next week)

"When did you first become acquainted with your husband?"

"The first time I asked him for money after we were married."

Farming Where It Seldom Rains

This three bottom tractor lister is used in the semi-arid regions of the West. Corn and other crops are planted in the deep furrows where most of the moisture collects. Listing helps keep the soil from blowing away from the roots of the crop. In some very wet regions crops are planted only on ridges to prevent rotting.

Did you ever hear this one?—

Some Reason for It

The next time anybody yelps about a typographical error in your paper, hand them this one:

In an ordinary column there are 10,000 pieces of type, there are seven wrong positions that a letter may be put in, there are 70,000 chances to make errors, and millions of chances for transpositions. In the short sentence, "To be or not to be," by transpositions alone, it is possible to make 2,759,022 errors.

All of which helps to explain the following items:

Mrs. McPherson's lips trembled. She removed her spectacles and dabbed at a vagrant team coursing down her ashen cheek.—Los Angeles Examiner.

Dear Little Bluebells

"Marines will now guard the United States mails."

"How lovely," said Bluebelle, "I hope they send a nice one to escort this letter. It's to Algy."

Steamship Agent

"Can I see Mr. Wombat?"

"He is engaged."

"I just heard it. I want to see him about a honeymoon trip."

Pen Products

"I earn a living from the pen."

"So do I."

"Poetry?"

"Hogs."

"Mother, was your name Pullman before you were married?"

"No, dear. Why do you ask?"

"Well, I just wondered. I see that name on most of our towels."

Up and About

"I thought you were sick, May?"

"I had to get well in a hurry, I couldn't stand my husband's cooking."

Absent-Minded Professor—Walter, half an hour ago I ordered some lamb chops. Have you forgotten them—or have I had them?—DeLaval Monthly.

Dad's Report

"How is your girl doing in college?"

"Well, she's got good vaccination marks, that's about all I can say."

So It Goes

Mother—Mary, aren't you getting too big to play with the boys?

Mary—Oh, no, mother; the bigger I get the better I like 'em.

To Fit Him

Customer—I want a couple of pillow-cases.

Clerk—What size?

Customer—I don't know, but I wear a size seven hat.

Mike—This is a great country, Pat.

Pat—And how's that?

Mike—Shure, th' sign in the post-office sez yez can buy a foive-dollar money order for three cents.

"They named the baby Bob."

"For his father?"

"No, for his mother's hair."

Pennsylvania Products Show

(Continued from page 3)

Dairyman told those attending the meeting.

In a single year America produced 116,000,000,000 pounds of milk, enough to fill a canal 16 feet deep, as wide as the Erie Canal, and 3170 miles long, or the equivalent of the distance from New York to San Francisco. If put in tank milk cars, the train would be 34,462 miles long, or 11 trains running parallelly across the continent.

"Ten years ago we consumed 78,000,000,000 pounds of milk as compared to over 116,000,000,000 pounds in 1925," Mr. Glover stated. "Part of this is accounted for by the 17 per cent increase in population, but the interesting thing to the dairy farmer is that the annual per capita consumption has increased from 790 pounds to 1012 pounds or 28 per cent. This extra consumption of milk calculated at a very nominal farm value returns to the dairy farmers over $500,000,000 a year."

The foundation of the industry is the 23,600,000 cows in the dairy herds," Mr. Glover explained. "Of these, only one-third return a profit to their owners; one-third just pay for their board, and the remainder are kept at a loss. The investment in barns alone for the boarder cows amounts to $750,000,000."

To locate the poor cows so they can be eliminated he suggested the cow testing association. He also urged the growing of more legumes.

HORTICULTURAL ASSOCIATION

TWO speakers at the State Horticultural Association of Pennsylvania, Robert W. Balderston, secretary, Interstate Milk Producers' Association, and John W. Gorby, executive secretary of Apples for Health, Inc., stressed the necessity for advertising home-grown fruit.

In outlining the advertising campaign carried on by the Interstate Dairy Council, Mr. Balderston attempted to show the fruit growers of the state the value of advertising their wares.

"During the past year it is estimated that over 780,000 people, children and adults, were reached by talks and stories and plays given by the council, carrying the message of the importance of milk, green vegetables and fruit in the diet.

"But the Dairy Council was not content to conduct simply a propaganda association to increase the consumption of dairy products, and incidentally fruits and vegetables. It established a quality education department, which worked with the producers in the territory for two years and then was changed to the Quality Control Department, to carry out a set of sanitary regulations approved by the producers and dealers of the territory. Thru these regulations the quality of supplies in the Philadelphia Milk Shed has been materially improved.

Methods Used by Dairy Council

"All the Dairy Council work has been supported by a general publicity department which has worked with newspaper articles, some little advertising, exhibits and very largely thru motion pictures in theatres and thru schools and churches. One motion picture was shown in one year in Philadelphia to over a million people in the regular Philadelphia moving picture theatres."

Mr. Gorby described the nationwide movement to advertise "Apples for Health." He told apple growers about the lessons they can learn from the national advertising of the orange; how in six years the American people per capita have increased the orange consumption from 31 to 65 and in twenty years have multiplied their total sales by nearly 500 per cent; how the raisin growers in ten years have increased their per capita consumption of 1 to 4.1 pounds and how their total sales have increased from 70,000 to 200,000 tons; how in 10 years the canned pineapple thru cooperative national advertising had grown from 400,000 to more than five million cases.

Striking illustration of the power of national advertising may be found in sixteen other fruits and vegetables, that have been made the subject of strong individual campaigns.

"The successful national advertising of the apple will first of all require time. Second, a considerable amount of money. Third, effective organization. Fourth, expert advertising skill. Our organization is prepared to meet all these requirements," Mr. Gorby declared.

Bud Selection Improves Crops

Dr. C. E. Myers, plant breeding specialist of the Pennsylvania State College, speaking before the Horticultural Association, said that the possibilities of improving horticultural crops by bud selection have attracted the attention of commercial and scientific horticulturists for the past quarter of a century.

There are two well recognized kinds of bud variations—modifications and mutations. The former are commonly found but fruit bud mutations are rare. Some varieties show a greater tendency to produce bud sports than others.

Controlling the Oriental fruit moth by means of bait pails has been used in experiments at the Arendtsville Laboratory, said S. W. Frost, of the Pennsylvania State College Experiment Station. The work has shown encouraging results but further experiments will be conducted with a view to making definite recommendation later.

Cultivation in the spring and clean practices during the summer and fall were stressed and strongly recommended to fight this insect pest.

VEGETABLE GROWERS' ASSOCIATION

THOSE attending the Pennsylvania Vegetable Growers' Association learned from W. B. Mack, of the Horticultural Department of State College, that there are tricks in all trades, even in the selection of the right fertilizer for the right crop.

Results of experiments with fertilization of vegetable crops in rotation at the College Experiment Station were given by Professor Mack, with emphasis on work with cabbage, early potatoes and tomatoes.

BEEKEEPERS' ASSOCIATION

INSECTS are necessary in the pollination of plums, peaches, apricots, cherries, and all other stone fruits, according to Henry R. Eby, county agent at Pittsburgh, in speaking before the Pennsylvania Beekeepers' Association.

The honey bee is the best pollinator which man has under control. Authorities were quoted by County Agent Eby to prove that 90 per cent of the pollination of orchards is due to honey bees.

Cooperative bee work in Berks County was reported by M. T. Hartman, assistant county agent at Reading. Bee work in the county is made possible by the cooperation of the beekeepers in the organized extension and educational activities of the organizations represented in the county.

The Berks County Beekeepers' Association is an active organization with a membership of about sixty, representing many of the largest beekeepers in the county. There are about 3000 colonies of bees distributed among 500 beekeepers. Du the past year a total of fourteen b keepers' meetings were held, wi a total attendance of 295.

BABY CHICK ASSOCIATIO

G. H. HOCKER, Wayne Cou made a plea for higher app priations for the poultry husba work of the Pennsylvania State Co lege in presenting the special re of the legislative committee of Pennsylvania State Baby Chick sociation to that organization. T committee has found that the p ent facilities of the department entirely inadequate to give pro service to the poultry industry of state.

Requests listed in the report of committee include a new $200, poultry administration building, central feed and storage house, laying houses, 24 brooder houses, poultry breeding houses, and $25, for a state egg-laying contest. committee also made recommen tions for increased appropriations research and instruction work that more knowledge and info tion would be available for distrib tion thru the extension service poultrymen of the state.

From One Chick to Million

From the nest-stealing hen vi the lone chick to the hatchery p ducing 1,500,000 chicks in a s year was a part of the word pictu painted for members of the B Chick Association by H. C. Knand head of the department of poultr husbandry at the Pennsylvania Sta College.

Incubator capacities during th past few years have doubled, treb and quadrupled as the demand f baby chicks has increased. Produ tion of baby chicks today is a facto proposition. It depends upon tw principles — quality and serv Transportation, at first a ser problem, still needs improvem Chicks often are shipped 100 more miles. To satisfy custom chicks must be delivered in condition. If the future of the hatch ery business is to be a successful all poultry agencies must cooper There must be publicity and adver tising.

POULTRY ASSOCIATIO

A. G. PHILIPS, former head of the Department of Husbandry at Purdue Uni speaking to Pennsylvania men at the Farm Products urged them to protect the interests against influences to stifle the industry. Such ganization also would obtain p ity for Pennsylvania poultry ests, legislation for the poultry dustry of the Commonwealth, eration in the solving of nation poultry problems, education, support of the State College. As example of a successful organiza he pointed to the Indiana St Poultry Association.

Two hundred carloads of poultry, valued at $1,250,000, are ceived and sold each week in West Washington Market of York City, said Gabriel Kr commission merchant of New To this center shipments of poul arrive from practically every and thru its merchants are sold per cent of the poultry raised in New England, Middle and South At lantic States.

Market quotations there are bas largely upon supply and demand. Poultrymen were advised to ship poultry to reliable bonded commi sion merchants only.

The turkey is the only domestic ed commercial fowl native to Amer ica, was the statment made by H. H. Kauffman, poultry extension special ist of the Pennsylvania State Col lege. Turkeys were unknown to the civilized world before Columbus dis covered America. Chickens have

Exhibitors of Prize Fleeces

ALLEN A. PAMS, Greene County, exhibited the champion ram fleece, and Chas. B. Orndoff, also of Greene County, the champion ewe fleece, at the State Farm Products Show. Over 150 fleeces were entered. The Greene County Wool Growers' Association was awarded first prize in the special county exhibit of 6 fine wool fleeces. The Washington County association took second place in this exhibit and first in the special county exhibit of 6 medium wool fleeces, with Mercer County a close second. The awards follow:

Class 1—Fine Wool

Purebred Merino Ram.—1, Allen A. Pams, Deer Lick; 2, Rufus Patterson & Son, Kirby; 3, Murdock Fuller, Waynesburg; 4, J. C. Paxton, Houston.

Purebred Merino Ewe.—1 and 2, Chas. B. Orndoff, Waynesburg; 3 and 4, Rufus Patterson & Son, Kirby.

Merino Wether. — 1, Lawrence County Wool Growers Association, Newcastle; 2, John Parsons, Wind Ridge; 3, J. W. Stewart, Jefferson.

Merino Lamb.—1, J. C. Paxton, Houston; 2, J. H. Orndoff, Waynesburg; 3, R. D. Hamilton & Son, Canonsburg.

Merino Ewe (Commercial Grade). —1, H. K. Bell, Clarksville; 2 and 4, Horn and Clemens, Taylorstown; 3, Mercer County Wool Growers' Association, Mercer.

Class 2—Medium Wool

Purebred Ram.—1 and 4, F. W. McDowell, Mercer; 2, J. B. Henderson, Hickory; 3, McKean County Sheep and Wool Growers, Smethport.

Purebred Ewe.—1, Jas. Marquis, Hickory; 2, Lawrence County Cooperative Wool Growers' Association, New Castle; 3 and 4, F. W. McDowell, Mercer.

One-half Blood Ewe.—1, 2, 3 and 4, Lawrence County Cooperative Wool Growers' Association, New Castle.

Three-eighths Blood Ewe.—1, Mercer County Wool Growers' Ass'n, Mercer; 2, McKean County Sheep & Wool Growers' Association, Smethport; 3, Lawrence County Cooperative Wool Growers' Association, New Castle; 4, Jas. Marquis, Hickory.

One-fourth Blood Ewe.—1, J. B. Henderson, Hickory; 2, Mercer County Wool Growers' Association, Mercer; 3 and 4, Lawrence County Cooperative Wool Growers' Association, New Castle.

Class 3—Coarse Wool

Purebred Ewe.—1 and 2, Mercer County Wool Growers' Association, Mercer.

Class 4—Championships

Champion Ram Fleece.—1, Allen A. Pams, Deer Lick.

Champion Ewe Fleece.—1, Charles B. Orndoff, Waynesburg.

Class 5—Special County Exhibit

Six Fine Wool Fleeces.—1, Greene County Wool Growers' Association, Waynesburg; 2, Washington County Wool Growers' Association, Washington; 3, Lawrence County Cooperative Wool Growers' Association, New Castle; 4, Mercer County Wool Growers' Association, Mercer.

Six Medium Wool Fleeces.—1, Washington County Wool Growers' Association, Washington; 2, Mercer County Cooperative Wool Growers' Association, Mercer; 3, Lawrence County Cooperative Wool Growers' Association, New Castle; 4, McKean County Sheep & Wool Growers, Smethport.

RADIO DEPARTMENT

The Man Behind the Voice

"GOOD evening, ladies and gentlemen of the radio audience." While no official copyright has been secured on this phrase, the radio listener can rest assured that it is Graham McNamee, one of the popular announcers of WEAF. But as the personality behind the radio voice has always been a thing of mystery to those whom it guides thru the maze of broadcast programs, a few words about this favorite announcer and "radio reporter" should be interesting.

Soloist When Small Boy

Graham McNamee was well started on a musical career when the day of radio broadcasting came. As a boy he had a sweet soprano voice, and in St. Paul, Minn., where his family had moved from his birthplace in Washington, D. C., he won distinction for his musical talents. After losing his soprano voice, McNamee developed a fine baritone and gained prominence as a church and concert soloist.

One day, in the early summer of 1923, Graham McNamee "walked in"—as he puts it—to WEAF's reception room at 195 Broadway, New York City, wondering if he possessed the qualifications for the position of radio announcer. He was given a voice test and a day or so later informed that he was to be "taken on."

From that day McNamee's fame grew as he proved able by his wonderful versatility to describe equally well the plays of a World's Series or the technique of the Philharmonic Orchestra. His most famous assignment of announcing and reporting was the Democratic National Convention, but politics is far from being the limit of his ability. He is an active sport follower, keen and quick-sighted, as his description of leading football games and boxing contests has shown. His last national assignment was the inauguration of President Coolidge.

So when you tune in on WEAF on your local station and hear "Good evening, ladies and gentlemen of the radio audience" you may feel certain that it is the voice of Graham McNamee.

Graham McNamee, popular announcer of WEAF.

Exhibitors of the Best Tobacco

D. F. HOLBEIN, Lancaster County, won sweepstakes for the best exhibit of cigar filler tobacco in the State Farm Products Show exhibit, and first prize in the broadleaf filler B tobacco class. Hayes Dorey, Clinton County, won sweepstakes for the best exhibit of cigar wrapper tobacco and first prize in the Havana Seed wrapper class. The complete list of awards follows:

Pennsylvania Broadleaf

Wrapper and Binder.—1, Lewis R. Creamer, Lancaster County, $5; 2, J. F. Weaver, Lancaster County, $3; 3, J. H. Hostetter, Lancaster County, $1.

Wrapper B's.—1, J. F. Weaver, Lancaster County, $5; 2, John F. Good, Lancaster County, $3; 3, Chas. H. Gerlach, Lancaster County, $1.

Filler B's.—1, D. F. Holbein, Lancaster County, (Sweepstakes) $5; 2, C. R. Cassel, Lancaster County, $3; 3, Wm. Strohl, Lancaster County, $1.

Farmers' Filler.—1, Milt Carpenter, Lancaster County, $3; 2, Wm. Jones, Lycoming County, $2.

Pennsylvania Havana Seed

Wrappers:—1, Hayes Dorey, Clinton County, (Sweepstakes), $5; 2, S. C. Ramm, Clinton County, $3; 3, R. J. Miller, Clinton County, $1.

Binders.—1, S. C. Ramm, Clinton County, $5; 2, David Baird, Clinton County, $3; 3, Hayes Dorey, Clinton County, $1.

Filler B's.—1, S. C. Ramm, Clinton County, $3; 2, Hayes Dorey, Clinton County, $2; 3, R. J. Miller, Clinton County, $0.50.

Farmer's Fillers:—1, Hayes Dorey, Clinton County, $3; 2, S. C. Ramm, Clinton County, $2; 3, Ben M. Baird, Clinton County, $0.50.

GLECKNER 1000 Thousan 1000 HARNESS

12 Wear-Resisting Improvements

Style "P" Penn'a, N. Y., Ohio & West

$68 for 1½" traces. Add $2.65 for 1¾" traces (without collar)

When You Buy Harness

The three most important things to consider are: Quality, Price and Service

"GLECKNER" QUALITY—is well known and our reputation for making the best harness has been earned by forty-eight (48) years experience in the Harness business. Only best selection of hides, thorougnly tanned; genuine linen thread and tested hardware are used in GLECKNER Harness. Every operation is under the direction of a member of the GLECKNER family (father and four sons).

"GLECKNER" PRICE—is lower than any other high quality harness. Standardization and quantity production have reduced the cost. Hence the name 1000 "Thousan" 1000 Harness illustrated above. (Thousand of one kind).

"GLECKNER" SERVICE— is given by the GLECKNER dealer nearest to you. He will let you examine the Harness, explain the easy adjustments, fit it to your horses if you so wish, see that you receive the red Guarantee Tag that goes with each set and arrange time payments if desired. He always keeps in stock extra parts for your convenience. No letters to write, no red tape, No special hardware to cause delay.

Berlin, N. H., Feb'ry 14, 1924.

"We have handled your team Harness for several years. We have sold most of them to Lumbering Companies and they have given the best of satisfaction." J. F. BELL & SONS COMPANY.

FREE—Send for Booklet with information about the 11 other styles and 12 Wear-Resisting Improvements. Ask for name of nearest GLECKNER Dealer.

STEADIER FORDSON POWER with PICKERING Governors

Equip your Fordson with a Pickering Governor for steady, even power ALL the time.

For the Pickering is built without joints or links which prevents any loss of regulation and makes it respond instantly to the slightest change in load. This means steady power, smaller fuel bills and longer tractor life.

The Pickering does not sacrifice power for power control. It is the only governor that does not cut down the power of the motor—TESTED and PROVED by the University of Nebraska.

Send coupon for free pamphlet 8-A which describes the Pickering Governor for your make of tractor, and tells how the governor pays for itself in 60 days.

34 per cent linseed meal.. ..	48.25@

Mill feed firm under improved demand and continued light production.

Livestock and Feeds Advance

Review of the Week Ending January 22

POTATOES.—Mild rainy weather, liberal supplies and a limited demand were responsible for the weak condition of the potato markets during the week. Prices averaged slightly lower, altho real fancy stock was about steady. Most markets reported considerable stock of ordinary quality and this had a depressing effect on the demand.

POULTRY.—The live poultry market in New York was firm during the early part of the week under moderate supplies and a fair demand. Prices advanced slightly. Toward the close of the week supplies did not clean up and the market developed an unsettled tone. Receipts of dressed poultry were light but the mild weather was unfavorable to trading and conditions were rather unsatisfactory.

EGGS.—The New York market was weaker due to more liberal receipts. At the close of the week prices were about steady on fresh-gathered eggs. Chain stores were buying in considerable quantities. Nearby eggs declined slightly and supplies were not cleaned up from day to day.

BUTTER.—The large butter markets were erratic and very irregular. The market opened steady on Monday, and developed some strength on Tuesday but Wednesday brought sharp declines. This was due chiefly to lighter buying. At the close all markets showed a steadier tendency but were far from being firm.

FEED.—The markets were stronger and prices advanced on most lines. Cold weather over wide areas increased consumption to some extent. Wheat feeds made moderate advances. Cottonseed was higher but the demand was limited at the higher price levels.

HAY.—The market was generally steady with supplies about equal to the demand. Top grades were in fair demand but lower grades were hard to move. Alfalfa hay was more active under lighter receipts and offerings of timothy were also light.

LIVESTOCK.—The hog market at Chicago was irregular and prices closed lower than last week. Beef steers were 25c lower while heifers were steady. Vealers advanced sharply toward the end of the week. Stockers and feeders were strong and heavy calves were steady. Fat lambs were lower but yearling wethers closed steady.

GRAIN.—The wheat market was slightly higher at the end of the week with a fair volume of business. Corn was steady in price but the market was draggy.

Adams County, Pa.—Steady cold weather prevails with no snow. Farmers hauling manure, cutting wood and trimming apple trees. Some unsatisfactory reports of the condition of corn in the cribs. Prices: wheat, $1.35; corn, 75c; oats, 50c; 1½ per cent milk, $2.70; eggs, 40c.—A. R., January 18.

Armstrong County, Pa.—A five- to six-inch snow covering has been with us for about two weeks. If present conditions continue fall-seeded grains promise well for next season. Baled hay and straw and some grain are being moved to market and commercial feeds, lime and coal are coming back. There has not been a season in many years when it was more difficult to secure coal. Almost all private mine owners are now equipped with trucks and insist upon delivery at a price in some instances, of 17c per bushel, or if it can be gotten at all at 10c per bushel on scaffold at mine. These prices represent an advance of about 50 per cent over those two or three years ago. To offset what seems unfair some farmers have bought sawing outfits of the Down-East type and are sawing out the light timber from the home woodlot. Nearly all fat hogs and cattle slaughtered and sent to market. Farm flocks of hens are not laying generously, still prices have not advanced in proportion to the scarcity of eggs. Little fall plowing was done. Many bushels of certified seed potatoes will be brought in for spring planting. Acreage will be less than last year. In this part of the state a defined propaganda is being organized seeking an advance in the wages of teachers in public schools. Prices: wheat, $1.30; rye, $1.25; buckwheat, $1.75 per 100 lbs.; oats, 55c; corn, 80c; potatoes, $2@2.20; apples, 50c@$1; dressed pork to 200-lb carcass, 17c; beef, 15@18c by carcass; chickens, 28@30c lb., live; butter, 50c; eggs, 55c.—W. M. P., January 10.

Centre County, Pa.—Ground is covered with snow. Many fields of corn still standing unhusked. Many are putting up ice, especially dairy farmers. More bucks were brought out of the mountains than have ever been recorded. Market quotations: chickens, live, 20c; veal calves, live, 10c; pork, live, 11c; dressed, 16c; wheat, $1.30; rye, 90c; corn, 85c; barley, 70c; buckwheat, 90c; oats, 40c; butter, 45c; eggs, 40c; lard, 15c.—A., January 17.

Chester County, Pa.—The extreme cold weather continues. A young blizzard on January 15 blocked many roads. Many farmers finished corn during cold days that snow was off the ground, altho there is a lot still in the fields in shocks and some on stalk. Poultry raisers are making plans to start their young chicks off in the early spring. Eggs have taken a big drop, bringing about 43c from the commission men. Potatoes still about $2 in small quantities. Apples are moving very slowly even when priced from 50c to 75c per bu. Milk has found a ready market all fall and winter. Good cows are rather scarce and high in price.—F. R. G., January 17.

Clinton County, Pa.—Cold and lots of snow since December 3rd. Ice 12 inches thick has been housed by farmers. The Clinton County Cooperative Association met January 5 in annual session, elected officers and directors, and reported a substantial increase in business. The Clinton County Extension Association met January 7 and elected officers and directors for the ensuing year. Very little wheat sold. Price too low for most farmers. Butchering about completed. Shoats and fat hogs scarce and high. Much corn standing in the fields.—W. C. W., January 14.

Elk County, Pa.—Moderate amount of snow and roads have been open and in good shape so far. Poultry farmers busy with only a fair average for pullet production so far and old hens slow to start. Prices remain rather good, being about 85c at present. Potatoes holding up well. Still getting $2 but sale not brisk. Butter about 55c; hay, $25 and very little grain of any sort for sale. This year marked first all-day meeting of County Extension Association and it was huge success. About 200 business men and farmers had luncheon together.—R. D. R., January 14.

Juniata County, Pa.—We are having real winter weather with lots of ice on the roads but have had very little snow at one time. Farmers are busy filling their wood sheds. There has been a lot of sickness and doctors are very scarce and hard to get. Egg production is increasing and prices not so high. Prices: wheat, $1.25; corn, 80c@$1; poultry, heavy, 25@30c; eggs, 40c; butter, 40c.—C. B. L., January 10.

Middlesex County, N. J.—Reports indicate more unhusked corn than usual due largely to scarcity of labor and low prices. Potato growers are ordering fertilizer and considerable home mixing is being done. Indications are for a 15% increase in acreage over last year. Apple growers fairly well cleaned up. Larger growers shipping to New York and Philadelphia have suffered more than those having established local markets. Egg prices discouraging but hatcheries report plenty of orders. A number are putting in added incubator equipment and quite a few men are starting in this business.—O. G. B., Jan. 15.

Mifflin County, Pa.—Farmers not doing much but attending to the stock. Some hauling out manure. Still many shocks of corn standing out. Still some butchering done by farm folks. Small pigs are more plentiful and some cheaper than a year ago. A few public sales of livestock and farm implements are being offered; veal calves can be bought at 10c lb. Dealers are paying for wheat, $1.28; corn, 65c; oats, 45c; potatoes, $1.50; eggs, 40c; butter, 45@50c; lard, 14c; chickens, 20c; apples, 50c.—J. H. B., January 14.

Snyder County, Pa.—We are having cold weather and six snows since November, 1926. Not much snow on the ground at present. Quite a good deal of corn to husk yet. Threshing about done. Some farmers feeding cattle for market. Lots of hogs on the market. Markets: wheat, $1.25; corn, 70c; oats, 40c; rye, 80c; butter, 50c; eggs, 45c.—S. D. D., January 10.

Susquehanna County, Pa.—We are having our seventh week of real winter weather, the thermometer registering from 16 to 20 degrees below zero. Butchering nearly all done. Roads mostly blocked with snow altho a few farmers have made V-shaped drags out of planks and cleared roads for travel. As corn was of poor quality, seed will be very scarce next spring. Winter apples are rotting badly. Farmer's profits on a winter dairy won't be very big this weather, especially where cows have to go very far for a drink of ice cold water. Hens laying and eggs dropping in price. Farmers are busy cutting wood and tending stock. Eggs, 60c; butter, 55c; apples, $1.25.—J. A. G., January 11.

Tioga County, N. Y.—A vast amount of snow has fallen which prevailing high winds blow into huge drifts. Roads are almost impassable on some of the hill farms. Very cold weather by spells, 10 to 12 below zero. The potato yield was not large and all that were raised were not dug. Wet weather was also responsible for vast losses in beans and buckwheat, as well as many fields of oats and hay. There were six Farm and Home Bureau meetings held in this county the week ending January 8th. The conservation commission of the state game laws report a favorable year for pheasants during 1926 and expect to distribute many more young birds and eggs thruout the entire state. Prices: wood, $3.50@4.50 a cord; coal, chestnut, $13@14 ton; potatoes, $1.50@2; eggs, 53c, for fresh white; butter, 53@55c. Meats range from 12c to 40c for beef and 25@50c for pork.—C. A. A. B., January 12.

Products Show

(Continued from page 22)

domesticated for over 6000 years, turkeys less than 400 years. The turkey is an efficient animal in changing feed over to turkey meat. Some producers find that it requires no more feed to raise a 12-pound turkey than it does to grow a 6-pound chicken.

Little research work has been done to determine the laying ability of turkeys, what feeds are most suitable, what methods of management are most practicable, and how diseases and parasites can be controlled, despite the fact that the price of turkey meat on the market indicates that there is a public demand for it. Most turkeys raised in Pennsylvania are left to drift for themselves, and the mortality is usually high, about fifty per cent or more.

The importance of keeping records was emphasized by J. C. Taylor, poultry extension specialist of the Pennsylvania State College. He told the Association that probably 80 per cent of the people deriving part of their income from poultry were merely guessing about the profitableness of their enterprise.

He recommended a flock record which would show the daily egg record, mortality, culling, and amounts of feed used; a financial record including inventory at the beginning of the year and the monthly financial transactions, and an incubation and brooder record.

Profitable poultry raising depends to a large extent upon the economical, rapid growth of young chicks and keeping losses reduced to a minimum, John Vandervort, poultry extension specialist of the Pennsylvania State College, said. Even with the best of chicks at the start, modern equipment and the right sort of feeding and attention, success is uncertain unless a definite sanitation program is followed.

First and Second Potato Awards

W. A. WESTRICK, Cambria County, won the grand champion prize for the best exhibit of potatoes at the State Farm Products Show on his Rural Whites. Omer Dietrich, Northampton County, was awarded the champion prize for the best exhibit of Russets. The first and second awards follow:

Class 1—District 1

Rural White Skins.—1, Geo. M. Schwalm, Schuylkill County, $5; 2, Walter H. Schlegal, Northampton County, $4.50.

Russets.—1, Omer Dietrich, Northampton County, $5, (champion Russet ribbon—1st sweepstake); 2, H. E. Weitknecht, Northampton County, $4.50.

Class 2—District 2

Rural White Skins.—1, Albert Vasey, Bucks County, $5; 2, Rufus K. Meyers, Lebanon County, $4.50.

Russets.—1, Rufus K. Meyer, Lebanon County, $5; 2, H. B. Diener, Lebanon County, $4.50.

Class 3—District 3

Rural White Skins.—1, W. A. Westrick, Cambria County, $5, (champion Rural ribbon, 1st sweepstakes, grand champion); 2, E. J. Westrick, Cambria County, $4.50, (2nd sweepstakes).

Russets.—1, G. H. Dumm, Cambria County, $5, sweepstakes; 2, W. A. Westrick, Cambria County, $4.50.

Class 4

Rural White Skins.—1, Walter Platts, Potter County, $5; 2, F. E. Wagner, Potter County, $4.50.

Russets.—1, Fred L. Kline, Jefferson County, $5; 2, A. J. Webb and Sons, Erie County, $4.50.

Class 5

Rural White Skins.—1, D. W. Proctor, Erie County, $5; 2, H. W. Billmeyer, Bucks County, $4.

Russets.—1, J. D. Parks, Montgomery County, $5; 2, Harvey Stockhouse, Bucks County, $4.

Russets.—1, A. L. Shaffer, Jefferson County, $3; 2, Glen Riddle Farm, Delaware County, $2.50.

Class 6

Rurals.—1, Omer Dietrich, Northampton County, $5 and ribbon; 2, G. H. Dumm, Cambria County, $4 and ribbon.

Russets.—1, W. A. Westrick, Cambria County $5, and ribbon; 2, E. J. Westrick, Cambria County, $4 and ribbon.

Class 7

Russets.—1, W. A. Westrick, Cambria County, $5; 2, P. C. Strittmatter, Cambria County, $3.

Rurals.—1, W. A. Westrick, Cambria County, $5; 2, Vincent Holtz, Cambria County, $3.

Sweepstakes. — W. A. Westrick, Cambria County, $5.

Class 8—Boys' and Girls' Classes

Russets.—1, Stearn Burnham, Jr., Clarion County, $5; 2, Heath Courson, Clarion County, $4.50.

White Skins.—2, Michael Mills, Erie County, $4.50.

Class 9

Russets.—2, Paul Russel Weaver, Cambria County, $4.50.

White Skins.—1, Marlin Wingard, Cambria County, $4; 2, Galen Wingard, Cambria County, $3.

Class 10

Russets.—1, Vernon Card, Potter County, $5; 2, Berwyn Baker, Potter County, $4.50.

White Skins.—1, Lawrence Fuller, Potter County, $4; 2, Kenneth Sloat, Potter County, $3.

Class 11

Russets.—1, Raymond Gass, Mifflin County, $5; 2, Wm. Krick, Mifflin County, $4.50.

Class 12

Russet.—1, Roy Conrad, Lebanon County, $5; 2, Jacob N. Smith, Lebanon County, $4.50.

All Classes

Class 13—Sweepstakes

Russets.—1, Stearn Burnham, Jr., Clarion County, $3; 2, Roy Conrad, Lebanon County, $2.

White Skins.—1, Marlin Wingard, Cambria County, $3; 2, Galen Wingard, Cambria County, $2.

Class 14—Grand Champion Exhibit

W. A. Westrick, Cambria County, $5.

Planet Jr.

Every farm should have a garden

—*every garden a Planet Jr.!* The secret of farming success and independence—food for the family as well as the stock. Have a garden! It's so easy with Planet Jr. Seeders and Wheel Hoes. Makes no difference how small or large the seed. From carrots and lettuce to peas and beans, your Planet Jr. drills and hoes them just right, just deep enough in a fraction of the time it takes by hand. No scooping out uneven seed furrows. No fumbling with seed. No crowding. Just a narrow line of seed, thick enough for a good stand, straight for easy hoeing.

Live better, save money, be independent. Write today for our free booklet—"Home Gardens—How to 'Grow What You Eat'". Mailed on request with 76-page Planet Jr. catalog.

Grow what you eat!

ENTHUSIASTIC GATHERING

Jersey Farm Bureau Federation Program Outlined

MEMBERS of the various County Boards of Agriculture, gathering during Agricultural Week at Trenton for a two-day session on January 11-12, held one of the most enthusiastic annual meetings of the New Jersey Federation of County Boards of Agriculture in its history. Secretary H. E. Taylor, of the Federation, reviewed the progress of the Farm Bureau in New Jersey for last year and outlined an aggressive county board program plan for 1927. After commenting upon the general recognition of the Federation in the state and the accomplishments which it had achieved for the New Jersey farmers during the year, Mr. Taylor called attention to the work ahead, as follows:

"The most immediate work before the Federation for 1927 is to carry out the legislative program, authorized in tentative form at the legislative conference held last September. The principal feature of the program upon which we are working is the passage in the new legislature of the doe-deer bill which will make an open season on does for the two days of December 27 and 28 of 1927.

It's a Big One

This old maple tree on the Shallenberger homstead, Juniata County, measures 11⅝ feet, or 139 inches, in circumference.

"Other phases of the Federation legislative program include the gasoline tax and road bond issue, the endorsement of compulsory automobile liability insurance and the amendment of the motor vehicle laws to the point of establishing uniform motor traffic light signals and regulations thruout the state.

"Another measure included in the legislative program is in line with the Federation's work to eliminate bovine tuberculosis. The Morris County Board has requested the passage of an enabling act which would allow the area plan of tuberculin testing. The Federation will back such a measure. . . .

Will Back Roadside Markets

"The Federation will expand the saving plan on automobile liability insurance, support the Farmers' Roadside Market Association, and develop further the vigilance committees to fight stealing of farm products.

"Advertising of New Jersey farm products is another important project for the coming year. The building up of public opinion in favor of purchasing New Jersey products rather than those brought to our markets from a distance will actually save money to the buying public as well as effect marketing economies for producers. This means that definite work will be done to aid producers of eggs, milk, fruit and other products."

The disposal of the Muscle Shoals property again came up for an airing by the New Jersey farmers, who expressed their firm determination to win the fight in Congress for the leasing of Muscle Shoals by the government for fertilizer rather than power production. The Federation at its annual meeting called attention to the special New Jersey committee representing both the Farm Bureau and the Grange which has made a careful study and analysis of the offers now pending for Muscle Shoals.

Favor Muscle Shoals Offer

A resolution affirming the position which the committee has taken on the question, and in support of the American Farm Bureau fight at Washington, was unanimously passed by the convention in favor of the American Cyanamid Company's offer on the Muscle Shoals property.

The Federation advocated legislation which would make honesty prevail in the sale of woolen fabrics and called attention to the fact that such legislation is now up for consideration in Congress and should have the support of the entire farm population as a protective and sound economical measure.

President H. B. Hancock, of Bridgeton, N. J., was unanimously re-elected president, while J. W. Miller, of Princeton, was elected vice-president; D. J. Perrine, of New Brunswick, treasurer, and C. E. Garretson, of Belle Mead, assistant treasurer.

Secretary H. E. Taylor, of Freehold, was re-elected executive secretary of the organization. The board of trustees was re-elected as follows: E. E. Logan, of Mount Holly; W. H. Whiton, of Neshanic, and Joseph Barton, of Marlton.

The new executive committee of the New Jersey Federation for 1927 was ratified by the annual meeting as follows: Atlantic County, Henry Tapken; Burlington County, E. E. Logan; Camden County, C. E. Bell; Cape May County, Norman Taylor; Cumberland County, Elmer H. Wene; Essex County, L. C. Genung; Gloucester County, Herbert Borden; Hunterdon County, John Tine; Mercer County, J. C. Errickson; Middlesex County, D. J. Perrine; Monmouth County, I. B. Vanderveer; Morris County, A. B. Scully; Ocean County, H. H. Ober; Salem County, Samuel Ridgeway; Somerset County, Dr. W. H. Whiton; Sussex County, G. W. Van Horn, and Warren County, George Edgar.

Money Goes As Far As Possible

Treasurer Dr. Frank App in his annual report showed the New Jersey Federation to be in a stable condition and his report further brought out the fact that the expenditures for 1926 had been carefully budgeted so as to cover the widest number of agricultural problems in which New Jersey farmers are interested.

Reporting to the annual meeting on the work of the long-time agricultural program, Director H. J. Baker, of the State Extension Service, committee chairman, said: "Considerable progress has been made by the committee in analyzing the agricultural situation in making studies upon which a definite agricultural program for New Jersey might be developed. The work has been divided and assignments made to expert workers. Some of the sub-committees will be able to report shortly. The committee in charge of the study of the Irish porato situation will be able to report in two months.

Other commodity groups such as those studying the dairy and poultry situations have amassed an impressive array of data.

"The committee has decided to make its report to farmers in sections, as rapidly as the work is completed, rather than to wait until all of the studies are completed. It is hoped that the work of the committee will be successful in shaping up a program for New Jersey agriculture that will be of economic value to the entire state."

Take Advantage of Insurance Plan

J. L. Oakley, chairman of the Federation Insurance Committee representing the relations between the members of the Farm Bureau and the Lumbermen's Mutual Casualty Company, reported that over 550 individual farmers are now taking advantage of the Federation's saving plan on mutual automobile liability insurance. This plan means a saving of 10 per cent over old line rates at the time of placing the insurance and a 25 per cent saving to each member payable at the end of the year. As conditions warrant and the volume of business grows there will be a further discount, he said. The business now open under this Federation saving plan represents insurance on over 1200 cars and trucks, a gain in cars insured of 350 during the year.

The annual banquet and social entertainment of the Federation was held on Wednesday night, January 12, at which Chester Gray, Washington representative of the American Farm Bureau Federation, and Senator David H. Agans, Master of the New Jersey State Grange, spoke.—W. H. B.

Veterinary

Conducted by Dr. J. F. Shigley

[illegible]

HORSE IS UNTHRIFTY.—After working for a while my mare seems to weaken and falls down. After a few minutes she gets up and works as before. She is a little high over the kidneys and seems shrunken in [illegible].—W. F. K., Sarver, Pa. Have your veterinarian examine this mare. The fact that she falls may be taken as an indication of an abnormal development of structure and prescriptions would not be indicated. There may be some kidney trouble but that may be the least of her troubles.

MANGE.—What will cure mange on dogs and cats?—T. G. M., Colfax, Pa. Isolate the affected animal. Clean and disinfect quarters; burn bedding used by these animals. Wash with warm water and soap; apply creolin liniment to about one-third of the body. Leave on for 24 hours; wash off and apply to another one-third. As mange may be transferred to the human family, do not hesitate to consult your veterinarian regarding these cases.

PIGS ARE LAME.—One by one my [illegible]-old pigs become lame. They get so bad they cannot come to the trough to eat. What shall I do for them?—J. K., Windsor, N. J. The condition is probably the result of a deficient diet, that is, one which does not contain the necessary vitamins. Try a mixture of 100 pounds of corn, 15 pounds of tankage or fish meal, five pounds of linseed oil meal and 5 pounds of ground alfalfa. Add to the feed one tablespoonful of cod liver oil for each pig daily. Give skim milk if available. Allow plenty of exercise and direct sunlight.

SWINE

PURE BRED BIG TYPE POLAND CHINA PIGS [illegible] around 75 lbs., either sex. Prices reasonable. C. L. LEBO, WOMELSDORF, PA.

PEDIGREED BIG TYPE CHESTER WHITES 125 fall pigs, 25 service boars, 85 bred sows, priced low, shipped on approval. C. E. Cassel, Hershey, Pa.

PENNS VALLEY BERKSHIRES Gilts bred for May farrow. Fall boar pigs. W. F. RISHEL, CENTRE HALL, PA.

TOBACCO

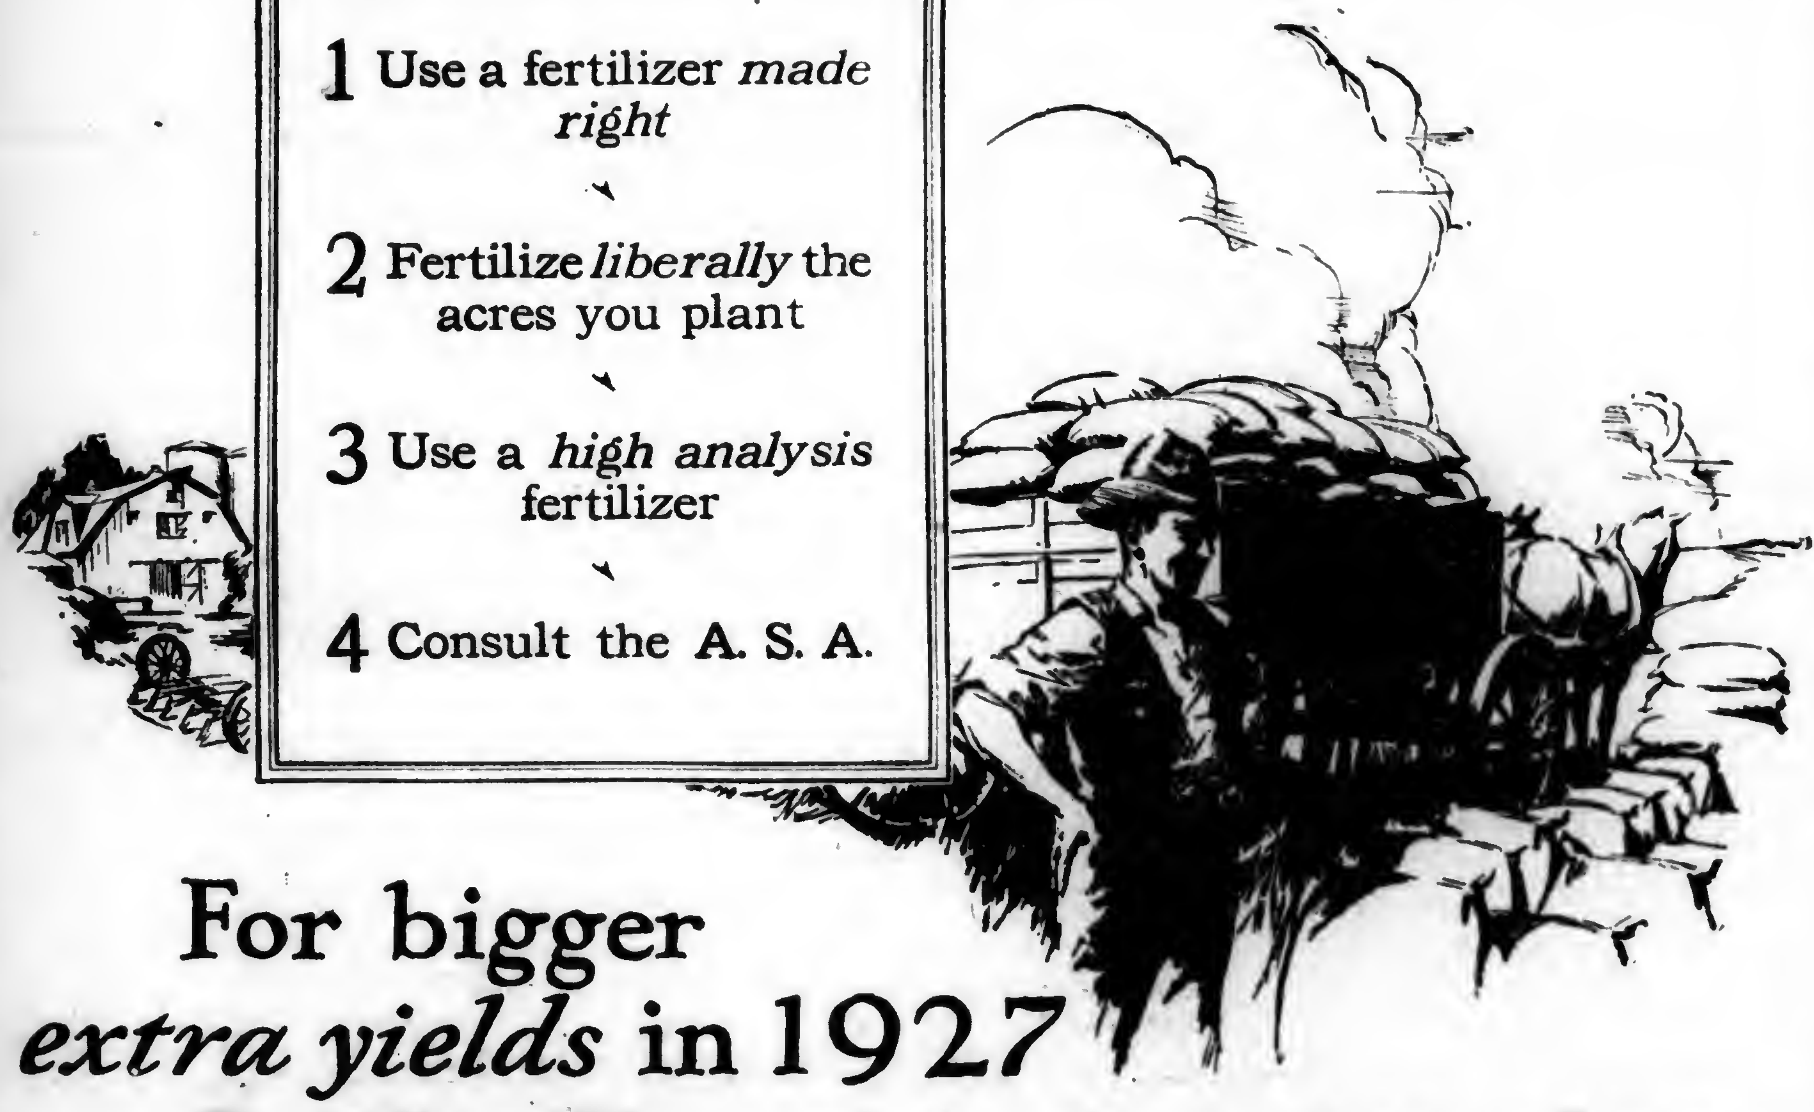
HOMESPUN TOBACCO—Smoking or Chewing, 4 lbs. $1; 12, $2.25. Send no money. Pay postmaster on arrival. Pipe free for ten names of tobacco users. United Farmers of Kentucky, Paducah, Ky.

LEAF TOBACCO—Selected chewing, 5 pounds $1.50, ten $2.50. Best smoking, 5 pounds $1.25; Ten $2. Satisfaction guaranteed. Pipe free, pay on arrival. Cigars 50 for $1.80. Cooperative Growers, Elva, Ky.

HOMESPUN TOBACCO—5 lbs. $1.25, ten $2. Write for prices on other grades and cigars. Satisfaction guaranteed. Pipe free. Pay postmaster. Farmers Union, Paducah, Ky.

GUARANTEED HOMESPUN TOBACCO—Chewing or smoking 5 lbs. $1.25; ten $2.00; cigars $2.00 for 50. Pipe free, pay when received. Farmers Union, Maxon Mills, Kentucky.

HOMESPUN TOBACCO—Guaranteed. Chewing five pounds $1.50; 10—$2.50. Smoking, 10—$1.50. Pipe free; pay when received. United Farmers, Bardwell, Kentucky.



THIS YEAR successful farmers will demand larger yields *per acre*

1 Use a fertilizer *made right*

2 Fertilize *liberally* the acres you plant

3 Use a *high analysis* fertilizer

4 Consult the A. S. A.

For bigger *extra yields* in 1927 Swift offers this 4-point plan

This year successful farmers are planning for larger production *per acre*. They know they must produce a certain amount on each acre to pay the cost of production. Beyond that, in the *extra yield*, is their profit.

To help farmers bring through a larger *extra yield* this year Swift & Company recommends the 4-point plan outlined above. This is the plan successful farmers will follow because they know—

1. They can get this *extra yield* by using fertilizer of the right *kind* and *quality*.

2. They can save on costs of bagging, labor and freight — get their plantfood for less money—by using *high analysis* fertilizer.

3. They can obtain larger yields with less labor and at lower cost by fertilizing *liberally* the acres they plant.

Follow the practice of these successful farmers. Plan now for a larger profit-making *extra yield*. Use the Swift 4-point plan. It is your best assurance of success.

Take no chances with the quality of fertilizer you use. *The kind and quality of plantfood in the fertilizer you buy depends upon the manufacturer who makes it.* Put your faith in Swift's Red Steer Fertilizers, as successful farmers do. They know that the Swift name on any product means the best product of its kind—has meant that for 50 years.

Talk over this plan with the A. S. A. (Authorized Swift Agent). He knows good fertilizer practice in your locality. Get his advice. Look for his sign. It marks the place to get "the fertilizer the best farmers use."

Swift & Company
Fertilizer Works

What's Behind Seeming Discrepancy in Potato Price Quotations

A POTATO GROWER came into the office sometime ago with a newspaper clipping of potato prices. "I want to know what my potatoes are worth," he said. "The prices on this report are inconsistent, they don't gee. Here 120-pound sacks are quoted comparatively higher than 150-pound sacks and bulk stock is lower than either. All these are U. S. No. 1s; what causes the big difference in price?

"Here are potatoes from the northern part of the state selling 75c lower than the same variety from the southern part, and there is a difference of 50c in the potatoes from two adjoining counties, what's the reason?"

The conditions to which this grower referred have been noticeable this past season in all sections of the country. The chief conditions which cause differences in price is the appearance of the potatoes and their container. To be attractive in any market they must be uniform in size, free from dirt, growth cracks, disease, bruises, cuts and second growth.

"Are They Good Cookers?"

The housewife may ask the dealer whether a certain lot of potatoes is "good cookers" but she will always choose the most attractive ones, if they are within the reach of her pocketbook.

There is no one ideal potato for every market, for thru circumstance housewives in various cities have come to have various ideas of what is an attractive and desirable potato. The dark skinned potato sells at a discount in Philadelphia, but in some other cities it is in demand. The large potatoes are not wanted in Philadelphia since housewives have come to expect them to have hollow-heart, but in the West where this condition is not as prevalent, they are considered favorably.

Clean Ones Shove Aside the Dirty

All of these things influence the price of potatoes and apparent inconsistencies are bound to occur. But why should potatoes from two adjoining counties vary so much in price? Soil conditions in the one county are such that the potatoes were bright and clean and attractive to the buyers in the market to which they were shipped, while the potatoes from the other county were dull and dirty in appearance. The same variety of potatoes from both counties, if prepared and placed on the table, could not be distinguished, still they did not sell at the same price.

The potatoes from the northern part of the state were laboring under a bad reputation. They were good potatoes but in the past potatoes coming from that district and adjoining sections had not been well graded and had been subject to sundry ailments, such as wire worm and blight. Some of the dealers had been "stung" in the past and had a strong prejudice against them. The fact that they were good did not help since there were plenty of potatoes from sections with good reputations. These prejudices may not appear to be logical but they illustrate human nature, and make material differences in potato prices.

The prejudices give rise to some strange conditions. In Cincinnati a number of years ago, it is said that a receiver offered some very inferior potatoes in 150-pound sacks as Red River Ohios. They proved very unsatisfactory because they were so different from the Red River Ohios packed in 120-pound sacks, to which the trade was accustomed. The memory of this experience still remains and it is very difficult to sell any red varieties on this market in any other package than the 120-pound sack.

Dealers Prefer Sacked Stock.

The fact that sacked potatoes were quoted relatively higher than bulk stock was due to a growing preference among most dealers for sacked stock. For many years it was the custom to ship potatoes in bulk and when sacking first began the 165 and 180-pound sacks were used. These were hard to handle and now the majority of the potatoes in the East are marketed in 150-pound sacks.

Within the past few years in New York City and Philadelphia there has been a growing preference for two-bushel sacks. Potatoes of comparable quality packed in these lighter sacks have averaged slightly higher than 150-pound sacks and have sold more readily. Chain stores, which are a big factor in the potato business, want their potatoes in 100 or 120-pound containers.

In Portland, Oregon, the practice formerly was to put 110 pounds in a sack and now many growers are using 100 and even 50 pound sacks. In this section of the country consumers often buy in the original package and the 50-pound sack is ideal, since it can be easily handled and put in the back of an auto. One reason that the use of small sacks started in this district was on account of the abundance of second-hand grain sacks since elevators in which grain is stored loose are a comparatively recent development.

Boston Has a Different Method

In Boston practically all potatoes are received in bulk and are packed locally in 100-pound sacks. The chief cause for the shrinkage in the size of containers is ease in handling. In some cities it is said that trade unions will not allow one stevedore to handle a 150-pound sack, but require that two men be used. The smaller package is also popular with the jobber, since in general his gross profit ranges from 15c to 35c per sack, regardless of weight or cost.

Every market report contains a valuable lesson and there is a reason for every apparent inconsistency. The grower who studies his market report and applies its teachings to his own problems will profit.—R.

A Dollar Saved Is a Dollar Earned

Pennsylvania Farmers Increase Profits by Reducing Crop Costs

PENNSYLVANIA farmers simply cannot afford to pay four or five dollars a day to a man to worry along with a two-horse plow, turning over a little furrow only twelve or fourteen inches wide and five or six inches deep.

Back in the days when men could be hired for $1.50 a day and horse feed was cheap, farmers could use such methods and still make money. But in these modern times of high-priced labor and keen competition every man must be equipped with machinery that will enable him to do many times as much work in a day as his father and grandfather were able to do.

The above is the consensus of opinion among some of the outstanding farmers of the state as expressed by Professor R. U. Blasingame of the Department of Farm Machinery, Pennsylvania State College, before a large group of farmers and implement men attending the tractor school conducted at Harrisburg last week by a large farm machinery concern.

They Make Money By Saving It

Professor Blasingame recently has visited a large number of the most successful farmers in Pennsylvania. He finds that the men who are making the most money are those who realize that a dollar saved in producing a crop is just as good as a dollar added to the selling price. They are making every effort to cut production costs by using modern machinery and efficient methods.

Here is a potato grower in eastern Pennsylvania who sprays his 175-acre crop twelve times. He mounts his sprayer outfits on motor trucks, and travels up and down the rows at eight or ten miles an hour. The spray tanks are unusually large, so they don't have to be filled often, but when it is necessary to go for water no time is wasted. The trip to the filling station is made at 25 or 30 miles an hour, and the water runs into the tanks thru a six-inch pipe.

A famous truck farmer near Philadelphia has found that he can save $1.75 an acre by plowing with tractors. Nevertheless, he doesn't consider that saving as important as the fact that his tractors always are ready for an emergency. With them he can, and does, plow all night when that seems necessary. One garden tractor does the work of six men in cultivating closely planted truck crops.

Now Is the Time

Several harvester-thresher combines were used in Pennsylvania last year. They cut in half the cost of harvesting and threshing wheat. These great machines cut a 12- or 14-foot swath, threshing the grain as they go and saving all the loss in time, labor and shattered grain common to the usual harvesting methods.

Now is the time for Pennsylvania farmers to "cash in" on the favorable circumstances that give them the advantage over food producers in most of the rest of the country, according to Professor Blasingame. There are three things that favor the Keystone State farmer and give him an opportunity to reap an unusual profit by the intelligent use of modern machinery.

First of all, Pennsylvania land is productive. Our yields of practically all important crops are above the

(Continued on page 31)

A Hoe or Cultivator—Which?

Prize Contest Announcement

TWO MEN are hired to work corn. One is given a hoe, the other a two-row cultivator. Each is paid $4.00 a day for his labor, even tho the man on the cultivator may cover fifty times as much ground as the man with the hoe.

Can the hoe-farmer make money in these two-row cultivator days? Can the man with a cradle and a flail compete successfully with the owner of a harvester-thresher combine? Eastern farmers answer, "No." They say, "We cannot change selling prices, but we can increase our profits by producing the same crops at lower costs—by multiplying man-power thru the use of modern machinery."

Are you one of these farmers? Are you using up-to-date equipment to reduce costs and increase profits? If you are, tell us about your experiences. Write us a letter on this subject:

How I Have Profited by Using Modern Labor-Saving Machinery

The following prizes will be awarded for the three letters considered best

First prize	$15.00
Second prize	10.00
Third prize	5.00

All other letters published will be paid for at regular space rates. Good photographs will be welcomed. (No negatives.) All letters should reach this office on or before Tuesday, February 15. Don't delay; the time is short. Address: Contest Editor, PENNSYLVANIA FARMER, 261 S. 3rd Street, Philadelphia.

Rambling Around at the Products Show

The Visitor Has To Keep Moving If He Wants To See It All

By THOMAS H. WITTKORN

WHAT if it did rain practically all of two days of Pennsylvania's Eleventh Annual Farm Products Show at Harrisburg? The crowds were there just the same as usual and everybody went home feeling amply repaid for having gone. The exhibits this year required 120,000 square feet of floor space, nearly three acres, in five buildings, and were a higher quality and of greater variety than ever before.

If you were not there you missed inspiration to last thru the year and possibly untold dollars which would have come from something learned during the week.

✣ ✣ ✣

Every fourth year is introduction time at the show. The new Governor was scheduled to meet and speak to his country constituents at the big mass meeting Tuesday evening, the official opening of the week, but he did not appear. The new Secretary of Agriculture, Dr. Charles G. Jordan, was there and convinced the approximately 2000 who heard him that he is one of them and will continue the good work started under Secretary Willits.

Dr. Ralph D. Hetzel, the new president of Pennsylvania State College, also made his first bow to the farmers and left the impression after his speech that the ones who selected him for the job "picked" well.

✣ ✣ ✣

The long hoped-for building in Harrisburg—large enough to house the annual mid-winter show—seems to be nearer a reality than ever before. During the week a committee of men who have been active in staging the show ever since it was started, met with the Harrisburg Chamber of Commerce committee and considered the possibility of using the proposed new armory. Provision has been made for the ground and a bill is now in the Legislature providing for the erection of a structure to cost $350,000. If it can be definitely settled that the state will allow the new building to be used for such events as the Farm Products Show everything possible will be done by those interested in the show to have the bill passed.

✣ ✣ ✣

The usual number of meetings was held by the 27 state-wide organizations which come to the capital every year. No matter what the visitor's interest—beef, bees, business or a score of others—he could find a place to meet people ready to discuss the same thing and swap experiences. All of the meetings were well attended. The week brought no organized outcry for "legislative relief," as is coming out of the West, and it is a healthy sign for eastern agriculture.

✣ ✣ ✣

A combined wheat harvester and thresher, a small type of the gigantic outfits used in the West, attracted most attention in the unusually large machinery exhibit. This outfit comes with a 10- or 12-foot cutter bar and the small size may be pulled by a small tractor. Three of these machines were said to have been used in the state last year and a number of them are in Maryland.

The grain is delivered into a wagon at the side or bagged and carried on a platform of the machine. A gasoline motor, of course, runs the threshing operations. The straw can be left in a windrow at the rear to be gathered by a hay loader, or can be spread over the ground to be plowed under. Two men can cut and thresh 25 or more acres in a day.

✣ ✣ ✣

Proof of the general interest in high class chickens and pigeons is shown by the attendance at the wonderful display of these birds. On Tuesday, when Harrisburg was filled with inaugural visitors, 9160 went to see the poultry but only 3112 had interest enough to go around the corner to see the wool, corn and departmental educational exhibits. On Wednesday when the country people were there, 8892 saw the poultry and 7436 visited the other building.

✣ ✣ ✣

The dairy cattle exhibit while always small in size, due to lack of available quarters, made up in interest what it lacked in quality. The Jersey, Holstein, Guernsey and Ayrshire breed associations had attractive booths and a few animals of their choice to lend "atmosphere" to discussions.

The feature daily educational exhibit consisted of 11 dairy bulls from McKean

Goodyear now announces a *new-type tread* for the balloon tire

Here you see displayed Goodyear's latest contribution to the American motorist — an improved new-type tread for the balloon tire.

As is apparent, it is a development of that most famous of all treads, the Goodyear All-Weather, now re-designed in the light of new balloon tire knowledge.

The first advantage to you of this new Goodyear tread is greater traction and non-skid efficiency.

This is achieved not only by placing the diamond-shaped All-Weather blocks in the tread's center, but also by flattening the profile of the tire to insure broader road contact.

The second advantage to you is improved tread-wear, accomplished by the flat design, and by placing two circumferential ribs in the tread at the points of greatest wear.

The new All-Weather balloon tread wears evenly and smoothly without wavy spots or "pot holes," and at any given mileage shows less wear and less obliteration of the non-skid design than is the case with earlier types.

In addition to these important benefits, the new Goodyear tread makes for longer total tire mileage, for quiet and smooth running, and for an even better looking tire.

You will want this new tire for the same sensible reasons that for years have made "*more people ride on Goodyear Tires than on any other kind.*"

Goodyear Means Good Wear

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS.

BY R. P. KESTER

THE week of January 17 was a busy one. Besides the usual work of getting out the paper, there was the State Products Show, with all the meetings in connection at Harrisburg. But it is impossible to get all the information that is to be had during Show Week. Of course, most people are not interested in everything that goes on. The best way to get the most of the week is to select the exhibits and the meetings which relate to the lines of business one is engaged in.

◆ ◆ ◆

ACTING upon this principle I spent most of my time at the Show in looking at the fruit, vegetable and poultry exhibits, and the fine line of machinery and equipment manufactured for these lines of business. This latter has become one of the leading features of the exhibitions and farmers have the opportunity of examining at leisure the latest and best implements used in their work. It is well worth the cost of a trip to the Products Show.

◆ ◆ ◆

A FEW weeks ago I used my most extravagant terms in describing the beauty of the fruit exhibited by New Jersey growers at their winter exhibit at Atlantic City. While I will not retract my strong statements, I will say that the Pennsylvania fruit shown at the Harrisburg show was equally fine and as highly colored. I was surprised at this because of the cloudy, rainy, unfavorable weather last fall—weather which was not conducive to high color in all localities.

◆ ◆ ◆

ANYONE at all interested in poultry will find the poultry exhibit, which has become one of the important features of the Harrisburg show, one of the best in the state. This is primarily a practical poultrykeepers' show, and all breeds are found there. I find myself torn with doubt and uncertainty as I look over the fine specimens of the different breeds on exhibition, because we are trying to decide which one to adopt for Neshaminy Gardens.

◆ ◆ ◆

OUR hesitation is caused somewhat over the question of the major purpose of our proposed flock. At our roadside market we have had innumerable calls for dressed poultry as well as for eggs, and for this purpose a meat breed would be desirable. On the other hand, we are not sure we want to be bothered with dressing poultry. At the present moment we are more inclined to egg production and the by-products that go with it.

◆ ◆ ◆

THE public seems to have an insatiable appetite for good table poultry. Of course a good part of the public does not know what a really toothsome chicken is like because they never ate any that did not go thru the long and leisurely channels of the trade. I had a portion of such a "spring chicken" not long ago at a dinner. It looked all right and it was pretty well-cooked, but it tasted very much like a returned poultry crate smells.

◆ ◆ ◆

THE first meeting I attended during the week was a gathering of the old State Board of Agriculture and the former institute workers. About forty of these people met, renewed old acquaintance and enjoyed themselves while partaking of a modest banquet.

◆ ◆ ◆

THE first big meeting of the week was the general meeting held in the Chestnut Street Opera House on Tuesday evening. It seemed that everybody was there and it made a splendid opportunity for two new public men to make their initial bow to the farmers of the state, also for the farmers to bid farewell and Godspeed to the retiring and popular Secretary of Agriculture, Frank P. Willits. The two new men—new in the positions they hold—were Dr. Ralph D. Hetzel, President of State College, and Dr. Charles G. Jordan, Secretary of Agriculture.

The Cheerful Plowman

Agents!

MY WIFE she is bothered with agents at times, and listens at length to their tales and their chimes. They come selling sweepers, and doilies, and starch, they come selling rubbers and artics for March, they come selling china, and currants, and silk, they come selling ointment, and powdery milk, they come selling this, and they come selling that,—a tag for a dog, or a bell for the cat, a plate for the door, or a tree for the hall, aluminum, silver and pewter, and all!

"Good woman," I say, "It's a puzzle to me how patient and kindly you know how to be! That agent has stolen two hours of your time, and sometimes, my dear, isn't patience a crime? Why not frame a 'NO SIR!' as loud as a drum and shoo them away just as soon as they come?"

"Not I!" says that woman, "I'll not be unkind, nor build a mean thought in another one's mind! Those men have their business, their labors to do, a task to perform and a day to go thru!

"I may not buy goods that they offer to sell, but purpose to treat them both kindly and well! They may not be farmers, nor merchants, as such, they may be Canadian, Irish, or Dutch, but while I am living and right in mind they'll find me considerate, thoughtful, and kind!"—J. Edw. Tufft.

Everything for Farm and Outdoors
1872
WARD'S FIFTY-FIFTH ANNIVERSARY
1927
MONTGOMERY WARD & CO.
Catalogue 106
Spring & Summer 1927

The Stage Coach and the Pony Rider were the best means of communication through the big West when Montgomery Ward began business in 1872. Montgomery Ward & Co's. progress has been as great as the improvement in transportation. Yet the fundamental principles that Mr. Ward established in 1872 rule this business today: to always offer a saving on merchandise of honest quality, and to deal under a Golden Rule Guarantee. That has been our unbroken policy for 55 years.

Ward's New Spring Catalogue *is Now Ready for You*

Now Ready for You, our 55th Anniversary Catalogue, ready with *everything* new for Spring, complete with everything of interest to man, woman or child—this big 624 page book is now ready and *one copy is to be yours Free.*

Your Money Saving Opportunity. Fifty Dollars in cash will be your saving this Spring if you write for this book and *use this book.*

Consider that $100,000,000 worth of merchandise was bought for this book—bought by the thousand dozen, by the car load—bought for cash in the enormous quantities that compel lower-than-market prices. The benefit of this big buying is always passed on to you.

Your Satisfaction is Assured because Quality comes first at Ward's. Your satisfaction, your pleasure with everything you buy is our first consideration. Quality first—then low price. We never sacrifice quality to make a low price. Every bargain you buy at Ward's is a bargain both for Quality and Price.

Your every need supplied. Everything for the Farm, the Home and the Family is shown in this Catalogue. Everything a woman wears or uses; everything to make the house a Home, to add beauty and comfort and convenience. Everything of interest to men—to the boy and girl. Every wish is met, every need supplied in this big, new complete Spring and Summer Catalogue.

A ***55-year-old Guarantee*** is back of every article we sell. A 55-year-old policy of courtesy and appreciation assures you always of satisfaction when you order from Ward's.

The Book is Ready. Your opportunity for Saving and Satisfaction is before you.

This coupon will bring you your Catalogue absolutely free.

Difficulties Disappearing

THE situation in Mexico and Central America seems to be clearing up slowly. The statements made by Secretary of State Kellogg regarding conditions did not meet with a hearty response in this country, if one may judge by the comments of the press and the actions of civic bodies. The people of the United States have only too recently had concrete evidence of the lengths to which some oil producers will go to become excited over their contentions in Mexico. Neither were the people of this country to be aroused over the alleged activities of Russian Reds in Mexico, nor would they take seriously the declaration that the "Reds" were seeking to overturn the government of the United States. If the great mass of the home-owning, industrious and prosperous citizens of this nation can so easily be made rebels and anarchists we are not so great a people as we are wont to believe. Of course, there is considerable misunderstanding of the United States in Central America, and there are people there who keep alive and exaggerate the difficulties, but we believe this nation is wise enough and generous enough to convince them by peaceable methods of our honesty and good intentions.

Bill to Fight Corn Borer

A BILL has been passed by the House of Representatives at Washington, and favorably reported by the Senate Agricultural Committee appropriating $10,000,000 to fight the corn borer. Dr. C. L. Marlatt, who testified before the Senate committee, stated that it is proposed to have corn fields cleaned up by destroying all stalks and wintering places between corn harvest and the first of April. It is hoped to start at once so that no spread will take place in 1927 if it is possible to prevent it.

The corn borer today affects a total of 100,000 square miles in the United States, or double the area of last year. It has been found that not only corn, but such crops as celery, beets, spinach, and even oats are subject to the borer's ravages.

Assurances have been received from most of the states interested that legislation will be enacted to furnish the necessary cooperation for the work. Most of the agitation for this work has come from the Corn Belt states where the borer is most feared, but Pennsylvanians should also get busy. We need an appropriation for cooperating with the federal government in this fight. Pennsylvania's corn belt, the southeastern counties, is threatened. If it is not stopped, in all probability the borer will spread over this, the chief corn growing section of the state. Take up the matter with your legislators now.

A Big Job Well Done

WE FEEL that we should publicly express our appreciation of the way in which the State Department of Agriculture was conducted by Frank P. Willits whose term of office has just closed. We believe that these sentiments will be echoed by the great majority of the farmers of the state. Being Secretary of Agriculture in Pennsylvania is no minor position. It is one of the biggest jobs in the government of the state. No other one department is connected, directly or indirectly, with so many of the citizens of the Commonwealth. In truth it may be said that every human being as well as every animal and every tree, plant and shrub in the state comes within the care and oversight of the Department of Agriculture.

Mr. Willits brought with him to the position the sincere determination to perform the duties of the office honestly and impartially, and we believe that he succeeded fully in living up to his purpose. Disregarding the few minor disaffections resulting from doing his duty, the ex-Secretary turns over the keys of the office to his successor with the respect and good will of all the people of Pennsylvania.

Growth of the Canning Business

THE National Canners' Association held their annual convention in Atlantic City last week. The members of this organization represent a business which is comparatively new, yet it is one which touches the life of practically every home in the land. It is only a little over a century since the process of preserving food by canning was discovered. Napoleon offered a prize to the one who would devise a means by which food products could be prepared so that they could be carried with an army without spoiling, and canning was the result. However, little was done towards making the process general until fifty years afterward. The census figures show that in 1919 canned goods to the value of $574,000,000 were put on the market.

Commercial canning has not only changed the housewife's work, but it has also made a difference in the growing and marketing of fruit and vegetables. The market for "stuff to put up" has almost vanished, and the growers find retail buyers for only such quantities as are eaten while fresh, the greater part of such produce being sold in a wholesale way to canneries.

While the development of this business is in the direction of economy and efficiency, the public must demand genuine fruit and vegetable products. There has been a tendency to manufacture and sell "compounds," and even synthetic stuff. This is especially true of preserves, jellies, marmalades, butters, etc. Pennsylvania has one of the best and most rigid pure food laws in the country, and the inspectors are continually on the lookout for spurious ready-to-eat food.

Growers as well as canners have a duty to perform in developing and enlarging the market for canned goods. Quality should be the watchword at all times. The selection of varieties possessing high quality should be practiced by fruit and vegetable growers, even when selling to canners. The belief that anything is good enough for canning houses is a mistaken one and will spell disaster in the end.

Mr. McKee Resigns

WE HAVE just learned of the resignation of Deputy Secretary of Agriculture John M. McKee, effective February 1st. The name of his successor has not been announced as the forms close for this issue.

Possibly few people realize what the retiring Deputy Secretary has done for Pennsylvania agriculture since he went out, in 1912, as one of the pioneer county agents. Good Roads Day, which gave momentum to the state's great road-building program, was a result of his activity in Washington County. Community buildings, livestock judging contests and dairy cost accounting systems are now commonplace, but they were introduced into Pennsylvania thru his efforts as a county agent.

Mr. McKee's work in the Department of Agriculture is better known and no less important. His grasp of the state's farm problems, as shown by his work on rural electrification, tuberculosis eradication, the Farm Products Show, and as Secretary of the State Council of Agricultural Associations,—to name only a few of his interests,—has won for him the respect of every agricultural leader.

We don't know what plans Mr. McKee has made for the future, but we trust that he will continue in some branch of agricultural work in Pennsylvania. Men of his vision, common sense and executive ability are an asset to any business in any state.

Editorial Sidelights

HERE is another piece of news that gets in under the wire after all the rest of this paper has been cast in type. Raymond G. Bressler has accepted the appointment as Deputy Secretary of Agriculture to succeed Mr. McKee.

MR. BRESSLER is Vice-Dean and Director of Instruction in the School of Agriculture at the Pennsylvania State College. He was born in Pennsylvania and was engaged in rural educational work in Texas for eight years before returning to this state in 1918.

THE NEW Deputy Secretary operates a farm near State College in conjunction with his other duties. He has a broad knowledge of Pennsylvania agriculture, and a host of friends, the result of his work at Penn State and in Grangers' and other farmers' meetings thruout the Commonwealth.

NEXT WEEK we shall publish some interesting biographical material about the new Secretary of Agriculture, Doctor Charles G. Jordan. Doctor Jordan is a real farmer and livestock man, in spite of his title, which doesn't mean Doctor of Veterinary Medicine, or Doctor of Philosophy, or Doctor of Medicine. It means Doctor of Divinity, —but more about it next week.

THE PRINCIPAL prize winners among the exhibitors at the 1927 Pennsylvania Farm Products Show not published last week appear in this issue as follows:

Apples	Page 10
Baby Beef	" 34
Butter	" 33
Grain	" 33
Honey	" 18
Maple Syrup	" 9
Potatoes (400 Bushel Club)	" 18
Poultry	" 14
Sheep	" 33
Swine	" 34

The names of newly elected officers of farm organizations appear on page 29.

THEY'RE HOPEFUL, BUT

Advocates of New Relief Bill Hard at Work—Shall Co-operatives Belong?—Action Taken on Postage Rates.

Washington, D. C.

ADVOCATES of the McNary-Haugen equalization fee farm relief bill are concentrating their efforts on two moves. One is to get a vote on their proposed measure in the House and Senate before March 4th. The other is to round up enough congressmen and senators to secure its passage. They are hopeful, but not sure of the result. The Senate Committee on Agriculture has voted to report favorably the equalization fee bill, which had already been reported out by the House Committee on Agriculture. Fourteen of the sixteen members of the Senate Committee voted for the bill. Proponents of McNary-Haugen plan say that changes in the bill will remove much opposition to the old measure. But its opponents declare that it is "more objectionable and certainly more unconstitutional" than its predecessor. Supporters of the Curtis-Crisp bill have issued a minority report, and are prepared to make a fight for it in both the House and Senate.

To Establish Right to Belong

The Tincher bill designed to prevent discrimination against farmers' cooperative marketing associations by boards of trade and similar organizations has been unanimously approved by the House Committee on Agriculture. This bill which was introduced in the Senate by Senator Arthur Capper, passed that body last spring, and is in a favorable position to become a law. This bill would abolish any further need for litigation by providing by Federal law the right of a cooperative to membership in trade organizations.

Lower Postage Rates Likely

The Senate Post Office Committee has reported favorably a bill to restore the 1920 second-class rates on magazines and papers, and to repeal the service charge on parcel post packages. This parcel post service charge has been opposed by the farm organizations, and it is largely thru the efforts of their Washington representatives that its repeal is well on the way. There is a growing sentiment in Congress in favor of lower parcel post rates.

United Effort Worked

The second conference of the executive officials and Washington representatives of the National Grange, National Farmers' Union and American Farm Bureau Federation was held in Washington January 24 to agree upon a national legislative program for the rest of the present Congress and extending into the Seventieth Congress. The similarity of the legislative programs of the three national organizations of farmers as shown at this conference was significant. Twenty-eight legislative projects were found to be viewed by all three with substantial agreement. Great progress was made toward a common working understanding as to methods to be followed in the future in presenting these measures to Congress and the committees considering them.

In a statement issued by the farm leaders it is said that with only one day to devote to this conference, more progress was made than has heretofore been evident after years of effort. National Grange Master Taber said it was one of the big days for agriculture.

Doesn't Mean Another Day Off

The joint resolution sponsored by Senator Capper and Congressman Ketcham to set aside the first Thursday of October each year as Agricultural Day does not propose another legal holiday. Fred Brenckman, Washington representative of the National Grange, points out that the plan is that the president and governors issue a proclamation and that the day be appropriately observed thruout the country. The bill which has been reported favorably by the Senate Committee on Agriculture, originated with the National Grange and has been endorsed by other national farm organizations.

Consider New Quarantine

The European corn borer has been found in New Jersey and Connecticut and is spreading out over new areas in New York state. A public hearing to consider the advisability of extending the corn borer quarantine to include these newly infested areas will be held February 8 by the Federal Horticultural Board in Washington.—E. E. R.

ASSUMES NEW DUTIES

Highway Official Will Make Own Study of Road Problem—Educational Superintendent Works on Policies.

Harrisburg, Pa.

JAMES L. STUART, the new head of the State Highway Department, has assumed his duties, having been prevented from taking charge immediately after inauguration by illness. Mr. Stuart will move slowly in the matter of both policy and personnel in his department. He is an engineer as well as business administrator and will make his own studies of needs of the primary and secondary road systems and of the rural road situation. Owing to the fact the proceeds of the last bond issue have been virtually exhausted the problem of building roads will be one of unusual importance.

Planning Educational Work

The new administration has taken hold in the Public Instruction Department and the last week the various bureau heads have been discussing their branches with Dr. John A. H. Keith, the superintendent. A meeting of the State Council of Education will be held shortly and there will probably be some announcement in regard to policies before very long. Careful calculations are being made as to needs for the schools and it is possible reports following surveys last year may be taken up for discussion. Provision for money for normal schools in the budget will enable considerable improvement and expansion of plants to be made.

More Rural Patrolling

According to what is heard about the State Capitol the coming of spring will probably see more state policemen on rural patrol work. This is a branch said to have had less attention last year than in some former years and requests for presence of State Police are said to have brought assurances of expansion of such work. There may be more highway patrolmen put on duty this year.

Barn Fire Studies

State Police authorities are compiling results of investigations of a number of barn fires in typical rural counties the last year with the idea of ascertaining just how many were due to green hay. Some interesting observations on precautions and on fires following cutting of hay are said to have been obtained.

Up to Commission

The Public Service Commission has before it several cases raising questions on motor bus service. The proposition of interstate bus lines is about to be decided and will likely lead to a fight in the courts.

Capitol Crowded

The State Capitol is crowded more than ever this year because of the legislative sitting and the creation of new offices the last few years. Considerable shifting around has followed the convening of the lawmakers, who have named their committees and employes and gotten down to business. There are numerous bills with many more to follow, but the April date for adjournment still holds.—E. C.

PLAN NEW ROAD RULES

Desire Development of Tri-State Traffic Signal System—Fertilizer Companies Underbid Cooperatives.

Trenton, N. J.

THE State Highway Committee on uniform traffic signals held another of its hearings in Trenton on January 24 covering the territory of Mercer, Hunterdon, Burlington and Middlesex Counties. It was brought out at the hearing that the Highway Committee will arrange meetings with the New York and Pennsylvania State Highway Departments with the view of exchanging information on the enactments on traffic laws having a tri-state effect. The purpose is to develop from the study now being made thruout the state, a system of uniform traffic signals which would be identical and jointly put into effect in all three states.

Poultry Show Proposed

Keen interest is now being shown by poultrymen in the suggestion for a large poultry show to be staged at Atlantic City next October. Representatives of local poultry associations meeting in Trenton this last week discussed the situation. They also considered legislation of interest to poultrymen and the question of the extension of membership in the State Poultry Association. These matters are to be brought to a head at the next meeting of the Board of Trustees of the state association.

Fertilizer War Rumors

Gossip is keen in South Jersey over recent price cuts in fertilizer made by the old line companies. Last year there was a price differential at this season of the year of about $3 in favor of the old line companies' prices. The independents met it that time, but the new price cut of $5 per ton is causing some concern. Several of the co-operatives are afraid of being badly hit.

Tomato Advisory Committee

An Advisory Committee recently was appointed to study the tomato situation in Gloucester, Salem and Cumberland Counties with the view to working out ways and means for improving the pack as sent to market. The committee consists of: Prof. L. G. Schermerhorn, New Jersey Experiment Station, chairman; Alvin Gaventa, Swedesboro; Edgar Hurff, Swedesboro; John M. Fenton, State Department of Agriculture; George E. Lamb, County Agent, Woodbury; Charles H. Nissley, vegetable extension specialist, State Agricultural College, New Brunswick, and Harry Black, Swedesboro. Ex-officio members are W. B. Duryee, Dr. J. G. Lipman, Director of the New Jersey Experiment Station, and H. E. Taylor, Trenton.—W. H. B.

DEMOCRATS MAY HELP

Prompt Action Will Probably Bring Desired Results—Borer Question One of Control—Fair Abandoned.

Ithaca, N. Y.

A NEWS special from the state capitol states that more aid to rural schools is possible especially for the benefit of seventh and eighth grade pupils who wish to attend a high school, if the rural districts bring pressure to bear on their representatives before other appropriations push this measure out of the legislative program. Governor Smith and Democratic supporters are believed to favor such aid; also enough Republicans to pass such a measure. This would be in addition to the bill to appropriate 36 millions for the city schools of the state within the next four years.

State Census Tabulation Needed

A Cornell University expert, speaking before the State tuberculosis and health conference, says that this state has not had a good state census in the last 50 years. Tho the 1925 census has been taken it has not been tabulated so that it may be of value to students and scientists. A new appropriation is needed, he believes, to put this information into an available form.

Corn Borer Travels

Tompkins County farmers are warned of a light infestation of corn borer. In Chautauqua and Schenectady County areas the infection is 80 per cent. The pest has spread to nearly all parts of the state and the problem becomes one of control rather than eradication. In this state the damage is greater to sweet corn than to ensilage corn. The market or canners cannot use an ear that has been infested.

Compliment to Farm Bureau

The great Cortland County fair has been abandoned, unless the Cortland County Farm Bureau can be induced to assume control of its affairs. This fair has for years been the largest county fair north of Hagerstown, Md., but was last year unable to pay all its premiums. The directors are in favor of abandoning the project unless the Farm Bureau will manage it. The buildings and equipment are excellent but there have been unwise policies and lack of interest. The Farm and Home Bureau exhibits have for some time been the outstanding agricultural attractions.—M. G. F.

THE LITTLE LOYALIST

V-C Super Analysis Fertilizers

Saves you half the freight
Saves you half the hauling
Saves you half the handling

Save You Money

Every bag of V-C Super Analysis Fertilizer you apply will save you money.

You get more pounds of plant food per ton at a lower cost per pound.

You save half of your freight bill. Your cost and labor of hauling is cut in half, and you save nearly half of the labor in applying.

In V-C Super Analysis Fertilizers for cotton, corn, tobacco and other crops are combined our manufacturing skill, the experience of practical farmers and the investigations of State Agricultural authorities.

The result is a product carrying twice as much plant food as an ordinary grade of fertilizers. You need use only half as much.

A V-C dealer is near you anxious to supply you. Let us introduce him if you don't know him.

For more facts about V-C Super Analysis Fertilizers and the experience of other users, write

Virginia-Carolina Chemical Corp.,
Home Office

Isbell's Seeds Do Yield More

You can make more money from your garden and crops when you plant dependable seeds—adapted to your soil. The work of preparing the land and planting is the same whether you use ordinary seed or pedigreed seed. But the crop tells the story: added profit—often double or triple—comes from using hardy, big-yielding, Michigan-grown, Isbell's seeds.

48 YEARS OF BETTER SEEDS

For nearly a half century, Isbell's have been developing yield, vitality and hardiness in seeds. Ceaseless experimenting, careful selection, better growing, sorting and cleaning methods have done this. 200,000 customers have proved this profit-building quality—they plant Isbell's seeds year after year and get bumper crops. We grow our own seed—you buy direct from us, saving money and eliminating all risk of substitution.

Poor Seed Is Expensive As a Gift

AS THE days gradually lengthen and seed catalogs come thru the mails the gardening fever again begins to incubate and will doubtless break out as of old when Old Sol has finally driven back Cold Maker, the Blackfeet Indian god of winter.

Seeds! What a promiseful word. As we ponder our garden plans and hopes for the coming season the trials and disappointments of other years are inclined to fade. We see only luxuriant healthy crops rewarding our care. Indeed is it not wonderful that we can start anew each spring? And each year our increasing fund of experiences and observations enables us to realize more fully the "hidden possibilities of the seed."

On the one hand how true it is that improved soil, experience, skill, toil, all come to naught with degenerate seed while on the other hand seed from highly bred strains of proven varieties places within our reach the full reward due good gardeners. Dr. J. B. S. Norton, the great plant breeder, has said: "At no point in the production of crops can greater results be secured with less effort than with the seed."

But how may we be sure the seed we plant is true-to-name and among the best? Growing our own seed of choice sorts is one way. The only other way to be absolutely certain is to buy seed a year in advance and test under field conditions. This plan is in considerable favor with wide-awake market growers and shippers.

Tested Seed Insures Results

Among the more important crops, the seeds of cabbage, celery, lettuce, tomato, eggplant, pepper, and spinach retain their vitality sufficiently well to make the practice feasible. The investment required is not burdensome and it is genuine insurance that affords well grounded satisfaction to be able to start a crop from a bag of seed which has already produced a test crop of accepted type and quality on our own land.

But home gardeners generally, and even commercial growers, in the case of their minor crops will seldom consider such pains warranted. Their reliance must be placed in the honesty and integrity of reputable seed dealers and growers. Farm papers, county agents and extension specialists from our state colleges are all ready to help us locate reliable sources of seed supply, and there are a considerable number of houses which are honestly and zealously endeavoring to serve gardeners with the very finest seeds.

Out of fairness to this better class of seedsmen I want to go on record as having received among several hundred items over a period of years but one shipment which was other than represented. Good seed frequently and very justly costs more but poor seed is expensive as a gift. That is not new but bears repetition.

Good seed deserves safe storage. In our climate temperature can be practically ignored if the seed is properly cured and is stored in a dry, ventilated place. Vermin, mice in particular, probably destroy more seeds about farms than all other causes combined.

Jars Give Adequate Protection

A Clearfield County gardener of my acquaintance places his smaller seeds, lettuce, cabbage, celery, tomato, cucumber, etc., in ordinary screw top fruit jars. The caps are loosely applied without rubbers. My own experience has been that the scheme is excellent. Insurance usually pays in the end.

Where larger quantities of seeds are to be stored a mouse and rat proof seed room is almost indispensable and will save its cost many times over. Here on Logan Spring Farm we have just made an inventory of seeds on hand, carried over from last year, and longer. Excepting peas, carrots and onions most of the seeds required for 1927 plantings are available from proven stocks and we know they will be there when we want them for they are stored in a vermin proof room 6 by 9 by 7 feet in size.

When the acreage of grain crops was reduced one section of the granary was lined with three-mesh to the inch galvanized screen or "hardware cloth," and provided with a door of the same material. As in many Pennsylvania bank barns the granary is above the "overshot," a cold but dry and ventilated location. In the several years this room has been in service we have experienced normal longevity in seeds stored there and have not lost a penny's worth by mice or rats.

Such a room is also very convenient in curing sweet corn for seed and popcorn for market, as well as for storing clover seed and empty grain bags with safety. Your hardware dealer or mail order catalog will specify standard widths. Dimensions may then be worked out to avoid

(Continued on next page)

Tempting the "Sweet Tooth"

This year, for the first time, a maple products exhibit appeared at the Farm Products Show. The beekeepers also had an attractive display.

loss of time or material in cutting.

We cannot leave the subject of seeds without mentioning germination testing. Equipment varies all the way from the elaborately controlled humid chambers and greenhouses used by larger seedsmen to a saucer on a warm shelf in the kitchen with the seed placed between two blotters which are kept slightly moist.

As a guide to rate of planting the germination test is indispensable. A 50 per cent stand of spinach can hardly return a profit. On the other hand 50 per cent too many plants is nearly as bad, the plants will be small and inclined to "bolt" to seed. Mildew will be favored.

My favorite plan is to take a small sample of each lot of seed when making inventory, or as the package arrives from the seedsman, and plant at field depth in shallow plant boxes filled with soil, 20 or 50 seeds of each kind, depending on size of seed. Each row is labeled with lot number or variety, number of seeds planted and date. Ordinary heat and water are given. Light is not necessary as we only want to know the percentage of strong sprouts.

Such a test, coupled with field proven seed, is well worth while in connection with any vegetable crop counted on to produce a major portion of the farm income. We are forced to take plenty of chances even after these avoidable ones have been eliminated.—Gilbert S. Watts.

Maple Syrup Awards

STRANAHAN BROTHERS, Crawford County, were the leading winners in the maple syrup and maple sugar exhibit at the State Farm Products Show. This was the first time maple products have been shown at this state-wide show. The exhibits came largely from Crawford and Somerset Counties. The judges were H. E. Hodgkiss, extension entomologist, and Miss Margaret Brown, home economics extension, both of Pennsylvania State College. The awards follow:

Class 1—Syrup, Gallon Tin

1, Stranahan Bros., Crawford County, $5; 2, J. O. Lambert, Somerset County, $3.

Class 2—Syrup, Gallon Glass

1, Stranahan Bros., Crawford County, $5.

Class 3—Syrup, Quarts or Smaller Glass

1, Stranahan Bros., Crawford County, $2; 2, J. O. Lambert, Somerset County, $1.50; 3, Anna Bell Lambert, Somerset County, $1.

Class 4—Sugar, Cake

1, Stranahan Bros., Crawford County, $1.50.

Class 5—Sugar, Crumb

1, W. B. Schrock, Somerset County, $1.50; 2, H. C. Beerits' Sons, Somerset County, $1; 3, J. O. Lambert, Somerset County, $0.50.

Class 6—Maple Candy

1, J. O. Lambert, Somerset County, $1.

Trade Honors Merchant

THE Philadelphia carlot produce markets were closed on January 18 in honor of Thomas J. Cancelmo, a prominent merchant, who died on the 14th. This is the first time in history that any member of the trade has been so honored.

Mr. Cancelmo was head of the firm of A. Cancelmo, and was very popular with all the trade. As president of the Philadelphia Carlot Receivers' Association he had much to do with the development of the plans for the new Pennsylvania Terminal, as well as the new B. & O. Terminal and Auction Rooms. He was always an outstanding figure in any movement for betterment of trading conditions and hours.—R.

Those Who Grew the Best Apples

D. K. STERRETT, of Cumberland County, won the Pennsylvania Horticultural Association cup for the best bushel of apples in the State Farm Products Show. His successful entry was a basket of Staymans. The Franklin County Horticultural Society won the county horticultural society banner for having the largest number of prize winning exhibitors.

The Chester-Delaware Horticultural Society was awarded the first prize of $100 in the county association exhibit. Lebanon County took second, and Luzerne County, third.

The complete list of first prize winners for each class and variety follows:

CLASS 1.—Best barrel of apples of each of the following varieties: Delicious, Gillan Bros., Franklin County, $10; Paragon, H. R. Worthington, Chester County, $10; Rome, S. L. Smedley, Jr., Delaware County, $10; Stayman, S. L. Smedley, Jr., Delaware County, $10; York, H. R. Worthington, Chester County, $10.

CLASS 2.—Best exhibit of one box each of the following standard commercial varieties: Baldwin; Daniel Rice, Perry County, $6; Delicious, Daniel Rice, Perry County, $6; Grimes, C. B. Snyder, Lancaster County, $6; Jonathan, S. L. Smedley, Delaware County, $6; McIntosh, Woodbourne Orchard, Susquehanna County, $6; Spy, Woodbourne Orchard, Susquehanna County, $6; R. I. Green, Woodbourne Orchard, Susquehanna County, $6; Rome, Daniel Rice, Perry County, $6; Stark, Daniel Rice, Perry County, $6; Stayman, D. K. Sterrett, Cumberland County, $6, (sweepstakes); Winesap, Daniel Rice, Perry County, $6; York, Friendly Fruit Farm, Bedford County, $6.

CLASS 3.—Best single box, any variety not mentioned in Class 2. Banana, Daniel Rice, Perry County, $6.

CLASS 4.—For the best exhibit of one round bushel basket of each of the following standard commercial varieties: Baldwin, Daniel Rice, Perry County, $6; Delicious, W. O. Bingham, Franklin County, $6; Grimes, Guy Hayman, Chester County, $6; McIntosh, Shaffer Brothers, Wayne County, $6; Spy, Woodbourne Orchard, Susquehanna County, $6; Paragon, H. R. Worthington, Chester County, $6; Rome, S. L. Smedley, Jr., Delaware County, $6; Smokehouse, H. R. Worthington, Chester County, $6; Stark, H. R. Worthington, Chester County, $6; Stayman, D. K. Sterrett, Cumberland County, $6; Winesap, S. L. Smedley, Jr., Delaware County, $6; York, H. R. Worthington, Chester County, $6.

CLASS 5.—Best exhibit of one round bushel basket of any variety not mentioned in Class 4: Gano, Friendly Fruit Farm, Bedford County, $6.

CLASS 6.—Best exhibit of one bushel hamper of each variety mentioned in Class 4: Baldwin, Daniel Rice, Perry County, $6; Delicious, Friendly Fruit Farm, Bedford County, $6; Grimes, S. L. Smedley, Jr., Delaware County, $6; Jonathan, S. L. Smedley, Jr., Delaware County, $6; McIntosh, Daniel Rice, Perry County, $6; Spy, Woodbourne Orchard, Susquehanna Co., $6; Rome, S. L. Smedley, Jr., Delaware County, $6; Smokehouse, H. R. Worthington, Chester County, $6; Stark, H. R. Worthington, Chester County, $6; Stayman, D. K. Sterrett, Cumberland County, $6; Winesap, Daniel Rice, Perry County, $6; York, H. R. Worthington, Chester County, $6.

CLASS 7.—Best exhibit of one bushel hamper of each variety mentioned in Class 4: Paragon, H. R. Worthington, Chester County, $6.

CLASS 8.—Best plate of five specimens of each of the following varieties: Baldwin, Daniel Rice, Perry County, $4; Delicious, Daniel Rice, Perry County, $4; Grimes, Springwood Farms, York County, $4; Jonathan, D. M. Wertz, Franklin County, $4; McIntosh, Shaffer Brothers, Wayne County, $4; Spy, H. L. Sayler, Berks County, $4; R. I. Greening, C. D. Sandt, Northampton County, $4; Rome, Daniel Rice, Perry County, $4; Smokehouse, Boyer Brothers, Adams County, $4; Stark, Daniel Rice, Perry County, $4; Stayman, D. K. Sterrett, Cumberland County, $4; Wagener, E. V. Close, Tioga County, $4; Winesap, Daniel Rice, Perry County, $4; York, Taylor Goshorn, Adams County, $4.

The three leading county horticultural association exhibits. Chester-Delaware, first prize winner, Lebanon, second, and Luzerne, third.

CLASS 9.—Best plate of five specimens of each of the following varieties: Black Twig, Mt. Breeze Orchard, Franklin County, $1; Ben Davis, Mt. Breeze Orchard, Franklin County, $1; Gilliflower, Daniel Rice, Perry County, $1; Dominie, C. D. Snyder, Lancaster County, $1; Ensee, Mrs. E. H. Kraybill, Lancaster County, $1; Spitzenberg, F. C. Cope, Susquehanna County, $1; Fallawater, C. D. Sandt, Northampton County, $1; Fall Pippin, C. D. Sandt, Northampton County, $1; Gano, Guy Hayman, Chester County, $1; Golden Delicious, F. C. Cope, Susquehanna County, $1; Hubbardston, R. A. Briggs, Luzerne County, $1; Maiden Blush, J. H. Burckart, Lancaster County, $1; Mann, P. R. Seifert, Northampton County, $1; Lauver, Springwood Farm, York County, $1; N. W. Greening, D. M. Wertz, Franklin County, $1; Oliver, R. A. Briggs, Luzerne County, $1; Nero, H. R. Worthington, Chester County, $1; Opalescent, Woodbourne Orchard, Susquehanna, $1; Paradise, C. D. Snyder, Lancaster County, $1; Pewaukee, C. D. Snyder, Lancaster County, $1; Rambo, S. L. Smedley, Delaware County, $1; S. Rambo, Springwood Farms, York County, $1. 20 Ounce, R. A. Briggs, Luzerne Co., $1; Wealthy, D. M. Wertz, Franklin County, $1; Westfield, R. A. Briggs, Luzerne County, $1; Smith Cider, F. Gearhart, Monroe County, $1; Winter Banana, Daniel Rice, Perry

(Continued on next page)

County, $1; Yellow Newtown, Guy Hayman, Chester County, $1; Y. Belleflower, C. D. Sandt, Northampton Co., $1; York Stripe, Mt. Breeze Orchard, Franklin County, $1; Snow, C. S. Koch, Schuylkill County, $1; King David, H. Nolt, Lancaster County, $1; King, P. R. Baltz, Lebanon County, $1.

CLASS 10.—Best sixteen apples of each variety mentioned in Class 4: Smokehouse, S. L. Smedley, Delaware County, $5; Jonathan, S. L. Smedley, Delaware Co., $5; McIntosh, Daniel Rice, Perry County, $5; Paragon, W. O. Bingham, Franklin County, $5; Grimes, C. D. Snyder, Lancaster County, $5; Baldwin, Daniel Rice, Perry County, $5; Spy, F. R. Cope, Susquehanna Co., $5; Stayman, D. K. Sterrett, Cumberland County, $5; Stark, Daniel Rice, Perry County, $5; York, H. R. Worthington, Chester County, $5; Delicious, Daniel Rice, Perry County, $5; R. I. Greening, Woodbourne Orchard, Susquehanna County, $5.

CLASS 11.—Best sixteen apples of any variety not mentioned in Class 4: Banana, Daniel Rice, Perry County, $5; Winesap, Daniel Rice, Perry County, $5.

CLASS 12.—Best tray of each variety mentioned in Class 4: Paragon, H. R. Worthington, Chester County, $5; York, H. R. Worthington, Chester County, $5; Stark, H. R. Worthington, Chester County, $5; Smokehouse, H. R. Worthington, Chester County, $5; Spy, F. R. Cope, Susquehanna Co., $5; Stayman, D. K. Sterrett, Cumberland Co., $5; Grimes, C. D. Snyder, Lancaster County, $5; Baldwin, Daniel Rice, Perry County, $5; Rome, Daniel Rice, Perry County, $5; Delicious, Daniel Rice, Perry County, $5; McIntosh, Woodbourne Orchard, Susquehanna Co., $5; R. I. Greening, Woodbourne Orchard, Susquehanna County, $5; Jonathan, S. L. Smedley, Delaware County, $5.

CLASS 13.—Best tray of each variety mentioned in Class 4: Winesap, Daniel Rice, Perry County, $5.

CLASS 14.—Best tray of any variety not mentioned in Class 4: Banana, S. R. Snyder, Lancaster County, $5; Gano, Friendly Fruit Farm, Bedford County, $5.

Farm Women in Harrisburg

THE Society of Pennsylvania Farm Women held one of the most successful meetings in its history during Farm Products Show Week at Harrisburg. The two-day program included a number of outstanding addresses and entertainment features.

At the business session on Thursday morning, attended by more than 250 women, the following officers were elected for the coming year: president, Mrs. John F. Hice, Wilmore, Cambria County (reelected president for the third time); vice president, Mrs. F. C. McComb, Venetia, Washington County; secretary, Mrs. A. W. Woldemuth, Manheim, Lancaster County; treasurer, Miss Sallie A. Metzger, Ephrata, Lancaster County (reelected for the third time).

In his address at the opening meeting on Wednesday morning, Honorable Alvin Sherbine emphasized the importance of the country as the balance wheel of society. He said in part:

"Were it not for the untainted, confiding, genuine, old fashioned brand of American manhood and womanhood that moves like a steady stream from the rural sections toward the great cities of our nation, congested centers of population would inevitably become cesspools of debauchery, fertile soil for political treachery and would ultimately destroy the very foundations of representative government."

Kind Old Man—"And do you know why Santa Claus didn't bring you anything, little girl?"

Doll-Faced Child—"Yes, worse luck! I trumped father's ace in the bridge game on Christmas eve."—Credited by the Passing Show to Needles and Pins.

Over 50 years in the Seed Business

The Finish Depends on the Starter

Nothing means more to baby chicks than a good start in life and nothing means more to you than to give it to them.

All rules for correct feeding can be boiled down to: "The Right Feed at the Right Time."

The right feed, of course, means LARRO, a starter having exactly the right ingredients to build brawn and bone; to keep the chicks growing fast, yet evenly; to cover them with uniform close feathers; to build capacity and frame that will assure profit for you later.

Two more chicks raised out of each 100 hatched—two ounces added to the weight of each chick you raise—means $58.00 more income for you from each ton of feed. Don't forget that!

And speaking from our own experience, which has been verified hundreds of times by others, we know that Larro can do even better than that. Your chicks will prove it.

POULTRY

R. L. SCHARRING-HAUSEN
Staff Contributor and Adviser
Glenview Farm

Hemorrhage of the Comb

I have a hen two years old. She seems lively, but blood drops from her comb, until now the comb is pale, swollen and watery.—Q. F. Z., Lancaster County, Pa.

Hens with large full combs, in good laying condition, are liable to hemorrhage of the comb, such as you describe. A small cut or other wound will start bleeding and fail to stop, sometimes continuing until the hen has bled to death.

The remedy is to apply some styptic or healing powder, such as alum, to stop the flow of blood. The bird ought to be kept in a warm place by herself for a day or so, to prevent the other fowls from picking the wound, after which she can be put back in the flock.—R. L. Scharring-Hausen.

Birds Have Indigestion

We would like to have advice about the cause and the cure for indigestion in poultry.—C. B. G., Lancaster County, Pa.

Indigestion in poultry is often caused by spoiled or moldy feed. The remedy, of course, is to feed nothing but sound materials. You might add 5 per cent of ground charcoal to the mash. Brown droppings indicate an excess of carbohydrates in the ration.

If the feed is sound and you are sure that the birds are getting nothing poisonous on range, perhaps your birds have a touch of bronchitis, which causes a good many sudden deaths at this time of the year in birds that seem healthy.

The next time you find a pullet dead, cut open her windpipe, and if you find in it a cheesy substance near the entrance to the throat, that is bronchitis. The remedy is to clean out and disinfect the house, keep the birds warm, dry and out of drafts, and feed plenty of grain to keep the birds in good flesh.

If these suggestions do not clear up the trouble, write me again, telling just what kind and amounts of grain and mash you are feeding, and also describing any further symptoms you may see.—R. L. Scharring-Hausen.

Tapeworm Infestation

A laboratory examination of two chickens showed a heavy infestation with tapeworms. Please let me know how to rid my flock of them; also if there is danger of the young chicks becoming infested and if so how to prevent infestation.—C. F. C., Lehigh County, Pa.

To expel tapeworms in fowls, mix a pint each of wheat and oats and a teaspoon of lye. Cover with water and cook for two hours. The fowls are starved for twenty-four hours and then given all the mixture they can to eat. At the next feeding the flock is given Epsom salts in the drinking water at the rate of one pound per 100 hens. This is rather a hard treatment and may cause a drop in egg production. It should be given only in nice weather.

Treatment Worth the Trouble

A better treatment, which, however, costs more and is more trouble, is kamala. This drug is given in the form of a capsule, the dose being one gm. per bird. No starving or fasting is necessary, and the clean-up is usually complete.

Tapeworms have part of their life cycle in several species of flies, and to raise young chicks successfully where tapeworm infestation has occurred, it is necessary to screen the houses with mosquito wire and not allow the chicks out except in similarly screened runs during fly time. The use of green feed and cod liver oil will keep them in health.

I expect to get some new information on this method of rearing chicks from the New Jersey Station before long, that has not been published before, and will write up an article covering the ground at that time.—R. L. Scharring-Hausen.

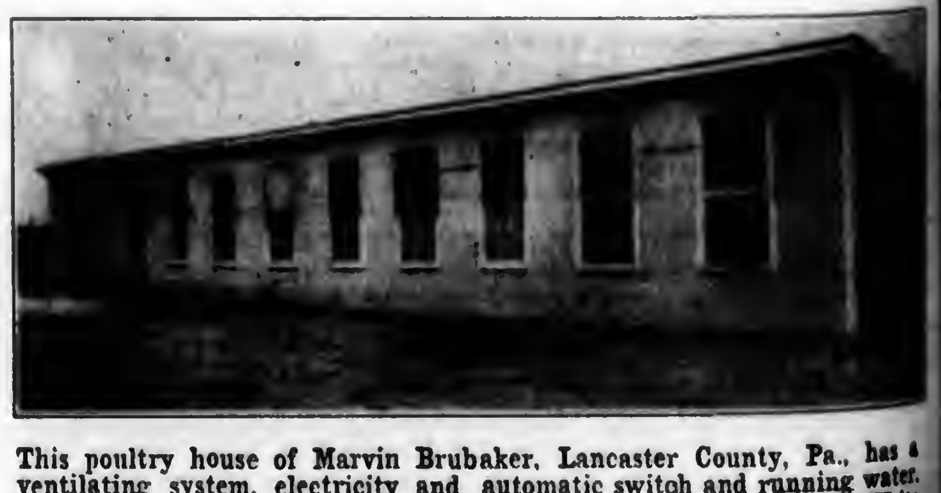
Condensed Buttermilk Prevents Toe Picking

In the past I never used condensed buttermilk in the ration for young chicks. As the mash contained powdered buttermilk, I thought it unnecessary to fuss with the other. Last season, however, an agent induced me to try a small keg, claiming the condensed form was an especial aid to digestion. I began feeding this stuff straight as it came from the keg, starting when the chicks were about a week old.

At first, a small quantity was smeared on the edges of the mash hoppers, and as the chicks became used to it, I increased the quantity until they were given what they would clean up in twenty minutes.

(Continued on next page)

Up-to-Date in Every Way



This poultry house of Marvin Brubaker, Lancaster County, Pa., has a ventilating system, electricity and automatic switch and running water. The building is 18 feet by 70 feet. Mr. Brubaker has nearly 500 White Leghorns at the present time.

I simply smeared a good-sized chunk on a board, and leaned the board against the side of the pen to keep their feet out. The chicks were simply crazy for it, and would neglect everything else in the morning until they had their buttermilk.

Whatever other effects it had, there was one result, which I have not seen mentioned before and which has made me a confirmed user of condensed buttermilk for young chicks: during the time I used buttermilk, there was not one single case of toe picking in the brooders, which has always been a serious nuisance in the past. The only toe picking I had occurred in one pen when I ran out of buttermilk, and that stopped in one day when I got a fresh supply.—R. L. Scharring-Hausen.

Nest Box Notes

A HOME supply of skimmilk is a mighty fine thing for the poultry flock. It is advisable to feed it sour, but it should never be allowed to sour in galvanized vessels or be fed out of them, as the acids form compounds with the metal which are poisonous to chickens, especially baby chicks. Stoneware or enamel pans are the things to use.

* * *

Anyone who attends a poultry meeting nowadays is bound to hear a lot about cod liver oil. Its use is now standard practice in poultry raising, being fed not only to baby chicks, but to laying and breeding stock as well. The oil is fed because it is especially rich in two vitamins. The first, vitamin A, increases and promotes growth and vigor, increases the appetite, and aids the bird in warding off disease. The second, vitamin D, promotes bone growth, preventing rickets and leg weakness.

* * *

There are many brands of cod liver oil on the market, and since the oil is valuable simply because of its vitamin content, only the product of reliable companies, tested for vitamin potency, and protected against deterioration, will give the desired results.

* * *

Vitamin A is injured by exposure to air. For this reason many poultrymen prefer to buy oil in small containers rather than in barrels. For the same reason it is not a good plan to mix the oil with a large bulk of mash, unless it will be consumed within a few days. The best way to feed it is to add it directly to a moist mash from the can, or to mix it with a small quantity of grain to be fed from a trough.

* * *

The ultra-violet rays present in direct sunlight have the same effect on bone growth as vitamin D. Window glass excludes these rays, but some of the glass substitutes on the market admit them.

* * *

I recently read of an experiment where one lot of chicks was raised under glass, another under a glass substitute, while a third was allowed out in the open. By the time these chicks were of broiler size, the first lot had developed leg weakness, but the others were free from it.

* * *

Cod liver oil must be relied upon to furnish vitamin D during that part of the year when the sunlight is weak and cloudy weather prevails, or when chicks must be confined.—R. L. Scharring-Hausen.

HAVE A CAMEL

Smoking refreshment that never ends

WHY is it that the enjoyment of Camels never fails? That you can light them all day and far into the night with never a loss of smoothness, mildness and incomparable fragrance? It's simply a question of quality. Camels contain the choicest Turkish and Domestic tobaccos grown. Camels are given an expert blending found in no other cigarette.

First thing in the morning. Late at night. Before or after breakfast, lunch or dinner. Light Camels as liberally as you choose, one after the other, as often as you desire the cheering comfort of a cigarette. You will get always the refreshing thrill of smoking pleasure.

Camel perfection has resulted in a demand that has never been known before or since. There has never been cigarette popularity that could compare with Camel's. Each year, millions of experienced smokers, who are willing to pay any price for quality, find in Camels every good thing they've ever wanted in a cigarette.

Here's a smoke invitation that's leading millions to an entirely new conception of cigarette contentment and satisfaction—

"Have a Camel!"

BLUE HEN

Every Chick will be a HEALTHY Chick if you use the BLUE HEN Colony Brooder

It has a capacity equal to its rating—and the chicks on the outside edge won't shiver because its new hover spreads an even, healthy heat from the stove to its outside edge.

It is easy to control—and the large magazine needs loading only once a day. It is inexpensive to operate—and built to last. No castings to burn out in a season or two.

A real, live money-making Proposition to User-Agents. Write us Today

Write TODAY for the free new "Blue Hen Book of Brooder Facts".

LANCASTER MFG. CO. 882 W. Janet St. Lancaster, Pa.

Mention Pennsylvania Farmer when writing to advertisers.

Your Chicks Are SAFE in a Dickelman ROUND METAL BROODER HOUSE

Patents Pending

Cool in Summer—Warm in Winter. A system of ventilation that can be positively controlled. Hot foul air let out from the top. No odor when house is opened in the morning. Cool sides of building drive little chicks towards stove in center. No "piling up."

U.S. Government states "the biggest leak in the poultry business is from the loss of baby chicks. In most flocks less than half the baby chicks are raised to marketable size."

With a Dickelman, you should be able to raise 90% to 97% to maturity. Buy one this year and let the additional chicks you will mature pay for it. Shipped knocked down in 500 chick units. This house is 12'6" in diameter. We have found by repeated tests that it takes a house this size to mature 500 chicks in a healthful condition. To use a smaller house is to jeopardize your profits. Mail the coupon. Read what Dickelman Houses have done for practical poultrymen.

Remember a "Dickelman" Pays for Itself

THE DICKELMAN MFG. CO.
DEPT. 326 FOREST, OHIO

Safe from Smothering. It is circular and has no corners.

Safe from Varmints, such as rats, skunks, weasels, etc. It is of iron and they can't gnaw through.

Safe from Fire. It is of metal, even the floor has a metal covering.

Safe from Disease. It can be easily cleaned and thoroughly disinfected. Smooth metal floor and walls provide no breeding places for disease germs.

Better Fertility—More EGGS!

Originator of Prize-Winning "Aristocrat" Barred Rocks Uses and Recommends Dr. LeGear's Poultry Prescription to Improve Fertility and to Increase Egg Production.

W. D. Holterman, Ft. Wayne, Ind., breeder and originator of "Aristocrat" Barred Rocks, has been a big success because he knows how to get egg production all year. His customers have been winners in thousands of shows. Why experiment? Follow the advice and methods of successful poultrymen. Do as Mr. Holterman and other big breeders do. The way to keep chickens healthy and producing is to mix with their feed

Big Poultryman Recommends Dr. LeGear Poultry Prescription

Ft. Wayne, Ind., July 27, 1926.
Dr. L. D. LeGear Medicine Co.,
St. Louis, Mo.

Gentlemen: I have used your poultry prescription and your poultry remedies and have always found them highly satisfactory. I feel that I can honestly recommend both your poultry prescription and your poultry remedies to poultry breeders everywhere.

If your poultry prescription were used more universally there would be greater egg production, better fertility, and much of the mortality among flocks of poultry would be avoided, and thus the profits to breeders increased.

I believe every poultry raiser should keep on hand a supply of such high-class remedies as yours for emergencies as they arise, and use your poultry prescription regularly, as you recommend.

Yours very truly,
W. D. HOLTERMAN, Fancier.

Dr. LeGear's Poultry Prescription

Contains TONICS for the blood, nerves and egg organs—LAXATIVES for the bowels—REGULATORS for the digestive organs—MINERALS for the feathers, bone and bone tissues. It supplies the vital mineral and vegetable ingredients not found in any home or commercial mixed poultry feeds, and without which poultry cannot produce maximum egg production and profits.

This is the time when you want more eggs—fertile eggs—the kind that give you maximum hatching results—strong chicks and minimum losses. You needn't risk a penny to try any Dr. LeGear Remedy. Get a package from your dealer and use it up. If not thoroughly satisfied return empty package to him and he will refund your money. To each 50 lbs. of laying and feed mash, mix 1 lb. of Dr. LeGear's Poultry Prescription.

White Diarrhoea kills thousands upon thousands of baby chicks each year. Loose bowels and common diarrhoea are also prevalent.

Use Dr. LeGear's Chick Diarrhoea Tablets in the drinking water and give no other water to drink, regardless of whether chicks show symptoms or not. Keeps chicks in good, healthy condition—helps them ward off disease, and is a great aid in bringing them to maturity. Get a can from your dealer. Use it up. If not satisfied, return can to dealer and get your money back.

FREE—Just Off the Press "Dr. LeGear's Complete Poultry Guide and Feeding Manual." How to get more eggs—better fertility—stronger chicks—larger profits—how to prevent and treat all poultry diseases. Gives feeding formulas of U. S. and State Experimental Stations, and leading egg laying contests. Invaluable to beginners, fanciers, farmers, hatchers and big operators alike. Ask your dealer for a free copy or send us 6c in stamps to cover mailing, etc.

DR. L. D. LeGEAR MEDICINE CO., ST. LOUIS, MISSOURI

HILLPOT Quality Chicks

Profit Payers for Practical Poultrymen

"I like your methods, Hillpot", writes one of my repeater customers. "Practical. No fads or nonsense. The first lot of your chicks showed me what your QUALITY means to a poultryman's cash book—and it means even more now."

If you are a practical poultryman—in the game for profit—an order of my vigorous chicks will make you as regular a repeater as the thousands of hard-headed folks who have already found what Hillpot Quality means in earlier broiler and heavier egg profits.

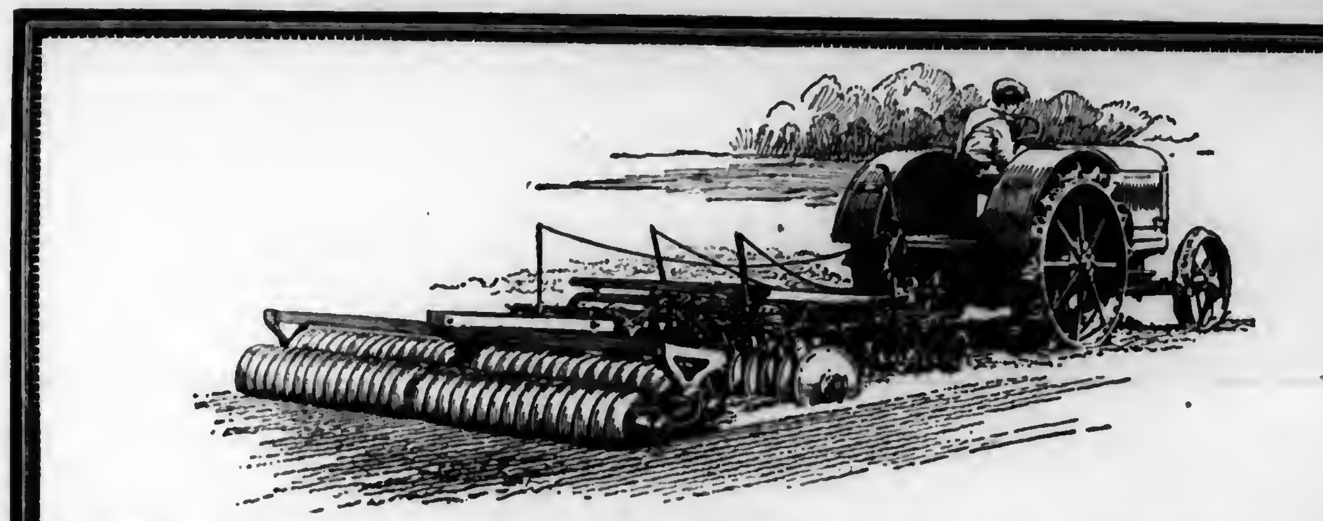
CAPONS.—Bolton Farms, Hummelstown, 1st capon, $2.50.

Famous Pigeon Shown

THE pigeon show held at Harrisburg in connection with the State Farm Products Show, attracted much attention. A total of 944 pigeons, representing 54 different varieties, made up this display. A number of the winning birds in the National Pigeon Show were entered and several racing pigeons were on exhibit. One of the entries has flown over 800 miles. The signal corps of the U. S. Army exhibited 12 pigeons, some of them being descendants of the famous homer pigeons which were used to carry important messages during the World War.



The NEW HEAT-TREATED DISKS *on* McCormick-Deering Disk Harrows *hold their edge in any soil*

THE Harvester Company has always put especially durable saw steel into McCormick-Deering disks and every user has benefited accordingly. Now, through careful experimentation the builders have learned to increase the efficiency of the disks *by a heat-treating process which toughens and tempers the steel.*

The new McCormick-Deering disks—heat-treated, crimped-center—are better able to stand the strains encountered in the faster tillage operations made possible by tractor power. They show special ability to hold a cutting edge, even when cutting and cultivating the hardest, rockiest soil.

The *disks* in the harrow take hard punishment! Glance at disk shown at the right. Note the *crimped center*—that means McCormick-Deering. The heat-treated, crimped-center disk in your harrow will mean fewer sharpenings, longer life, better work with less power.

Improve your tillage, lengthen the life of your equipment, put your 1927 crops into better seed beds at the right time—by relying on the thoroughly up-to-date and complete line of McCormick-Deering Tillage Implements. The line includes horse and tractor disk harrows, peg and spring tooth harrows, field and orchard cultivators, rotary hoes and the Dunham Culti-Packer. All sold by McCormick-Deering dealers.

Be Sure it is a Heat-Treated Crimped-Center Disk

Look for the *Crimped-Center*—an *exclusive feature* on *McCormick-Deering Disks.* Over and above the toughening that is now given the disks by heat-treatment, the crimped center adds great durability. It adds 50 to 100 per cent to the strength at the center, and *you can get it only on McCormick-Deering Disk Harrows.*

* * *

You can take one of these new McCormick-Deering heat-treated disks and hurl it edgewise against a hard concrete floor without hurting the edge. You can put it in a vise and spring it out of shape with a large wrench—it will spring back into normal shape at once. *The disk that stands such treatment will stand abuse in the field.*

INSURE—
Health and Profits

ARE you killing your cows with kindness? Are you wasting good feed dollars in ineffective attempts to force production? Too much heavy, rich, expensive rations that the overworked digestive and assimilating organs cannot convert into milk makes your cows logy, off feed—the easy prey of disease.

Kow-Kare, used with the winter feed, shows such amazing milk gains simply because it actively aids the digestive organs, stimulates assimilation—builds natural health and vigor right where the milk-making process occurs. Kow-Kare is not in itself a food. It throws no added burden on the cow's digestive functions. Its action is not temporary—but PERMANENT. It invigorates the productive process—makes the cow thrive on the less expensive NATURAL foods.

Gear up your cows to higher milk yields right now. It costs you nothing to give your cows this vital help. The added milk much more than pays the slight cost. You get cow-health insurance as a BONUS. A single can of Kow-Kare will ration a cow one to two months. Full directions are on every can.

Prevent Disease Losses

Most cow diseases are prevented entirely where Kow-Kare is used with regularity. By keeping the cow's vitality at a high level expensive cow troubles cannot gain a foothold. When disorders such as Barrenness, Retained Afterbirth, Abortion, Bunches, Scours, Lost Appetite, etc., do creep in, Kow-Kare brings speedy recovery by restoring the health and vigor of the organs where these troubles always originate. Kow-Kare rescues many a hopeless cow—turns many a loss into profit.

Feed dealers, general stores, druggists have Kow-Kare—$1.25 and 65c sizes, (six large cans, $6.25). Full directions on the can. Mail orders sent postpaid if your dealer is not supplied. Our valuable free book on cow diseases sent free, on request.

When Cows FRESHEN

no investment is so certain to pay big returns as giving Kow-Kare. Instead of *expecting* trouble at calving you prevent it with this great invigorator. Thousands of dairymen no longer think of letting cows freshen without the aid of Kow-Kare—fed two to three weeks before and after. It assures a healthy vigorous cow and calf.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry Pennsylvania State College

Specialists Present New Facts to Dairymen at Annual Meeting

THE annual meeting of the Pennsylvania Dairymen's Association held in connection with the State Farm Products Show attracted the largest attendance in the history of the association. Fully 300 were in attendance at the forenoon and afternoon sessions while the banquet in the evening was attended by about 375.

The program brought before the dairymen many new and interesting facts, the speakers all being specialists in their respective lines of work.

Dr. S. I. Bechdel, Dairy Department, State College, Pennsylvania, discussed the dairy research work being done at the College. Some of the results in brief are as follows:

Mixed corn and soy bean silage did not prove much superior to straight corn silage for milk production. Sunflower silage stored alone or with corn was much inferior to corn silage. Sunflowers cannot be recommended for silage in Pennsylvania except in a few high altitude sections where corn is not a sure crop. Canada field peas and oats are recommended for summer silage. Such silage is inferior to corn silage but is much better than no silage and makes a good supplement to pastures.

Frost Spoils Value of Corn

The nutritive value of the corn crop for silage was found to advance until maturity. It is recommended that such a variety of corn be grown for silage as will attain in average years at least the milk stage of growth before killing frosts occur.

Soy bean hay was found equal to alfalfa hay for milk and butterfat production. Soy beans are recommended as an excellent emergency crop that may be used in case of scarcity of clover or alfalfa hay.

Ground buckwheat was found to take the place of corn meal in the ration without seriously affecting milk production. Buckwheat middlings and gluten feed proved of equal feeding value for milk production.

Cane molasses was found to play an almost insignificant part in the digestibility of a dairy ration. The value of molasses in a dairy ration therefore, aside from what carbohydrates it may add, is due almost entirely to its effect in increasing the palatability of the ration.

Grinding alfalfa hay increased the digestibility of the ration about two per cent. Whether this small increase in digestibility is sufficient to justify the trouble and expense of grinding the hay is an open question.

Skimmilk Powder Investigations

Investigations have recently been started to determine the feasibility of raising calves on skimmilk powder to take the place of liquid skimmilk. The results to date are encouraging. Data on more than forty calves will be obtained this year.

What relation does the conformation of a dairy cow have to her milk producing ability? Over 100 measurements and weights of organs are taken on all cows of known milk producing ability that are slaughtered in the College herd after they have served their period of usefulness. Fifteen other experiment stations beside the Pennsylvania Station are cooperating with the U. S. Bureau of Dairying in a comprehensive study to determine whether the ideal dairy type as taught by cattle judges is scientifically correct.

Calves were raised to maturity without any vitamin B. This is the vitamin that prevents the paralysis known as beri-beri in humans. After the cows freshened their milk contained vitamin B. Where did the cows get the vitamin B to put into their milk? There would appear to be a possibility that they synthesize this vitamin in the digestive tract.

By means of a surgical operation a permanent opening has been made thru the left side of one of the experimental heifers so as to gain access to the rumen at will. Portions of fermented and partially digested

food will be removed from time to time in order to determine whether vitamin B has been produced by fermentations that occur within the rumen.

H. W. Jeffers, manager of the Walker Gordon Farms, Plainsboro, New Jersey, gave an interesting account of their experiences in handling 1050 milking cows. The cows are kept in stables housing 50 cows each. Each man in the stable is responsible for a certain number of cows. The milk is all handled at one central plant. Land is rented out to farmers who grow hay and silage at a fixed price per ton, $5.00 per ton being the standard price for green corn for the silos.

A commercial drying oven has been installed for drying forage. The green forage first goes into an immense hopper and then passes on an endless apron thru an oven of hot air. This results in the driving off of the moisture in the hay or other green material. In a few minutes the hay comes out of the oven sufficiently dry for storage in the mow.

The process appears to have large possibilities in facilitating the drying of roughage and will be especially valuable in wet seasons when curing hay by ordinary means is difficult.

Flies Aren't Made Welcome

The remarkable freedom of the Walker Gordon plant from flies is due, according to Mr. Jeffers, to the fact that all refuse and breeding places are kept clean and to the use of large numbers of fly traps baited with molasses and bran, especially in the early part of the fly season, and later to the use of a commercial fly killing preparation which is "fogged" thru the stable by spraying. This is done late at night or early in the morning when most of the flies have gathered on the ceiling. The preparation is not harmful to livestock or man but is destructive to flies. The cost of the preparation and its application averages about $1.00 per animal per season.

The Walker Gordon Farms formerly bought all their cows but had difficulty in getting a high average production per cow in this way. For the last few years they have been raising heifers by a system of putting out heifers from their best cows with farmers who raise these calves at a charge of from 14 to 21 cents per pound gain in weight. This has proven satisfactory to both parties. The herd now averages above 8000 pounds of 4 per cent milk per cow annually. They hope in five years to have the average up to 10,000 pounds of 4 per cent milk per cow.

Control of Contagious Abortion

Dr. F. A. Marshall, of the Pennsylvania Bureau of Animal Industry, discussed the prevention and control of contagious abortion, using questions and their answers as a basis of presentation. His conclusions were as follows:

(1) Be honest with yourself. Arrange maternity stalls and religiously use them; be very careful they are not infecting stalls.

(2) Do not keep infected calves in the feed alley or near other cattle.

(3) Do not keep clean cows exposed to infected cows at calving time.

(4) A breeder owes it to himself, to his breeding industry and to the public in general to have a herd free from tuberculosis and abortion.

(5) Do not keep a cow with either disease without properly protecting the other animals.

(6) Do not buy infected animals and expect a profit from them.

(7) Raise, buy and keep only the ones free from abortion.

(8) Keep feeding records, butterfat records and have better cows.

Dr. Marshall also presented the present status of tuberculosis eradication as conducted by the Pennsylvania Bureau of Animal Industry.

(Continued on page 19)

Look! What this New De Laval got out of our skimmilk!

SIZES [illegible] Balance in 15 Easy Monthly Payments

THESE people were surprised to see a new De Laval Separator skim a quart of rich cream from a can of their skim-milk. They thought their old separator was doing good work, but the new De Laval proved it wasn't. Satisfy yourself that you are not losing cream in this way. Ask your De Laval Agent to bring out a new De Laval and try this simple test:

After separating with your old separator, wash its bowl and tinware in the skim-milk. Hold the skim-milk at normal room temperature and run it through a new De Laval. Have the cream thus recovered weighed and tested. Then you can tell exactly if your old machine is wasting cream, and what a new De Laval will save.

The new De Laval is the best cream separator ever made. It is the crowning achievement of 48 years of cream separator manufacture.

Guaranteed to skim cleaner

The new De Laval has the wonderful "floating bowl"—the greatest separator improvement in 25 years. It is guaranteed to skim cleaner. It also runs easier with milk going through the bowl, and lasts longer.

Send coupon below for name of your De Laval Agent and *free* catalog.

Free Trial of Proved Swedish Abortion Treatment

Famous Foreign Formula quickly relieves badly infested herds. Gives amazing results in cases believed hopeless.

Thousands of American Farmers say the Froberg Swedish Abortion Treatment has saved their herds from destruction. This remarkable treatment has been used with complete success in the big dairy herds of Sweden for many years, and has cleaned up whole districts over there literally rotting with contagious abortion.

It was only after great expense of time and money that this secret formula was made available to American Farmers. During the past nine years the treatment in American herds has given all the amazing results that made it so famous abroad. Herd after herd has been rid of this disease. Even cows considered hopeless by veterinarians have yielded to its healing qualities and been restored to health and produced fine vigorous calves.

SAVED HIS HERD

David Mohr, Jenison, Michigan, says: "Last year I raised only one good calf out of 14 cows bred, all other calves were aborted. I was desperate. I used your C.C.C. treatment. This year with the same herd I have not lost a single calf. It's wonderful. My neighbor lost 3 calves in a few days—I gave him some C.C.C. and it stopped the trouble right there."

The fame of Cow Calf Control (C.C.C.) the name of this treatment has spread from breeder to breeder. Today it is put out only on an absolute binding guarantee that it will stop every case of abortion; that every cow treated will deliver a normal calf, or the treatment cost is refunded. Two reliable banks stand behind our guarantee. You can't lose. C.C.C. is practically 100% successful.

SEND NO MONEY

Mr. John W. Froberg, a native of Sweden and a large dairy owner, is responsible for introducing C.C.C. into this country. He has made the treatment easy to give, and at a cost per animal that every farmer will gladly pay.

Write today for full details explaining our free trial offer. Just send your name and address without further obligation to Froberg Remedy Co., 16 Lincoln St., Valparaiso, Ind.

COLT Light is practically sunlight. Its clear, brilliant flood of light cannot injure the eyes. The Colt Hot Plate takes all the drudgery out of cooking. The Colt Self-heating Iron makes ironing a comfortable task. These are the advantages that a Colt Light Plant brings to your family — advantages that add more to their comfort than any other improvement you could install.

The Colt Light Plant is *safe*, and the Colt Light Generator is listed as "standard" by the Underwriters' Laboratories, Inc. On the average farm, you refill the Colt Light Generator with Union Carbide* and change the water only three or four times a year. This generator is specially equipped to automatically give the user warning several times when the supply of carbide is nearly exhausted, allowing ample time to refill with Union Carbide.*

Colt Light fixtures add beauty to any home. They may be had in a wide variety of styles and types. A Colt Light Plant lasts for years and years, without expense for repairs.

Join the thousands of satisfield Colt Light users! Let us show you how easily and quickly you can install a Colt Light Plant in your home! Write today for our free descriptive booklets.

No need to fear spring thunder storms if you have a Leadclad roof.

"A Leadclad Roof is Lightning Proof!"

Ninety-Seven Potato Growers Qualify for 400-Club

THE 1926 Keystone 400-Bushel Potato Club has 97 members. That means that only three less than 100 Pennsylvania potato growers produced more than 400 bushels of potatoes on a measured acre during the season of 1926. Of this number, 61 were awarded medals at the Farm Products Show in Harrisburg. The rest were repeaters who had won their medals in former years.

For the third year in succession R. E. Briggs and Son, of Luzerne County, were the champion potato growers of the state. Their yield in 1924 was 637.6 bushels; in 1925 it was 571.4 bushels; in 1926 it was 688 bushels on a measured acre.

Three members of boys' and girls' potato clubs were made members of the 400-bushel group. They are: Merritt Bardo, Lycoming County; Wilbert Lance, Beaver County; Bruce Cooper, Jefferson County.

Their Bees Deserve a Vacation

TREESDALE FARMS, of Butler County, won first place in both light comb and extracted honey at the State Farm Products Show. D. C. Gilham, of Schuylkill County, was given first award in the individual collective exhibit. Butler County won first honors in the county exhibit. The first and second awards in all classes are as follows:

CLASS 1. Light Comb Honey.—Treesdale Farms, Butler County, $5; D. C. Gilham, Schuylkill County, $4.

CLASS 2. Dark Comb Honey.—A. B. McGuire, Crawford County, $5; D. C. Gilham, Schuylkill County, $4.

CLASS 3. Light Extracted Honey.—Treesdale Farms, Butler County, $5; Enos H. Hess, Cumberland County, $4.

CLASS 4. Amber Extracted Honey.—Wm. A. Heiss, Union County, $5; Enos H. Hess, Cumberland County, $4.

CLASS 5. Dark Extracted Honey.—D. C. Gilham, Schuylkill County, $5; Treesdale Farms, Butler County, $4.

CLASS 6. Beeswax.—I. L. Barton, Crawford County, $5; D. C. Gilham, Schuylkill County, $4.

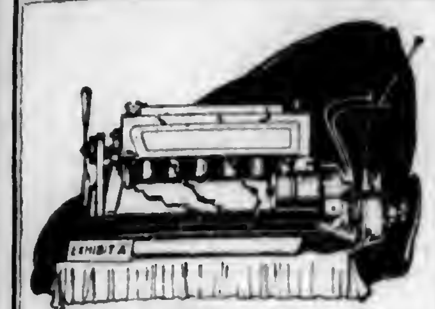
CLASS 7. Individual Collective Exhibits of Honey, Wax and Honey Products.—D. C. Gilham, Schuylkill County, $5; A. T. Keil, Butler County, $4.

CLASS 8. (1) Cake.—(A) Fruit Cake, Mrs. A. T. Keil, Butler County, $1.25. (B) Loaf Cake, Mrs. Frank Kramer, Schuylkill County, $1.25. (2) Cookies.—(A) Rolled Cookies, C. F. Christmann, Lehigh County, $1.25; Mrs. A. T. Keil, Butler County, $0.75. (B) Drop Cookies, Mrs. Frank Kramer, Schuylkill County, $1.25; Mrs. A. T Keil, Butler, $0.75. (5) Vinegar.—D. C. Gilham, Schuylkill County, $1.25.

CLASS 9. Canned Fruit.—D. C. Gilham, Schuylkill County, $4.

CLASS 10. Candy.—1. Home-made, Honey Creams, A. B. McGuire, Crawford, $1.25; D. C. Gilham, Schuylkill County, $0.75. 2. Commercial Products.—Honey Nougat, D. C. Gilham, Schuylkill County, $1.25. Honey Caramels, D. C. Gilham, Schuylkill County, $1.25.

CLASS 11. County or Association Collective Exhibit.—A. T. Keil, secretary-treasurer, Mars, Butler County, first, $25. P. A. McGowan, secretary-treasurer, Williamsport, Lycoming County, second, $20. D. C. Gilham, secretary-treasurer, Schuylkill Haven, Schuylkill County, third, $15.



CRACKED cylinders due to carelessness,

Waste and ruin follow in the path of Frost, the enemy of motors.

Be careful.

Save your cylinders—save your radiator—save your car—with FreezFoil [Denatured Alcohol] the safe, sure, and economical anti-freeze, proven by millions of motorists.

Ask your garage or service station to FreezFoil your radiator—accept no solution that does not bear the name shown below.

Have Your Radiator Solution Tested When You Buy Gasoline

FreezFoil Per cent	Water Per Cent	For Temperature	
5	95	30°	above
15	85	20°	
25	75	10°	
30	70	ZERO	
35	65	10°	below
40	60	20°	
45	55	30°	
55	45	40°	

FreezFoil is not a motor-damaging compound—it is highest test completely denatured alcohol—sold under various tradenames by members of the Industrial Alcohol Manufacturers Association who are licensed to use the trade mark below in connection with their own brand.

Specialists Present Facts

(Continued from page 17)

Individual herd tests have been conducted as follows:

	Number of herds	Number of Cattle
Accredited	2,993	53,963
Negative tests	4,155	46,891
Reacting herds, last tests	1,004	18,197
Total	8,152	119,051

By the area plan 531 townships have been tested in 45 counties. This work includes 72,870 herds containing 451,601 cattle. Seven counties are accredited as modified areas: Mercer, Crawford, Jefferson, Cameron, McKean, Butler and Clearfield. Complete county tests have also been made in the following counties, altho they are not yet accredited as modified areas: Lawrence, Union, Indiana and Potter. On the waiting list there are 2335 individual herds in 54 counties and as area tests 164 townships in 43 counties.

Unprofitable Cow a Menace

Mr. C. T. Conklin, secretary of the Ayrshire Breeders' Association, Brandon, Vermont, presented the herd test plan of testing cows for production. He stated that the unprofitable cow, regardless of how rich a pedigree she may have, is a menace to society and should be slaughtered. The dairy cow and man are in competition for the use of the same land and many of the same crops, and only when the dairy cow can improve the quantity or quality of the nutrients from this land is her owner justified in keeping her.

Secretary Conklin outlined the first year's experience with the Ayrshire herd test plan, and declared that Ayrshire breeders are very enthusiastic about this method of testing, in which every animal in the herd is entered, and herd averages for the year computed.

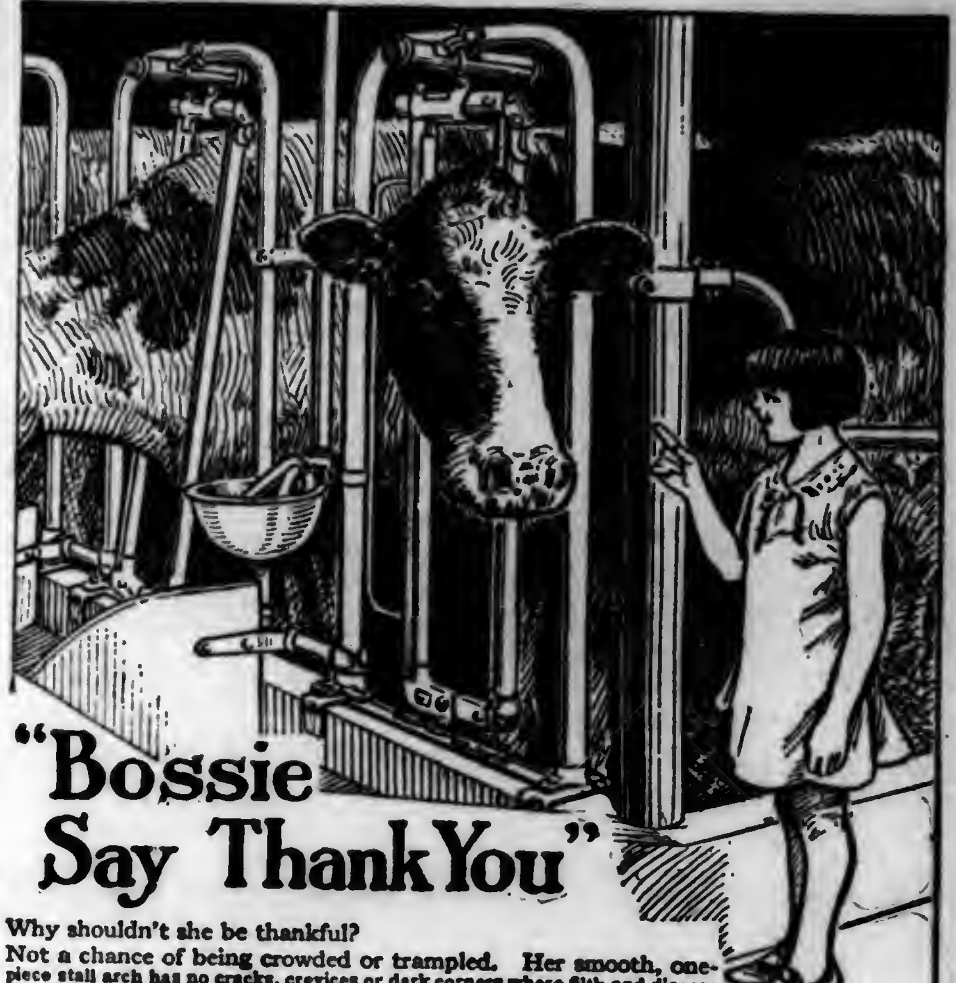
Dr. E. B. Forbes, director of the Institute of Animal Nutrition at State College, in discussing the subject of mineral nutrients for dairy cows, stressed the importance of an adequate dry period with liberal feeding since it is during the dry period the cow lays up a store of minerals for her lactation period.

Leguminous roughage is highly desirable as it contains more minerals than grasses or cereal straw and if it is necessary to use the latter kinds of roughage it may be helpful in avoiding weakness in calves and premature births to allow the cows free access to bone meal but this should be regarded not as an established but as an experimental procedure.

Rate at Which to Feed Salt

Common salt should be fed at the rate of from one to three ounces daily according to milk yield. Two ounces is enough for any but the very best cows. If one wishes to experiment with the use of a mineral supplement he may mix four parts of bone meal with one part of salt and allow the cows to run to this at will. Only under unusual circumstances, however, would beneficial results be anticipated.

Dr. Forbes stated in conclusion that "It is by no means certain that the mineral losses which have been shown to prevail during the early part of the period of lactation are not fully restored during the latter part of the period and while the cow is dry. Nor has it been clearly shown that calcium salts added to rations composed of feeds of normal composition will materially improve the calcium balance of the animal. This subject, therefore, requires further investigation and the commercial application of the suggested facts before they are regarded as established."



"Bossie Say Thank You"

Why shouldn't she be thankful?

Not a chance of being crowded or trampled. Her smooth, one-piece stall arch has no cracks, crevices or dark corners where filth and disease may hide. *Pure air and light reach every spot around her.* She lies down, gets up, turns around to lick or look behind as easy as in the pasture. Her stanchion adjuster keeps her lined up at the gutter; she lies down in comfort and not in filth and misery. She keeps clean.

Fresh air to breath; a fresh drink when she wants it—even at night; never nervous, tired or sick. She looks well, feels well and does well. Every day she deposits in the milk pail her thanks for this comfort of a barn that's right.

If your barn isn't right now you can make it right. We'll help you.

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Far

JUDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, fired Bayne Trevors, general manager, because he wasn't square. The men grumbled. Trevors made trouble in every way possible. Bud Lee, horse foreman, and old Carson promised to stay. Judith could depend on them and on "Doc" Tripp; veterinarian and a friend of her father.

Busy days followed. Mrs. Simpson took up her duties caring for the ranch house and Pollock Hampton, part owner of the ranch, arrived with his guests—Major and Mrs. Langworthy and Marcia, their daughter; Marshal Rogers, lawyer, and Frank Farris, artist.

On May 30 Charlie Miller, returning from Rocky Bend with the pay roll, was robbed. To avert a walkout, Bud Lee covered 80 miles in six hours and put the money into Judith's hands in time in spite of smokeless powder and a silencer that put his horse out of business on the way back.

Next day, while searching for clews of the holdup, Bud Lee and Judith came upon the old cabin on the plateau in good repair. The girl was surprised and pleased but Bud Lee didn't tell her he was responsible even when she declared the man who had fixed it "a dear." In a hollow nearby they found fresh footprints of two men. A bullet sped over their heads. They ran for the cabin, firing as they ran. A third man started shooting from the cabin walls. Lee felt a stinging pain in his leg but kept on. When they reached the cabin the third man was wounded. They dragged him inside. It was Bill Crowdy, one of the troublemakers on the Ranch a short time before. Tied to his belt was the bag with the stolen pay roll.

Judith decided they'd spend the night where they were. She wasn't going to give the other two gunmen a chance to get Crowdy. She wanted to use the prisoner to help put Trevors in jail. From outside came the murmur of men's voices. One was Chris Quinnion, the man Judith believed responsible for the death of her father, demanding the money. At Lee's "Come ahead, we're waiting" a rifle cracked, splinters flew—the fight was on.

When dinner was over at the ranch house and Judith hadn't appeared, Pollock Hampton began to think something wrong.

Continued from last week

HAMPTON learned from Mrs. Simpson that in the afternoon Judith after a hurried lunch had taken her rifle and ridden away. Where? Mrs. Simpson did not know. But she grasped the opportunity to confide in Hampton a suspicion which she held in connection with the robbery and killing of Bud Lee's horse under him—a suspicion which was growing rapidly into positive certainty. She didn't like to mention the matter to him, since Fujioki was his servant. But had he noted Fujioki and that other black Spanish, Jose? They had a community of interest which must extend far beyond racial kinship; they were, even at this very second, out in the courtyard together talking in subdued voices. Mrs. Simpson had been raised a lady, Mr. Hampton, sir; and she knew that in the best families one was not supposed to eavesdrop. But at a time like this. . . . Well, she had crept up behind the lilac bushes and they were speaking guardedly about the hold-up! Almost in whispers, with every sign of guilt—

"Hurried lunch?" said Hampton. "Took her rifle, did she?"

His eyes had grown very serious as he stared down into Mrs. Simpson's concerned face.

"Send Jose to me," was what he said next.

"Aren't you afraid, Mr. Hampton?" she exclaimed, picturing to herself this pleasant young gentleman at death-grips with the sombre Jose. However, she obeyed and called Jose whom Hampton merely sent to the men's quarters with word for Carson and Lee to come to the house. Mrs. Simpson, witnessing the bloodless meeting from the hallway, was a little relieved and very much disappointed.

HAMPTON strode up and down the office, the frown gathering upon his usually smooth brows. Plainly if something had happened to Judith the present responsibility lay upon his shoulders as next in authority.

"Here I am!" announced Carson briefly. "What is it?"

"I am a little worried, Carson," said Hampton, "about Miss Sanford."

"Huh?" grunted the old cattleman.

"Judith hasn't put in an appearance and it's growing late," continued Hampton hastily. "I'm afraid——"

"Afraid? Afraid of what? You don't think she eloped with your Jap or stole the spoons do you?" snapped Carson. He had been interrupted at the crucial point in a game of cribbage with Poker Face and the cattleman's weak spot was cribbage. He glared at Hampton belligerently.

"Where is Lee?" questioned Hampton sharply. "I told Jose I wanted the two of you. Why didn't he come?"

"Dunno," answered Carson, still without interest. "I ain't seen him. Wasn't in for supper——"

"I tell you," cried Hampton, angry at Carson's quiet acceptance of facts which to him were darkly significant, "he, too, was out with his rifle today; I saw him myself. Now he fails to show up! Don't you see what all this points to?"

Carson, who seldom lost his poise with one-half of his brain still given over to the hand he meant to play with Poker False, merely sighed and shook his head.

"I'm real busy down at the bunkhouse, Mr. Hampton," at last came his quiet answer, "where me an' Poker Face is figuring out something important. As for worrying about a man like Bud Lee or a girl like Judy, why, I just ain't going to do it a-tall. Most likely if you'll call up the Lower End——"

"I've done it!" Whirling in his impatient stride across the room, Hampton came swiftly to Carson's side. "They're not there. They left the Lower End this afternoon and came on here. Then, both armed, they rode away again at four or five o'clock. I tell you, man, something has happened to them."

"Don't believe it," retorted Carson. "Not for one little half-minute, I don't. What's to happen? Huh?"

"You know as well as I do what sort of characters are about. The man who robbed Charlie Miller—who shot at Bud Lee——"

"Whoa!" grinned Carson. "Don't you go and fool yourself. That stick-up gent is a clean hundred miles from here right now an' still going real lively. If any other jasper lent him a hand, why, he's on his way, too. Not stopping to pick flowers. It's the way them kind plays the game."

Carson was so cheerfully certain, so amused at the thought of Bud Lee and Judith Sanford requiring anybody's assistance, so confident concerning the methods of outlaws, that finally Hampton sent him away, half assured, and went himself to his friends in the living-room. Here he found the major and Mrs. Langworthy reading and yawning. Marcia laughed at a jest of Farris's, while Rogers sought to interest her in himself. The every-day, home-like atmosphere had its effect in allaying his picturesque fears. Hampton noted how her handful of days in the country had done Marcia a world of good, putting fresh, warm color in her rather pale cheeks, breeding a new sparkle in her eyes. She was good to look upon.

He let half an hour slip by in restless inactivity. For, no matter what Carson might say or these people in here do, Judith had not yet come in. When Marcia addressed a bright remark to him, he started and stammered: "I beg your pardon!" They laughed at him, saying that Pollock Hampton was growing absent-minded in his old age. But their banter failed to reach him; he was telling himself that some accident might have befallen one or both of two persons whom he frankly admired for their efficiency.

BY HALF past eight they had caught his uneasiness. At every little sound they turned expectantly. Still no Judith. Mrs. Simpson, comfortable woman that she was, came in, bustling with apprehension. Mrs. Langworthy shook off for a little her listlessness and recounted how she had watched "that girl" riding like a wild Indian toward the Upper End. Perhaps her gun had gone off accidentally.

"Or," she concluded with a touch of venom, "it wouldn't be above her to run off with that long horse foreman."

"Eh?" said the major. "Don't believe it. A fine fig— ahem. When should she run to? And why run at all?"

Marcia looked a quick distress to Mr. Hampton.

"It is late," she said timidly. "Oh, Pollock! Do you think——"

No longer to be restrained, Hampton left them and went to his room for a rifle and cartridge-belt. He intended to slip out quietly, feeling that he would get from Farris and Rogers only the sort of disbelief he had gotten from Carson. Marcia met him in the hall; she had heard his quick steps and guessed that he was going out. Now clearly, tho she was frightened, she was delighted with him. He had never thrilled her like this before. She had never guessed that Pollock Hampton could be so stern-faced, so purposeful. She whispered an entreaty that he be careful, then as he went out, ran back to the others, her eyes shining.

"Pollock is going to see what is the matter," she announced excitedly. Whereat Mrs. Langworthy stared at her and then indicated facially her supreme disgust. The major suggested taking something, the occasion so plainly demanding it.

HAMPTON passed swiftly thru the courtyard. He saw the light of the bunk-house gleaming brightly. On his way down the knoll he came upon Tommy Burkitt.

"Is it Mr. Hampton?" asked Tommy, coming close in the darkness to peer at him.

"Yes. What is it? Who are you?"

"I'm Burkitt, Tommy Burkitt, you know—Bud Lee's helper. I—I am afraid something has happened. Lee hasn't come in yet; they tried to pick him off once already, you know——"

"Neither has Miss Sanford come in," said Hampton quickly, sensing here at last a fear that was fellow to his own. "They rode toward the Upper End. You know the way, Burkitt?"

He moved on toward the corral. Burkitt turned and came with him.

"Sure I know the trail," muttered Tommy. "You're goin' to see what's wrong with 'em? Miss Judy, too! My God——"

"Bring out a couple of horses," Hampton commanded crisply. "We've lost time enough already."

"I'll go tell Carson an' the boys——"

"I have already told Carson. He says it's all nonsense. Leave him alone."

Tommy, boy that he was, asked no further questions, but ran ahead and brought out two horses. In a twinkling he had saddled them, and the two riders, each with a rifle across his arm, were hurrying over the mountain trail.

In the blackness which lay along the upper river Hampton gave his horse a free rein and let it follow at Tommy's heels. The roar of the lashing water, the pounding of shod hoofs, the whining creak of saddle-leather were the only sounds coming to them out of the night. When, finally, they drew rein under the cliffs at the lake's edge all was silent save for the faint distant booming of the river below them.

"Now which way?" whispered Hampton, his voice eloquent of suppressed excitement and eagerness.

Tommy was shaking his head in uncertainty when suddenly from above there came to them the sharp report of a rifle. Then, like a bundle of firecrackers, a volley of half a dozen staccato shots.

"Listen to that, Burkitt," muttered Hampton. "They're at it now—we're on time——"

TOMMY slipped from the saddle wordlessly, came to Hampton's side and tugged at his leg, whispering for him to get down. Leaving their horses there, they slipped into the utter darkness of the narrow chasm in the rocks which gave access to the plateau above.

"Now," cautioned Tommy guardedly, as they came to the top, "keep close to me if you don't want to take a header about a thousan' feet. Look!" He nudged Hampton and pointed. "There are two horses across yonder; Bud's an' Miss Judy's, most likely."

Hampton did not see them, did not seek to see them. Something new, vital, big, had swept suddenly into his life. He was at grips first-hand with unmasked, pulsing forces. A tremor went thru him and he was not ashamed of it; for it was not the quaking of fear, but the thrill in the blood of a man who, plucked from a round of social artificialities, finds himself with the smell of burnt powder in his nostrils and who feels a swift eagerness for what may lie just yonder waiting for him. "They're at it now!" he whispered to Burkitt. Men—yes, and a girl—were shooting, not at just wooden and paper targets, but at other men! At men who shot back, and shot to kill.

"Listen," said Burkitt. "Somebody's in the old cabin; somebody's outside. Which is which? We got to be awful careful."

They began a slow, cautious approach, slipping from bush to bush, from tree to tree, standing motionless now and then to frown into the folds of the night's curtain. Abruptly the firing ceased. They made out vaguely the two forms of the attackers, having located them a moment ago by the spurting flames from their guns. Then, "Got enough in there?" came the snarling voice of Quinnion. "If you haven't, I'm going to burn you out an' be damned to you!"

He got an answer he little expected. For Hampton, running out into the open, now that he knew that Bud and Judith must be in the cabin, was firing as he came. Burkitt's rifle spoke with his.

"Run for it, Shorty!" yelled Quinnion. "You know where. We're up against the Blue Lake boys."

"Bud!" shouted Tommy. "Oh, Bud!"

"In the cabin," came Bud's ringing answer. "Give 'em hell, Tommy! Coming!"

With his words came the sound of the door snapping back against the wall, the reports of Tommy's rifle and Hampton's pumping hot lead after two racing forms.

"They'll get away!" shouted Hampton, a sudden red rage upon him. "Curse it! It's too dark——"

Then Tommy gave over shooting and yelled to Lee to hold his fire. For instead of two there were three flying forms, three fast-racing, blurring, shadowy shapes merging with the night. Pollock Hampton, his rifle clubbed in his hand, was running with a college sprinter's speed after Quinnion and Shorty, calling breathlessly:

"Look out, they'll get away!"

Once Quinnion stopped to shoot back. The hissing lead went wide of the pursuer and he gave over firing and settled down to good, hard running, disappearing from Hampton's staring eyes. But Shorty was still to be seen, running heavily.

"Don't shoot, Bud!" cried Tommy again as two figures ran out of the cabin. "Hampton's out there—the crazy fool——"

"Hampton, come back!" shouted Lee, running after him.

But Hampton was gaining on the heavy-set Shorty and had no thought of coming back. Nor a thought of anything in all the wide world just then but overtaking the flying figure in front of him. Shorty stumbled over a fallen log and rose, cursing and calling:

"Chris! Lend a hand."

That little chance of an uprooted tree saved Hampton's life that night. Shorty, falling, had dropped his gun and hurt his knee. For a moment he groped wildly for the lost rifle, then ran on without it. Hampton cleared the log, and with a yell rather befitting a victorious savage than the young man whom Mrs. Langworthy hoped to call her son, threw his long arms about Shorty's neck.

"I got him!" shouted Hampton. "By glory——"

Shorty drove a big brutal fist smashing into his captor's face. But Hampton merely lowered his head, hiding it against Shorty's heaving shoulder, and tightened his grip. Shorty struggled to his feet, shaking at him, tearing at him, driving one fist after the other into Hampton's body. But with a grimness of purpose as new to him as was the whole of to-night's adventure Hampton held on.

JUDITH and Lee and Burkitt came to them as they were falling again. Now suddenly, with other hard hands upon him, Shorty relaxed, and Hampton, his face bloody, his body sore, sank back. He had done a mad thing—but triumph lay in that he had done it.

"A man never can tell," muttered Bud Lee, with less thought of the captive than of the captor—"never can tell."

"I am thinking," said Judith wonderingly, "that I never quite did you justice, Pollock Hampton!"

Hampton's captive, known to them only as Shorty, a heavy, surly man whose small, close-set eyes burned evilly under his pale brows, rode that night between Hampton and Judith down to the ranch-house. He maintained a stubborn silence after the first outburst of rage. His hands tied behind his back, a rope run round his waist and down on each side thru a cinchring, he sat idly humped forward, making no protest.

Burkitt and Lee, despite Judith's objections because of Lee's wounded leg, remained at the cabin with Bill Crowdy. Crowdy had lost a deal of blood, and tho he complained of little pain, was clearly in sore need of medical attention. Judith coming to the bunk-side just before she left, assured him very gently that she would send Doc Tripp to him immediately and, further, that she would telephone into Rocky Bend for a physician. Crowdy, like Shorty, refused to talk.

"Aw, hell," he grunted as Lee demanded what influence had brought him with Shorty and Quinnion into this mad project, "let me alone, can't you?"

And Lee let him alone. He and Burkitt eat and smoked and so passed the remaining hours of a long night. The folly of seeking Quinnion in this thick darkness was so obvious that they gave no thought to it, impatiently awaiting the dawn and the coming of men whom Judith would send.

The events of the rest of the night and of the morrow may be briefly told: Shorty's modest request of a glass of whiskey was granted him. Then, his hands still bound securely by Carson, he was put in the small grain-house, a windowless, ten-by-ten house of logs. An admirable jail this, with its heavy padlock snapped into a deeply embedded staple and the great hasp in place. The key safely in Judith's possession, Shorty was left to his own thoughts while Judith and Hampton went to the house.

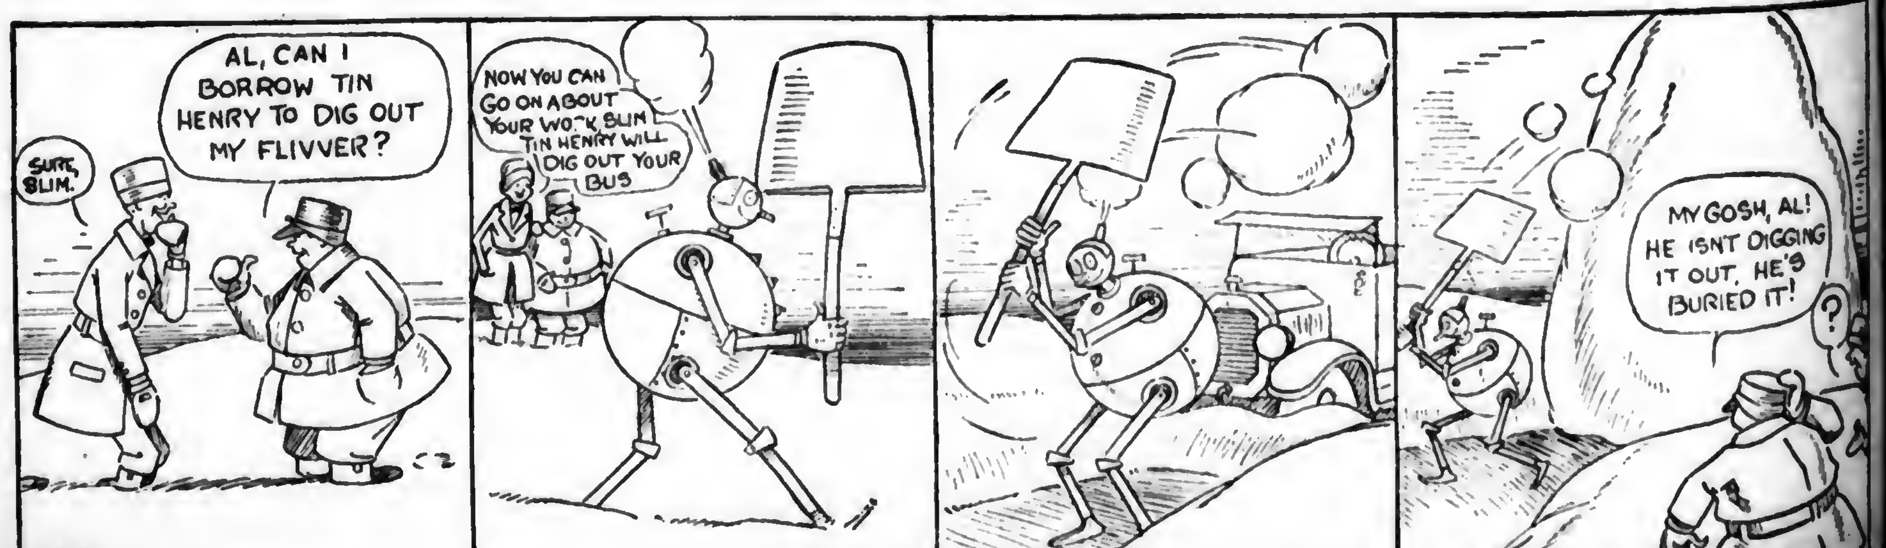
In answer to Judith's call, Doc Tripp came without delay, left brief, disconcerting word that without the shadow of a doubt the hogs were stricken with cholera, and went on with his little bag to see what his skill could do for Bill Crowdy.

"Ought to give him sulphur fumes," grunted Tripp. But his hands were very gentle with the wounded man for all that.

Pollock Hampton had no thought of sleep that night; didn't so much as go to bed. He lay on a couch in the living-room and Marcia Langworthy, tremendously moved at the recital Judith gave of Hampton's heroism, fluttered about him, playing nurse to her heart's delight. The major suggested that Hampton have something and Hampton was glad to accept. Mrs. Langworthy complacently looked into the future and to the maturity of her own plans. In truth, good had come out of evil, and Marcia and Hampton held hands quite unblushingly.

(To be continued next week)

Activities of Al Acres: *Slim's Little Old Bus Must Be Feeling Sort of Flat* : : By Leet



AL, CAN I BORROW TIN HENRY TO DIG OUT MY FLIVVER?
SURE, SLIM.
NOW YOU CAN GO ON ABOUT YOUR WORK SLIM— TIN HENRY WILL DIG OUT YOUR BUS
MY GOSH, AL! HE ISN'T DIGGING IT OUT, HE'S BURIED IT!
LEET

The Richards Oak of Maryland

Lafayette and his army camped under this tree April 12, 1781, and during the Civil War a detachment of cavalry camped beneath its boughs. The tree, which is thought to be over 500 years old, is 21 feet 8 inches in circumference, 70 feet high and its branches have a spread of 105 feet.

Did you ever hear this one?—

Not to Be Cheated

Tommy is fond of squeezing toothpaste out of his shiny new tube.

"Don't take too much this time, dear," his mother said to him one morning when he was cleaning his teeth.

"How much may I have?" asked Tommy.

"Well, I should think a little bit, perhaps as big as a bean."

Tommy gave a great pinch and out shot the paste.

"Oh, oh!" exclaimed his mother, "not all that, Tommy. Didn't I say as big as a bean?"

"Yes," replied Tommy, "this is a stringbean."

What's the Use?

Mrs. Smith, a regular visitor in the doctor's consulting room, started on the long story of her troubles. The doctor endured it patiently and gave her another bottle of medicine. At last, she started out and the doctor was congratulating himself, when she stopped and exclaimed, "Why, doctor! You didn't look to see if my tongue is coated!"

"Not necessary," wearily replied the physician. "We don't find grass on a race track."

Father's Fault?

The young son of a well-known physician was observed by an understanding neighbor, moping toward home long after school had been let out. "What's the trouble, Frankie?" she inquired kindly. "Dyspepsia and rheumatism," was the rueful reply. "At such an early age?" said the neighbor with a twinkle in her eye. "No," the boy replied, thoroly downcast because of a lost afternoon after school, "the spelling class."

The More the Better

A very High Church missionary—a good and devoted soul—was sent out to the Adirondacks, where most of the people had grown up Baptists. An old man of that persuasion died and his family wanted him buried from the church. The missionary, uncertain whether he might use the church for an unconfirmed sectarian, telegraphed to the bishop, asking what he should do. Back came the cordial answer: "Bury all Baptists possible."—The Christian Register.

Fact or Fancy

An American in dear old London was bragging about his automobile. He ended his eulogy by declaring: "It runs so smoothly that you can't feel it, so quietly that you can't hear it, has such perfect ignition that you can't smell it, and as far as for speed—boy, you can't see it."

"But, my word, old dear," interrupted the Briton, anxiously, "how do you know the bally thing is there?"

"The doctor says I must cut out cigars, drinking and late hours."

"That means a decided change in your mode of living, then, doesn't it?"

"It means nothing of the kind," snapped back the short-tempered 'patient.' "It simply means I change doctors."

"Doctor, I wish you would give me something to help my memory. I forget so easily."

"All right. I'll send you a bill every month."

OUR YOUNG PEOPLE'S FORUM.

From Forum Members and Friends

Dear Cousin Ruth:—We have had a lot of snow this winter. I had a good time sledriding. I have a Shepherd dog eight weeks old and I have a good time playing with him. Everywhere I go he follows me. We have a tractor to do our plowing, a binder to cut the oats and wheat, a corn planter and a corn plow.—Charles Tarr, Westmoreland County, Pa.

Dear Cousin Ruth and Forum Friends:—I am sending you a picture of our cattle. We have an old horse named Cap. He will not kick or anything. I like to ride him, and when I want to get on his back he puts his head down. Then I sit on it and he puts me right on his back. I try to stand on his hind legs and get on his back but I can't jump high enough.

I have a heifer about twelve months old. I love to play with her. We also have twenty-six little pigs. —John Lyle Keeley, (X), Chester County, Pa.

Dear Cousin Ruth and Forum Friends:—We are starting a Literary Society in our school. I am on the Program Committee.

My father went for deer this fall, but was not lucky enough to get one. The club he went with bagged four deer, tho, so we got some of the meat. I liked it. I like to read books. In our school we have a Lancaster County Rural School Library. There are around thirty books in it.—Mary E. Good, fifteen (X), Lancaster County, Pa.

Dear Cousin Ruth:—I suppose spring is coming, for the ice is melting outside. That reminds me of something that happened last spring, later than this. We had emptied the corn-crib and were using it as a play-house. Brother Charlie, aged three, had left his Sunday hat out there on a nail one night. When we went out the next morning a mother wren was scolding. She had begun to build a nest in that hat, and already had a good-sized handful of sticks in it.

What should we do? Brother had to have his hat to go away next Sunday. Finally I got an old kettle, placed the partly-built nest in it as well as I could, and hung it up in place of the hat. We stayed away a few days and when we looked again the wren had nearly finished the nest. She raised a clamorous family in it, too.

I never had a real bird-house occupied so soon after it was put up, as that hat.—David W. Lehigh, (X), Adams County, Pa.

SOME OF OUR DAIRY CATTLE
John L. Keeley, (X), Chester County, Pa.

Dear Cousin Ruth:—We had an entertainment last Wednesday and we had sixty-one children in our play. We will have examination the last of this month and if I pass I will be in 3-B.

Our church helped 15 needy families at Christmas.—Thelma Esham, Wicomico County, Md.

Dear Cousin Ruth:—We have three big skating ponds. I am learning how to skate. I have lots of fun on the ponds. The school boys come over with their sleds and skates at noon. When the school-bell rings we take off our skates and run to school.—Paul Klements, Salem County, N. J.

MY SISTER MARY
Ruth Sites, Cumberland County, Pa.

Dear Cousin Ruth:—I am not going to school this winter. I would like to go, but I have to help mother with the work.—Ruth Sites, Cumberland County, Pa.

Dear Cousin Ruth:—In the summer I help make hay and drive the horses.

There is a tower about three miles from my home. It is on the highest peak on the Negro Mountains. It is sixty feet high.—Dorothy Opel, Somerset County, Pa.

Dear Cousin Ruth and Forum Friends:—I milk three cows when mother is sick. We have a purebred herd of Holsteins. We started them off on powdered milk.

I had a lot of popcorn this year. I have four ponies. The only one you can ride is Betty. She is black with a clipped mane. She is thirteen hands high. I also have a dog, "Laddie Boy." When I milk he sits behind the door—Catharine Dougherty, (X), Chester County, Pa.

Dear Cousin Ruth:—I have a kitten and a little dog and they are very good friends to each other. The dog is brown. The kitten is striped like a tiger. Everybody says it looks like a tiger.

We have one cow. I milk her very often.

I like winter because I like to skate and slide.—Anna Castle (X), Frederick County, Md.

Dear Cousin Ruth and Forum Friends:—We have a large white owl which my brother caught in our field. I feed him three times a day, altho he cannot see. It seems he can smell when you come, for he begins to caw and make a funny sound with his bill. I feed him raw meat and when he has finished he drops the meat on the perch and that is the sign that he has had enough. Then I try to pat him and he begins to twitter and twitter, just like a little singing bird. His wing span is 4 feet, 7 inches. Everyone who sees him thinks he is a wonderful bird.

I also have a pet rabbit who sits directly in front of me when I come to feed her. We keep the three rabbits and six guinea pigs in the chicken coop, for it is too cold outside in the winter time. In the summer they live in a wire cage out-of-doors. I feed them cabbage, carrots and cowbeets.

Today I brought some clover hay into the chicken coop for the little banty to sleep on and what do you think, the little guinea pigs began to eat it.

Next week I will enter the new term in high school. I am taking a four-year Commercial Course. I expect to be a teacher.—Marie Benkendory, thirteen (X), Passaic County, N. J.

Dear Cousin Ruth and Forum Friends:—I help strip tobacco. We have about 2,000 lath stripped. I have a pet dog and two cats. The dog's name is "Towser." We have a horse named "Babe Ruth." I like to drive him. He will follow after me if I hold out my hand.

I went to Sunday School the other Sunday. Today I didn't go because it was so cold and the wind was blowing too bad. I have about a mile to walk. My girl friend and I walked to Sunday School every Sunday last year.—Barbara Hevel, Lancaster County, Pa.

Here's How

FOUR Dauphin County Girls sent in a letter the other day asking how to join our Forum. Here's how, girls.

It costs nothing to join the Forum. Boys and girls who send in contributions, not of money, but of letters, pictures, drawings, original poems, recipes, etc., become friends of the page. Those sending in contributions which I think particularly good are made members and receive the pin.

When writing try to tell of the most interesting things that you do or have happen to you. For example, a list of the animals on the farm isn't half as interesting as an account of the fun you have taking care of them, or the tricks you have taught them. I like to hear about your trips, whether short or long, but remember that it makes the account very much more interesting when you tell what you saw and the funny little things that happened as you traveled. If you are club members, write about your club work. Oh, there are lo of interesting things. Find them an tell about them in your letters to th Forum.

Frances Dennis, of Salem County, N. J., writes asking whether picture will be returned after they have bee used on the page. To her questio and to any of you who may hav been asking the same question i your own minds, here's the answer "Yes." If you send in a snapshot fo the page and want to have it re turned, please write on the back "Please Return" and it will com back to you in time. Should I hol it longer than you want me to, ju write in and I'll see what can be do about it.

How are the winter sports comin on these days? I hope you don' break all your bones when you g racing down icy tracks on you Christmas sleds.

COUSIN RUTH.

OUR LITTLE FOLKS PUZZLE CORNER

DEAR LITTLE FOLKS:—The ground is covered with snow, as I write this, altho when you read it maybe the snow will be gone and perhaps the ground-hog will have told us that spring is near. Another winter, way back in the days of the Revolution, when George Washington and his troops were in camp at Valley Forge, there was much snow on the ground, too. Among those troops was an officer who was interested in the American cause altho he came from a country far away. You can find a sentence about this young officer in the puzzle this week.

On both sides of the black line in the puzzle there are queer looking signs. If you make the signs on the right hand part stand for the letters under which they appear in the left hand part you will soon find out the name of one of Washington's friends and from what country he came. When you have made out this sentence, send it to me on a postcard or in a letter so that it reaches me by February 11th. BE SURE TO SAY HOW OLD YOU ARE, telling me also the name of the county in which you live and when your birthday comes. The prizes go t the ten children, sending in the corre answer, whose cards or letters are th best in grammar, spelling, penmansh punctuation and general appearance. Address all puzzle answers to the Puzzl Editor, Pennsylvania Farmer, 261 Sou Third Street, Philadelphia, Pa.

There certainly must be a flock of Ou Little Folks who know something abou putting together slices of states. Th puzzle was in the January 15 issue o Pennsylvania Farmer, and the answer i PENNSYLVANIA, RHODE ISLAN DELAWARE, NEW JERSEY, NE YORK, VERMONT, CONNECTICU MASSSACHUSETTS, VIRGINIA, MARYLAND. I'm so glad so many new Littl Folks are finding their way into Our Corner; I know those friends whose answer I count on seeing in my weekly mail ar glad to make them feel at home her

The prize winners this week are: Le Challenger, age 13, Toms River, N. J.; Eleanor Coughanour, age 13, Smithto Pa.; Mary Fretz, age 11, Ottsville, Pa.; Stephen Godowitch, age 10, Sharon, Pa.; Alice Vera Gray, age 9, McDonald, Pa.; Emma S. Heefner, age 10, Fayettevill Pa.; Roman Kowalick, age 8, Hacketts town, N. J.; Howard H. Metzler, age 1 Lititz, Pa.; Mary Troxel, age 11, Ephrat Pa.; Mildred Weiner, age 9, Everett, Pa.

"Getting Ready to Be a Mother"

A Book for All Those Interested in Happier Homes, Healthier Mothers and Better Babies

CAROLYN C. VAN BLARCOM has written the most helpful volume on the subject "Getting Ready to Be a Mother," and I wish all women would read what she has to say. Young mothers should yearn to study it for their own personal protection and for the welfare of their children. Older women—mothers and grandmothers—should ponder over it that they may be better able to advise rightly those who call on them for guidance. The author has had wide experience nursing mothers and babies, and was formerly connected with the Training School for Nurses at Johns Hopkins Hospital.

There are nuggets of information on every subject concerning the mother during the period of pregnancy and in the confinement. Then follows thoughtful, well-planned care of the new-born babe and continued advice for the good of the mother's health. Thought is given to both mother and babe for many months before the child is born. Too often in rural districts, this feature is sadly neglected.

Today the farmer studies and secures expert advice on his work, be it cattle-raising, poultry or gardening. Should the farm woman go blindly on thru this most "amazing of all life's miracles" without wise help and counsel?

Too often young mothers seek advice given freely by older women who perhaps have had several children. Often women who have had miscarriages and have lost babes in infancy are most willing to offer advice, and too often just such help, altho well-intended, leads to distress.

We'll Be Glad to Lend It

We have placed this volume, "Getting Ready to Be a Mother," on our library shelves and want to lend it to all who are interested in happier homes, healthier mothers and better babies. The text and many illustrations will be an invaluable guide to every woman. Altho we have several volumes, your name may need to be placed on the waiting list, and the book will be sent to folks in the order that demands are received. If you want to borrow this book for two weeks, send to Home Page Library, Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa. (fifteen cents to cover mailing expense). Other books which may be borrowed at the same rate are:

Feeding the Family, Mary Swartz Rose.
The Woman of Forty, Dr. Edith B. Lowry.
Cooking for Profit, Alice Bradley.
Your Child Today and Tomorrow, Mrs. Sidonie Gruenberg.
Child Training, Angelo Patri.
Home Handicraft for Boys, A. Neely Hall.
More Baskets and How to Make Them, Mary White.

Gertrude S. Stewart.

Fashion Book Ready

EVERY woman likes the "different" clothes. If you're in doubt about that next dress of yours or Mabel's, why not buy a copy of our new, up-to-date Spring and Summer, 1927 Book of Fashions? It may give you just the idea you're looking for.

Ten cents sent to Pattern Department, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa., will bring this pattern book to you. It contains not only 500 dress designs, but several valuable hints for the home dressmaker.

Busy Work for Little Fingers

IN CELEBRATING February 14 mothers have an excellent opportunity to impress upon young minds the value of friendship, unselfishness and general good-will. Let the "busy work" for little fingers be Valentine making, and if the children are in school, it can be wisely co-related with their studies in nature. Bird valentines are among the prettiest. Color the birds first, then cut them out and paste onto valentines. Care should be exercised to have them "true to life."

Let tiny tots make valentines for Daddy. He would enjoy blotting pads of red ornamented with little white hearts or some simple bookmarks made with a special touch. Parents to whom such tokens are given should take care to use the gifts, as nothing pleases a child more than to know he has made something which is useful and beautiful, too.—Mrs. Corey C. Garey, Pennsylvania.

Old Shirtwaists

NOW that the bungalow apron and one-piece dress are in vogue a collection of shirtwaists is to be found in most homes. Many are too good to be discarded and the thrifty housewife wonders what to do with them. Here are a few suggestions.

Handkerchiefs for everyday wear and for school children can be made from some of them. Colored waists or those checked by colored stripes can all be used as well as white goods. Two or three handkerchiefs of good size can usually be cut from the body of the waist and smaller ones from the sleeves. The edges of the cloth when turned in, in a very narrow hem and caught with a crochet hook with some contrasting color or of crochet cotton makes a very pretty finish; this edging can be enlarged to taste, or the hemming may be done on the sewing machine.

Separate underskirts can be topped out into slips or very pretty corset covers can be made from waists of suitable material. Embroidery and small pieces not used can be utilized for doll clothes perhaps by the young miss of the family. Very soft goods cut into strips for bandages is another good use for the extra waist.—Jessie E. Nye, Pa.

The Kitchen Cabinet

VALENTINE COOKIES

For the cooky dough use

½ cup shortening
1 cup sugar
2 eggs
1 tablespoon milk
2¼ cups flour
2 teaspoons baking powder
½ teaspoon lemon extract.

Roll thin and cut with heart-shaped cutters any tinner will make for you. Spread with the following filling after placing in the pans.

FILLING

½ cup raisins
½ cup dates
½ cup sugar
½ cup water
1 teaspoon flour

Chop the raisins and dates and mix with other ingredients. Cook together, stirring to prevent scorching. When thick spread on top of the cut cookies. Then place another heart-shaped cooky on top. Bake in a moderate oven and you will have the nicest filled cookies for Valentine's Day.

One of Our Contributors

I HAVE reached the shady side of life, and am well down the hill toward sunset. I have always been a keen lover of nature, and spend every possible moment out-of-doors. My idea is that to grow old gracefully, one must work all he is able, have a hobby, and never for one moment lose interest in life.

I have written a good deal for the last thirty-five years, and continue to enjoy it—perhaps because I like to give advice. I would not have a photo taken for my best friend, but here is a picture of our home which we love dearly.

My heart's desire is to leave this world a bit more beautiful than I found it, and so, as you see, I plant things, and constantly share roots, seeds and cuttings with others, that my object may be accomplished.—Mrs. H. M. Woodward, (Helen Manning), Illinois.

THREADED NEEDLES

I HAVE found that a small work box—I purchased mine at the five and ten—containing a couple of spools of thread, needles, thimble, buttons and a small pair of scissors saves many steps if kept in the kitchen. It is so easy to sew that button on immediately when sonny has pulled it off, or to take that stitch in time that always saves nine.—M

* * *

If children's bloomers are made extra long between the belt and the crotch, a tuck may be put in halfway between. This will give extra length when the child grows. Little boys' two-piece suits should be long enough to have a tuck inserted on the wrong side in line with the buttons and a hem three inches wide below them so the buttons may be lowered when the child gets taller.

* * *

Those who are making new coats or perhaps cutting over old ones, for the children may like to try some of the heavy stitching used so much on ready-made garments.

Loosen the tension screw in your machine shuttle, fill the bobbin with rope twist the color you desire your stitching to be. Thread the machine with sewing silk the color of the twist. Turn the right side of the goods down so the bobbin stitch comes on the right side and stitch. Use a long stitch and try out on a piece of material so as to get tension, etc., adjusted right. This stitching is decorative as well as handy for covering piecings.—Mrs. Perley W. Lawton.

How Will You Keep St. Valentine's Day?

PERHAPS there is some one of your acquaintance that would enjoy a letter. There may be a shut-in or a convalescent for whom you could make up a neat package of really good jokes cut from papers and magazines. Make all your correspondence gay with the rosy-red heart stickers.

You might have a friend or neighbor who would be made happier by a gift of heart-shaped cookies neatly boxed with plenty of red paper. Children love cookies with red icing. If you cannot get red sugar, make icing as usual, adding a few drops of red vegetable coloring.

Surprise your family with hot biscuits or cakes cut heart-shaped. Tuck a bit of Valentine love in the kiddies' lunch baskets making their February 14 sandwiches in the shape of hearts.

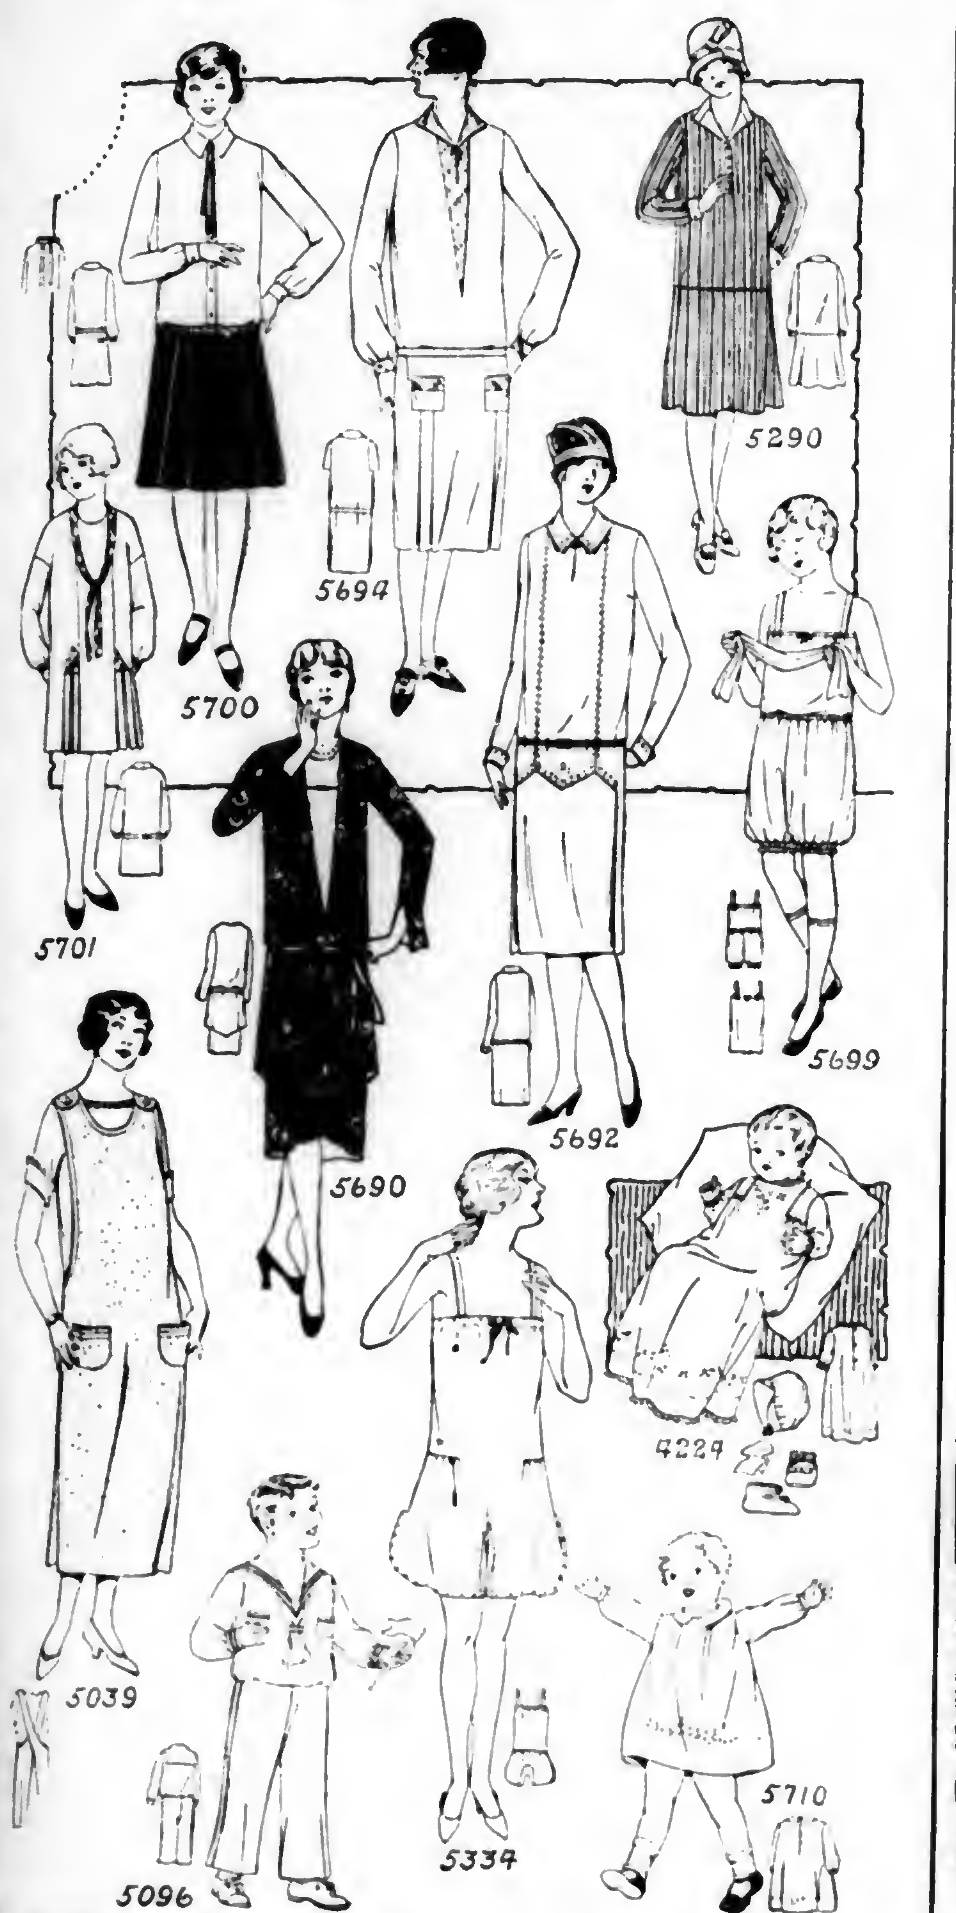
Last year a friend sent me two heart-shaped hot dish holders. They were made of black poplin, stuffed with two thicknesses of wool and the edges joined with stitches of brilliant red. I am making some this year and putting them in a heart-shaped wall pocket to hang near the stove.

Mother would appreciate a new apron, heart-shaped, and if made of gay red-figured percale or print, and edges piped with red tape, how attractive! Be sure to adorn it with a little heart-shaped pocket, too.

Father's desk will take on a festive air if you make him several new red blotters, and give them the Valentine shape. We are all just children, after all, so let's join with the youngsters and do something different on February 14 and remember as many folks as we can with tokens of love.—Betsey Ford, Maryland.

If You're Wondering What Next

Perhaps These Will Solve the Problem



Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5700.—Blouse and Skirt.—Four sizes: 14, 16, 18 and 20 years. A 16-year size requires 1¾ yard of 36-inch material for the blouse, and 1⅝ yard for the skirt. Price 10c.

5694.—With the Popular Vest.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size, if made with long sleeves, will require 3⅞ yards of plain material 36 inches wide, and one-half yard of contrasting material. Price 10c.

5290.—School Dress.—Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 1⅞ yard of striped material and one-quarter yard of plain 54 inches wide. Price 10c.

5701.—Child's Dress That's Different.—Four sizes: 4, 6, 8 and 10 years. A 6-year size requires 2⅜ yards of 36-inch material with one-quarter yard of contrasting material. Price 10c.

5690.—For Dress-Up Occasions.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 4⅝ yards of 40-inch material with ¼ yard of contrasting material 18 inches wide for facing on the vestee. Price 10c.

5692.—Simple Tailored Model.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 3⅞ yards of 40-inch material. Price 10c.

5699.—Girls' Underwear.—Seven sizes: 2, 4, 6, 8, 10, 12 and 14 years. A 10-year size requires five-eighths yard of material for the shirt and 1⅛ yard for the knickers 36 inches wide. If shoulder straps are made of ribbon three-quarters yard is required. Price 10c.

5039.—An All-Over Apron.—Four sizes: small, medium, large and extra large. A medium size requires 2⅞ yards of 32-inch material. Price 10c.

5096.—Jaunty Sailor Suit.—Three sizes: 2, 4 and 6 years. A 4-year size requires 2¼ yards of 36-inch material. Price 10c.

5334.—Ladies' Undergarment.—Cut in 4 sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 2 yards of 36-inch material. Price 10c.

4229.—A Set for the Baby.—This set comprises a pretty dress, a dainty cap and comfortable shoes. The dress requires 1⅞ yard, the cap three-eighths yard and the shoes one-quarter yard, of material 36 inches wide. Pattern 10c.

5710.—Dainty for Tiny Tots.—Three sizes: 6 months, 1 year and 2 years. A 1-year size requires 1¾ yard of 27-inch material. Price 10c.

Send 10c in silver or stamps for our up-to-date spring and summer 1927 Book of Fashions.

You can be quickly cured, if you STAMMER

Send 10c for 288-page book on Stammering and Stuttering, "Its Cause and Cure." It tells how I cured myself after stammering 20 yrs. B. N. Bogue, Bogue Bldg., 11701 N. Ill. St., Indianapolis.

Keep Musterole on the bath-room shelf

Years ago the old-fashioned mustard plaster was the favorite remedy for rheumatism, lumbago, colds on the chest and sore throat.

It did the work, but was sticky and messy and burned and blistered.

Musterole has taken the place of the mustard plaster.

Rub on this soothing ointment at the first cough or sniffle, at rheumatism's first warning tingle.

Made from pure oil of mustard, with the blister and sting taken out, Musterole penetrates the skin and goes to the seat of trouble.

To Mothers: Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

$598 ALADDIN
6 ROOMS-5 PLANS
WE PAY THE FREIGHT

You can buy all materials for a complete home direct from the manufacturer and save four profits on the lumber, millwork, hardware and labor.

Price Includes All lumber cut-to-fit, highest grade interior woodwork, siding, flooring, windows, doors, glass, paints, hardware, nails, lath, roofing. Complete instructions and drawings are also furnished. Safe arrival of complete materials is guaranteed. We pay the freight to destination on all Houses, Summer Cottages and Garages.

Save 18% Lumber Waste—30 % Labor Costs

The lumber that's wasted costs just as much as the lumber that's used, and the best way to cut your cost is to save the usual waste. The Aladdin System prepares all the lumber in our mills ready to be nailed in place. Cost of lumber is reduced 18 per cent, cost of labor is reduced 30 per cent. Quantity production of standard designs allows us to quote the very low prices we do, and still maintain the High Quality materials for which Aladdin Homes are noted.

Aladdin Certified Lumber

Aladdin homes are all built of beautiful, clear siding, clear flooring, clear interior woodwork, and sound, strong framing. They are permanent, year 'round houses, and are not portable or sectional in any sense. They are just like any other architect-designed, contractor-built homes in your neighborhood, and are warm in winter. You get the finest quality of materials obtainable. Our blue prints and instructions make it easy for anyone familiar with tools to erect an Aladdin. We guarantee safe arrival of complete materials and PAY THE FREIGHT to destination.

Aladdin's 21 Years' Success

is proof that you can do as thousands of other home builders do every year—save from $200.00 to $800.00 by building an Aladdin home. There is an Aladdin near you wherever you live. Go and see one. SAVE money, time and annoyance by ordering all materials from one reliable manufacturer. Complete shipment guaranteed.

Business Methods Would Avert Many a Family Quarrel

IF EVERYTHING that requires business dealings with other members of the family circle was conducted along business lines there would be few family quarrels. Ninety-nine out of every one hundred family disturbances are over financial matters.

Many fathers and mothers shrewd in their dealings with the world, scrupulously honest, good citizens, devoted fathers and mothers, will throw to the winds all business sense in dealing with their children and relatives expecting by some miracle to escape the common fate that injustice, partiality, loose dealings and taking things for granted bring. They mean to do right, but somehow they think business methods are not necessary in dealing with their own, but that is the very place where they are absolutely needed.

In one family of four children, two elected to go to college and two to go into farming. The father and mother frankly talked the matter over and told the boys that they could not pay the college expenses in full for the students, nor could they set the others up in farming. The matter was talked over and each son was given an equal amount. Later the college students were helped while the others were not, but the boys gave notes for their aid which could either be paid off at the end of the schooling, or used against their share should the father and mother pass away.

It Should Have Been in Writing

This excellent plan which worked very well is in striking contrast to a neighbor who put one son thru college with the understanding that he was to repay the money. There was nothing in writing to show that he owed the money, so when the father passed away unexpectedly the younger son took his share with the rest and the family circle was disrupted and is to this day.

Time and again it happens that a son or daughter moves into the homestead, takes care of the remaining parent, or both parents, till they die, and there is absolutely no business in the whole proceeding. The other children think the one has had the advantage of a house already furnished, farm equipment and an e time, while the husband and wi may have been handicapped from the very start, and the parents took that share without compensating the one at home.

One old gentleman of ninety-thre gives his daughter five dollars every three months for his support, and the rest he divides among his oth children. If he goes to visit the other children they send him back in a week saying that Grandpa wa so homesick, but they never send his money back. The daughter and her husband have been forced to mak repairs on the house at their own expense and keep up the other buildings, and the chances are that they will be turned out soon after the funeral of the elderly man.

She'll Never Get a Penny

There was a time when the couple could have done business in business-like way, and had a fa amount for board while they pa rent for the place, but it is too la now. For twenty-seven years the daughter has had the entire care of the father, part of which time he was bedfast, but she will never get a penny for her labor unless she figh for it.

The only safe way to avoid troubl is to have a contract and then li up to it. A woman who took ca cf her mother for years with the understanding that she was to have little property (a small house a five acres of land worth per $3000) had to go into court to es lish her rights against her bro who had never lifted a hand to for the mother.

Of course, there arb rare ca where everything is harmo when financial difficulties have to adjusted, but they are so rare it doesn't pay to take a chan Hilda Richmond, Ohio.

Dozens from Which to Choose

THE housewife who wants something different for her window will do well to choose the cactus. There are dozens of kinds, and practically every one of them bears flowers of wonderful shape and beauty.

All kinds do well in pots and they seem better able to withstand the dry atmosphere of the ordinary house than most window plants. This is doubtless due to the fact that the various species nearly all grow wild in sandy, dry climates, or climates where, during a considerable part of the year, there is little or no rainfall. For this reason, cacti do not need large quantities of water.

Better water them liberally once a week, then let the soil get very dry before watering again. Do not keep the soil wet continuously. It is bad for the plants and may cause them to rot.

Seed Best to Start With

One of the best ways to start a collection of cacti is by growing them from seed. Get a packet of mixed seed and plant them during February or March and you should have a nice bunch of plants for blooming next winter. The plants seem to bloom most luxuriantly during late winter and early spring, altho some varieties are in blossom at Christmas.

Most seedsmen offer the seeds for something like twenty-five cents per packet, and this should produce all the plants one can take care of and more. The desirable kinds may kept and duplicates and others or given away.

Plant the seeds thinly in a box clean soil. Cover lightly and The cactus in its native enviro starts new plants during the season, so the seeds and young will stand considerable water they are making their growth.

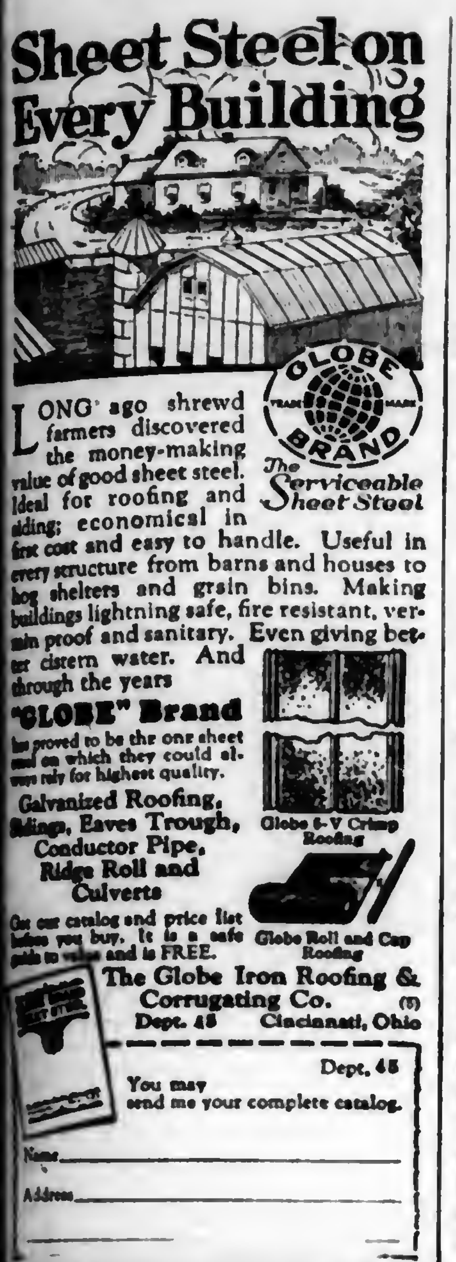
Transplant the seedlings to pots and plunge these in the where the sun can reach them the summer. Most cacti have roots and do not need large which to make their growth.

In the fall, before frost comes, up the pots and change the to larger pots before setting window. Cacti need sunshi order that they make a full and blossom freely.

Cacti are of all sizes and Some grow tall and branching, others are scarcely more than inch or two in diameter. The on the small plants are out of proportion to the size of the Some plants not more than inches in height will bear blooms inches across.

The housewife who has a full of tall plants will find these cacti useful to tuck into the where they will bloom with care or attention.

I once saw a window devo tirely to cacti. It was odd than beautiful. A better way have a few plants and sandwich in among the others.—C. H. C



Sheet Steel on Every Building

LONG ago shrewd farmers discovered the money-making value of good sheet steel. Ideal for roofing and siding; economical in first cost and easy to handle. Useful in every structure from barns and houses to hog shelters and grain bins. Making buildings lightning safe, fire resistant, vermin proof and sanitary. Even giving better cistern water. And through the years

"GLOBE" Brand
has proved to be the one sheet steel on which they could always rely for highest quality.

Friendly Talks

By EDGAR L. VINCENT

IN THE township where our farm home stands we can count up a number of church buildings that are standing empty from one week's end to another.

These churches were built, some of them, fifty years ago. Farmer folks sacrificed to raise the money to build and furnish them. For a long time not a Sunday passed when the doors were not open for worship. These houses were a blessing to the community and I think that even now, altho the houses are empty, they have an influence for good. We like to look at them and think what they stand for.

But the most serious part of it is that, go which way you may, almost the same situation may be found. Rural churches are fast going out of date. In the whole country there are thousands of deserted churches.

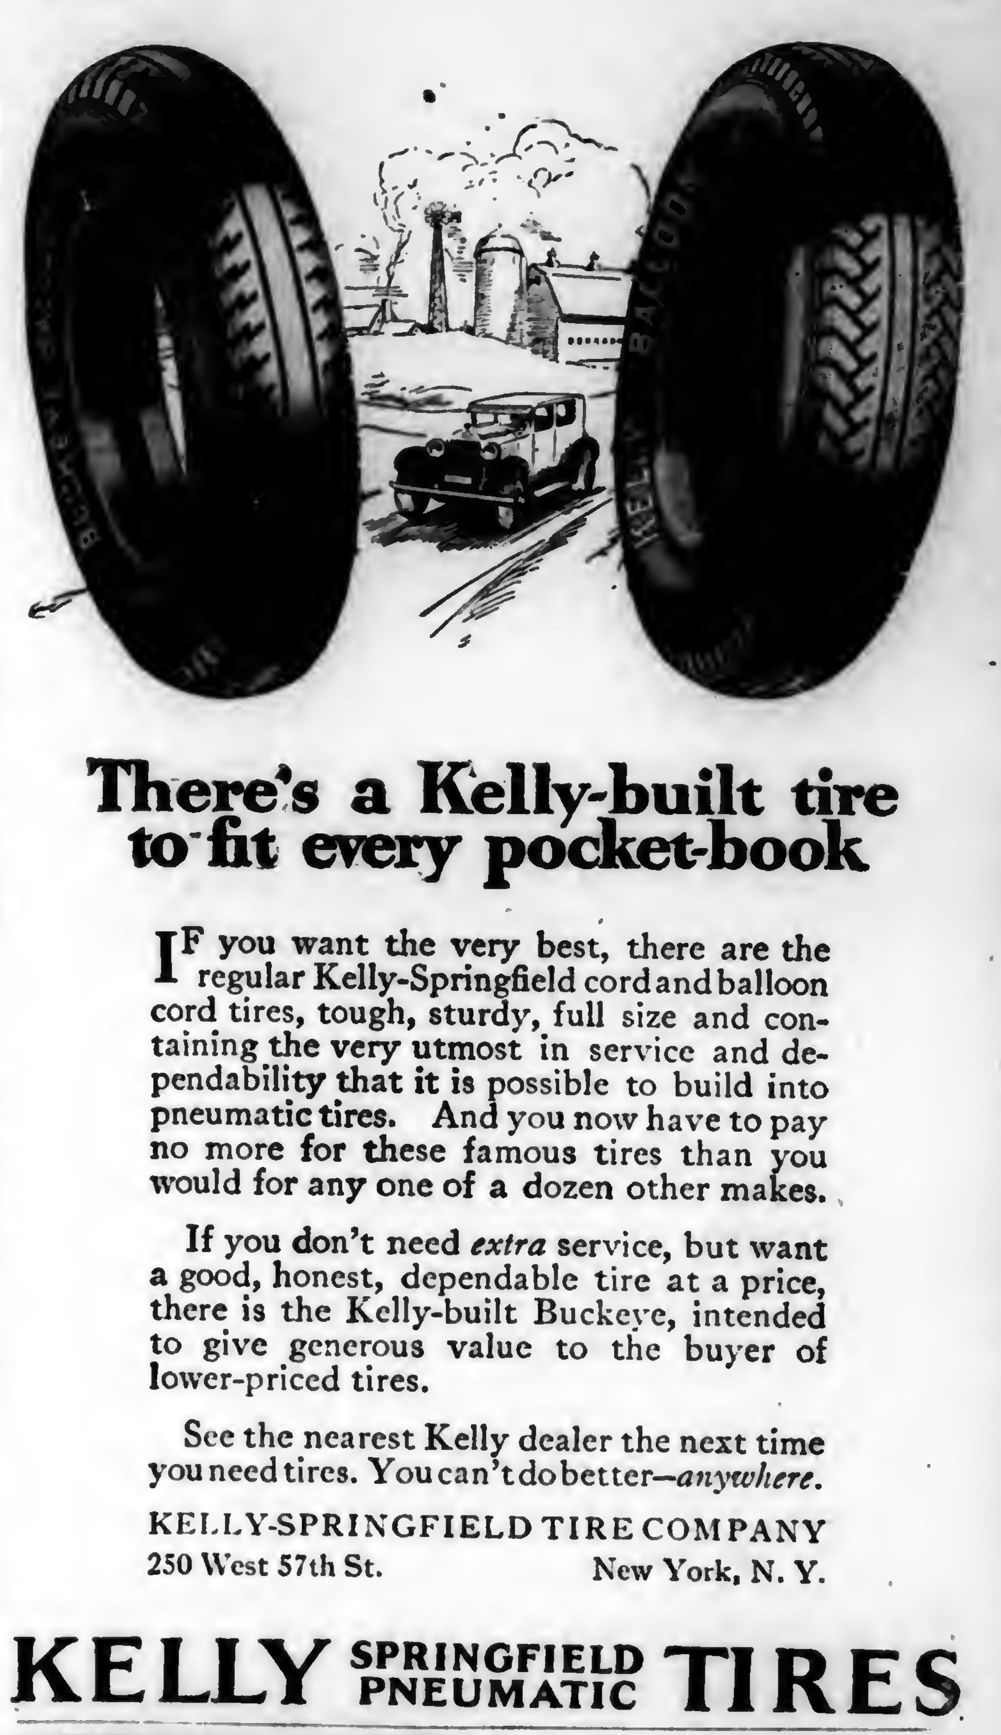
The thought is a saddening one to everybody who has a due regard for the moral and spiritual welfare of the community. If there is any class of people in the world that should find the church a means of help to right living, it is the farmer. No one is more dependent upon the Great Father of us all for everything he has than is the farmer. Every crop he grows springs from the soil, God-given and God-blessed every day by sunshine, dew and rain. No place in the world is nearer to the heart of God than is the country. Into its making He put the best He had. It is the most beautiful part of all creation. The quiet of the country ought to bring the farmer a peace of mind and a love for the best that he cannot find anywhere else.

But here stand the churches, empty, tumbling into ruins. And nobody seems to care. And everybody ought to care; for if we lose our hold upon the Church and sacred things the time will surely come when the character of the nation will be changed. We shall lose our place among the nations of the world and become a people whose God is not the Lord, to be laughed at and turned away from by the people of other parts of the world.

"But," do we say, "there is nothing I can do about it." Many do say that, and say it perhaps with sorrow in their hearts, knowing the results when a community or a nation turns away from God. But we are mistaken. There are good people enough in every neighborhood, if they will put their strength together, to bring back Divine Services to every one of these deserted churches.

The thing needed first of all is to want to serve our fellow man in this way. Do we realize the necessity? Have we thought it thru that a churchless world would be a ruined world, morally and spiritually? Can we see that for our own good and for the best interests of our boys and girls we should stand by the right in every possible way, the maintenance of Divine worship included? Do we not feel the need in our hearts for the preservation of all things sacred?

Then why not get together, pray together, give ourselves anew to God and start out once more to light the fires on these broken-down altars of the Church? Nothing that we can do would be of greater service to humanity.



There's a Kelly-built tire to fit every pocket-book

IF you want the very best, there are the regular Kelly-Springfield cord and balloon cord tires, tough, sturdy, full size and containing the very utmost in service and dependability that it is possible to build into pneumatic tires. And you now have to pay no more for these famous tires than you would for any one of a dozen other makes.

If you don't need *extra* service, but want a good, honest, dependable tire at a price, there is the Kelly-built Buckeye, intended to give generous value to the buyer of lower-priced tires.

See the nearest Kelly dealer the next time you need tires. You can't do better—*anywhere*.

More work from your horses

On many farms, the horses are stabled early, so the men can do the "chores." While the horses are eating, the men milk and do other work—for several hours.

Use of electricity for grinding feed, milking, pumping water, and furnishing good light inside and out, shortens "chore time." Less time being required for these tasks, the teams' working day can be lengthened—at both ends.

A woman in Vermont says that the use of electricity on her place permits four men and two teams to be kept on productive labor for two hours more than formerly. Her total power bill each month is less, she says, than it would cost to feed one person.

The General Electric Company manufactures many electrical products which are used on the farm. The G-E Farm Book describing these products may be obtained from your local light and power company.

The Voice of the Peopl

This department is reserved for the use of our readers to discuss all problems and matters of general interest. Write your views and comments briefly on any question of social, economic or educational importance and thus share them with others. It will be necessary to limit such articles to 200 or 300 words. Publication of an article in this department does not signify editorial endorsement.

False Surplus Doctrine

FARMERS and their families should rejoice in bumper crops, for they and their help are large consumers of food." This is the argument the writer has heard from the lips of professors and doctors of agriculture, and I have read the same expression in a number of farm papers of late.

A strange parallel to this is the recent statement of a large apple grower of the East, when he declared to a city club that his county now had a chance to catch up financially as they had an unprecedented crop to harvest and sell.

What would we think of the sanity of a tailor who was happy over an oversupply of made-up suits and no buyers entering his shop, in that he was wearing one suit himself?

The non-producer of food does desire a surplus; indeed he is a supporter of extraneous agencies and efforts, the object of which is greater production, regardless of a margin of profit to the producer. Therefore, the "bumper" crop may be the child of hardship for the producer, a source of pride to the crop booster and finally joy to the consumer.

We Haven't Found Profit

The farmer is always crippled by unusual crops unless the heavy yield is only local and there is chance for favorable distribution. The writer is just now delivering to a sixty-mile market, apples sprayed, hand-picked, properly graded and packed, in cold-blooded competition with apples of three or four counties, and from all the foremost apple producing states. All are "big crop" apples and it is needless to tell the reader that there is no margin of profit even tho each member of our family were eating a peck of the fruit each day here at home.

An over-production of the commodities we buy and consequent low prices would afford some relief, but most of these things are under control and likely to remain so as the buying power and demand is foreseen. Perhaps the things we farmers buy would drop in price if we could get Uncle Sam to "reclaim" city lots and ners and thereon set up shops and tories to manufacture the thing need in competition with the folks now enjoy our trade; a bill with end in view, it seems, should ge signature necessary to make it tive.—D. H. W., Clearfield Co., P

How Are You Going to Keep Them on the Fa

HAVING observed the growing process of several farm boys girls, I am led to believe that if are to be kept on the farm, must include in their child those four old-fashioned duty, unselfishness, obedi self-control.

If I were a parent facing th lem of "how to keep 'em down farm," I would, first be sure that they belonged there make the children's lives as their home as attractive and their work as easy and result give them as many educati cultural advantages as time cumstances would permit. I try to help them see and cheri the charm and beauty and that surround them.

But, I would teach them that is not always a merry jest, would do my utmost to show how to meet the hard, disagr tasks as real men and women, quitters. I would teach them member that there are other in the world beside themselve would teach them that they know how to obey before they command, and must be maste themselves before they can others.

Then, when crops failed, or went flat, or hard times contin hammer at the gate, I don't these children would rush off city to get a job with a "going" cern. I believe they would have ficient character and love of and parents to buckle down and and stick until the tide turned, they had a going business of own, right down on the farm.— M. Bush.

They Met the Governor

This picture shows farm vocational students on the Grand Staircase Capitol at Harrisburg. The four men in the front row are: Parkinson, of State College; L. H. Dennis, state director of education; Governor Fisher; H. C. Fetterolf, assistant director cational education.

RADIO DEPARTMENT

The Man Behind the Voice

JURISPRUDENCE, dramaturgy, golfing, philosophy and cheer-leading are just a few of the things, besides radio announcing, that are immensely important to Louis L. Kaufman, Chief Announcer of Station KDKA, the Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa. Some people say that this energetic announcer reminds them of Bill Hart. That movie idol doesn't feel natural unless he is armed with two guns. Louis insists on having two jobs.

For several years now Mr. Kaufman has been familiarizing himself with problems of Law and Equity as a University of Pittsburgh student. This has been his day-time occupation. At night it's the microphone and the one hundred and one problems connected with getting a program thru that little instrument.

Louis L. Kaufman, Chief Announcer of KDKA

Before enrolling at Pitt, Louis spent four years at Penn State. While there he did a lot of cheerleading at all the big games.

Is it any wonder that his voice has been heard half way around the globe?

Tip on "B" Batteries

IT OFTEN happens that one part of a "B" battery goes dead for reasons unknown. Hence it is worth while, in testing a 45-volt "B" that has contacts for voltages from 16½ to 22½, to test between the adjacent contacts for 1½ volts each. If a cell shows less than 1 volt, while all others seem full, simply connect a wire between the contact springs or posts each side of the cell to short it out of circuit.

A dead cell inserts resistance in "B" circuits which usually interfere with sensitivity. Sometimes one-half the battery goes dead while the other half is usable. Accidental short-circuiting by poorly insulated wires is responsible for not a little of this trouble.—B. F.

The Maid—"Yes, sir, your suitcase looked so untidy with all those old labels on it from Japan and America and Egypt and Africa that I thought I'd clean them all off."—The Passing Show.

Associations Elect Officers

AT VARIOUS association meetings held in Harrisburg during State Farm Products Show Week the following officers were elected:

HORTICULTURAL ASSOCIATION OF PENNSYLVANIA: Sheldon Funk, Boyertown, Berks County, president; Dr. J. H. Rittenhouse, Lorano, Berks County, vice president; Robert E. Atkinson, Wrightstown, Bucks County, secretary, and Edwin W. Thomas, King of Prussia, Montgomery County, treasurer.

The two elected members of the executive committee are H. F. Hershey, of Hamburg, Berks County, and C. Arthur Greist, Guernsey, Adams County.

The work of the secretary has been so divided that R. D. Anthony, of State College, will have charge of the work connected with membership.

PENNSYLVANIA STATE VEGETABLE GROWERS' ASSOCIATION: F. Biddle, Bustleton, president; E. Weinschenk, New Castle, vice president; W. B. Nissley, State Col- secretary-treasurer.

SOCIETY OF FARM WOMEN OF PENNSYLVANIA: Mrs. John F. Wilmore, Cambria County, re- president for the third time; F. C. McComb, Venetia, Wash- County, vice president; Mrs. Woldemuth, Manheim, Lancas- County, secretary; Miss Sallie A. , Ephrata, Lancaster Coun- ted treasurer for the third

PENNSYLVANIA STATE BEE- ERS' ASSOCIATION: W. C. Millville, Columbia County, ent; Edwin J. Anderson, State e, vice president; Chas. N. e, Harrisburg, secretary-treas-

PENNSYLVANIA SHEEP AND L GROWERS' ASSOCIATION: R. L. Munce, Canonsburg, president; J. B. Henderson, Hickory, vice president, and W. B. Connell, State College, secretary-treasurer. The association voted to furnish a silver loving cup for the champion medium wool fleece at the Tri-State Wool Show at Wheeling, West Virginia.

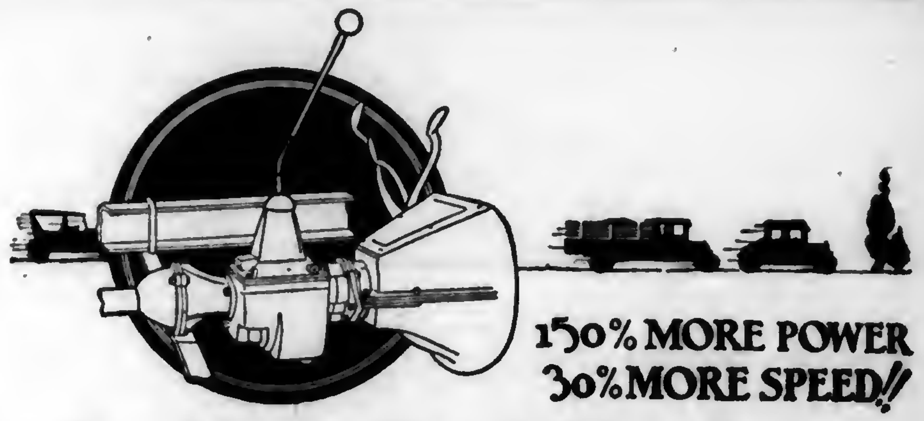
PENNSYLVANIA DAIRYMEN'S ASSOCIATION: E. B. Fitts, head of dairy extension, State College, president; Dr. L. M. Thompson, Montrose, first vice president; M. T. Phillips, Pomeroy, second vice president; W. F. Shrum, Jeannette, third vice president, and Robert F. Brinton, West Chester, secretary-treasurer.

PENNSYLVANIA STATE POULTRY ASSOCIATION: Guy Leader, York, president; J. W. Parks, Altoona, vice president, and E. W. Callenbach, State College, secretary-treasurer. The association voted to join the National Poultry Association and Paul Guldin, Yellow House, Berks County, was chosen representative on the Council.

PENNSYLVANIA BERKSHIRE BREEDERS' ASSOCIATION: B. D. Harvey, manager of Sycamore Farms, Douglassville, president; J. P. Winslow, Brookville, secretary-treasurer.

PENNSYLVANIA POLAND-CHINA BREEDERS' ASSOCIATION: R. L. App, Selinsgrove, president; Charles Sheffer, York, vice president; C. L. Rumberger, Uniontown, secretary; W. L. Treaster, McClure, treasurer.

PENNSYLVANIA DUROC-JERSEY BREEDERS' ASSOCIATION: A. S. Frommeyer, Chambersburg, president; M. R. Rutherford, Harrisburg, vice president, and S. R. Zug, Chambersburg, secretary-treasurer. Other members of the executive committee are Walter McMullen, manager of Immergrun Farms, Loretto; Boyd Kline, Orangeville, and Lehman Zeager, Elizabethtown.



—for Your Ford Truck or Passenger Car—

The MUNCIE
Gear Shift Transmission for Ford Trucks,
$84.50
Passenger Car Model (without reverse gear) ($74.50)

PUTTING a Muncie Transmission in your Ford is like putting in another engine. The Muncie, by making available *all* the power developed by the sturdy Ford engine, actually *more than doubles* the hauling power of a Ford truck or car. The Over Drive Model gives you 150% more power and 30% more speed. The Standard Model gives 200% more power for emergency pulls. And the extreme flexibility of seven forward speeds and five reverse speeds.

With a Muncie Transmission in your Ford truck you can haul two-ton loads over the hardest roads—do it in less time and on less gas and oil than you now require for one-ton loads.

The Muncie is cutting operating costs and increasing earnings for Ford owners in all parts of the country and in all kinds of work. It is sold on a positive money-back guarantee. Ask your Ford dealer—or write direct for descriptive literature.

Steers, good to choice (Lancaster)	9.87½	10.25	...	9.75
Hay, Number 2 timothy, baled (Phila.)	23.00	23.50	23.50	25.00
Wheat, No. 2 red winter (Philadelphia)	1.49	1.47½	1.48	1.88
Oats, Number 2 white (Philadelphia)	.58½	.59	.59¼	.52½

Unusual Situation in Potato World

Review of the Week Ending January 29

POTATOES.—Supplies were liberal in most markets during the week. This combined with the slow demand resulted in a weak condition. Prices declined and the volume of business was comparatively small. In Philadelphia there was an unusual situation with Pennsylvania round whites selling higher when packed in 120-pound sacks than when in 150-pound containers. This is hard to explain but it was due partly to the slightly better quality of the potatoes in the two-bushel sacks and partly to the fact that there is a growing preference for potatoes in this container. In spite of the fact that there were 30 extra pounds in the 150-pound sack dealers paid as much as 25c more for the 120's.

EGGS.—The New York market was slightly weaker toward the close of the week on account of the more limited trading and increasing supplies. Nearby Pennsylvania and New Jersey white eggs showed an unsettled tendency and some dealers were selling at slightly lower prices.

POULTRY.—The live poultry market in New York was irregular and toward the end of the week it was difficult to quote prices because of the light trading. Chickens showed a firm tendency while fowl were about steady. Receipts of fresh killed poultry were light but most stock was poor and prices were low.

LIVESTOCK.—The Chicago hog market averaged higher than last week and the best grades of beef steers were stronger. Heifers advanced while cows held steady. Vealers closed lower and stockers and feeders about steady. Fat lambs, yearling wethers and fat ewes were stronger. Feeding lambs were steady to 25c higher.

HAY.—The market was generally steady with offerings of timothy about equal for current needs. There was only a light demand from the South. Best alfalfa in good demand but poorer grades moved slowly.

GRAIN.—The market held firm under a fair export demand. Wheat prices averaged higher in sympathy with the advance in foreign markets. Offerings of corn were more than equal to current needs but the market was generally steady. Oats showed a firmer tone, especially on high quality grain.

FEED.—Offerings were limited at most points and prices advanced. Wheat feeds were higher and cottonseed advanced. Gluten feed and linseed meal were higher.

County News and Comment.

Blair County, Pa.—Difficulties in getting about at the present time. Everything is coated with ice. Wheat is still being bought for $1.30 a bushel but the market is very uncertain and many look for the price to drop. Corn, 75c; oats, 45c; apples, $1, potatoes, $2; hay, $25; straw, $15; chickens, 30c; eggs, 55c; country butter, 65c, apple butter, 75c a gallon.—H. E. H., January 25.

Carroll County, Md.—Very little snow so far. Because of this growing grain looks bad, especially wheat. Yet the open winter with mild days now and then has been a blessing to the farmers in one way as it gave them a chance to get corn husked and fodder removed to the barns. Rain past fall not only delayed corn husking but also large amount of moldy corn. Corn yield was low and quality poor. Farmers cutting firewood and hauling manure. Some ice of fair quality has been harvested but not many farmers harvest ice any more. A cow testing association has been started in the county. Red clover seed is scarce and high. Each year more farmers are trying sweet clover.—... I. H., January 22.

Clarion County, Pa.—Zero weather has been broken by three days' rain. Wheat is now looking fine. About one-half of the corn unhusked. Some farmers busy hauling ... and crushed lime for spring use. Cattle doing fairly well. Beef cattle and hogs a drag on the market. Farmer looking forward to March for better market. Prices: wheat, $1.15; oats, 45c; corn, 45c; creamery butter, 68c; country, 45c; eggs, 45c; potatoes, $1.75; chickens, ..c; veal, 14c.—C. R., Jan. 24.

Columbia County, Pa.—Very little snow this winter, but not in years has the sledding been better. The roads have also been very good for motor vehicles. The annual county fair board meeting and election of officers was held last week. The first week of October was set for the fair. Adult poultry clubs have been formed in some parts of the county and interesting meetings are being held every month, with a poultry specialist from State College in charge. Market price: wheat, $1.25; butter, 50c; eggs, 45c.—J. H. L, January 20.

Dauphin County, Pa.—Weather warm and rainy. Quite a number of light snows up to this time but no snow on ground. Much ice has been stored; twelve to fourteen inches and of very good quality. Farm sales are beginning. Milk cows bring high prices. Much interest was shown by a much larger attendance from this section at the State Farm Products Show. Prices for products: Good timothy hay, $23; oats, 50c; corn, 75c; rye, $1; wheat, $1.35; butter, 60c; eggs, 36c.—L F. M., January 22.

Gloucester County, N. J.—Fewer winter broilers will be put out by Gloucester County farmers this spring than for some years but it is likely that the total number of chicks put out next spring will be as large as ever. Poultry has been high all winter, with good chickens still bringing 40c per pound and eggs 43c per dozen. There is a possibility of fewer sweet potatoes going out this year. It takes fancy stock to bring over $1.25 per hamper. Cold storage houses still full of apples and the movement will not start until March 1st.—A. K., January 20.

Lebanon County, Pa.—Have had very cold weather up to a week ago. Ice one foot thick. Icy roads have been such a menace all winter that roads had to be ashed. Ten crates of rabbits were received and set free in our county by our Fish and Game Protective Association. The first woodlot thinning demonstration ever held in this section was conducted by County Agent Berger, assisted by State College specialists, on the Wolfe farm northeast of Lebanon. Lack of deep snow has enabled farmers to haul manure, cut and haul firewood with greater ease than for years. Medium and earlier sown wheat looks fine; late, looks very bad.—R. I. W., January 24.

Mercer County, Pa.—It is reported on good authority that a farmer near Grove City filled his silo during Christmas week. Community meetings being held by the county agent and his assistants in the Grange halls. Old fashioned winter weather for several weeks past. Plenty of snow, good sleighing and below zero weather most of the time. Snow about all gone now but very icy. Prices: milk, $2.30 for 3.5 at the plant; dressed hogs, 16@18c; hog-dressed calves, 17@18c; butter, 55c; eggs, 38c; potatoes, $1.40; wheat, $1.46; buckwheat, $1.70; little pigs, $6@8. No hay, corn or oats being sold.—J. W. B.; January 24.

Salem County, N. J.—Salem County potato growers who specialized in certified seed have had one of best years for a long time. Prices have been as high as $8 per sack with the demand far in excess of supply. Dairy farmers much more encouraged this winter than for considerable time. The advance in price late in the winter has had a stabilizing influence on the market. Farm land not selling with scores of farms on the market. Everyone is awaiting the sale of the Kandle Farms, the famous experiment farms where Dr. Martin, New Brunswick, has been conducting potato experiments for many years. The death of Mr. Kandle recently placed these farms on the market. The way they sell will determine extent of farm sales the rest of the winter.—E. M. B., January 15.

Saratoga County, N. Y.—The thaw the past week has removed most of the snow, leaving fields green. Winter wheat shows fine. Only a few farm sales. Land selling at higher figures, cattle selling up to $175 per head. Hogs are plentiful and three times as many being kept over for breeders. Horses are cheap, and hard to get any offer for them. Eggs from farm bring 65c per dozen; butter, 55c per pound. Since the work slackened at one of the big electric company plants, the tide has turned and many vacant farm homes will be occupied again this year. Farmers that farmed the past year made a good living and have plenty of spending money. This shows that prosperity is rewarding the farmers that work and stick to the farm.—B. B., Jan. 24.

York County, Pa.—The snowfall so far this winter has been light. There is still quite a lot of corn unhusked and every mild day some one tries to get a few shocks husked. Wheat fields look very brown and bare. The six townships tested on the area plan for the eradication of T. B. last year are now receiving their first annual retest at the hands of the State Veterinarian. Three new townships signed up for the first test during the present year. The annual meeting of the Farm Bureau will be held in York January 26th. Wheat, $1.30; oats, 45c; corn, 70c; hogs, $13.50; live weight chickens, 23c to 25c; 4 per cent milk, $2.70; potatoes, $1.50.—W. K., Jan. 24.

A Dollar Saved

(Continued from page 3)

average, and in the case of corn and wheat our production per acre far exceeds that of some of the famous mid-western states which make those crops a specialty.

Second, Pennsylvania farm land is relatively cheap. While farmers in some states are still suffering from the land boom and senseless values of war times, our land owners are having no such troubles.

And finally, Pennsylvania farmers are closer to their markets than the producers of any other state. Instead of having to ship all of their products many hundreds of miles, they can sell them at their own roadside markets or load them onto motor trucks and take them, over the finest system of good roads in the United States, to any of the scores of large towns and cities within hauling distance.

These fine roads take the farmer to the city market and bring the city man out to the farmer's roadside stand. One man in eastern Pennsylvania sold $75,000 worth of produce at his farm on the "cash and carry" plan in one season. Another who, incidentally, contributes weekly to the columns of Pennsylvania Farmer, sold $11,000 worth of vegetables and small fruits at his roadside market last year.

Examples of this kind could be multiplied indefinitely. There are more people in Pennsylvania than in Canada. All of them must eat, and naturally they prefer fresh, home-grown products. There are less than a million people on farms in the Keystone State, but there are more than eight million consumers living in towns and cities.

The substance of it all is this: Pennsylvania farmers have unsurpassed natural advantages, and they have the country's finest markets. The nearness of those markets makes it difficult to get labor, but, thanks to the agricultural engineering profession, machines are available which make little labor necessary. Many are making money by using factory methods on the farm. Many more will begin to profit when they see what efficient production methods can do for the producer with fertile, low-priced land and the best markets in the world.—C. L. White.

Rambling Around at the Show

(Continued from page 3)

County. This is the only county in the United States which has bull associations of the four major breeds and two or more animals were at Harrisburg representing each breed.

• • •

In the elections of the breed associations the resignation of Mrs. E. R. Fritsche, as president of the Berkshire organization after five years' excellent service, was the outstanding feature.

• • •

The dairymen's banquet, Wednesday evening, always the largest social event of the week, broke its record when nearly 500 sat down to the tables in the Masonic Banquet hall. The chief speaker was A. J. Glover, Editor of Hoard's Dairyman. Dr. L. M. Thompson, who asked to be relieved of the presidency of the Holstein-Friesian Club Federation on account of other pressing work, was the toastmaster.

Silver cups were presented to outstanding members of the cow testing associations thruout the state.

• • •

The four meetings of the Society of Farm Women were well attended, and a great deal of interest shown in organization work. By a unanimous vote it was decided that the Society join the Women's Legislative Council of Women Voters.

• • •

Interest in potatoes seemed to run higher than in any other thing. A manufacturer from New York State who was exhibiting his potato machinery, told me there was twice as much interest at Harrisburg in his display as there was at any place he had been.

• • •

The educational feature which seemed to attract the most attention was a small mechanical one of the Interstate Milk Producers' Association featuring the value of milk. It was based on the ever popular, altho often "fixed," fair game of striking a bell with a weight sent up a cord by a blow with a maul. Four figures in the exhibit took turns swinging the maul. Mr. "No Milk," sent the weight only to the 20 mark, Mr. "A Little Milk," made it reach 40, Mr. "More Milk," could send it to 80 but every time Mr. "Plenty of Milk" took a swing it went to the top and rang the bell.

Thousands stood for a few minutes to watch these little figures work and if facial expressions tell anything everybody walked away with a full realization of what milk will do even for country people.

• • •

The 212 baby beeves shown by the boys and girls made the largest and most outstanding exhibit of strictly farm products at the Show. Eighty-three of them were brought by club members from Lancaster County, 65 from Adams County, 38 from Lebanon County and 26 from Cumberland County.

• • •

A touch of color in packages shown by the commercial exhibitors for fruit, seems to be the coming thing. Roadside market sales, according to the manufacturers, are largely responsible for this.

• • •

The display of dairy products, including 146 four-pint samples of milk, surpassed even last year's record breaker. The milk samples were especially high testing, fifty-nine per cent of them reaching 96 or better, one going to 99. As a feeble example but a good start, in calling attention of the passing crowds to Pennsylvania's first place in the Union for the manufacture of ice cream, a hundred or more different kinds of printed containers for brick ice cream were piled on a table.

• • •

Several of the elaborate educational exhibits which represented the State Departments at the recent Sesqui-Centennial celebration did good duty this year at the Show.

State College made its usual extensive exhibits. Owing to last season's continual wet weather many calls have been made for land drainage methods and this was featured by the extension department under the direction of Mr. John R. Haswell, agricultural engineer in charge of this work.

Successful Farmers Need This Seed Book

THIS Seed book deals with the real money crops—the ones you depend upon for profit. Corn for silo and crib—absolutely sound germination. Oats that have been yielding big crops of good heavy grain. Certified Potatoes from Maine and Michigan.

CLOVERS AND ALFALFA

Good Red Clover is scarce this Spring. Early buying is advised. We have genuine American-grown and also Northern European, suited for Eastern farms. Take your choice. Genuine "Grimm" and "Northwest" Alfalfa at very reasonable prices.

Sweet Clover, best scarified Seed—Wilson Black Soy Beans and Quality Seeds for all other farm crops.

Write for your copy of our 1927 Seed Book and Free Samples of Seeds that interest you.

A. H. HOFFMAN, Inc.

"Hoffman's Seeds Pay"— Sow them and they'll prove it!

This Beautiful 1927 Model
BUICK Sedan GIVEN
or $1195.00 in CASH

I am going to give this beautiful new Buick Sedan—also a 1927 Chevrolet Coach and a large list of additional costly prizes. I have already given over 50 new automobiles to advertise our business and now YOU can get this new Buick Sedan or $1195.00 cash.

Can You Put a Star Around the Buick?
By drawing six straight lines with four dots on each line you can make a six pointed star—can you do this? Draw the lines—cut out the ad.—send your name and address. Get 5,000 points toward a Buick Sedan. You can have $1195.00 in cash instead of the Buick if you win first prize and prefer it.

$250.00 Cash Extra for Promptness!
Think of that! I will pay $250.00 cash extra for promptness. A word to the wise is sufficient—be prompt. Duplicate prizes will be paid in case of ties. 30 big prizes will be awarded March 28th. You don't risk a cent of your money now, later, or ever. Solve the puzzle—act promptly—reply now.

F. G. REYNOLDS, 500 North Dearborn Street, Dept. 121 Chicago, Ill.

Grain Exhibit Awards

M. C. SELLERS, of Franklin County, received the grand champion award for the best 10-ear exhibit of corn at the State Farm Products Show. The grand champion awards for the best entry of wheat went to Joseph Lazarus, of Northampton County. A. L. Shaffer, of Jefferson County, was awarded the grand champion prize for the best exhibit of oats.

Hoover Brothers, of York County, won first in barley; Luther Koehler, of Monroe County, first in rye; Elvin Blouch, of Lebanon County, first in soy beans; Elmer McHenry, of Indiana County, first in silver hull and common gray buckwheat; Ed. S. McHenry, of Indiana County, first in Japanese buckwheat, and Isaac R. Zcok, of Mifflin Country, first in timothy seed.

The first prize winners in each class are as follows:

Small Grains Exhibit

CLASS 1. WHEAT.—District No. 1, Joseph Lazarus, Northampton County, $5. District No. 2, Mrs. Russell Edwards, Cambria County, $5. District No. 3, H. G. Heilman, Lycoming County, $5. Grand Champion, Joseph Lazarus, Northampton County, $5.

CLASS 2. OATS.—Patterson Type, J. C. Slear, Union County, $5. Victory Type, A. L. Shaffer, Jefferson County, $5. Grand Champion, A. L. Shaffer, Jefferson County, $5.

General Corn Display

CLASS 1, District 1.—Lancaster County Sure Crop.—C. N. Myers, York County, $5 (sweepstakes, ribbon). Yellow Dent.—C. A. Straley, York County, $5. White Dent.—Rowland Evans Sons, Delaware County, $3. White Capped Yellow Dent.—J. Howard Paxson, Bucks County, $4.

CLASS 2. District 2. Lancaster County Sure Crop.—E. S. Egger, Adams County, $5. Yellow Dent.—Thomas Atherton, Franklin County, $5. Yellow Dent.—M. G. Sellers, Franklin County, $3, (sweepstakes, ribbon). White Capped Yellow Dent.—J. R. Yeich, Berks County, $5.

CLASS 3. District 3. Yellow Dent.—N. E. Solt, Carbon County, $5. White Capped Yellow Dent.—Gary Sprigle, Monroe County, $5. Flint.—William C. Roth, Monroe County, $3.

CLASS 4. District 4. Yellow Dent.—W. R. Austin, Luzerne County, $5. Flint.—Henry Klinestuber, Pike County, $5.

CLASS 5. District 5. Yellow Dent.—F. S. Strosnider, Greene County, $5.

CLASS 6. District 6. Lancaster County Sure Crop.—N. C. Criswell, Union County, $4. Yellow Dent.—Leroy Leach, Mifflin County, $5. White Capped Yellow Dent.—J. O. Slear, Union County, $5.

CLASS 7. Honorary Class.—Yellow Dent from Districts 1, 2, 5.—C. N. Myers, York County, $6. Yellow Dent from Districts 3, 4, 6.—Benj. Byler, Huntingdon County, $6. White Dent.—R. Harry Hannum, Delaware County, $4. White Capped Yellow Dent.—D. M. Landis, Lancaster County, (sweepstakes, ribbon), $5. Flint.—Philip McCarty, Pike County, (sweepstakes, ribbon), $4.

CLASS 8. Variety Class. Golden Queen.—Henry Heiland, Jr., York County, $5. Greene County Leaming.—F. S. Strosnider, Greene County, $5. Clouds Yellow Dent.—Christ Balsbaugh, Dauphin County, $4. Reid's Yellow Dent.—M. G. Sellers, Franklin County, (sweepstakes), $4. Ohio Leaming.—Dice Miller, Union County, $4.

CLASS 9. Boys' and Girls' Class. Yellow Dent.—Lloyd Wenger, Lancaster County, $3. White Dent.—Miriam Sellers, Franklin County, $3. White Capped Yellow Dent.—Harry G. Herr, Lancaster County, $3. Flint.—Clifford Lessig, Monroe County, $3.

CLASS 11. Grand Champion. Best Ten-Ear Exhibit in the Show. All Classes.—M. G. Sellers, Franklin County, $5.

CLASS 12. Best Exhibit of 30 Ears of Corn. Lancaster County Sure Crop.—Sam Eby, Lancaster County, $8. Yellow Dent.—M. G. Sellers, Franklin County, $8. White Dent.—Rowland Evans Sons, Delaware County, $7. White Capped Yellow Dent.—H. G. Herr, Lancaster County, $8. Flint.—Philip McCarthy, Pike County, $7.

(Continued on next page)

CLASS 13. Single Ear Class. Lancaster County Sure Crop.—Henry Heiland, York County, $2. Yellow Dent.—M. G. Sellers, Franklin County, $2. White Dent.—M. G. Sellers, Franklin County, $2. White Capped Yellow Dent.—D. M. Landis, Lancaster County, $2. Flint.—Wilma Buck, Monroe County, $2.

Better Farming for YOU
In the South, there's better farming—because it's easier, surer, more profitable. Better labor—and cheaper. Better living—because of the lower cost, outdoor life; good schools, churches, neighbors.
In the South, there are better farm lands—still to be bought at low prices, but steadily increasing in value; lands suitable for all kinds of farming.
In the South, there's an all-year season for planting and marketing—one crop right after another, on the same piece of land; money coming in all the time.
Let the L. & N. know what kind of farming you want to do, and we will tell you where and how it can be done.
Full information sent you, free, on request (but we cannot undertake to find you salaried employment). Write G. A. Park, Gen. Imm. & Ind. Agt., L. & N. Railroad, Dept. P-9, Louisville, Ky.

More profit per rotation

YOU can get a greater net profit per rotation by treating your rotation as a whole and applying your fertilizer on a rotation rather than on a single crop basis.

Consider, for example, two remarkable tests, which show how this can be done:

America's oldest continuous fertilizer experiment, begun in 1881, by the Pennsylvania State Experiment Station is a four year rotation of corn, oats, wheat and hay, on Hagerstown silt loam soil. The corn and wheat receive fertilizer and increases in hay and oats are due to the residual effect of the fertilizer.

Phosphoric acid gave better results than no fertilizer, but best results came where potash was added to the phosphoric acid. For a period of 40 years, this fertilizer combination gave an extra net increase per rotation of $20.40 over the unfertilized plots. Nearly half of this sum ($10.13) was due to the potash.

The Delaware Experiment Station after 15 years experiments with a rotation of corn, oats or soy beans, wheat and clover hay or sassafras silt loam soil, has concluded that:

In such a rotation potash is the first factor that limits crop production, phosphoric acid second and nitrogen third.

Muriate of potash is the only single fertilizer material that improves the quality of grain. Acid phosphate and muriate of potash is the best combination of two materials in improving the quality of grain, better than muriate of potash alone.

If the quality or yield of any of your crops has been poor or unstable where you are using acid phosphate alone or a low potash mixture, such as a 2% goods, try a 5% or 6% potash high analysis mixture. It should give bigger yields and improved quality and show a better profit per rotation.

FREE—A new, illustrated booklet, "Better Grains and Hay", is being prepared for the press. If you will send us your name and address we will gladly mail you a copy as soon as it appears.

Mercer County Lassie

SHERRY McDOWELL, Fredonia, was awarded the grand championship at the Pennsylvania Farm Products Show, on her pen of three Hampshires in the judging of the boys' and girls' club fat lambs by P. C. MacKenzie, State College. Fifty-one lambs were shown by club members of Mercer, Tioga, Centre and Washington Counties.

At the annual meeting of the Pennsylvania Sheep and Wool Growers Association following the judging, Miss McDowell, Margaret McNally, Burgettstown, Jane Vial, State College, and Loyal Marquis, Hickory, told of their experiences in feeding and fitting their lambs. P. C. MacKenzie, the judge of this year's exhibits, advised the boys and girls on how they could improve in their 1927 club practices.

S. J. Wiley, Stewartstown, talked on the production of market lamb and Dr. Henry Turner, of the State Bureau of Animal Industry, discussed the ravages of internal parasites. Tom Harvey, manager for C. E. Mathias, West Chester, told about hothouse lamb production. J. M. McKee, deputy secretary of agriculture, presented the work and aims of the State Council of Agricultural Organizations, and R. L. Munce was chosen representative on the Council.

Prizes for Butter

THE following prizes were awarded to butter exhibitors at the State Farm Products Show:

FARM BUTTER.—1, J. E. May, York County, $10; 2, Harry Rauch, Dauphin County, $7; 3, Mrs. W. W. Tollman, Dauphin County, $5; 4, Mrs. Ralph Hosier, Columbia County, $3.

CREAMERY BUTTER.—1, Hershey Creamery, Dauphin County, $10; 2, Greenville Dairy, Mercer County, $7; 3, State College Creamery, Centre County, $5; 4, Indiana Cooperative Dairy, Indiana County, $3.

Extension Workers Make More Contacts

THE agricultural and home economics extension workers of the Pennsylvania State College made 195,982 farm and home contacts during 1926. The number of contacts have steadily increased during the past six years.

Dairy husbandry reached 44,442; home economics, 29,409; agronomy, 25,915, and plant disease control work, 19,639. Animal husbandry work extended to 14,442 farms, insect control to 11,219 and poultry husbandry to 11,011 farms. Agricultural economics and rural social work reached 10,800 farmers.

Organized extension work is now carried on in 65 of the 67 counties in the state. The service is headed by M. S. McDowell, director. R. H. Bell, H. H. Havner and J. M. Fry are the assistant directors. Madge T. Bogart is in charge of the home economics extension work. There are 43 agricultural specialists, 65 county agents, 7 assistant county agents and 35 home economics workers. The specialists aid the county representatives in the work along subject-matter lines.

I'll Set You Up in the Oil Business
Without Investment
I want an ambitious, energetic man in every county to join me in the oil business. I'll make him my partner, furnish everything that's needed to do business and divide the profits 50-50 every week. I have hundreds of men now with me on this basis—ready for a hundred more, part or full time. It's a chance of a lifetime. In this business you can make
$50 TO $250 A WEEK
Your Share of the Profits
Wengard, in Ohio, made $430 for his share in one week. Montgomery, in Iowa, made $216 the first week he started. Hundreds are making $200 to $500 every month the year round. It's a great business. Everybody buys oil. You simply take orders on Long Credit Terms for nationally known lines—Cen-Pe-Co Motor Oils—Columbia Paints and Roofing. We ship direct from nearby warehouse and collect. Pay you every Week.
Write Quick for this chance. Just say, "I am interested in your proposition", in a letter or on a postcard. Mail it and I'll send complete particulars by return mail. First applications get the preference. **Act Now!**

New
Chick Mash contains all necessary minerals and cod liver oil meal
ALL IN ONE!
Dead chicks are dead loss. Any chicks, if not fed correct food will eat up profits and give nothing in return. Minerals, Buttermilk and Cod Liver Oil Meal are absolutely necessary to the proper growth and development of strong, sturdy chicks. No better feed can be had for baby chicks than one composed of pure grains—selected animal proteins—and the vital and necessary mineral elements. Now—these are combined in QUISENBERRY'S BUTTERMILK STARTING FOOD. No mixing and fussing by adding minerals. This food is properly prepared—correctly proportioned and very easy for the tender baby chick to digest and assimilate.
Start your chicks on the road to health. Their entire future as broilers or layers all depends on the start they get now. Realize your just profits from them. Feed them Quisenberry's Buttermilk Starting Food from the start—it is easily digested and contains every element that is recognized the world over to be necessary for proper, even and constant chick development.
FREE Radio Courses will be given to every person using Quisenberry's Buttermilk Starting Food. Radio talks to be given over stations WGR, Buffalo, and WDAF, Kansas City, by Prof. T. E. Quisenberry and other noted poultry experts. Illustrated printed lectures will be sent free to all those who request them.
For Sale by all Dealers, or Write

"Would not take $50.00 for my PICKERING Governor"
Mr. O. D. Swenning, Aurora, South Dakota says:
"Received the Pickering Governor for my McCormick-Deering and put it on in an hour and a half. We started out threshing tough flax and found the tractor worked a lot better. If a slug came in, the Governor acted before the belt flap would come down; the motor did not vary over twenty revolutions, either separator empty or full.
"The motor will not smoke after a slug as it used to and I KNOW I SAVE ABOUT THREE GALLONS OF GAS A DAY.
"Have run it only a week BUT WOULD NOT TAKE IT OFF FOR $50."
Mail coupon for free pamphlet 8H which describes the Pickering adapted to your tractor.

Boys and Girls Sell Pets at Auction

THE baby beef exhibited by Ralph Williams, York Springs, was adjudged the grand champion of the 212 animals in the boys' and girls' club exhibit of the 1927 State Farm Products Show. In the auction sale this animal was bought by Arbogast and Bastian, Allentown, for 45 cents a pound. The total live weight was 895 pounds.

Harry Kreider, of Lebanon County, won the silver loving cup awarded by Pennsylvania Farmer for the best fitted entry in the baby beef show.

Harry Kreider, winner of the Pennsylvania Farmer cup.

Adams County had the three best steers in the show and the Lebanon County club exhibit was picked as the best all-round county display, the calves being the most uniform thruout.

The entire 212 baby beeves were sold Thursday afternoon in the fast time of two hours and twenty minutes by Colonel George W. Baxter. Arbogast and Bastian, Allentown, bought a carload of the blue ribbon beeves, among which was the grand champion of the whole show which returned $402.75 to his youthful feeder.

The same buyers bought the champion pen of fat lambs, exhibited by Sherry E. McDowell, a club girl of Fredonia, Mercer County, for 20 cents a pound. The reserve champion pen of lambs went to the same concern.

Bought by the Carload

Other heavy buyers included Wilson, Martin and Company, Philadelphia. In their carload of 31 steers was included the reserve grand champion of the show, a Lebanon County product, which sold for 16 cents a pound. Swift and Company, Harrisburg, took 26 head. George Weisinger Brothers, Pottsville, bought a carload also. Purchasers from every county having baby beeves in the sale bought some of the prize animals to take back to the home communities. A total of over $28,000 was realized by the young beef growers for their product, the average price being $13.25 per hundred pounds.

In the fat lamb sale Jeager Brothers, Baltimore, purchased 15 of 51 head sold by the club members of Centre, Washington, Tioga and Mercer Counties.

Lancaster County boys and girls consigned 83 head to the sale, their club being the largest of its kind in the country. The Adams County club had 65, Lebanon 38, and Cumberland 26 head of the blue ribbon beeves.

Duroc-Jerseys Top State Swine Show

DUROC-JERSEYS topped the state swine sale at the Pennsylvania Farm Products Show. The highest individual and highest sale average of the sale went to the red hog fanciers. John F. DeLong, Sally Ann Furnace, Berks County, paid $225 for the high priced individual which was consigned by Immergrun Farms owned by Charles M. Schwab, Loretto. The sale average was $98.65.

Immergrun Farms made a clean sweep of the honors in the showing, winning first prize on junior pig, first on senior pig, and first on junior yearling. The senior pig was picked as grand champion of the red hog show. Prof. M. F. Grimes, of the Pennsylvania State College Animal Husbandry Department, was the judge.

Thirteen medals were awarded at the meeting of the Pennsylvania Duroc-Jersey Breeders' Association to growers of purebred Duroc ton litters in 1926. The association voted to award medals again to successful aspirants in 1927. The organization will encourage futurity shows, participate in the state show and sale next year, and promote the showing of Durocs at local and county fairs. The association will award a medal to the freshman at the Pennsylvania State College scoring highest in the annual freshman swine judging contest there. The Duroc breeders went on record endorsing increased show facilities.

Sycamore Hoosier Queen, consigned by Sycamore Farms, Douglassville, was picked as first prize senior yearling and grand champion of the Berkshire show. The same farm had the first prize senior pig. The best junior pig was shown by W. F. Rishel, Center Hall. W. C. Skelley, animal husbandryman of the New Jersey College of Agriculture, New Brunswick, officiated as judge.

Ton litter medals were awarded at the meeting of the Berkshire Association to 13 growers of purebred Berkshire ton groups in 1926. The association voted to continue the encouragement of ton litter work. Particular emphasis was laid on boys' and girls' pig club work; the members were urged to get in touch with county agents so that only high-class pigs will be selected for the demonstrational projects. The association will participate as usual in the 1928 state show and sale.

A sow consigned by Sycamore Farms, Douglassville, topped the Berkshire sale at $167.50. She was purchased by Alex Cooper, Reynoldsville. Thirty head, many of them young gilts, averaged $77 per pig.

Poland-Chinas averaged $91.94 each. Twenty-five head were sold, the top pig going to the Delaware Land and Development Company, Mortonville, Pa., for $120. The consignor was Ewing Porter, East Millsboro.

At the business meeting of the Poland-China Breeders' Association, it was voted to hold a consignment sale at the State Show in 1928 and to award medals to all growers of purebred Poland-China ton litters in 1927.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

ABORTION.—What is the best treatment for abortion in cattle?—N. R., Tyrone, Pa. Numerous so-called treatments for abortion are marketed. The present view of the matter is that sanitary and hygienic measures are fundamental. Isolation of aborters, destruction of fetus, membranes and discharges are indicated. The use of vaccines and bacterins may become the generally accepted method of immunization. The blood test has been of value in the matter of identifying individuals affected. Bulletins on this subject may be secured from the Bureau of Animal Industry at Harrisburg as well as from the Department of Agriculture at Washington, D. C. Your local veterinarian will be able to assist you in solving your particular problem.

COW HAS LUMP ON LEG.—I have a cow with a lump on one front leg as large as two fists. It seems something like a tumor.—J. H. R., Maitland, Pa. You do not say just where the lump is. If it is due to the irritation of the knee on the floor or to an abscess, your veterinarian will probably remove this swelling surgically. His judgment in this matter after an examination may be accepted.

COW HAS ITCH.—Our cow has a breaking out on her neck; because of the itching she rubs her neck against stalls until the blood comes and scabs form. Could you give me a cure?—Mrs. M. H. H., Ellwood City, Pa. If chickens are kept near the stable I would suspect lice. Wash the part with warm water and soap. Follow with a two per cent creolin solution. Repeat in seven days. Spray the stall with the same solution, using hot water for stall disinfection.

COW IS LAME.—Before my cow had her second calf I noticed she seemed stiff and sore. Her feet turned up in front. Her legs are swollen from knees down. She is thin in flesh and does not eat very well.—J. R. H., Safe Harbor, Pa. Usually the stiffness seen during the last two weeks of pregnancy disappears after calving. Try adding one ounce of cod liver oil to the diet daily. Allow access to a mixture of 1 part salt and 4 parts steamed bone meal. Examine the feet, trimming away all excess tissue.

ABORTION.—If a cow aborts the second time in succession, is she apt to do so the third time? If I take the cow away from the rest as soon as she has aborted and keep her there until she has thoroly cleaned, are the other cows safe from getting the disease?—F. V., Madisonburg, Pa. Abortions may occur during the course of high fevers, injuries or as the result of infection in the uterus. The latter cause is most common. We advise isolation of aborters until all discharges have ceased, destruction of litter and dead calf. The animal should be kept away from the herd until clean. Keeping the animals in good physical condition, and using care in the diet is a means of limiting the number of abortions. Cows may abort three or four times without becoming immune. Such animals are poor individuals in a herd.

PIGS HAVE WORMS.—Our pigs have worms. What would be the best expeller in this case?—A. J. S., Yorktown, N. J. It would be well for you to secure some worm capsules from your veterinarian. Individual treatment of the pigs is the most efficient method of handling. Rotate the lots so as to prevent or limit reinfestation.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

30 Days Trial 24 Hour Service

By all means fill out the coupon below and mail today. You will want to know how Kalamazoo gives you *30 days trial* in your own home and *360 days approval test* on anything you purchase. See how close Kalamazoo is to you—*24 hour shipping service* saves your time—safe delivery guaranteed.

Cash or Easy Terms

Read the easy terms—many as low as *$3 down, $3 monthly*. Nowhere in the world can you get such value, such service as Kalamazoo now offers in this new book.

Free Furnace Plans

This new *FREE* book tells you how to make a triple savings on Kalamazoo furnaces. First it saves you 1-3 *to* 1-2 *on the price of the furnace itself*. Secondly, it shows how you make a *big fuel saving* every month. Lastly, it illustrates how you *save the cost of installation* by following Kalamazoo free plans and free service. Thousands of Kalamazoo owners have put up their furnaces themselves, eliminating entirely any difficulties of installation

Quality First

Remember this! Kalamazoo specializes in the manufacture of stoves, ranges and furnaces. We build in large quantities. You get better quality at lower prices from a factory whose sole interest is making stoves, ranges and furnaces than you can elsewhere. This new catalog will prove it. Compare the quality, beauty, weight and size of Kalamazoo products with others. Don't make the mistake of buying elsewhere before you send for this book. Write your name in the coupon today.

Beautiful Porcelain Enamel Ranges

On every page you will see why factory prices save you 1-3 to 1-2. Pictured in full color are porcelain enamel ranges in beautiful delft blue and pearl gray—the very latest and most popular of all ranges. Also mahogany porcelain enamel heating stoves—now in great demand. These enamel ranges and stoves are as *easy to clean as a china dish*. The enamel is baked in our new enameling plant. Once you see them—bright, colorful, glistening clean—you will never again be satisfied with dull, drab, black ranges and stoves. Our business on them increased over 300% last year—that shows their popularity.

"Kalamazoo Stove Co.
Dear Sirs:

In regard to the Emperor Range received a month ago today we certainly are more than pleased. We find it perfect in every respect. Sure is a wonderful heater and baker. I bake with satisfaction and know it will not burn on the bottom or top but bake a golden brown. Saved at least $45 and will certainly recommend your stoves to our friends.

Your truly,
Mr. and Mrs.
Orville Kracht."

Heats Perfectly

Penn Yan, N. Y.

"Kalamazoo Stove Co.
Gentlemen:

I received the 23-inch Kalamazoo Chief furnace February 13th, in good shape. Nothing missing—parts [illegible] went together perfectly. We built a fire, and in ½ hour the house was like an oven. We had to open doors and windows, and at only 6 above zero. We never could heat the rooms with a stove, but now it is like summer when furnace is checked. Thank you for your promptness.

Yours truly,
Mr. Robert Tran[illegible]"

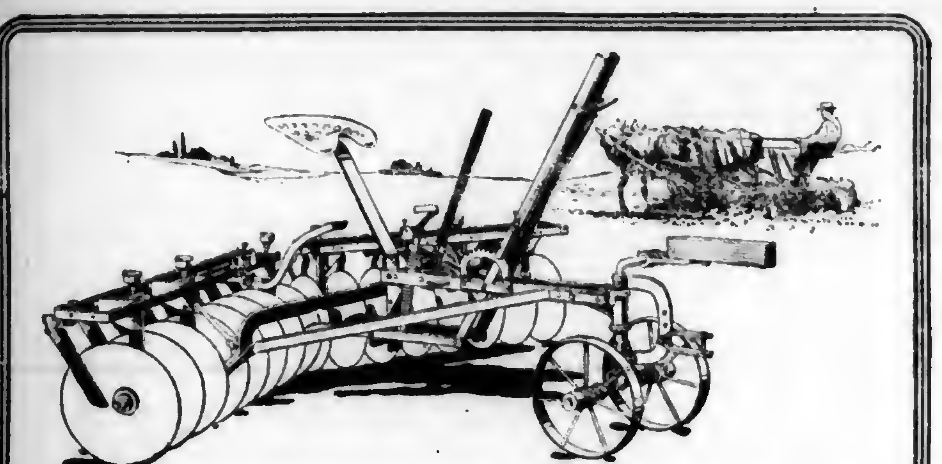
The Lincoln Monument, Union Square, New York City.

Former Secretary of Agriculture Willits reviews the tax situation as it affects the farmers of Pennsylvania. Page 3.



Thousands Know It for Its Good Work

Thirty-five years ago farmers bought the John Deere Model B Disk Harrow because they recognized the advantages of its remarkable flexibility, great strength, correct design, light draft and ease of operation.

JOHN DEERE
MODEL B DISK HARROW

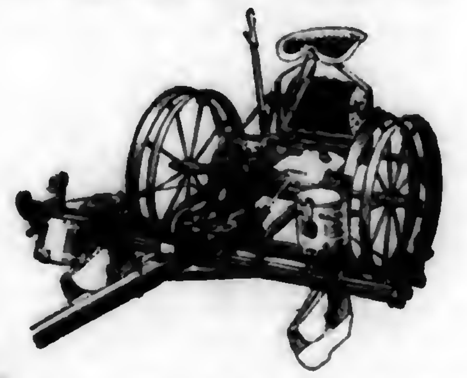
has for nearly a half century of outstanding performance continued to strengthen its position as a leader in the disk-harrow field.

Farmers like the independent action of the gangs—the way one gang holds to its work when the other gang meets an obstruction.

They find in the pivoted-yoke construction the most effective means of getting uniform disking in irregular ground. They like the way the handy third lever and powerful pressure spring controlling the pivoted yoke enable them to apply more or less pressure for proper penetration in any kind of soil.

Write today for folder describing the Model B. Address John Deere, Moline, Illinois, and ask for Folder BS-716

JOHN DEERE
THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS



BLACK HAWK
PLANTER

Cuts Cost Of Corn Crop

The amount of money you will get from your corn is hard to control—whether you sell it or feed it.

But you can raise it at a lower cost by using a Black Hawk Planter.

It drops seed in every hill—there are no misses.

It puts exactly the right number of kernels in every hill and you can adjust this number instantly according to the richness of soil.

It checks the rows perfectly making them easier to cultivate and to harvest.

A Black Hawk Planter will help you to make money on corn.

The Ohio Cultivator Co., Bellevue, Ohio

Introducing New Department of Agriculture Leaders

DR. C. G. JORDAN, Pennsylvania's new Secretary of Agriculture, was born and spent his early life on a farm at Volant, Lawrence County.

He started rustling for himself at an early age, selling books and teaching country school. He was graduated from Westminster College, at New Wilmington, Pennsylvania, with his A.B. and later D.D. degrees. He continued his studies and later was graduated from Princeton Theological Seminary. In addition to being a minister,—serving at one time as the pastor of the largest Presbyterian church in Ohio,—Doctor Jordan is well-known in Pennsylvania, Ohio and other states as a Chautauqua lecturer.

Doctor Jordan was a member of the state Legislature in the sessions of 1919 and 1921, and served as chairman of the Committee on Agriculture, being greatly interested in all legislation concerning farmers.

Dr. C. G. Jordan

The new secretary has kept his old home farm and says that one of the greatest satisfactions of his life was to see the sour, thin old soil on that 300-acre farm respond to drainage, liming and fertilization, until now it produces abundant crops of grain and hay. Over seven miles of tile have been laid on the farm. Thousands of head of cattle, sheep and hogs have been fed and this has helped greatly to build up the fertility.

Two Deputies Appointed

Secretary Jordan issued the following statements on January 28 in announcing the appointment of Raymond G. Bressler, Assistant Dean, Pennsylvania State College of Agriculture, and C. E. Carothers, of Washington County as his deputies:

"I have appointed Mr. Raymond G. Bressler Deputy Secretary of Agriculture. His term of office will begin February 1, 1927.

"Mr. Bressler was born and reared on a farm near Halifax, Dauphin County, Pennsylvania. He was a country school teacher. He was graduated at Shippensburg State Normal, received his A. B. at Valparaiso University, and later was graduated at the Texas Agricultural College where he taught for a number of years.

Mr. R. G. Bressler

"In 1918 Mr. Bressler came to the Pennsylvania State College where he has taught and worked ever since. He is now Assistant Dean of the Pennsylvania State College of Agriculture. He lives on and operates a farm near State College. He is a member of the Grange.

"Mr. Bressler will take up the work carried on by Deputy Secretary McKee. He will also assist in the field work now being outlined for the Department of Agriculture. Because of his technical training, practical experience and genial disposition, we believe he is amply qualified for the work before him."

Mr. Carothers

"I also have appointed as Deputy Secretary of Agriculture Mr. C. E. Carothers, of Washington, Pennsylvania. Mr. Carothers was Deputy Secretary under two former secretaries,—Charles E. Patton and Fred Rasmussen.

"The work in mind principally for Mr. Carothers is to assist in providing ample accommodations for the State Farm Products Show.

"Because of his experience, wide acquaintance and business ability we believe Mr. Carothers will be able to very substantially aid in the solution of this problem."

Income Tax Tangle Unravelled

TO THE farmer the problem of correctly making out an income tax return for the year 1926 should present no unusual difficulties, notwithstanding he is required to use the larger form, 1040. Careful study of the instructions on this and accompanying form 1040-F—schedule of farm income and expenses—will be of material aid in this connection.

The use of Form 1040 for reporting net income is required when the net income, regardless of amount, was derived from "a business or profession, including farming," and in all cases where the net income was more than $5000.

A copy of the form will be mailed taxpayers who last year filed similar returns of income. Failure to receive a form, however, does not relieve the taxpayer of his obligation to file the return and pay the tax on time. A copy may be obtained by writing the collector of internal revenue for the district in which the taxpayer lives.

A farmer who keeps his accounts on the cash receipts and disbursement basis—which means a record of the amount actually received and the amount actually paid for expenses—must file his income tax return for the year 1926 on that basis. He must include in his gross income for the year the amount of cash or the value of merchandise or other property received from the sale of livestock and produce, which were raised on the farm, profits from the sale or rental of farm lands, and profits from all other taxable sources. The farm expenses will be the amount actually paid out during the year.

For farmers keeping their accounts on the accrual basis, inventories at

Shall We Tax Property or Earning Power?

A Review of a Problem That Affects Every Pennsylvania Farmer

Editors' Note:—This comprehensive article on taxation is based on an address delivered by Mr. Willets, retiring Secretary of the Pennsylvania Department of Agriculture, before a recent convention of state secretaries of agriculture in Chicago.

By F. P. WILLITS

Former Pennsylvania Secretary of Agriculture

PENNSYLVANIA, even tho one of the greatest industrial states of the Union, has a farmers' tax problem along with Iowa, Illinois, Kansas and other states.

Many changes have taken place during the past 100 years in the industrial life of our state but a prominent rank in agriculture has been retained. One hundred years ago two-thirds of our gainfully employed in Pennsylvania were occupied in agriculture, animal husbandry and forestry. Today only one-tenth of our population lives on farms, yet both the number of farms and the annual value of farm products surpass the corresponding figures for three-fourths of the states.

With these changes of the past century has come the need for a change in the source of taxes from tangible property such as land and buildings to intangibles such as incomes. During the past the emphasis upon tangible property as a source of revenue has worked a hardship, in many instances, on the farmer.

City Earnings and Property Intangible

On the other hand, city earnings are not as obvious as are rural properties and earnings. Office buildings in the city do not represent the earning power of those who work in them. Lawyers, doctors, advertising agents and all sorts of professions thrive without any of the physical evidences of property that are so apparent in the country and many of them without physical property of any consequence at all. The result is that the general property tax alone as a source of revenue local and state tends to put the burden on the farmer and the home owner.

A property tax, general or classified, has been the cornerstone of the old system of taxation. What should be the farmers' attitude toward the general property tax? The results of classification of property have not been inspiring to the farmers,—in Pennsylvania the only tangible personal property which is taxed, except certain vehicles for hire, is horses and cows, both of which the farmer largely owns, while practically all machinery, the most valuable part of many industries, escapes taxation as property. Farmers, who are conservative, are slow to sanction changes, and, fearing that the burden may be shifted more and more to real estate, it is doubtful that they will favor modification of the general property tax until other sources of revenue are assured.

If improvements in education, highways and other services are to continue, it is necessary to procure new sources of revenue to finance them. In response to the demand for better roads the automobile license and the gasoline tax were created.

The only way that urban earning power can be reached since it is not based so much on physical wealth is by the income tax or the net profits tax or the inheritance tax and as a matter of cold fact the income tax is the only tax that gets at urban earning power and even then much of the earning power of the cities escapes as compared with farming communities.

A Tax Equally Just for All

A number of states have already devised new ways and means of raising revenue, chief of which is the personal income tax. . . . This tax is equally just for all classes of society, and it is but a modern method of attaining the same objective when formerly a man's property was a fair measure of his income and taxpaying ability.

Just what disposition should the federal government and the state make of the revenue derived from a personal income tax?

The need for state-wide subsidies for schools and highways to equalize the tax burden in rural districts has become readily apparent. It often happens that a rich township or county may have a small road mileage and a low population while a poor township or county may have a relatively heavy road mileage and a large population.

The value of federal aid for state highway systems has also been established. Some states object to federal aid because they pay relatively more of the income tax and get a return in subsidies less than their proportional contribution. To my mind the complete answer to that is that the earning power of the nation is only represented in its big cities and that the city earning power would be of no consequence without the great reservoirs of raw materials and food products in more remote districts and without the great earning power of the nation as a whole. This national earning power can properly be taxed and returned to the sources of its creation only by income taxes coupled with federal aid to highways and schools particularly.

Education is and rightly should be the function of the state. In view of the fact that the state usually prescribes the standards for schools and teachers, maintains an inspection service and has power to enforce its requirements, it is contended that the state as a whole should bear more of the burden rather than create a situation which is locally oppressive. The state is interested in giving equal educational opportunities to all and furthermore rural districts in the past have furnished a large per cent of the people for the cities. If these people are not properly educated, the nation suffers.

Figures show that on the main traveled roads, only about five per cent of the travel is farm traffic. With roads, the same as with schools, the state should contribute a greater percentage of the cost and maintenance.

In Pennsylvania, we have the state-county-local plan of road construction and maintenance which is proving very successful. There is need, however, for greater state aid in the more rural districts and greater emphasis upon the construction of "feeder" roads into the main state highway system.

Headlong Action Would Be Useless Folly

It would be folly for any government to go to the trouble of devising a new system of taxation without providing the safeguards essential to assure its successful operation. From the experiences in many states, it appears that centralization offers in fiscal affairs much in the way of efficiency and economy. Forty-four of the states already have some form of permanent tax commission. This fact should seriously recommend it to the other four states. Much could be done by such a commission, provided it is thoroly familiar with tax problems and representative of all classes of society, in compiling data as to sources of taxes and in recommending changes for the equalization of taxes.

The glaring inequalities of many local systems of assessment of property are apparent to all; especially, where the office of assessor is elective. One district within the limits of the taxing authority finds it to its interest to undervalue its property, and thus escape its just portion of county and state tax.

A recent survey indicated in Pennsylvania that some property was assessed at a figure nine times as high as other property of like value, and that in general rural property was assessed higher than urban property.

The extravagant cost of a local system of

The highest dairy skill is represented by this super-quality milk shown at the Penna. Farm Show.

The producer of milk will now have available the same clean power, as the manufacturer of dairy products has long used.

Rural electrification
—a matter of business cooperation

ALL FARMERS want to enjoy the comforts and convenience of electricity. How to get it is the question still to be answered by most of them. Yet rural electrification is merely a problem of business cooperation.

Electric service cannot be sold to isolated or occasional customers, as merchandise can. For electricity—like milk—cannot be stored to any practical degree; it must be consumed as produced.

Thus the cost of building transmission and distribution lines, and of keeping a supply of power ready for instant use, can only be met by having on every mile of line a sufficient number of consumers whose needs for electricity are many and varied.

That is the principal condition which governs complete rural electrification.

Lines can be built where groups of farmers will use enough power to make the extension of service a practical business undertaking, just as maintaining a milk route requires customers, not widely scattered, who use a steady supply.

So, to get electricity for your farm, get together with your neighbors and make your light and power company a cooperative business proposition. Ask your power company for information and cooperation.

The Committee on Relation of Electricity to Agriculture is composed of economists and engineers representing the U. S. Depts. of Agriculture, Commerce and the Interior, Amer. Farm Bureau Federation, National Grange, Amer. Society of Agricultural Engineers, Individual Plant Manufacturers, General Federation of Women's Clubs, American Home Economics Ass'n., National Ass'n. of Farm Equipment Manufacturers, and the National Electric Light Association.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS.

BY R. P. KESTER

THE editorial printed in this paper a week or two ago, in which farmers were rather sharply criticised for not studying the technical end of their business a little harder, evidently got under the skin of at least one reader. He sat down at once and wrote the following letter:

In the last issue of Pennsylvania Farmer there is an editorial on "What Are You Learning?" All right; I want to learn. Can you tell me of a few fruit growers somewhere near Philadelphia having three or four acres of tree fruits, who would tell me what they have found in their experience to be the best up-to-the-minute practices in fruit growing? My soil is slow in maturing fruit (apples). I want someone to tell me about fertilizing trees with nitrates, phosphates, etc., and about the effect of nitrogenous green manures,—alone or together. I would like to know how big a sprayer one should have for 100 trees, five or six years old. I should like to be told a lot about dusts, and dusting with a crank duster holding about a peck of dust. Can I reach the tops of six-year-old trees which are more rapid about growing than in ripening their fruit? Also, what growers find as to the best market varieties. One more question. How large a storage house should I have to care for the apples from an orchard of 100 trees? Thanks for the editorial.

—Reader, Chester County, Pa.

◆ ◆ ◆

WELL, I am glad that the editorial stirred up one man. He evidently has not been reading up on the subject of fruit growing. We have printed everything "Reader" has asked about more than once. Bulletins have been available, and books are on the market. That, however, is what we referred to in the article. Too many people fail to study up subject in which they are vitally terested until they run against snag, then they send out an S. O. call P. D. Q.

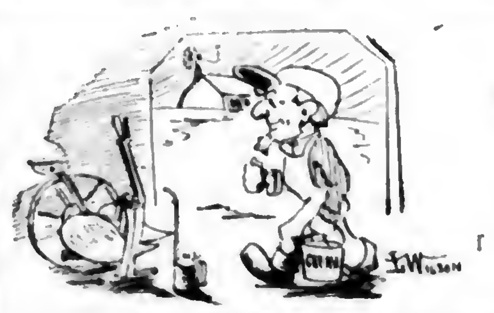
◆ ◆ ◆

HOWEVER, we do not wish to unduly harsh with this reader. is to be credited at least with ambition to find things out, and if lambasting him we can hit a others on the ear our purpose be fulfilled. Information on techni al subjects, to be worth while, be full and complete. A neighbor mine was convinced that spraying was necessary to get fine fruit. knew that much but did not try find out any more. He simply that he should spray. So he little hand squirt sprayer and some material in a bucket and ed up inside a forty-foot tree. he was squirting away I asked what he was using. He did know, nor could he tell what he spraying for. It was not the time to spray for codling moths, could he get any into the blossoms it had been.

◆ ◆ ◆

I WILL try to answer most of the questions asked a little later. In the meantime, we ask readers to write their views on any or all the inquirer's questions. I cannot do it today. I go to bury my Father.

To be honest, to be kind—to earn a little, and spend a little less; to make, upon the whole, a family happier for his presence; to renounce, when that shall be necessary, and not be embittered; to keep a few friends, but these without capitulation—above all, on the same grim conditions—to keep friends with himself—here is a task for all that a man has of fortitude and delicacy.
—Stevenson.



The Cheerful Plowman

Winter Care of Machinery

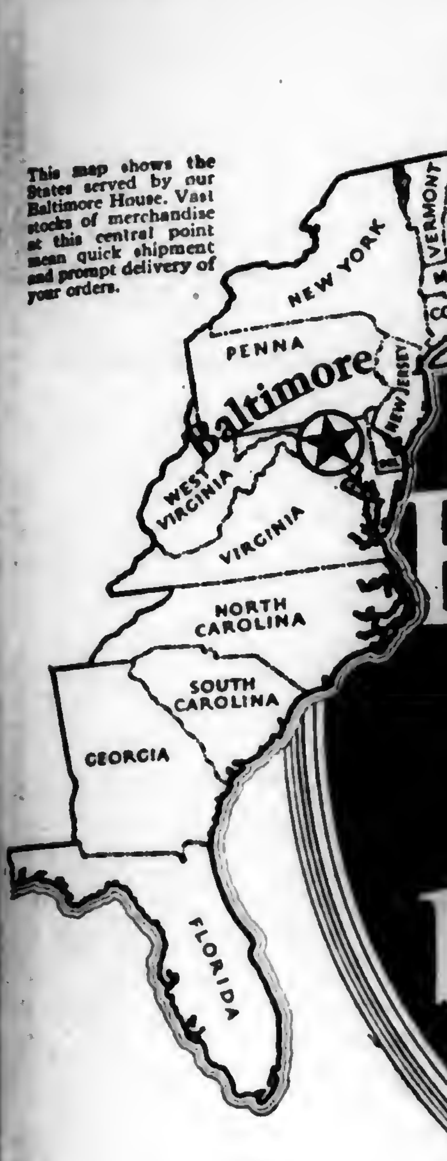
IN WINTER time I don't neglect my implements until they're wrecked, I'll say I never do, but they are rightly stowed away in proper tune the very day my work with them is thru! Just think! A dollar and a dime from wear and tear in winter time is something thrown away, it's something lost without a cause, unbroken by the gees and haws of busy summer day; it's something scattered to the wind.—Oh, gee, I'd feel as if I'd sinned if I let rust and storm sneak up and mar a faithful plow; I'd feel as if, indeed, somehow, my feelings were not warm!

I know one fellow, sad to say, who leaves his hay-rake night and day out by the apple trees, he leaves his wagon-boxes out where wailing storms cavort about, the prey of gust and breeze! When spring comes on he buys repairs, he rolls his dollars down the stairs, to Hades, if you ask, and then his labor is a job when whiffle-trees are on the bob, his farming is a task!

Now I (not boasting, understand) let no good dollars slip my hand and hit the Hades trail, I let no pennies slide the stair because of needless, fool repair when poles and neck-yokes fail. Each plow I own, each rake and hoe, has its own little place to go to spend its winter days, and there it goes when work is done, protected from the rain and sun, yes, there it goes and stays!

That overhead! Ah, there's the thing that makes a cabbage of a king if he won't watch his step! That overhead! Yes, yes, indeed, it makes heart and pocket bleed, it robs the purse of pep! Well, since it does let's watch it close, don't let it come in overdose, let's fight it where we can; and we can fight it, I can tell, by treating all equipment well; that's my best thought and plan!—J. Edw. Tuffl.

This map shows the States served by our Baltimore House. Vast stocks of merchandise at this central point mean quick shipment and prompt delivery of your orders.



Ward's Big Baltimore House was built to be near to you

FOR Fifty-five Years this Company's progress has been built upon *Service to You.*

It is part of our service to fill your orders quickly, to have at hand—near to you—vast stocks of fresh new merchandise ready to fill your orders immediately. That is why Ward's Big Baltimore House was built near to you—so that your orders would reach us quicker, and your goods would reach you quicker.

It is part of our Service to you to make possible each year a still greater saving for you.

A Saving of $50 in Cash is Yours This Year

This big Baltimore House offers to you a saving of Fifty Dollars in Cash if you use its advantages, if you *use* Ward's Catalogue, if you will turn to its pages *every time you have to fill any need* for the Farm, the Home and the Family.

Let us prove to you the Saving we offer. Let us show you how and why Ward's offers lower-than-market prices.

Quantity always determines price. If you buy one of any article, the price is higher than if you buy a hundred. A thousand gets a still lower price. Buying a hundred thousand of any article is a manufacturing contract, competitive bids are received and prices made close to the cost of manufacture.

8,000,000 Customers Make Possible Ward's Low Prices

$100,000,000 worth of merchandise was bought for our customers, bought for this one Catalogue. And paid for in Cash! There is a buying power that creates Bargains. There is a price-making power that gives all its advantages to You, because these savings in price are always passed along to You—our customers.

Low Price and High Quality Your Double Advantage at Ward's

It is part of our Service to you, to sell only goods of standard Quality, to sell only goods that will be satisfactory to you. At Ward's we never sacrifice Quality to make a low price.

So use your Catalogue. Your greatest saving, your most complete satisfaction, your most prompt service, are to be found in sending all your orders to Werd's—at Baltimore.

Lincoln—In wisdom great, but in humility greater, in justice strong but in compassion stronger, he became a leader of men by being a follower of the truth.
Calvin Coolidge

Propaganda

HAPPILY, the word propaganda largely has gone out of use. During the war it was used to designate everything that "the other fellow" was trying to tell the world. The term was used to stigmatize and discredit the other side's story. However, we must not conclude that there is no longer any propaganda simply because we do not see nor hear the word itself. The lessons from the war should have taught us to estimate properly the sayings and writings of others.

Bills to Pass

PROBABLY before this is read the vote on the farm relief bill will have been taken. The newspapers carry the information that some kind of coalition has been formed by the bankers who are backing the McFadden bank bill and the sponsors of the McNary farm bill and both will be passed. The bitter opposition to both bills has been allayed on the basis of "you play with me and I will play with you."

Short-Sighted Opposition

WE UNDERSTAND that the association of county fair managers is again opposing the establishment of a state fair. It seems to us that if the members would take the time to investigate the condition in states having state fairs they would find, as have others, that a good state fair is one of the best aids the county fairs in those states have; that the petty jealousy aroused by any attempt to establish a state fair is not well founded. County fair managers will find if they will investigate that the low moral standard which has characterized the average county fair for the last few years has done more to injure them in the public's mind and make them unprofitable than would the holding of the biggest kind of state fair. A bill has been introduced into the Pennsylvania legislature to raise the state appropriation to county fairs from $1000 to $1500. Unless there is some method of enforcing a different code in the management of these fairs the increase should not be made. There is evidently something seriously wrong when the leading farmers, and even the law and order societies, are opposing the kind of county fairs that are held in some sections of the state.

Figures That Talk

EASTERN railroads handled a greater volume of fruit during the shipping season recently closed than ever before. In the marketing period last fall,—August, September, October and November,—the railroads delivered 59,199 cars to New York, 9,372 to Philadelphia and 2,774 to Baltimore. This is a total of 71,345 cars of fruit for the three principal markets in this territory, as compared with 59,113 during the same season in 1925. This is an increase of 20 per cent in the amount of fruit reaching these consuming centers by rail. On the basis of these figures it is not hard to explain the unsatisfactory prices that have prevailed this year.

Compromise Plan Adopted

GENERAL ORDER 27 has been scrapped by the Public Service Commission. This famous edict, promulgated by the Commission about a year ago was, in effect, an attempt to tell the electric power companies of Pennsylvania "where they get off." Order 27 didn't work out as its backers hoped it would. Farm organization leaders were wise enough to realize that it wouldn't work. So a few months ago they got together and decided upon a plan of action radically different from the one that had been favored in some quarters. They decided that the quickest way to get electric service into rural sections was not to fight the power companies but to cooperate with them.

As a result of that decision several conferences were held with power company representatives, each side drew up plans for rural extensions, and by a process of give-and-take a single plan was evolved. This plan has been approved by the Public Service Commission and takes the place of Order 27. It will disappoint some who have believed untrue tales of cheap electricity in Canada and elsewhere. It will please others who understand the magnitude of the problems involved in rural electrification. On the whole, we believe it is a fair and workable plan. We shall publish details about it later.

The Agricultural Outlook

THE comprehensive review of the outlook for farmers during 1927 just issued by the Department of Agriculture does not contain any grounds for increasing acreage and production. In fact, the report advises, "The situation is clearly such as to discourage any general expansion of agricultural production. In some areas it apparently means a greater utilization of lands for pasture and forestry."

If farmers thruout the country can be made to understand this and act accordingly there need be no fear of glutted markets and ruinous prices the coming season. But if they believe that each individual may safely enlarge his output in the hope that all others will curtail production, disaster may be expected. Is it not time that farmers as a whole should act sensibly in this matter and not entertain the sneaking idea that each can beat his neighbor to it, and profit by increasing production? Better than any legislation that could be enacted would be a concerted effort on the part of all farmers to slightly curtail production for a year or two. We fully approve of all legitimate efforts to produce more economically, but we would like to have power of a czar a while to stop the perni activity which tends to increase produ just now.

The Rural Churches Again

THE comments made on this page f time to time concerning the condition country churches have brought forth a n ber of letters, usually very critical in th nature, but little that shows any plan or fort to remedy matters.

The Institute of Social and Religious R search recently released its report of a s vey covering a large part of the country. T investigation shows that there is a deci drift of rural church membership to vil churches. The report states: "The fig show that nearly a third of the member of village churches thruout the United S are farmer folk who have forsaken th country churches for churches in nearby v lages." This means that there are fewer attendance at country church services, m irregular services, diminishing funds, a poorer leadership. The reasons given for t change of membership are, better preach better buildings, and better music. The au mobile and good roads have furnished t opportunity for making the change.

This is another institution that seems to leaving the country for the towns. Du the past few years we have seen the tend to abandon the rural schools and send th children into the villages. The old-time ru gatherings for entertainment and instructi generally have been dropped and people m tor to town for these things, and now w learn that the country church is moving t town. What's the reason? Is it mental la ness, or is it because there is not mon enough in the country to provide and keep u good institutions?

Butter and Beef

WE HAVE gone so far in cutting Army and Navy appropriations th the boys in the service have to live on ol margarine. At least that is the conclusion t be drawn from this week's news from Wash ington. Moreover, the beef we produce i this country is too good for the service me so the meat supply is bought in Australia and New Zealand.

Since we are unable to feed the soldiers and sailors on the health-giving products o American farms with the present appropri tions, we respectfully suggest, as one altern tive, that the service forces be reduced. I other words, cut the Army and Navy to t the butter money.

Otherwise, let Congress provide enough butter and beef money.

Editorial Sidelights

SINCE taxes were invented people have been talking about them, even tho they didn't know what they were talking about. For few people know anything about taxation.

Two or three years ago the Pennsylvania State College and the State Department of Agriculture decided that it would be a good thing to gather some facts, so that taxation talk could be based on something more than personal notions and prejudices. Mr. Willit's article (Page 3) is based on some of the things brought to light in the fact-finding program carried out by these two agencies. More later about the results of this investigation.

HOW HAVE YOU profited by using modern labor-saving machinery? Write and tell us all about it, so that we may pass on your experiences for the benefit of other readers. As announced last week, prizes of $15.00, $10.00 and $5.00 will be given for the best letters, and others that are published will be paid for at space rates. All letters, and power machinery pictures, should reach us not later than Tuesday, February 15th.

GIVEN RIGHT-OF-WAY

Special Ruling Makes Farm Relief Vote Possible—No Toll on Proposed Canals—Will Broadcasters Charge?

Washington, D. C.

BEFORE this issue of Pennsylvania Farmer reaches its readers it is probable that the McNary-Haugen farm relief bill will have passed the House and sent on its way to the Senate for consideration. By a special ruling farm relief legislation will have the right of way in the House as soon as the appropriation bills are out of the way. Representative Tilson, majority leader in the House, says "we may safely count on being ready to go forward with the farm relief bill on February 8th."

"If It Is Good, Let's Have It"

Owing to an unexpectedly strong opposition from the South a movement is under way to exempt cotton from the equalization fee and an amendment has been drawn and is backed by a group of farm relief advocates providing that the equalization fee shall not go into effect on any of the farm products named in the bill for at least two years. The American Farm Bureau Federation is opposed to this amendment, on the grounds that if the equalization fee is a good thing it should become effective as early as possible. If this amendment were carried, it would be practically the same as the Crisp-Curtis bill.

The opinion prevails quite generally in Washington that the McNary-Haugen bill in some form will pass the House, but the Senate is still in doubt. Unless amended to meet the views of southern senators there is little chance for its passage.

Would Take the Ships to the Wheat

The cost of shipping wheat from Duluth to Liverpool would be at least 6½ cents a bushel lower than present rates, if the proposed ship canal is constructed, according to experts of the Department of Commerce. They have found that a 27-foot channel into the Great Lakes would admit 81 per cent of the dead-weight tonnage of ocean vessels now coming to the United States. Representative D. A. Reed, of New York, has introduced a new Bowen plan bill. It provides for a ship canal 27 feet deep and 300 feet wide from Lake Erie to the Hudson by way of Lake Ontario, and from Lake Ontario down the St. Lawrence River to the international boundary, a short distance above Montreal, covering the international portion of the St. Lawrence.

Will Sell Power to Pay for Canals

Congress is asked to grant a charter to a corporation known as the Federal Ship Canals Company. Its promoters claim that the adoption of the Bowen plan would give the West both the All-American route and the international portion of the St. Lawrence so far as this country's jurisdiction extends, without any cost in taxes to either the United States or Canada, and without waiting for a new treaty.

The ship canals are to be maintained and operated at the expense of the corporation. No tolls are to be charged for passage thru the canals. It is primarily a power proposition, the corporation agreeing to sell the power directly to the public at charges to be fixed by state public service commissions.

Is Now Making Air Nitrates

In presenting the offer of the American Cyanamid Company for the lease of Muscle Shoals before the House Military Affairs Committee, W. B. Bell said the offer of his company was the first from a corporation actually engaged in the manufacture and exporting of commercial fertilizer. It is planned to establish a urea plant on the Muscle Shoals site, urea being one of the most concentrated forms of fertilizers. Several farm organization representatives favor this company's offer.

Shall We Pay to Listen?

The conference report on the new radio regulation bill has been adopted by the House. It provides for the division of the country into five radio zones, creation of a Federal Radio Commission, division of its powers with the Secretary of Commerce, licensing authority and conditions of licensing.

A supplementary measure has been introduced in the House providing that no broadcasting station shall be used to broadcast any matter that can be heard only by a receiving set equipped with a special device or attachment without which such matter cannot otherwise be heard, and for receiving which a charge is made.

There is a new broadcasting apparatus, not now in use but already available, which will make it impossible to listen in except over a receiving set equipped with a certain attachment. The Dill-White bill, as reported from conference, gives the broadcasters the right to charge listeners-in.—E. E. R.

FEW LAWS ANTICIPATED

New Administration Doesn't Favor Multiplicity of Laws—Changes in Grange Personnel Announced.

Harrisburg, Pa.

WHILE the 1927 session of the Pennsylvania legislature seems to be living up to the reputation of other sittings of the general assembly in regard to rushes to introduce bills, chances are there will be fewer laws than anticipated placed upon the statute books. The Fisher inaugural address indicated very clearly the position of the new administration against piling new laws on the books. Some of the legislative committees began to report out bills very promptly, but this is an old game as the body to which they are sent acts as a stopper and the first four or five weeks are the times when the plays for home notice are made. Indications are the bulk of the bills, outside of appropriation measures, will be well listed before March is very far advanced. The budget is now in the hands of the money voting committees which will frame appropriation measures accordingly.

Adminstrative Code to Stand

The administrative code of the Pinchot administration seems to be very highly regarded by the Fisher administration if the care with which any proposed changes to that act are receiving is anything to go by. It was long ago predicted the code would never be repealed. There will not be many changes made, either.

FOUR ACES

Dewey Resigns for New Work

Philip H. Dewey, manager of the State Insurance Fund, has resigned as Master of the State Grange and will devote all of his time to the office to which he was named. The resignation of Mr. Dewey is the second change in the Grange offices here as Fred Brenckman resigned to go to Washington.

To Meet Government

Pennsylvania officials will meet federal authorities in charge of campaigns against the corn borer and Japanese beetle in a short time so they may coordinate the activities of the national and state governments. The extended quarantine areas are now being visited and arrangements will be made for inspection service and other work which must be organized before the pests grow active. Liberality of the budget on these projects is expected to furnish the state with means to make best use of the system built up the last year.

Bressler in Charge

R. G. Bressler, long connected with State College and a former Dauphin countian, has succeeded John M. McKee as Deputy Secretary of Agriculture, Mr. McKee having resigned to become connected with the survey in central Pennsylvania counties. Charles E. Carothers, former deputy, has been named to take charge of the Farm Show and similar matters with title of deputy.

Commission Complete

The State Public Service Commission is now complete, all members having been confirmed by the Senate. The State Compensation Commission has also been named and activities of the new administration are getting started. Each department head has been asked to make a survey of work and force, and until that is finished talk of reorganization is premature, to say the least.—E. C.

CELEBRATES BIRTHDAY

Salem Pomona Is Fifty Years Old—Millions to Better Roads—Livestock Must Be Healthy to Live in Jersey.

Trenton, N. J.

VISITING patrons from South Jersey counties gathered at Woodstown recently for the fiftieth anniversary ceremonial of the Salem County Pomona. The meeting was attended by over 600 Grange members. The history of Salem County was pictured by a pageant in charge of the Pomona lecturer. Social features as well as the serious side of Grange work rounded out one of the most enthusiastic Grange meetings of the winter season in South Jersey.

Road Improvement in Sight

Thirty-five road and bridge improvements for 1927 were approved in late January by the New Jersey State Highway Commission. The estimated outlay is $10,000,000, which amount is exclusive of the $8,000,000 proposed for the extension of the North Jersey route to the Hudson vehicle tunnel. Completion of the program this year, which is independent of the plan now before the state legislature, will leave less than 80 miles of the 16 New Jersey routes without permanent improvement. The 1927 developments take care of improvements at various places of traffic congestion.

Livestock Inspectors Active

Mid-winter is finding the livestock inspectors of the State Department of Agriculture active in many sections of New Jersey. In the northern part of the state the fight against bovine tuberculosis is being pushed rapidly, particularly with reference to the building up of accredited herds and the area plan for T. B. control proposed by the Morris County Board of Agriculture. In the southern and central part of the state, poultry inspection under the New Jersey accredited flock plan and sanitary control work including the vaccination of hogs against cholera and being actively promoted. In the poultry work a number of cases of roup have been reported.

Beverly Co-op Successful

The recent annual meeting of the Beverly Cooperative Growers' Association of Burlington County showed the cooperative movement well under way in that area. The association showed a surplus of $9500 for the fiscal year just ended, the association doing a total business of $849,000. The surplus was 3.6 per cent of the total business and expenses of operation were 2.28 per cent. The following Board of Directors was reelected: T. Sherman Borden, William K. Hoostra and Alfred D. Muller, all of Beverly.—W. H. B.

ADVISES BIG CHANGE

Dairy Leader Objects to Present Basis Upon Which Milk Is Sold—Bright Spots Aren't Easy to Find.

Ithaca, N. Y.

PROF. H. H. WING, veteran dairy leader of the State College at Cornell, in an address before the New York State Dairymen's Association and the New York State Breeders' Associations advised a radical change in the basis on which milk is sold to the public. The fat content is the most valuable and the most variable content, and the one the consumer knows least about when he buys, at present. Prof. Wing would have the minimum fat content stamped on the bottle cap and would have the price based on this content. He expressed the feelings of many dairymen when he protested against the present fat "differentials." He would change the state law so that any milk sold which tests below 3 per cent should be sold as skimmilk and that any milk sold having more than 10 per cent fat should be sold as cream. He would also have the law state what should be recognized as milk, not only as to fat content, but as to solids.

Crop Prices Decline

Instead of rising with other commodities the prices on farm products have continued to decline in the state of New York until at present it is announced that they are $39,000,000 below what they were in 1925, which was not a favorable year for the farmer. The greatest decreases have come in apples, potatoes, corn, peaches, pears, grapes, beans, onions, winter wheat and oats. All of these show greater production than in 1925. Wages to farm help have advanced over last year's figures. There are exceptions with bright spots where good money has been made.—M. G. F.

Clover Seed

Free from Weeds
Tested—High Germination

Catalog FREE

GET your Clover Seed from Pennsylvania's leading seed house. Make sure of clean, sound Seed, free from weeds. Tested and proven high in germination.

Hoffman's Red Clover Seed is suited for use in Eastern and Northern sections. It is *safe* Seed.

Alsike and Mammoth Clovers in good supply and at prices that are right.

Sweet Clover—Genuine White Blossom, scarified to make germination easy. A great soilbuilder - makes good hay when cut early.

Alfalfa—We have a fine stock of "Grimm" Alfalfa at the best prices we have been able to make on this strain in years. Our "Northwest" brand is also extra fine and even lower in price. This is a good year to start an alfalfa field.

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

Where Profits Are Made and Lost

TODAY I sowed in the greenhouse one-half pound of a special strain of early cabbage seed which cost $10.00. That is at the rate of $1.25 an ounce or $20 a pound, five times the average cost.

I am very sure from past experience that I can, with careful management, grow 15,000 plants, enough to plant an acre 14 inches by 30 inches, from each quarter pound of seed. In other words, the actual seed cost is $5 per acre for a crop that should return several hundred dollars. Ordinary seed would have cost $1 per acre. One or two barrels of good early cabbage will pay the difference.

After all, are we not inclined to compare prices of seeds too much on the basis of cost per pound? Not necessarily is the highest priced seed the best, tests will answer that, but invariably the best seed, whether it cost more or less, is cheapest.

AN' I'LL BETCHA I KNOW A PLACE WHERE WE CAN SELL EVERY CANARY WE RAISE —

When the city boys visit the farm.

We must secure as many seedlings as possible from each ounce of this or other high priced seed. Cabbage seed counts about 8500 per ounce, tomato seed averages around 9000 and celery mounts to more than 70,000 per ounce. What percentage of these do we gardeners convert into strong plants ready for the field? Perhaps 50 per cent would be a high average. Right here we may begin economical production. Twenty per cent more plants from each ounce of seed means a saving of one-fifth in the seed bill.

A scheme followed by some growers in starting plants under glass is to cover the seeds with clean, dry, sharp sand. For cabbage and tomatoes shallow furrows one-quarter inch deep and 2 or 3 inches apart are marked out by sliding back and forth on its edge a section of planed lath or other thin material. Celery requires a depth of a mere one-eighth of an inch.

The sand, which must be perfectly dry and finely screened, is run into the furrows thru the drainage hole in a 3-inch flower pot or a 20-penny nail hole in a tin can. The rate of flow is easily controlled by a finger.

With practice seeds may be covered very rapidly in this manner, they push up easily as the sand will not bake or crust and the stems are usually more free from damping off disease, due perhaps to the fact that the sand dries off more quickly than soil after watering.

Another factor in securing the maximum number and quality of plants from the minimum of seed is the soil. It must, of course, be friable and well filled with organic matter. Equally important is freedom from disease spores. Soil from areas which have never grown garden crops is usually safe. Leaf mold and thoroly rotted manure from animals that have not been fed crop refuse may be mixed in as required.

Where old hotbed, garden lot or greenhouse soil is used some form of sterilization is almost demanded. One gallon of formaldehyde diluted to 100 gallons with water and applied at the rate of one gallon of the mixed solution to each cubic foot of soil is a common recommendation. The soil should contain at the time of the treatment about the right degree of moisture for planting.

Better Not Be in a Hurry

When again dry enough to work the soil should be spaded over and allowed to aerate thoroly before sowing or planting is done, the time required depending upon soil and atmospheric conditions.

Under some conditions steam sterilization may be used to advantage, killing not only soil borne insects and diseases but weed seeds as well. A Clearfield County plant grower stacks in steam-proof chambers his flats or plant boxes filled with soil ready for sowing or planting. To permit free circulation of the steam the flats are separated by strips. Steam is turned in for a period of time sufficient to cook a small potato buried in the soil, the exact length of time required varying with the size chamber, pressure and volume of steam available.

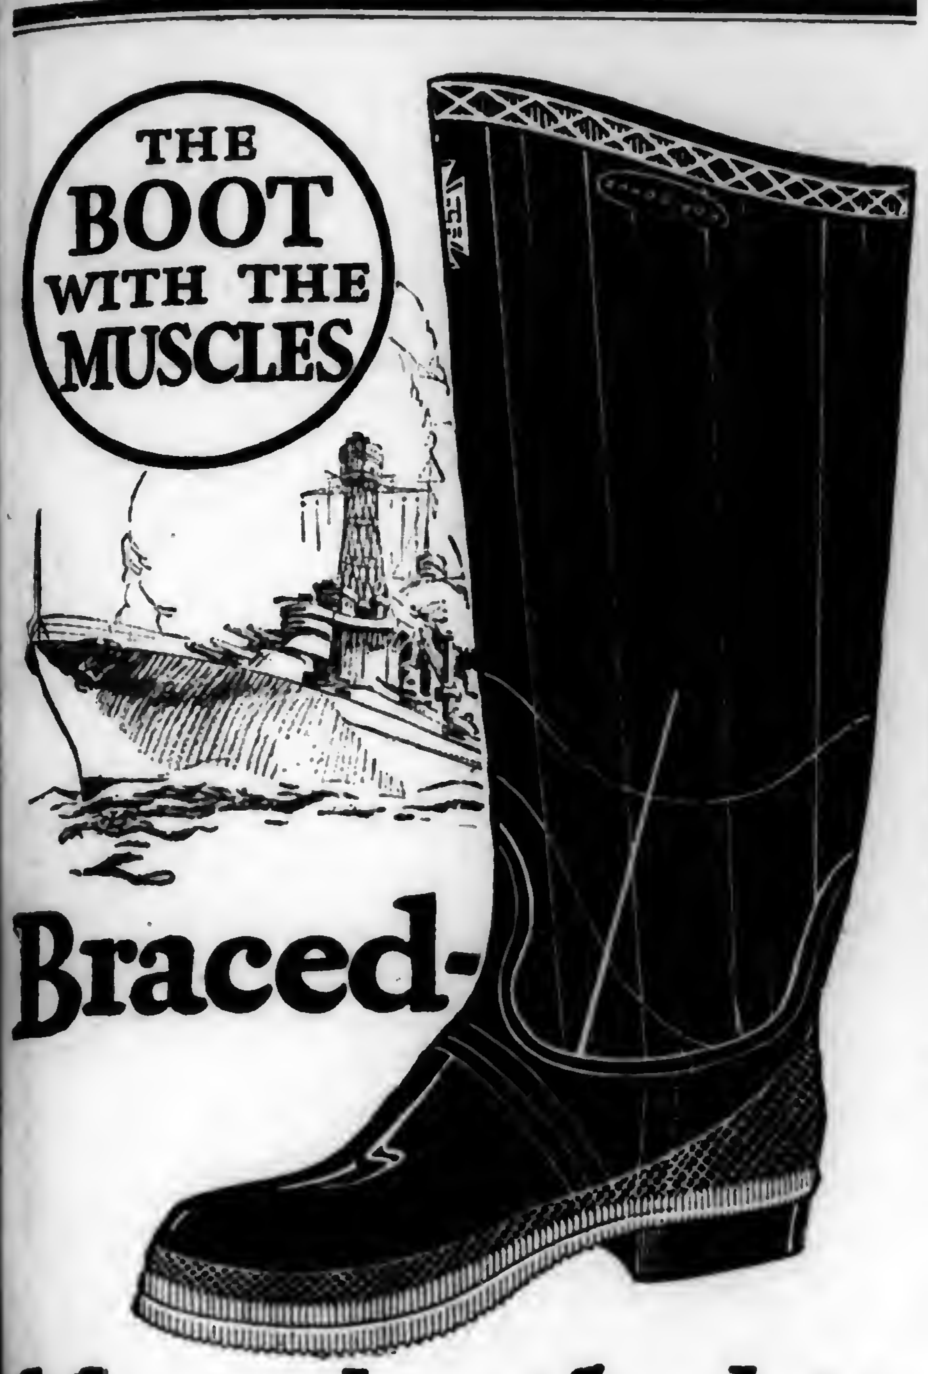
Here on Logan Spring Farm we sterilize our plant-growing soil in a bin 5 feet wide, 8 feet long and 1 foot deep. In the bottom are four 1¼-inch pipes spaced 15 inches apart with one-quarter-inch holes drilled every 6 inches. The shallow bin is filled with soil, covered with a tarpaulin and steamed for 20 minutes after the steam has come to the surface all over.

Even distribution of seeds in the furrow will do much to increase the yield of plants per ounce and in addition more uniform seedlings will be secured. It is doubtful if there is a better all-around way of sowing small seeds in flats or hotbeds than from a stiff envelope cut open with shears or sharp knife to avoid ragged edges. The envelope should not be more than half full and is grasped lightly between the thumb and fingers so that it is in a horizontal position with the open end parallel with the row to be sown. A gentle shaking from side to side will enable the operator, with a little practice, to sow both rapidly and evenly. A dozen seeds to the inch is a good rule until experience and one's own methods dictate a change.

Watchfulness Determines Results

Granted good seed, well prepared soil and careful sowing, watchfulness in controlling moisture and temperature will determine the resulting stand of plants. In bright weather newspapers placed over the soil will prevent rapid drying. With celery, burlap makes an ideal covering but must be removed promptly when seedlings begin to appear.

Temperatures between 50 and 60 degrees Fahrenheit will germinate cabbage, cauliflower, lettuce, beets and kohl-rabi in good shape. Peppers and tomatoes should run 10 to 15 degrees higher. Eggplants require 80 to 90 degrees for a lively start. In a structure devoted to hardier plants this may be secured by making a manure-heated hotbed within the greenhouse.—Gilbert S. Watts.



THE BOOT WITH THE MUSCLES

like a battleship

ITS RIBS of steel give to the battleship the utmost in strength, combined with the utmost in speed and freedom from unnecessary weight.

Its ribs or "muscles" of tough, live rubber give to Top Notch Buddy Boots the utmost in long service combined with the utmost in wearing comfort and light weight.

The "muscles" of Buddy Boots are a patented, exclusive feature. They protect the sides of the boot, strengthen them and prevent them from cracking. The "Boots with the Muscles" are not heavy or clumsy yet they will outwear any boot you ever bought.

Soles and heels are double-thick. There's a special rubber strip reinforcement next to the sole. The trim-shaped leg prevents the foot from sliding up and down.

Only the toughest, livest rubber goes into Top Notch Buddy Boots. We make each pair by hand from start to finish. They give you the most for your money in wear and comfort.

Rubber footwear for all the family

BOOTS, arctics, heavy and light rubbers, all styles and sizes for men, women and children. Made with unusual care to safeguard our 26 years' record for building durable, distinctive footwear. Ask for Top Notch Rubber Footwear by name and look for the Top Notch Cross. The best stores carry it or will get it at your request.

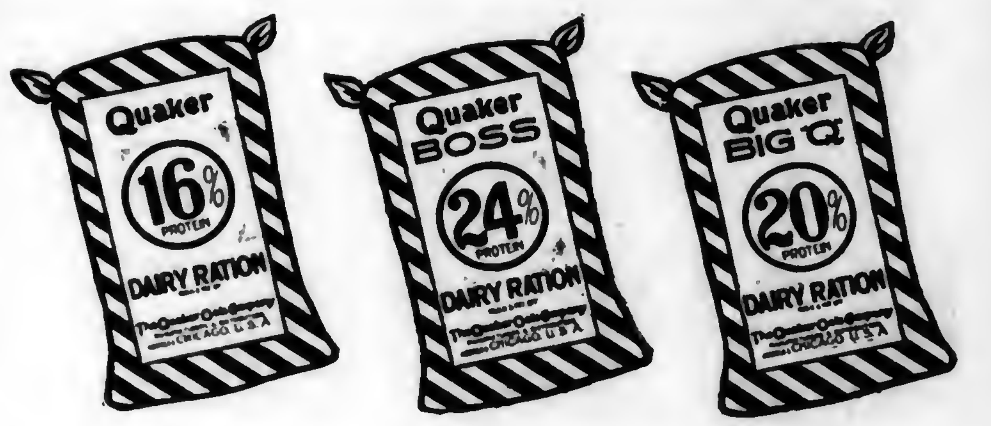
Select the feeds *that fit* YOUR farm YOUR herd

Dairy farms, and dairy herds, differ greatly. What's good for one herd may not be best for another. That's why Quaker offers a complete line of feeds, and helps you to determine exactly the combination that will give you best results.

Use prepared feeds. They save time and labor and insure a proper supply of minerals, vitamins and proteins. But use the feeds that meet your particular conditions.



Quaker 16% PROTEIN DAIRY RATION
Quaker BOSS 24% PROTEIN DAIRY RATION
Quaker BIG 'Q' 20% PROTEIN DAIRY RATION

One of these good rations, selected with consideration for the hay, and other roughage you have (or used with Quaker Sugared Schumacher) will give you a combination ideally suited to your conditions and herd.

Quaker Sugared Schumacher is the famous palatable and digestible carbohydrate feed. Our special process enables us to make this a dry, clean molasses feed that is easy to handle. Milch cows relish it. It may be used with one of the three Quaker high protein rations as the carbohydrate part of your feed. It is ideal for young stock, dry stock, horses, and swine, too.

Send for *free* book, *"The Dairy Herd."* It tells you just what you want to know about feeding and gives other valuable information on the management, breeding, and selection of dairy cows.

If your dealer does not handle Quaker Feeds write us direct for information on where you can obtain them.

What Prof. Mapes Did in 1847 The Good Farmer Does in 1927

"I'll go to the crop", said Prof. James J. Mapes, originator of Mapes Manures. "I'll ask the crop to tell me what fertilizer it needs". Although famous as an expert chemist, Prof. Mapes knew that he could not depend on chemical analysis alone. So, in 1847, he bought a farm to check up, in the field, what he had learned in the laboratory.

The good farmer of today knows, as Prof. Mapes did eighty years ago, that the crop is the best judge of fertilizer values. He knows that two fertilizers of the same analysis may give widely different results because of the different materials from which they are formulated. So he buys his fertilizer on the basis of crop results, not on analysis alone.

That is why Mapes users are so loyal to Mapes Manures. And that is why more good farmers every year are becoming Mapes users. We go to the crop; we ask it what materials it likes best; we put these materials into Mapes Manures. Mapes Manures are made to grow good crops—not to sell at a price. They are first made right, then priced as low as possible.

If you are not a Mapes user, try Mapes this year. Compare the crop yield; compare the crop quality; compare the crop profits with the result from any other fertilizer you can buy. Mapes "costs little more—worth much more".

Just Mail This Coupon Today

Write today for a list of the crop brands and prices of Mapes Manures. You'll be surprised at the little difference in cost between Mapes brands and other brands. Mapes "costs little more—worth much more". Please tell us what crops you plan to fertilize so that we can be of the greatest possible service to you in selecting the right brand to suit your special needs.

Staff Contributor and Adviser
Head of the Department of Horticulture
Pennsylvania State College

Lean Years Can't Depress Pennsylvan Fruit Growers for Very Long

THE seventy-eighth annual meeting of the State Horticultural Association of Pennsylvania was well attended, and the apple exhibit was pronounced by many the best ever held in the state, both as to quantity and quality. The Chester-Delaware Fruit Growers' Association was awarded the $100 premium for the best county exhibit. D. K. Sterrett, of Shippensburg, won the association cup, offered for the sweepstakes bushel, with an exceptionally well colored bushel of Stayman.

The nurserymen exhibitors at the Farm Products Show report about as many sales of nursery stock for spring planting as in former years, and the supply dealers seemed pretty cheerful. This is the way Pennsylvania fruit growers react to the depressing series of lean years shows that they have faith in future of their industry.

The program centered ar problems of marketing, rather of production. The outstanding ture of the meeting was the siastic endorsement given to the national organization for advert the apple—"Apples for Health."

The officers for 1927 are: Pr dent, Sheldon W. Funk, Boyer vice presidents, Dr. J. S. R house, Lorane; S. L. Smedley, Newtown Square; G. F. Mars, R. T. Crisswell, Cha burg; H. G. Lewis, Pittston; sec tary, R. E. Atkinson, Wright membership secretary, R. D. thony, State College; treasurer, W. Thomas, King of Prussia; bers of executive committee, Hershey, Hamburg; C. A. G Guernsey.

Yours for the Asking

IN SOME places from 75 to 100 per cent of late peaches and quinces were wormy last year due to bad infestations of Oriental peach moth. Many parasites attack the Oriental moth and entomologists are hopeful that these natural enemies will eventually control this Japanese invader. Department Circular 395-C, "The Oriental Peach Moth," containing a description of the insect, facts about its distribution, injury to trees, etc., may be obtained free, while the supply lasts, from the United States Department of Agriculture, Washington, D. C.

Reports Large Membership

The secretary reported a membership of 786 and the treas er's report showed a balance of $1000, of which $800 was deriv from life memberships; only the terest on this is used for current penses. Over one hundred grow attended the banquet on Wedn evening, which was featured by burlesque by W. R. Gordon, of College, in which "Apples Health" was advertised in a hu ous and very effective way.

The Wednesday morning was devoted to the national adv tising program of the apple The urgent need for such a progr is evidenced by the following

(Continued on next page)

The Fool and His Money

SOME Pennsylvania papers are carrying the advertisements of a pecan company, which offers to sell "units" of its extensive groves in Georgia. The company assures the prospective investor that it will "take care of the orchard free of charge thru the period of development." The "unit," consisting of a few acres, is turned over to the buyer when just beginning to bear; from then on it will support the man and his family in ease and comfort.

This, at least, is the impression left by a reading of the inspired prospectus. The big price that the buyer pays for the unit, on the instalment plan, is, of course, a detail that hardly needs to be mentioned, certainly not stressed.

Disappointment Awaits Investor

This is an old wolf in a new coat. "Unit" orchards have flourished at various times during the boom periods of apples, peaches, prunes, oranges and grapefruit. From 1906 to 1918, when the apple industry quaffed the heady wine of inflated prices, there were a number of these ubiquitous "come-on" enterprises in the Appalachian Region. Failure was predestined for every one of them.

Of the scores of unit or colony orchards that have been launched in various parts of the country, not one has been a success to anybody but promoters. One large apple e prise, in Maryland, yielded the moters several millions; at least, much money was shown at the up of its affairs to have mysteri disappeared. "The fool and his are soon parted."

Distant Units Endanger F

There is no reason to suppose a pecan "unit" is any more cable than an apple "unit." The son why these propositions fall is cause they are floated as a p scheme rather than as a managed and conservative ment. The price is too high, the too small, and the care by the pany is likely to be indifferent.

A pecan grove in Georgia tempting to a northern man; tance lends enchantment. If h bound to spend his dollars, he better put them in a Pennsy orchard. The pecan industry is idly approaching the point of tion that the apple industry reached—and now is passing.

A Pennsylvania orchard is a investment, not only because the a brighter outlook for the sale of product, but also because the ment can be watched. Long fruit growing, or nut growing, is to be disappointing.—S. W. F

ment prepared by Dr. G. F. Warren, of Cornell University.

—Net per capita supply of fruit—

	Apples, lbs.	Oranges & grape fruit, lbs.	Bananas, lbs.
1889-1897......	110	5	9
1898-1906......	105	8	10
1907-1915......	87	14	17
1916-1924......	74	19	14

The steady decline in the consumption of apples per capita, and the rapid increase in the consumption of citrous fruits and bananas per capita, especially since 1910, is due very largely to the well organized national publicity campaigns conducted by the growers and dealers of these fruits.

As evidence of the value of advertising in a sister industry, Mr. R. W. Balderston, of Philadelphia, secretary of the Inter-State Milk Producers' Association, reported what has been accomplished during the past six years in advertising milk and milk products by the Dairy Council of Philadelphia, which operates in New Jersey, Delaware and Maryland, and as far west in Pennsylvania as Johnstown. Over $150,000 a year is spent for this purpose, contributed by both producers and dealers.

A Long Way to Go

The results of this publicity campaign with milk are an index to what might be expected from a similar effort with apples. The per capita consumption of milk has been increased in the Philadelphia district from .54 to .69 pint per day. The doctors say that a quart of milk a day is none too much, so there is still a long way to go. The milk publicity program is not a temporary expedient; it is on a permanent assured basis, and will extend over a long series of years, so that the results will be cumulative.

Any publicity undertaken on behalf of the apple, in the judgment of Mr. Balderston, will be largely wasted unless it is on a long term basis. He stated that his organization is interested in and would be glad to cooperate with a substantial program for advertising a larger consumption of fruits and vegetables which should go hand in hand with milk.—S. W. Fletcher.

Personal Contact Desired

MEMBERS of the Fredon Fruit Growers' Association of Sussex County, N. J., meeting recently at on with the extension service of the County Board of Agriculture, developed a more aggressive for assistance from the county 's office. Discussion has been way for some time with refer to more profitable use of the ty agent's office by the member The plan developed at the ng limits orchard demonstra to one or two during the sea but encourages the building up personal contact thru supervision the orchard practices of individual .

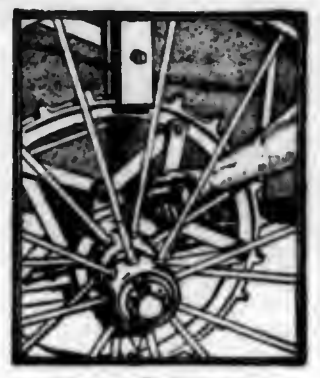
Consider Pooling Orders

The Fredon growers are consider the pooling of orders of nursery this season. A committee was ted which will assemble the of the membership on new tree stock, and make a survey the market to see where the order be placed cooperatively for best .

The question of keeping cost rec in orchard work was discussed some length, several of the grow indicating their intention of put in a full system of records dur the coming year. Spraying and ing topics were also discussed.

The annual election of officers re d in the following: President, e W. Van Horn; vice president, h E. Gruver; secretary-treasur Russell E. Snook; program com e, Charles M. Gruver, Harry L. s and W. Coursen R

No. 26 gives a Wide Spread with an Easy Pull!



Alemite Lubrication.

THE SUPERIOR BLACK HAWK No. 26 affords the farmer the very latest improvements and developments in manure spreaders. This big, light weight spreader does a perfect job of distribution. It completely pulverizes the manure, spreading it evenly over a wide surface with a spreading range of 4 to 28 loads per acre and operates as effectively on hillside as on level ground. Positively the lightest draft spreader on the market and although of large capacity is easily handled by a two-horse team.

A wide spread and an easy pull—combined with complete pulverization methods, wide quantity range, short turning radius, large capacity and durability make the *perfect manure spreader*—

SUPERIOR BLACK HAWK
-with Complete Alemite Lubrication

The Superior Black Hawk is equipped with a complete Alemite lubricating system as used on automobiles and other high grade machines. Each bearing is fitted with an Alemite cup and a 1,500 pound pressure gun is furnished. Heavy oil can easily be forced to every part of the bearing which insures a thorough job of lubrication, thereby reducing wear and lengthening the life of the spreader.

The complete SUPERIOR line of farm implements is designed and built to meet every requirement of fertilizing, planting and cultivating crops. It includes SUPERIOR Grain Drills, Corn and Cotton Drills and Corn Planters, Lime Sowers, Buckeye Cultivators and SUPERIOR Black Hawk Manure Spreaders.

See your dealer—or ask us for circular and full details covering these implements.

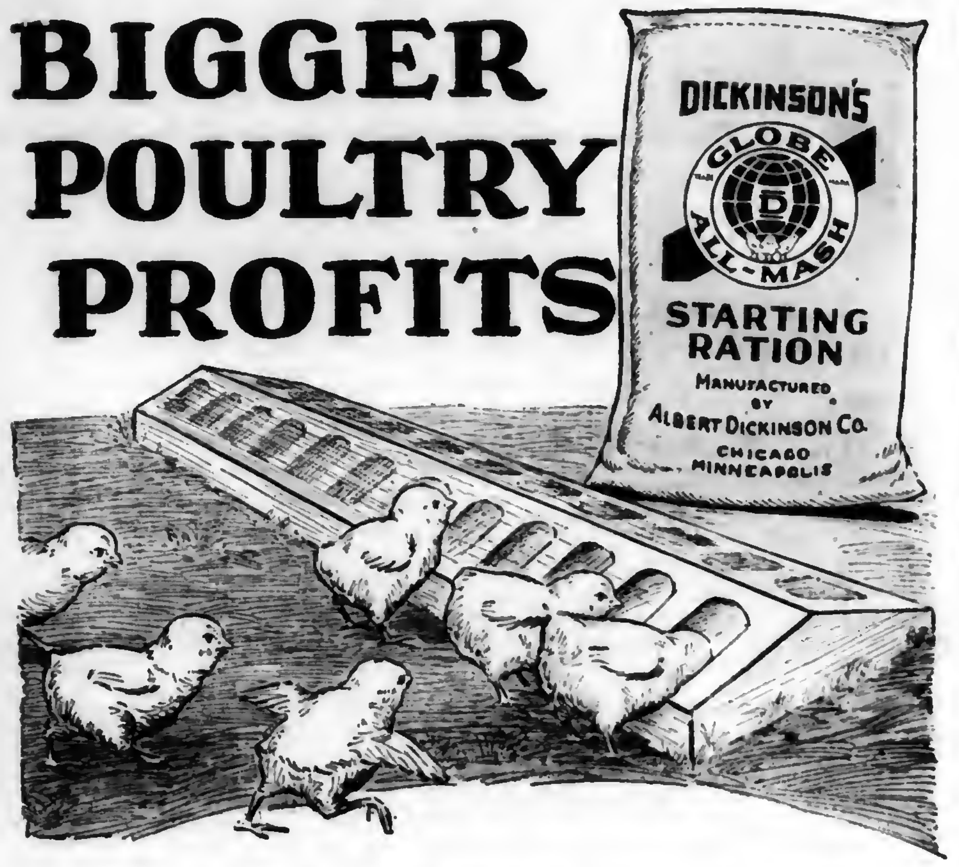
BIGGER POULTRY PROFITS



You will have better results than ever before with this new scientific

GLOBE "All-Mash" STARTING RATION

First on the market and first in proven results, the new Globe "All-Mash" Ration has been welcomed by leading poultrymen and feed experts as the greatest step forward in chick feeding in many years.

Perfected after long experimentation and careful tests, the new Globe "All-Mash" Starting Ration supplies, in one accurately balanced feed, every element required by growing chicks. No scratch grains or supplementary feeds of any sort are needed.

Saves Time—Labor—Disease—Waste

The entire ration is fed in clean, sanitary hoppers, which helps to prevent the spread of disease; chicks do not have to scratch in dirty litter for their feed. Much time and labor is saved by reducing the number of feedings. Less feed is wasted because none of it is fed on the floor. Simply fill hoppers with Globe "All-Mash" Starting Ration and allow chicks to eat all they want after they are 48 hours old. Be sure to provide plenty of hopper space.

GLOBE "All-Mash" STARTING RATION is the most sanitary, most efficient and easiest to digest chick feed yet developed. Try it and judge by results.

Breeding, Feeding, Medical Care

I have fifty two-year-old hens culled from 100. They molted in October and November but have not laid any this winter. Can a hen that would pass on white diarrhea to the baby chick be located in the pen?—Mrs. E. F. C., Susquehanna County, Pa.

The selected hens that you wish to use as breeders should be ideal for the purpose, and you are evidently handling them satisfactorily. If these hens are now feathered out they should lay soon. To induce them to eat more mash you might cut down and finally omit the noon grain ration and regulate the morning grain so that it is all scratched out of the litter by noon.

A full feed of grain should be given at night. This can contain quite a little whole corn, especially during cold weather, unless the hens show a tendency to put on surplus fat. It would probably be wise to limit the amount of cabbage fed to not over four pounds per day.

Two per cent of cod liver oil added to the mash would increase the fertility of the eggs, and for the same reason it would be advisable to get the flock out-doors as soon as the weather permits.

White diarrhea carriers can only be detected thru a blood test. If sufficiently interested you might write to the Pennsylvania Department of Agriculture. If this disease has not caused trouble in the past it is probably not necessary to consider it now.

Your pullets that are laying 70 per cent are doing remarkably well. Such a high production requires liberal quantities of grain in the ration to keep up the body weight; otherwise they may show a tendency to break down under the strain of continued heavy laying and develop prolapsis.

Reds are not so liable to do this as Leghorns, but if they should, a fattening mash of one pound each of condensed buttermilk, corn meal and rolled oats per hundred birds, fed at noon, will help hold them up to weight.—R. L. Scharring-Hausen.

The Proper Ratio

Will you please tell me how many duck hens can be successfully mated to one drake and how many geese hens to one gander?—R. S. L., Franklin County, Pa.

One drake and seven ducks is a common ratio on many commercial duck farms. Matings consisting one drake with five to eight usually produce good results. one to five mating is probably early in the season while the seven is all right later.

It is a common custom to heavy breeds of geese in trios. includes Toulouse, African and den geese. Matings of one with two to four geese may good results. White China geese to produce good goslings when ings are as large as one gander six geese.

There is no definite ratio can be given for all cases as breeding stock vary in vigor and dividuality. The figures given the proportions which seem to good results in the largest of cases.—R. G. Kirby.

Sweet Milk Good—Sour Milk Bett

Is sweet milk good for laying hens? I have about 80 Whi Leghorns. They are laying from 33 to 36 eggs a day. Have been feeding scratch twice a day and all the laying mash they want, also skimmilk in warm water.—Mrs. J. G., Mercer County, Pa.

Milk in any form is very good chickens of all ages. Sour milk buttermilk are especially so, as souring process produces a sub known as lactic acid which has very beneficial effect on the di system. I would advise you to the skimmilk sour, and feed it that form.

It is not safe to feed sour milk a galvanized vessel, because the of the milk forms a harmful pound with the metal. A stone or enamel pan would be safer. ing water should be provided in dition to the milk.

Perhaps you might care to give moist mash at noon, using the mash moistened with the milk mixing in any table scraps or en parings you might have. ens are very fond of such and they increase the egg Feed what they will eat in half hour.

Your method of feeding is right, because you are getting good egg yield. Be sure to provide oyster shell, and give your flock or three pounds of green feed day. Later in the season when the birds are laying more heavily, plenty of scratch feed at night order to keep them in good condition. —R. L. Scharring-Hausen.

Eastern Eggs Compete for Old Suprem

IN 1925 California and Washington furnished 12 per cent of all eggs received in New York City, T. B. Charles, poultry specialist of the Pennsylvania State College, told members of the Pennsylvania State Poultry Association at the State Farm Show. Fully 60 per cent of all egg receipts in the New York market for the four-year period 1922-25 originated in seven middle western states. Only 4 per cent of the New York receipts originated in Pennsylvania. During the same period 54 per cent of the egg receipts in the Philadelphia market originated in seven middle western states. This increased in 1926 to 61 per cent for seven states with the state of Pennsylvania furnishing only 10 per cent.

It becomes increasingly apparent that the poultrymen of the Keystone State are coming into competition in our large terminal markets with the egg producers of the Pacific Coast and of the Middle West. Thru force of circumstances, many of these states have been compelled to market their poultry products thru cooperative organizations. That means a standardized product and makes it more difficult for the nearby poultryman to compete sucessfully because he lacks volume of business with which to standardize.

ltra-Violet Rays Pass Thru

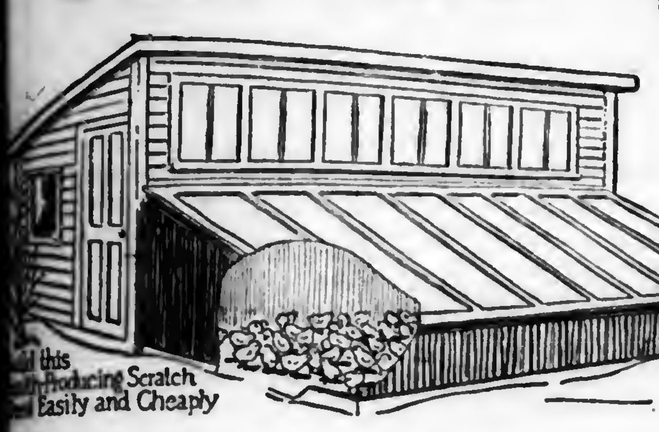
FLEX-O-GLASS Pat. Pend. T.M. Reg.

Weatherproof - Unbreakable - Transparent

1-8 Cost of Glass And Much BETTER

Keep Baby Chicks Healthy

Prevent Weak Legs, Diseases and Deaths



Give Baby Chicks Actual Sunshine doors. It's Nature's Only Health-Producer

't keep chicks behind . It shuts out the sun's -Violet rays, causing leg kness, rickets, and finally . Leading tate Experiment tations have this in many . But these scien- also found that cks kept under -O-GLASS were from rickets, weak legs, stayed , were full of pep and grew in this warm sunlit room— the chicks absorbed the ener Ultra-Violet rays that FLEX-O-GLASS admitted. See the in center column.

These tests were made for you. Put your chicks under health-producing FLEX-O-GLASS. Prevent weak chicks, diseases and deaths in this way. Every chick will mature or reach frying size sooner than ever before. Thousands of poultrymen replaced glass with FLEX-O-GLASS, which makes use of the —Nature's only health-producer—indoors too, where chicks out of slush, snow and rain. Fast, strong chick growth will you. Just build a FLEX-O-GLASS scratch shed easily and all poultry house windows with FLEX-O-GLASS. Use 15 for 300 chicks. This cozy sunlit brooderhouse will pay for many times the first season alone.

Gather Eggs All Winter

Experts and users have found that a FLEX-O-GLASS scratch shed concentrates the sun's Ultra-Violet rays on hens which keeps them active and healthy, stimulates the egg glands and makes them lay in coldest weather. Brings more fertile hatching eggs. Under glass hens quit laying and chicks die because it shuts out needed rays. Use 15 yards for 100 hens.

Only Genuine FLEX-O-GLASS

pigs and plants eventually die and hens quit laying if deprived -Violet rays. FLEX-O-GLASS admits these healthful rays. them. THOUSANDS of people have replaced plain windows with FLEX-O-GLASS, the Original Ultra-Violet ray advertised; discovered and perfected by Mr. Warp years ago careful research and experimenting, and recommended by best authorities and actual users everywhere. Millions of yards now . Why use a substitute when the genuine costs no more?

Enclose Porches and Stormdoors

nail FLEX-O-GLASS over screen and stormdoors. Changes snow into healthful sunroom or children's cheaply.

—and they both had the Same Start
10 Weeks Without Ultra Violet Rays Weight ¼ lb.
10 Weeks Under FLEX-O-GLASS Weight 2 lbs.

What Ultra-Violet Rays Will Do

See the two chicks above. They illustrate the difference in growth obtained by depriving chicks of Ultra-Violet Rays, and by keeping them under FLEX-O-GLASS. State Experiment Stations and thousands of poultrymen have proved this since Flex-O-Glass was originated. You can too. Take two chicks from the same batch. Feed them the same. Deprive one of Ultra-Violet Rays by keeping it under ordinary glass. Put the other under FLEX-O-GLASS. At 10 weeks, the latter will be two to three times the size of the former. Read what leading U. S. authorities say about Ultra-Violet Rays and FLEX-O-GLASS.

PROOF

IOWA STATE COLLEGE states: "Believe your product (FLEX-O-GLASS) far superior to common glass for enclosing chicken houses for winter and brooderhouses."

OHIO STATE EXPERIMENT STATION, upon completing a 10 weeks' ricket test reports: "Enough of the effective Ultra-Violet rays were transmitted to offer protection against leg weakness."

KANS. STATE EXP. STATION says: "Up until 2 years ago no one understood the value of Ultra-Violet Rays. Some excellent results have been reported by practical poultrymen who have used glass substitutes, which will allow the passage of the health-giving portion of sunshine to a considerable greater extent than glass."

DR. MORSE, for 45 years Consulting Chemist of Connecticut says: "Congratulations are due you. Your statements I heartily corroborate because the Ultra Violet rays which penetrate Flex-O-Glass make hens healthful, chemically active and increases oxygenating power of the blood."

Grow Plants Quicker and Stronger

Gardeners—get stronger, bigger plants that will grow when transplanted. Because FLEX-O-GLASS admits concentrated Ultra-Violet rays and Infra-Red (heat) rays, it makes plants grow much stronger and faster than when under plain glass, (Glass stops these rays). Have plants earlier. Get more money for them. FLEX-O-GLASS is installed much easier, holds heat better and costs far less than glass. Scatters light just as needed. Does not chill like glass. Frames are lighter and easier to handle. 15 yards of FLEX-O-GLASS covers a hot bed 135 sq. ft. Ideal for greenhouses.

Just Cut with Shears and Nail On

FLEX-O-GLASS is very easily installed. Comes in one piece 3 feet wide any length desired. Just cut to size with ordinary shears, nail on and the job in done. Absolutely weather-resisting. Looks neat and attractive. Lasts for years.

FLEX-O-GLASS is Guaranteed Most Durable

FLEX-O-GLASS, the Original product advertised for admitting Ultra-Violet rays is unequaled. Genuine FLEX-O-GLASS always has been and is today made on a stronger, better cloth base, specially processed to withstand all kinds of weather. That's why it lasts for years, always lies flat and stays bright. FLEX-O-GLASS even looks fresh and new after many seasons of exposure to wind, rain and snow. Don't confuse it with inferior materials. State Experiment Stations tested FLEX-O-GLASS thoroughly before recommending its use—Your Protection. Reg. in the U. S. Pat. office, and used with amazing results everywhere for replacing glass at only ⅙ the cost. Order Genuine FLEX-O-GLASS today at our risk—direct from the factory and save money.

Mrs. T. J. of Nebr. writes—"When FLEX-O-GLASS is installed beside another, it speaks for itself."

PRICES--All Postage Prepaid

Per yd. 36 inches wide: 1 yd. 50c; 5 yds. at 40c ($2.00); 10 yds. at 35c ($3.50);...........25 yds. at 32c ($8.00); 100 yds. or more at 30c per yard ($30.00).

SPECIAL TRIAL OFFER

15 Sq. Yards Postpaid for $5

The FLEX-O-GLASS MFG. CO. will send you 15 yards of FLEX-O-GLASS in a roll 3 feet wide and 45 feet long, postage prepaid, for $5.00. This big trial roll covers a scratch shed 9x15 ft. (size for 300 chicks) or use for brooderhouse fronts, hotbeds, poultry, barn or hoghouse windows, enclosing porches, storm doors, etc. If after 15 days not satisfied that FLEX-O-GLASS gives more warm healthful light than glass, or if it isn't stronger, better and more durable than other materials, just send it back and your money will be refunded by the FLEX-O-GLASS MFG. CO. without question. You take no risk.

You must be absolutely satisfied or your money back. Order direct from factory and save money. Mail check or money order today. Use Guarantee Coupon below which is backed by $1,000 deposited in the Pioneer Bank, Chicago. Send $9.50 for 30 yds. if you wish larger trial roll. Orders filled in 24 hours from Chicago, the railway center of the U. S. FREE catalog on request contains valuable poultry information.

OUR CLAIMS BACKED BY UNSOLICITED PROOF

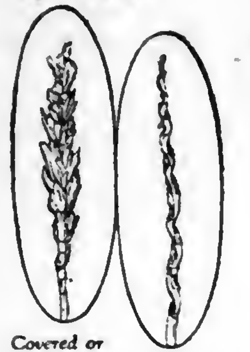
Smuts
of Wheat, Barley and other Cereal and Forage Crop Diseases
wiped out with

SEMESAN

The Organic Mercury Disinfectant for Dust or Liquid Application



Covered or stinking smut of wheat. *Loose smut of wheat.*

EXPERIMENT Stations, Agricultural Colleges and large-acre farmers have found Semesan the most effective, most economical disinfectant for the following diseases:

Smut Diseases—Bunt or stinking smut of wheat; covered smut of barley; stem smuts of rye; flag smut of wheat; loose and grain smut of sorghum; head smut of millet and smut of oheat.

Leaf Diseases—Stripe diseases of barley and glume spot of wheat can be effectively checked. The spot and net blotch of barley have also yielded to treatment with Semesan.

Stem and Root Diseases—Anthracnose of wheat, rye, oats, blue grass, orchard grass and timothy, "take-all" and seedling blight (Fusarium) of wheat; leaf spot of red clover; leaf and pod spot, and brown spot of soybeans; and numerous other diseases may be effectively checked by Semesan seed treatment.

AS long as there's a possibility of a better way of fighting disease there's always a possibility that you're not getting the most out of your acres and your effort. Read what Powell Fullerton of Idaho Falls, Idaho, says about Semesan:

"I found your Semesan treatment for wheat to increase germination and stand decided over formaldehyde treatment on the same ground and under the same conditions. While I did not harvest the two treatments separately, I noticed, when cutting, a much heavier stand on the Semesan side of the field. From this I judge I had an increased yield. I intend to again use Semesan on my wheat and Semesan Bel on my potatoes."

In Delaware, according to the Bureau of Plant Industry, "One grower disinfected his seed with Semesan and reduced covered smut from 22% to 0.5%. One field of spring barley where seed had been treated with Semesan showed only a trace of loose smut while untreated seed showed 1%. Spring barley treated with Semesan showed complete control of stripe while check contained 0.5%. In a field of winter barley treated with the same substance only 1% leaf blotch was found on the lower leaves while 20% was found on the check."

"Used Them For 10 Years, Best For Work and Wear" Says D. P. Roche

Mr. D. P. Roche, Empire, Mich., knows disk harrows. Read what he says:

"Your letter and catalog received. We already have two Double Disk Clark 'Cutaway' Harrows and one Single Clark 'Cutaway.' I want a disk to work with a light team on ground that is somewhat rolling and I think I will take the Single Action Harrow Extension. Ship us to Traverse City, Mich., one Disk Harrow as described on page 11. We are buying no experiment as we have used them for 10 years and can truthfully say they have anything beat we ever tried for wear and tillage. The draft is perfect."

Clark Single Action Harrow fitted with cutout or solid disks of cutlery steel heat treated and forged sharp for better work and longer wear. Reversible gangs. Light draft. Disks carry weight of machine. Made with extension heads for orchard work. Mail coupon for free catalog and book, "The Soil and Its Tillage."

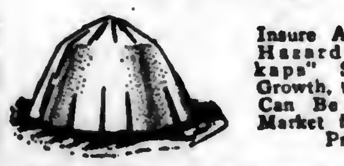
End Frost Damage



Insure Against this Hazard — "Hotkaps" Stimulate Growth, too, so You Can Be Earlier to Market for Better Prices.

USE "Hotkaps", individual hothouses that completely cover each plant, *protecting them from frost*, and stimulating a rapid, healthy growth. "Hotkaps" also shield plants from practically every danger, stimulating their growth to earlier maturity. Yet they get ample moisture and can be easily ventilated.

The most economical, and the most certain insurance for plants known against frost, rain, excessive heat, and wind. The cost is small—in quantities less than a penny each. Now widely in use in 38 of the states of the Union.

Your dealer probably has them in stock. Go see. If not, send the coupon now for additional information.

Nest Box Notes

DURING the winter months a great deal of trouble is caused by wet litter, due largely to the moisture-laden air breathed out by the birds. Warm air holds more moisture than cold air, so as soon as the exhaled breath cools part of the water it contains condenses and makes the litter damp.

• • •

The New Jersey State Experiment Station has done some work on henhouse ventilation, and Prof. E. L. Gross of the Rural Engineering Department, has devised a system to carry off this moisture-laden air. Poultrymen who have installed it say it works. I am putting these ventilators in one of my buildings. They are simple and cheap. The New Jersey Station at New Brunswick has put out a bulletin with plans which is available for free distribution.

• • •

Last fall I kept up production on the yearlings by the use of lights until November 1, when I took the lights off for two or three weeks and fed them on grain only. This shut off production and threw the hens into a molt. Then I put the lights on again and gave the birds a fattening mash containing a large proportion of yellow corn meal, continuing the heavy feeding of grain. These birds also got one per cent cod liver oil and one pound of condensed buttermilk per 100 birds per day. They came along nicely, and started to lay again in January, by which time I had them on laying mash again.

• • •

In selecting breeders out of this bunch I picked out a fine lot of large, deep-bodied birds in excellent condition. Practically all of them weighed five pounds, many of them six. I found three birds that weighed seven pounds, which is a surprising weight for American Leghorns. Larger birds stand the strain of laying better, lay larger eggs, and furnish a larger carcass when their life work is o'er.

• • •

Early hatched pullets always seem to grow better than pullets from late hatched chicks. They start to lay in the fall, and if properly managed go on right thru the winter. Often the late pullets do not lay at all until spring, as they do not develop properly during cold weather. Furthermore, not being vigorous, they molt early in the summer. Selected yearlings, while not doing much until after the first of the year, lay steadily during spring and summer.

• • •

We try to have the bulk of our Leghorns out the first two weeks in April; some of them earlier. By using lights and feeding heavily on grain after they are housed we generally avoid much fall molt. Heavier breeds should be hatched three or four weeks sooner than Leghorns.

• • •

A number of poultrymen have written in to ask what causes hens to bleed from the comb, sometimes to such an extent that the fowl dies. This is caused by an injury to the well developed combs of laying fowls. Especially during cold weather the wound may not stop bleeding, so that the bird dies from loss of blood. If discovered in time, the hemorrhage can be stopped by a styptic. I use a mixture of equal parts tannic acid and iodoform. Powdered alum will also do. The injured bird should be kept in a warm place by itself for a few days.

• • •

Mash-hoppers of the wall type may irritate the combs of birds feeding from them, and cause such bleeding. We are using hoppers of the trough type, and in tearing out one of the other kind this morning, I noticed that the bottom front board was red with blood where the hens' combs had rubbed against it.—R. L. Scharring-Hausen.

Friendly Talks

By EDGAR L. VINCENT

THE first seed catalog for the season came this morning. We have already looked it thru, marked some things we want and turned a leaf down so that we will not have to lose much time hunting it up when the time comes to plant.

It seems to me the seedsmen never sent out as attractive catalogs as they have lately. Better and better must be their motto, and they are living up to it well.

Do you remember the days when we boys used to try to jump farther than anybody else? Sometimes we would go back a rod or so and make a grand dash, setting our toe right on the line as we came to it and bounding away out into space, with everybody, maybe the girls, too, watching us. And sometimes we did not try the running jump, but just stood still with our toes to the mark and made a standing jump; and the fellow that jumped the farthest "set a pattern," and how we did try jump beyond that pattern! Half inch made us a victor, and for that last half-inch we strove with all our might.

Do We Set a Pattern For Others?

I wonder if we have been carrying on the jumping game ever since? And have we succeeded in setting a pattern for anybody? It is a good thing to do that. Not in any self-assertive, boastful way, but quietly, earnestly, honestly to strive for mastery in our business. That beats either the running jump or the standing jump of our boyhood days all hollow.

"I have been trying to do my best every year. I don't see how I could do any better." So we say, and so we honestly think; but is it possible that we may have been deceiving ourselves? If we put the best there is into it, may we not even now outdo ourselves and set a pattern for our neighbors who are watching us?

I do not think I ever had a man pay me a better compliment than one of our neighbors did. "I have always tried to follow you," he said, and my heart grew warm as I listened. I never had thought that I was doing anything more than I ought to do—just going on from day to day in a quiet sort of way; and here was a man who had been setting pattern after me! How many others may have been doing the same thing I do not know: but don't you think that was an inspiration to me to try to do a little better than I ever had before?

We Can Forge Ahead If We Will

And it is always possible to do that. The best cow never yet has been milked. We can plow a better furrow than we ever have. We can keep the old place looking a bit nicer. We can keep the fences up in better shape. We can get better seed. We can fit our land better. We can be more on time with our work, and we can with all smile a bit more and say, "How are you?" a little more cheerily.

I used to have spells when I was a boy thinking I would like to be a sailor. Then I wanted to be a railroad man, and after that a doctor and a preacher and a clerk in a drug store. But I long ago made up my mind that it is just as big a business and calls for just as much intelligence, pluck and determination to be a good farmer as it does to be the biggest man in the world in any other line; and the biggest thing of all is to beat one's own self. That is my pattern for this year, to beat myself!

Won't you "jine in"?

Nichols & Shepard Steam Engines

In 1925, Red River Special Threshers were built with roller bearings at every main bearing point.

In 1926, Alemite-Zerk Lubrication was added.

Now for 1927 comes another great improvement.

Nichols & Shepard Company is building all sheet metal parts in the Red River Special Line with Armco Ingot Iron — the great rust resisting metal.

The Hyatt Roller Bearings eliminate the expense and trouble of rebabbitting, give the machine an even steady motion, and cut the power required for threshing and the fuel cost to the bone.

Alemite-Zerk Lubrication saves many minutes of the bright threshing days that other machines throw away on "Oiling up."

Armco Ingot Iron will save dollars in the longer life of the machine and in freedom from troublesome rust. Armco Ingot Iron makes the long lasting Red River Special Line still more long lasting.

This 3rd great improvement makes the sides, deck and all other sheet metal parts—as safe from rust as all steel construction made the machines safe from fire and rot.

With these three great improvements are the famous 4 Threshermen, the greatest combination of machinery ever devised for getting the grain from the straw. They save dollars for the farmer in clean, merchantable grain, sent to the wagon box, not to the straw pile.

The Speed and Straw Governors control the N & S Hart Special Feeder, so that it feeds the Big Cylinder steadily, evenly, under all conditions of the straw. It is also a tilting feeder, making the cylinder quickly get-at-able.

Get the Facts!

However you thresh, we have two new books that will interest every farmer. "The Book of Successful Threshing," deals with the methods of threshing, the farm owned machine, the farmer company, the co-operative ring, custom threshing, etc. The other book—"Another Great Advance in Threshing Machines," will give you the complete details you need in selecting the machinery to use. Both are free to farmers. Just send in the coupon.

Findings and Facts—There's Always Something New for Dairymen to Learn

ECONOMIC facts for dairymen was the subject of an interesting address by E. M. Harmon, Associate Editor of the Dairy Farmer, Des Moines, Iowa, at the annual meeting of the Pennsylvania Dairymen's Association held during Farm Products Show Week.

Mr. Harmon emphasized the importance of having large enough acreage in the dairy farm to maintain a good sized business as such farms according to farm surveys make a much larger net income than small farms. Contrary to popular opinion it has been found that large farms average just as high yields of farm crops as small farms. Surveys in New York showed that the larger the farm the better, up to 200 acres of land.

> SOME highlights from the article on this page:
>
> "If a man has only a small acreage it will pay him to rent additional land in order that he may have large enough acreage to warrant the keeping of proper equipment for farming."
>
> "An 18 per cent increase in production could ordinarily be expected from milking three times daily instead of twice. . . . In some dairies that are getting a high price for milk and drawing the milk with milking machines it may be profitable to milk three times daily."
>
> "Cows having free access to water gave about 4 per cent more milk than those watered once daily."

Discussion brought out the fact that one cow for every four to five acres of tillable land appears to give a good balance between land and livestock. If a man has only a small acreage it will pay him to rent additional land, if he is not in position to buy, in order that he may have large enough acreage to warrant the keeping of proper equipment for farming.

Good cows are essential, cows that will average at least 300 pounds of butterfat per year at five years of age.

Good crops are a third important factor. A farmer can profitably apply sufficient fertilizer and labor to aim for crops that are one-fourth to one-third higher in yield than the average for the neighborhood.

Stable manure, reinforced with acid phosphate, makes an excellent fertilizing combination. An application of lime once every crop rotation will keep the soil sweet. general system of fertilization insure good crops, if the soil is ly fertile and well drained.

The fourth and last essential profitable dairying is diversity. will pay to raise a cash crop such potatoes, cabbage, beans, etc., keep a substantial poultry flock, swine so as to have four or five sources of income rather than

Mr. T. E. Woodward, superin dent of the U. S. Dairy Bureau at Beltsville, Maryland, told some of the dairy farm and herd vestigations conducted by the He stated that under ordinary ditions in the vicinity of Wa ton a person who undertook to a dairy herd, buying all the hiring labor and selling the at the current wholesale price make little if any profit.

The net cost of keeping a yielding 7500 pounds of milk proximately $205, and this does include the cost of incidental ning expenses, taxes, depreciation interest on investment. This an average cost of 24c per gallon milk. The average price of milk the Washington market is gallon.

Beltsville Reaches Conclusion

Therefore, it is evident that average good cows one cannot much profit after paying all if he disposes of his milk at wholesale prices. He must raise least some of his own dairy feed order to make a fair profit and more feed he raises the better feed can be raised more cheaply it can be bought. Hay at costs $30 to $40 per ton but the of growing it is but $15 per ton.

Crop rotation is worthy of eration, so that the proper kind amount of feed may be produced after year. The Beltsville rotation corn three years and alfalfa years, with pasture more or less manent. This rotation might all conditions but each farmer determine the number of livestock be kept and plan his rotation to ply the livestock with the food without a great surplus or cit.

At the Beltsville Farm a son of sweet clover vs. a mixture pasture grasses, including grass, timothy, red top, red and alsike clover, has been The sweet clover yields a little pasturage but it costs more has to be reseeded every two hence the cost of pasturage is the same in each case. The cows the mixed grass pasture yield a

(Continued on next page)

more milk than on the sweet clover pasture.

In selecting a bull, a proved sire is desirable but cannot always be secured. The next sire to choose is one whose dams and grand dams have high records of production. Consideration should be given to the conditions under which the records were made.

Work at Beltsville showed that a cow which will produce 400 pounds of butterfat under ordinary conditions will produce 600 pounds under test conditions in which the cows are milked three times daily. Four milkings daily would have increased the difference still more. In other words, the average increase in production with cows under test conditions as compared with ordinary farm conditions is approximately 50 per cent.

Test Milking Stimulates Flow

Whether it would pay to handle the whole herd under test conditions will depend on the market price of milk. With milk at 40 cents per gallon the two methods of keeping the cows resulted in equal returns. If milk were higher in price than 40 cents per gallon then the extra feed and labor would be worth while.

Some of the factors entering into the increased production under test conditions will be of interest:

Keeping the cows in box stalls resulted in an increase of 5 per cent in milk flow. However, the box stalls required 14 pounds of straw per day for bedding while stanchions took but 4 pounds. Straw costs $12 to $16 per ton. More labor was also required with the box stalls. Therefore, box stalls are not advisable except for cows which may be sick or ready to calve or where maximum production is desired regardless of cost.

Milking three times daily instead of two times resulted in an actual increase of 12½ per cent of milk. However, the change from one system to other was somewhat detrimental the three-time system and as nearly as could be estimated an 18 per increase could ordinarily be expected from milking three times instead of twice. The question comes up whether the increased milk will pay for the increased labor feed.

Under most conditions it is doubtful whether three milkings daily will pay. In some dairies that are getting a high price for milk and drawing the milk with milking machines may be profitable to milk three times daily.

The increase due to regular instead changed milkers amounted to less than 1 per cent, so it appears that may be milked by whatever method seems most convenient under circumstances.

Open Shed vs. Closed Barn Discussed

Cows housed in an open shed produced slightly more milk than those a closed barn. Contrary to expectations the open shed did not save labor if the cows were taken to separate room or stable to be milked. However, the manure was handled more economically in the open and it afforded the best known method of collecting and preserving the valuable constituents of the manure.

The open shed method required more bedding but coarse materials such as corn stalks could be used successfully for bedding in the open while they could not be so used the closed barn. Cows in the open should be confined at feeding so that each will have opportunity to get its proper share of feed. They should also be dehorned so as to prevent serious injury.

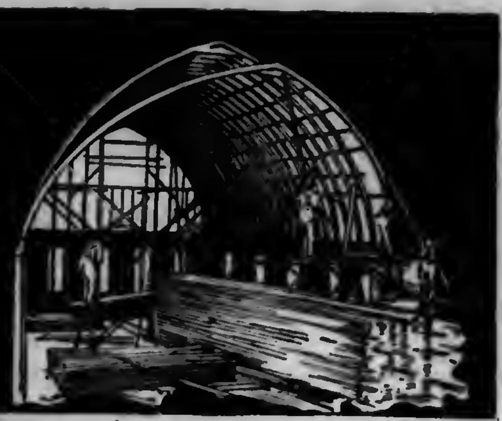
Exercise to the extent of three daily was found to increase the amount of milk a little over 1 per and it made the milk slightly

(Continued on page 29)

Diana Beat Jean by Six Pounds

A TON of milk a month for the first half of the year was the production average of Silverwood Diana, new world's champion Guernsey cow in class AA. She recently completed a record of 20,006.1 pounds of milk and 974.8 pounds of butterfat. The new champion began her test at the age of eight and one-half years and carried a calf for 281 days of the testing year. She is the fifth cow of the breed to produce over ten tons of milk in a year. Her highest day's milking was 76.5 pounds.

In making this record Diana took the world championship honors away from her stablemate, Golden Coronet of Jean Du Luth, beating the latter's record by six pounds of butterfat. Both animals are owned by William H. Williams, of Clinton County, New York.



DON'T Build—Remodel Ventilate or Equip A Hog House, Dairy Barn Horse Barn or Poultry House Until You Get Our Free Book

TELLS WHY Jamesway COSTS LESS and Saves Costly Mistakes

If you are thinking of building, remodeling or ventilating a cow or horse barn, hog or poultry house, or if you are considering the purchase of labor and time-saving equipment for such buildings, by all means, fill out coupon in this advertisement and let us send you free our valuable Jamesway book.

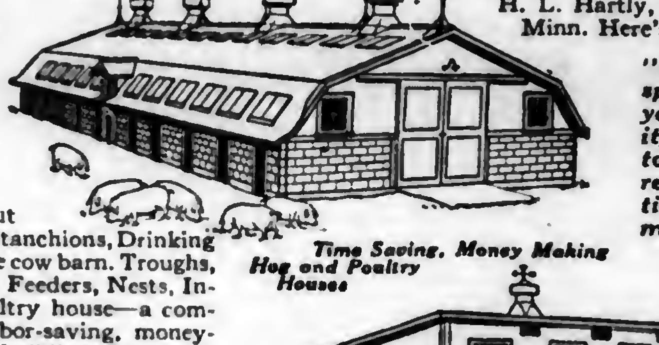
This book will show you how you can save money and have your buildings planned and equipped so that they are most convenient and practical. If you will avail yourself of Jamesway service, you'll have the same gratifying experience as H. L. Hartly, Manager of Island Farms, Duluth, Minn. Here's what he writes:

"We very much appreciate the splendid architectural service you have rendered us. The ability you showed to adapt plans to meet results desired were a revelation to me. Your suggestions saved me considerable in material and time."

Our many years' experience in planning and designing farm buildings enables us to save you money on materials and construction—show you how every door, window and general arrangement should be to make buildings convenient.

This book also tells you all about Jamesway Equipment—Stalls, Stanchions, Drinking Cups, Litter Carriers, etc., for the cow barn. Troughs, Waterers, etc., for hog houses. Feeders, Nests, Incubators, Brooders for the poultry house—a complete line of every kind of labor-saving, money-making equipment for any farm building. Jamesway Equipment is better and costs less in the long run.

Mail coupon today. Tell us just what you are interested in—whether building, remodeling, ventilating or equipping cow barn, horse barn, hog or poultry house, and we will send you the book that tells you just what you want to know.



Time Saving, Money Making Hog and Poultry Houses

Strains 100% Clean or your Money Back

Dr. Clark's Purity Milk Strainer is the only strainer on the market *guaranteed to get all the dirt, dust and sediment or your money back.*

Because it is the ONE strainer that strains absolutely clean is the reason why it is used and recommended by practically all the large dairies, creameries, condensaries, thousands of farmers.

WHY TAKE CHANCES
when you can use Dr. Clark's Purity Strainer with its sterilized cotton disc and KNOW that your milk will grade *100% clean?*

Dr. Clark's Purity Strainers are simple to use and easy to clean—save time—bring you higher prices for your milk. Also best for straining maple syrup, vinegar, cider and home beverages.

Sold by good dealers everywhere. Two sizes, 10 quart and 18 quart. Write for descriptive folder and our 10 Day Trial Test Offer. If your dealer can't supply you, we will. (2)

10 Day Trial Test
Write at once for our 10 Day Trial Test Offer. Find out how you can test the PURITY Strainer and get your money back if it doesn't remove every particle of dirt from your milk. Get all the facts. A postal or letter brings you complete information "10 Day Trial Test Offer" by return mail.

PAPEC
Throws And Blows Saves One Man

PAPEC
"The Cutter That Does Not Clog"
Good Silage Saves Grain

Good silage cuts your feed bills and increases the milk flow. It's easy to fill your own silo when the corn is at its best. Just put a Papec on the job. You can operate it with less help because no man is needed at the feed table. Light draft and low speed fit it for use with any light tractor—Fordson, McCormick-Deering, John Deere, Cletrac, etc.

A Papec runs year after year without breakdowns and practically without repairs. It fills the highest silo without clogging.

Our FREE 1927 Catalog tells how to make a Papec pay for itself in two seasons. Explains how the wonderful Third Roll saves a man and gives the unusual Papec Guarantee. Write for your copy today.

Papec Machine Company
178 Main Street · Shortsville, N. Y.
Over 50 Distributing Centers

The Papec is made in four models: Size "R", No. 81, 127 and 158.

RADIO DEPARTMENT

The Man Behind the Voice

KOLIN HAGER, chief announcer and studio manager of WGY, Schenectady, N. Y., didn't know fifteen years ago that popular radio broadcasting was coming. But even if he had known he could not have prepared himself better for the job of announcing and studio management.

Before he was ten he was a member of the boy choir at the Cathedral of All Saints at Albany and soon became boy soprano soloist. Then his voice changed, as the voices of healthy boys will, and he became a baritone and continued an intensive musical training with the hope that one day he would face the applauding, jeweled audience of the Metropolitan Opera House. This ambition was frustrated, however, and he became an actor in the great drama of the World War.

Kolin Hager, Chief Annonncer and Studio Manager of WGY.

In addition to studying music in its every phase, he attended New York State College of Teachers and taught English for a time on the completion of his course. From high school on thru college he devoted considerable time to oratory, and public speaking. In con with his music he studied F Italian and German.

With this background Mr. was abundantly equipped whe 1922 the General Electric Co opened WGY, at Schenectady, first of three stations now op by that company for popular b casting.

Mr. Hager has grown up with infant art and his administratio studio affairs at WGY has help make it one of the leading of the air. He organized the Players and under his guidan group of musicians and produce popular minstrel travesties and burlesques of events.

Cost and Extra T Are Prohibitive

Is there any practicable w of connecting an automo generator to a windmill charging a radio storage b tery?—A. S.

No, not at the present time cost of the special generator, the cial driving mechanism, the and voltage control, and the and work of looking after su arrangement would put it out of practical possibilities for small work. It would be far to have two batteries and hav charged alternately at a station.

It is entirely practicable, to use an auto generator in thi for charging a storage battery, ing the generator from the of the gasoline engine which for operating the washing the cream separator, the pump Any battery station man can you how to connect up the and how to get the proper speed, if the charging work is done the other work is being done the and time required will not b ticed.—D.

Bond Issue Arouses Lively Inter

THE present New Jersey bond issue for carrying out New Jersey's good roads policy runs out this year and interest is keen thruout the state, and particularly in the present Legislature, on ways and means of re-financing to begin this coming season.

The report of the State Highway Commission as given to the new Legislature calls for 1915 miles of roads at an aggregate cost of slightly over $190,000,000 and covering a period of 12 years. The proposal is to finance this cost by a bond issue of $80,000,000 to run for five years beginning this coming season.

The cost to the state for the proposed system is placed by the commission at close to $175,000,000. Federal aid would give an amount of $11,000,000 and some $5,000,000 would be contributed by the railroads in connection with the elimination of grade crossings. The remaining amount would be met by receipts of the motor vehicle department.

Nearly half of the recommended expenditure would be for 159 miles of terminal routes in the metropolitan area. It is figured that this cost would be slightly over $82,000,000. A system of terminal routes embracing 27 miles and forming a loop around Trenton would cost something less than $2,000,000 while an expenditure of roughly $3,7 would be required for the ment of 13 miles of terminal centering on Camden. This 1716 miles of road to be d in other parts of the state and tails the spending of something $98,000,000.

To take care of this aside from the $80,000,000 bond sue, the suggested plan is to h tax of two cents per gallon on line. Some exponents of the urge this as a super tax, while plan advocated by the farmers the gasoline tax if levied should ry with it a decrease in present mobile license fees.

The farmers believe that it proper policy to place the burd road development and maint upon those who use the roads The $80,000,000 bond issue ently would not affect the mill tax rate for good roads, and proval of such bond issue is in many sections. The gasoline however, is a warm and much ed issue.

It appears that two-thirds of cost of the bond issue would borne by the North Jersey or politan counties, so that the districts would profit by the plan.—H.

Here's to Your Health

By Dr. FRANK McCOY

Copyright, 1926, McCoy Health Service

THE other day I lectured before a large audience of retail meat dealers. At this meeting there was auctioned off an eighteen-month-old steer. It was hard to believe that this large, powerful animal had only lived a year and a half. It seemed almost impossible that so large a body and so much fine muscular tissue could be developed in such a short time, but this was an evidence of what scientific feeding is doing.

How wonderful it would be if the farmer would only start using such scientific information, added to his own personal experience, in regulating the diet of himself and family.

When we study the different types of men living today, from the primitive types found in the South Sea Islands to the more highly civilized types of our own race, it seems impossible to decide that any one kind of food was ever the original perfect food for man.

Handicapped by Variety

Millions of years have been needed to bring man to his present state of development, and while at one time food was not plentiful, I believe our greater handicap today is because we are over-burdened by so much nourishing food that we have steadily become gluttonous.

In this scientific age of the airplane, radio and electrical inventions, it is appalling how many fine thinkers are neglecting the simple rules of hygiene so necessary to observe, in order to keep their bodies fitting temples for their souls. There have been other glorious pages in man's history, when art and science have progressed to a superior plane, only to suffer a sudden decline. This deterioration has invariably been because of wanton intemperance.

As the builder chooses materials out of which to construct a building, so you should study with the utmost care the materials out of which you are to build your body, not alone for strength and endurance, but for beauty of form and symmetry.

Altho your system has the important power of choosing the elements needed from the mass of conglomerate substance you burden your digestive organs with, it is not wise to overwork your assimilative functions with needless material.

Food Needed for Repairs

We need food solely to supply the essential elements for building and repairing cell structure. The only foods necessary for the body are those containing these vital elements. Probably the most needed substance is that supplied by the protein foods, such as meats, eggs, cheese, nuts, fish, fowl, etc. Our muscular systems require those important protein foods and the body cannot long exist if deprived of them. Next in importance are the foods which embrace the vitamins and organic salts, such as those found in the non-starchy vegetables.

You all realize that a horse can use an almost unlimited amount of hay, but must be fed very carefully on grain. We have learned to feed our horses to secure the most efficiency, as we feed our cattle and hogs to produce the best stock for the market. Care should be exercised in selecting only foods which have not been devitalized by too much refinement. For instance, "pure white" flour has practically no vital material left after the roller mill process has removed the dark, coarser portions. The white part of the flour is mostly starch and water and of very little use to the system. The most nourishing part of the wheat was discarded, to be fed to cattle, until in recent years.

ATWATER KENT
RADIO

The receiver illustrated is the extra-powerful Model 32, with ONE Dial; price, less tubes and batteries, but with battery cable attached, $140. Other ONE Dial Models, $70 and $85. Radio Speakers, priced from $16 to $23.

It couldn't be better—*if built to your order*

WE KNOW exactly what you wanted because so many of you have told us.

You wanted *ease of operation*. You find it in the receiver which gets everything within range with the mere touch of the fingers of one hand on ONE Dial—the *true* ONE Dial with no secondary adjustments to confuse and delay.

You wanted *extra power* in order to get daytime market and weather news as well as evening programs. You find that no receiver reaches farther than the Atwater Kent ONE Dial Model 32.

You wanted *clear tone*. You find Atwater Kent tone as clear as a church bell on a frosty morning.

You wanted *reliability*. You find Atwater Kent Radio, factory-tested 159 times, famous everywhere as the Radio that works and keeps on working.

You wanted *neat appearance*. You find Atwater Kent Radio blending with the appointments of any home—a joy to the eye as well as the ear.

You wanted a *sensible price*. You find that quantity production in the largest Radio factory results for you in many dollars saved.

In short, you wanted all-round Radio which you could buy with absolute certainty you were getting your money's worth. You find it in Atwater Kent Radio.

It's the all-round Radio.

The nearest Atwater Kent dealer is an experienced and friendly adviser. His interest in you does not stop when he makes a sale. Let him help you select the Atwater Kent Receiver and Radio Speaker that meets your demand.

Judith of Blue Lake Ranch

By JACKSON GREGORY

Copyright Charles Scribner's Sons

The Story Thus Far

JUDITH SANFORD, part owner in Blue Lake Ranch since the death of her father, Luke Sanford, fired Bayne Trevors, general manager, because he wasn't square. The men grumbled. Trevors made trouble in every way possible. Bud Lee, horse foreman, and old Carson promised to stay. Judith could depend on them and on "Doc" Tripp, veterinarian and a friend of her father.

Busy days followed. Mrs. Simpson took up her duties caring for the ranch house and Pollock Hampton, part owner of the ranch, arrived with his guests—Major and Mrs. Langworthy and Marcia, their daughter; Marshal Rogers, lawyer, and Frank Farris, artist.

On May 30 Charlie Miller, returning from Rocky Bend with the pay roll, was robbed. To avert a walkout, Bud Lee covered 80 miles in six hours and put the money into Judith's hands in time in spite of smokeless powder and a silencer that put his horse out of business.

Next day, while searching for clews of the holdup, Bud Lee and Judith came upon three of the troublemakers. In the fight that followed Bill Crowdy was injured and Chris Quinnion, the man Judith believed responsible for the death of her father, and Shorty besieged the cabin in which Lee and Judith barricaded themselves.

When dinner was over at the ranch house and Judith hadn't appeared, Pollock Hampton began to think something wrong. By nine o'clock he was worried and with Tommy Burkitt, Bud Lee's helper, set off to find out what the matter was. As they neared the cabin Hampton started firing and Quinnion and Shorty ran, Hampton after them. He didn't stop until he had captured Shorty. Lee and Burkitt stayed at the cabin to guard Crowdy while the others took Shorty home and locked him in the grain house. Hampton's bravery that night touched Marcia more than anything he'd ever done and she played nurse that night to her heart's delight.

Continued from last week

BEFORE daylight Carson, with a few men, had breakfasted, saddled and was ready to ride to the Upper End to begin the search for Quinnion. But before he rode, Carson made the discovery that during the night the staple and hasp on the grain-house door had been wrenched away and that Shorty was gone, leaving behind him no sign of the way of his going. Carson's face was a dull, brick red. Not yet had he brought himself to accept the full significance of events. A hold-up, such as Charlie Miller had experienced, is one thing; a continued series of incidents like these happening upon the confines of the Blue Lake Ranch, was quite another. Hampton, knowing nothing of conditions in the mountains, had been quick to imagine the predicament in which he had found Judith and Bud Lee. To Carson that had been a thing not to be thought of. Now, only too plainly he realized that Shorty had had an accomplice at the ranch headquarters who had come to his assistance.

Carson blamed himself for the escape. And yet, he growled to himself, in a mingling of shame and anger, it would have looked like plumb foolishness to sit out in front of that heavy door all night, when he himself had tied Shorty's hands.

"Quinnion might have let him loose," he mused as he went slowly to the house to tell Judith what had happened. "An' then he mightn't. If he didn't, then who the devil did?"

Judith received the news sleepily and much more quietly than Carson had expected.

"We'll have to keep our eyes open after this, Carson," was her criticism. Remembering the night when she had been so certain that there had been some one listening to her talk with Tripp she added thoughtfully: "We've got to keep an eye on our own men, Carson. Some one of our crowd, taking my pay, is double-crossing us. Now, get your men on the jump and we won't bother about the milk-spilling. If we are in luck we'll get Shorty yet. And Quinnion, Carson! Don't forget Quinnion. And we've still got Bill Crowdy; we'll get everything out of him that he knows."

THE cattleman rode away in silence, headed toward the cabin at the Upper End, his men riding with him, an eager, watchful crowd. But Carson had his doubts about getting Quinnion, his fears that it would be a long time before he ever put a rope again to Shorty's thick wrists.

During the day Emmet Sawyer, the Rocky Bend sheriff, came, and with him Doctor Brannan. Sawyer assured Judith that he would be followed shortly by a posse led by a deputy and that they would hunt thru the mountains until they got the outlaws. He listened to all that she had to tell him and then looked up Bud Lee.

"You didn't see Quinnion?" he asked. "Could you swear to him if we ever bring him in? Just by his voice?"

"Yes," answered Lee. "I can. But see if you can't get Crowdy to squeal. We're shy Shorty's real name, too, you know."

To all questions put him, Bill Crowdy answered with stubborn denial of knowledge or not at all. He had been alone; he didn't know any man named Quinnion; he didn't know anything about Shorty. And he hadn't robbed Miller. That canvas bag, then, with the thousand dollars in it? He had found it; picked it up in a gully.

"I won't do any talking," he grunted in final word, "until I get a lawyer to talk to. I know that much, Sawyer, if I don't know a hell of a lot. An' you can get it out'n your head that I'm the kind to snitch on a pal—even if I had one, which I didn't."

Crowdy, at Doctor Brannan's orders, was taken to Rocky Bend where Sawyer promised him a speedy trial, conviction and heavy sentence unless he changed his mind and turned state's evidence. And—to be done with Bill Crowdy for good and all—he never came to stand trial. A mad attempt to escape a week later, another bullet-hole given him in his struggle with his jailer, and with lips still stubbornly locked, he died without "snitching on a pal."

Under fire in the dark cabin with life grown suddenly tense for them, Bud Lee and Judith Sanford had touched hands lingeringly. No one who knew them guessed it; certainly one of them, perhaps both, sought to forget it. There had been that strange thrill which comes sometimes when a man's hand and a woman's meet. Bud Lee grunted at the memory of it; Judith, remembering, blushed scarlet. For, at that moment of deep, sympathetic understanding touched with the romance which young life will draw even from a dark night fraught with danger, there had been in Bud Lee's heart but an acceptance, eager as it was, of a "pardner." For the time being he thought of her—or, rather, he thought that he thought of her, as a man would think of a companion of his own sex. He approved of her. But he did not approve of her as a girl, as a woman.

He had said: "There are two kinds of women." And Judith, knowing that his ideal was an impossible but poetic She rich in subtle feminine graces, steeped in that vague charm of her sex like a rose in its own perfume, had accepted his friendship during a dark hour, allowing herself to forget that upon the morrow, if morrow came to them at all, he would hold her in that gentle scorn of his.

"A narrow-minded, bigoted fool!" she cried in the seclusion of her bedroom. "I'll show you where you get off, Mr. Bud Lee! Just you wait."

When she and Lee met, she looked him straight in the eye with marked coolness, oddly aloof, and Lee, lifting his hat, was stiff and short-worded.

In the long quiet hours which came during the few days following the end of a fruitless search for Quinnion and Shorty, he had ample time to analyze his own emotion. He liked her; from the bottom of his heart he liked her. But she was not the lady of his dreams. She rode like a man, she shot like a man, she gave her orders like a man. She was efficient. She was as square as a die; under fire she was a pardner for any man. But she was not a little lady to be thought of sentimentally. He wondered what she would look like if she shed boots and broad hat and riding-habit and appeared before a man in an evening gown—"all lacy and ribbony, you know." He couldn't picture her that way; he couldn't imagine her dallying, as the lady of his dreams dallied, in an atmosphere of rose-leaves, perhaps a volume of Tennyson on her knee.

"Shucks!" he grinned to himself, a trifle shamefacedly. "It's just the springtime in the air."

IN SUCH a mood there appeared to Bud Lee a vision. Nothing less. He was in the meadow hidden from the ranch-house by gentle hills still green with young June. He had been working Lovelady, a newly broken saddle-mare. Standing with his back to a tree, a cigarette in the making in his hands, his black hat far back upon his head, he smilingly watched Lovelady as with regained freedom she galloped back across the meadow to her herd. Then a shadow on the grass drew Lee's eyes swiftly away from the mare and to the vision.

Over the verdant flooring of the meadow, stepping daintily in and out among the big golden buttercups, came one who might well have been that lady of his dreams. A milk-white hand held up a pale-pink skirt, disclosing the lacy flounce of a fine underskirt, pale-pink stockings and mincing little slippers; a pink parasol cast the most delicate of tints upon a pretty face from which big blue eyes looked out a little timorously upon the tall horse foreman.

He knew that this was Marcia Langworthy. He had never known until now just how pretty she was, how like a flower.

Marcia paused, seemed to hesitate, dodged suddenly as a noisy bumble-bee sailed down the air. Then the bee buzzed on and Marcia smiled. Still stepping daintily she came on until, with her parasol twirling over her shoulder she stood in the shade with Lee.

"You're Mr. Lee, aren't you?" asked Marcia. She was still smiling and looked cool and fresh and very alluring.

Lee dropped the makings of his cigarette, ground the paper into the sod with his heel and removed his hat with a gallantry little short of reverence.

"Yes," he answered, his gravity touched with the hint of a responsive smile. "Is there something I can do for you, Miss Langworthy?"

"Oh!" cried Marcia. "So you know who I am? Yet I have never seen you I think."

"The star doesn't always see the moth, you know," offered Lee, a little intoxicated by the first "vision" of this kind he had seen in many years.

"Oh!" cried Marcia again, and then stopped, looking at him, frankly puzzled. She knew little first-hand of horse foremen. But she had seen Carson, even talked with him. And she had seen other workmen. She would, until now, have summed them all up as illiterate, awkward, and impossibly backward and shy. A second long, curious glance at Lee failed to show that he was embarrassed, tho in truth he had had time to be a bit ashamed of that moth-and-star observation of his. Instead, he appeared quite self-possessed. And he was good-looking, remarkably good-looking. And he didn't seem illiterate; quite the contrary, Marcia thought. In an instant she cataloged this tall, dark, calm-eyed man as interesting.

SHE swirled her parasol at him and laughed softly. A strand of blond hair that was very becoming where it was, against her delicate cheek, she tucked back where it evidently belonged, since there it looked even more becoming.

"Mr. Hampton isn't here, is he?" she asked.

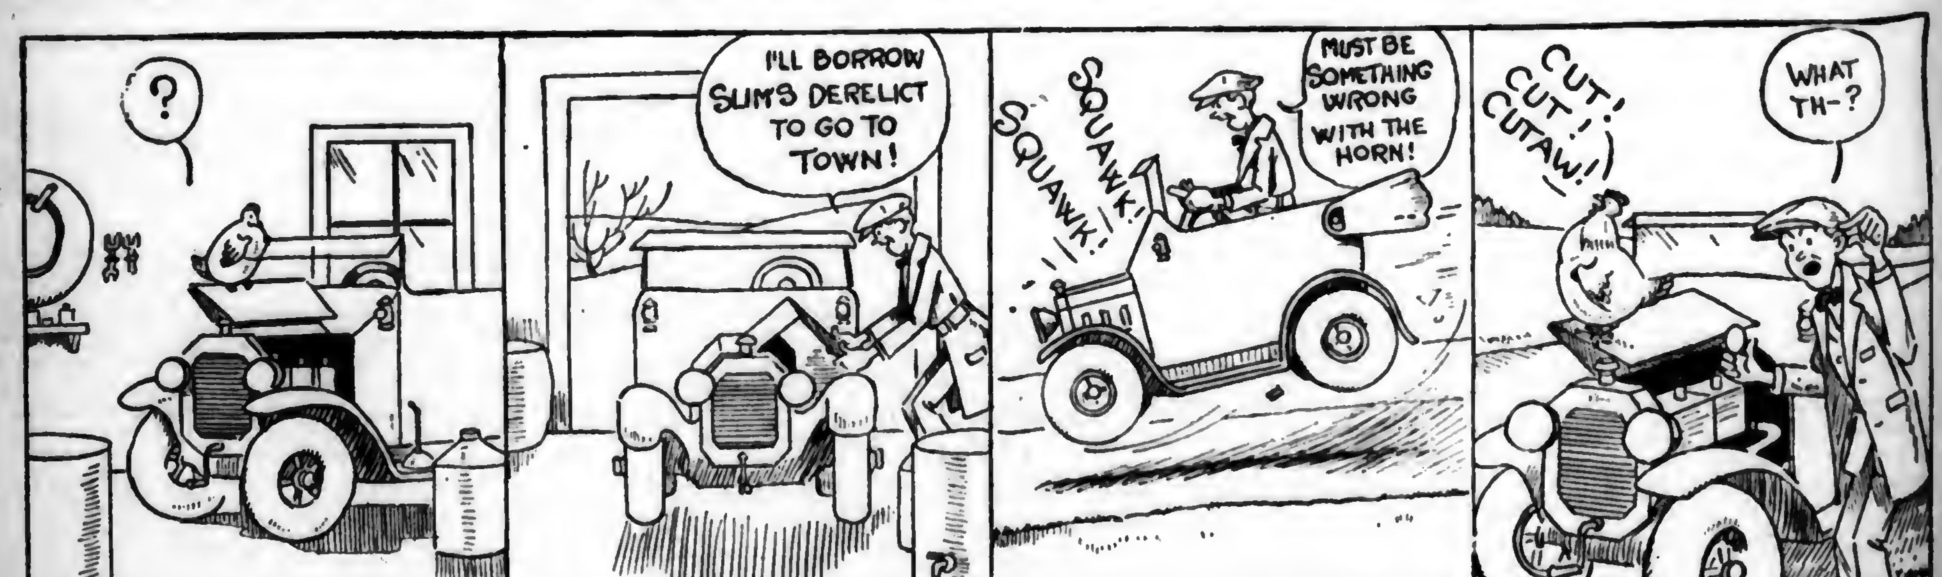
"No. Come to think of it, he did say this morning that he would be out right after lunch to help me break Lovelady. But I haven't seen him."

"He wanted me to stroll out here with him," Marcia explained. "And I wouldn't. It was too hot. Didn't you find it terribly hot about an hour ago, Mr. Lee?"

As a matter of fact Bud Lee had been altogether too busy an hour ago with the capers of Lovelady to note whether it was hot or cold. But he courteously agreed with Miss Langworthy.

"Then," she ran on brightly, "it got cool all of a sudden. Or at least I did. And I thought that Polly had come out here, so I walked out to surprise him. And now, he isn't here!"

Activities of Al Acres: *Slim's Flivver Has All the Conveniences of Home : : : By Leet*



?
I'LL BORROW SLIM'S DERELICT TO GO TO TOWN!
SQUAWK! SQUAWK!
MUST BE SOMETHING WRONG WITH THE HORN!
CUT! CUT! CUTAW!
WHAT TH-?
LEET

Marcia looked up at Lee helplessly, smilingly, fascinatingly. It was quite as tho she had added: "Oh, dear! What shall I do?"

Pollock Hampton had fully meant to come. But by now he had forgotten all about Bud Lee and horses to ride and to be bucked off by. A telegram had come from a nasty little tailor in San Francisco who had discovered Hampton's retreat and who was devilishly insistent upon a small matter—oh, some suits and things, you know. The whole thing totaled scarcely seven hundred dollars. He went to find Judith to beg an advance against his wages or allowance or dividends or whatever you call it. Judith was out somewhere at the Lower End, Mrs. Simpson thought. Hampton saddled his own horse and went to find her. All this Marcia was to learn that evening.

AFTER the swift passing of a few minutes, Marcia and Bud Lee strolled together across the meadow to the spring. Marcia, it seemed, was interested in everything. Lee told her much of the ways of horses, of breaking them, of a score of little ranch matters, not without their color. Marcia noted that he spoke rather slowly, and guessed that he was choosing his words with particular care.

She was delighted when they came to the bank under the willows where a pipe sent forth a clear, cold stream of water from a shady recess in the hillside. Here, at Lee's solicitous suggestion, she rested after her long walk—it was nearly a half-mile to the ranch-house — disposing her skirts fluffily about her, taking her seat upon a convenient log from which, with his hat, Lee had swept the loose dust.

"I'm dreadfully improper, am I not?" said Marcia. "But I am tired, and it is hot, isn't it? Out there in the fields, I mean. Here it's just lovely. And I do so love to hear about all the things you know which are so wonderful to me. Isn't life narrow in the cities? Don't you think so, Mr. Lee?"

The breeze playing gently with the ribbons of her sunshade brought to him the faintest of violet perfumes. He lay at her feet, obeying her tardy command to have the smoke which she had interrupted. His eyes were full of her.

"I'd so love," went on Marcia dreamily, "to live always out-of-doors. Out here I feel so sorry for the people I know in town. Here women must grow up so sweet and pure and innocent; men must be so fine and manly and strong!"

And she meant it. It was perfectly clear that she spoke in utter sincerity. For this long, summer day, no matter how she would feel tomorrow, Marcia was in tune with the open, yearned for the life blown clean with the air of the mountains. In the morning her mood had been one of rebellion, for her mother had said things which both hurt and shocked the girl. Her mother was so mercenary, so unromantic. Now, as a bit of reaction, the rebellious spirit had grown tender; opposition had been followed by listlessness; and into the mood of tender listlessness there had come a man. A man whom Marcia had never noted until now and who was an anomaly, almost a mystery.

Fate, in the form of old Carson, turned a herd of bellowing steers out into the fields lying between the meadow and the ranch-house that afternoon just as Marcia, making a late concession to proprietry, was shaking her skirts and lifting her parasol. It was scarcely to be wondered at that the steers seemed to Marcia a great herd of bloodthirsty beasts. Then there were her pink gown and sunshade. . . .

"Oh, dear, oh, dear!" cried Marcia.

So it was under Lee's protection that she went back thru the meadows and to the house. At first she was frightened by the strange noises his led horse made, little snorts which made her jump. But in the end she put out a timid hand and stroked the velvet nose. When finally Bud lifted his hat to her at the base of the knoll upon which the house stood Marcia thanked him for his kindness.

"I've been terribly unconventional, haven't I?" she smiled at him. "But I mustn't again. Next time we meet, Mr. Lee, I am not even going to speak to you. Unless," relenting brightly, "you come up to the house and are properly introduced!"

As she went thru the lilacs Lee saw her wave her parasol to him.

Three days later Bud Lee learned that Judith Sanford was, after all, "just a girl you know"; that at least for once in her life she had slipped away to be by herself and to cry. He stopped dead in his tracks when he came unexpectedly upon her, become suddenly awkward, embarrassed, a moment uncertain, but yielding swiftly to an impulse to run for it.

"Come here, Bud Lee!" commanded Judith sharply, dabbing at her eyes. "I want to talk to you."

He was at the Upper End where he had ridden for half a dozen young horses which were to be taken down into the meadow for their education. And here she was, on a bench outside the old cabin, indulging herself in a hearty cry.

"I—I didn't know you were here," he stammered. "I was going to make some coffee and have lunch here. I do, sometimes. It's a real fine day, isn't it, Miss Sanford? Nice and warm and—" His voice trailed off indistinctly.

"Oh, scat!" cried Judith at him, half laughing, still half crying. She had wiped her eyes but still two big tears, untouched, trembled on her cheeks. In spite of him Lee couldn't keep his eyes off of them.

"I'm just crying," Judith told him then, with a sudden assumption of cool dignity which had in it something of defiance. "I've got a right to, if I want to, haven't I? What do you look at me like that for?"

"Sure," he answered hastily. "It does you good to cry; I know. Great thing. All ladies do, sometimes—"

Judith sniffed.

"You know all that there is to be known about 'ladies,' don't you? In your vast wisdom all you've got to do is lump 'em in one of your brilliant generalities. That's the man of you!"

"Maybe I'd better go make the coffee?" he suggested hurriedly. "It's after twelve. And it'll do you good. A nice hot cup."

"Maybe you had," said Judith icily. "Perhaps I can postpone my conversation with you until the water boils."

LEE went into the cabin without looking back. Judith, watching him, saw that he ran his hand across his forehead. She sniffed at him again. But when Lee had the coffee ready she had washed her face at the spring, had tucked her tumbled hair back under her hat, and, looking remarkably cool, came into the cabin. Lee thought of his meeting with Marcia, of her repeated assurance that she knew she had violated the conventions.

"You can make coffee," Judith nodded her approval as she sipped at the black beverage, cooled a little by condensed milk. Lee was busied with a tin containing potted meat. "Now, have you got over your shock so that I can talk with you?"

He smiled at her across the little oil-cloth-covered table, and answered lightly and with his old assurance that he guessed he had steadied his nerve. Hadn't he told her a cup of coffee would do wonders?

"Would it go to your head," began the girl abruptly, "if I were to tell you that I size you up as the best man on my pay-roll?"

"I'd try to keep both feet on the ground," he said gravely, tho he wondered what was coming.

"I'll explain," she continued, her tone impersonally businesslike. "Next to you, I count on Doc Tripp; next to Tripp, on Carson. They are good men; they are trustworthy; they understand ranch conditions and they know what loyalty to the home-range means. But Tripp is just a veterinarian; simply that and nothing more. His horizon isn't very wide. Neither is Carson's."

"And mine?" he grinned at her. "Read me my horoscope, Miss Sanford!"

"You have taken the trouble to be something more than just a horse foreman," she told him quietly. "I don't know what your advantages have been; if you haven't gone thru high school, then at least you have been ambitious enough to get books, to read, to educate yourself. You have developed further than Carson; you have broadened more than Tripp."

"Thanks," he offered dryly.

"Oh, I'm not seeking to intrude into your private affairs, Mr. Bud Lee!" she cried warmly at his tone. "I have no desire to do so, having no interest in them. First of all, I want one thing clear: You said when I first came that you'd stay a few days, long enough for me to get a man in your place. We have both been rather too busy to think of your leaving or my seeking a substitute. Now what? The job is yours as long as you want it—if you'll stay. I don't want you leaving me in the lurch. Do you want to go? Or do you want to stick?"

What did he want? He had anticipated an interference from the girl in his management of the duty allotted him and no such interference had come. She left him unhampered, even as she did Tripp and Carson. He had his interest in his horses. It was pleasant here. This cabin was a sort of home to him. Besides, he had the idea that Quinnion and Shorty might again be heard from—that if Trevors was backing their play, there would be other threats offered the Blue Lake outfit from which he had no desire to run. There was such a thing as loyalty to the home-range, and in the half-year he had worked here it had become a part of him.

"I'll stick," he said quietly.

"I'm glad of that," replied Judith. "Oh, you'll have your work cut out for you, Bud Lee, and, that you may be the better fitted to do it, I want you to know just what I am up against."

She paused a moment, stirring her coffee with one of Lee's tin spoons, gathering her thoughts.

(To be continued next week)

Potato Harvesting in Maine

(U. S. Department of Agriculture)

The potatoes go from the ground to the wagon, from the wagon to the grading machine and then into the barrel. It is all done at the edge of the field. The photograph was taken in famous Aroostook County, Maine.

Did you ever hear this one?—

On the Safe Side

A tourist in Scotland came to a wide ferry. It was stormy, and the wind was constantly increasing. The Scottish ferryman agreed to take the tourist across, but told him to wait until he had first taken a cow across.

When he had finally started across with the traveler, the latter became curious.

"Will you tell me why you took the cow across and made me wait?" he asked.

"Weel, now," exclaimed the ferryman, "you see the coo wur valuable, and I feared the wind wud increase so the boat might upset on the second trip!"

Up and Coming Salesman

A live-wire salesman rushed up to the home of a doctor in a small village about 3 A. M. and asked him to come at once to a distant town.

The doctor cranked his flivver and they drove furiously to their destination.

Upon their arrival the salesman asked, "How much is your fee, doctor?"

"Three dollars," said the physician, in surprise.

"Here you are," said the salesman, handing over the money, "the blamed garage keeper wanted $15 to drive me over when I missed my train."—Keystone Motorist.

Result of Early Training

Coach (to new player)—You're great! The way you hammer the line, dodge, tackle your man and worm thru your opponents is simply marvelous.

New Player (modestly)—I guess it all comes from my early training, sir. You see, my mother used to take me shopping with her on bargain days.—Boston Transcript.

Glory's Graveyard

Office Boy—"My brother has a gold medal for running five miles, an' one for ten miles; a silver medal for swimming; two cups for wrestling, an' badges for boxing an' rowing!"

"He must be a wonderful athlete."

"He's no athlete at all. He keeps a pawnshop."—Good Hardware.

No Geometry Required

Teacher—Robert, here is an example in subtraction. Seven boys went down to the creek to bathe, but two of them had been told not to go in the water. Now, can you inform me how many went in?

Robert—Yes'm; seven. — Lancashire Daily Post.

A Suffering Sinner

A negro minister discovered two men playing cards on Sunday—and for money.

"Rastus," said the minister, "don' you know it's wrong to play cards on de Sabbath?"

"Yes, passon," answered Rastus, ruefully. "But, believe me, ah's payin' foh my sins."

A Matter of Opinion

Two rustic sports were uncertainly flivvering their way home from the county seat.

"Sam," said Henry, "I wancha to be very careful. First thing y'know you'll have us in a ditch."

"Me," said Bill, in astonishment. "Why, I thought you was driving."

"Fadder, give me a dime to go and see the sea serpent."

"Vasteful poy! Here's a magnifying glass; go find a vorm."

OUR YOUNG PEOPLE'S FORUM.

From Forum Members and Friends

Dear Cousin Ruth and Forum Friends:—In summer time I like to plow, harrow or roll. I think it is fun to work on a farm. I wasn't at school this week on account of a cold. On Wednesday we butchered two pigs.

I have been trapping for muskrats and caught two. I have also been trapping for rats and mice ever since last summer. I caught thirty-two rats and thirty-eight mice. I get five cents for a rat and one cent for a mouse. It is pretty cold and sometimes snows a little. We had a little sledding this winter.—Solomon King, thirteen (X), Lancaster County, Pa.

SUNNYSIDE FARM, MY HOME
Francis M. Gum, Jr. (X), Sussex County, Del.

Dear Cousin Ruth:—I am going to take the high school examinations.

We had two Christmas entertainments, one at school and one at church. I was in two plays and had a separate recitation, too.

We have a dog Buster. She is very friendly. She likes candy and ice cream. She likes to play with us and chase the cows. She doesn't like anyone to tease her, but we do tease her tho she doesn't like it.

Sometimes she gets in my brother's car and then you cannot get her out, so he takes her with him or stays home.—Ruth Sandt, thirteen (X), Northampton County, Pa.

Dear Cousin Ruth:—I feed our cows every morning and evening and go to school. I wish it would snow soon so I could ski. I am in the seventh grade. I am going on my sixth year in school and haven't missed a day or been tardy. I have a dog, his name is "Watch." He will run after the chickens and cows.—Kenneth Mansfield, Armstrong County, Pa.

A BABY AYRSHIRE
Emma R. Rupp, (X), Lehigh County, Pa.

Dear Cousin Ruth:—As soon as I get home from school I help mother get supper and then I get my lessons done and read the Forum page. My friend made a bird house for me and a little wren came to live in it and the little wren had three little baby wrens.—M. Elizabeth Brown, (X), York County, Pa.

Dear Cousin Ruth and Forum Friends:—I am a freshman in high school. We have a strict algebra teacher. I do not like Latin. Our Latin teacher gives us tests about every day. We have a very large class. In the beginning there were eighty, but a few dropped out.

I want to tell you of my experience going to the Sesqui. It was on the thirteenth of November, at 5 A. M., when our teacher, Mr. Heller, some freshmen and sophomores were going to the Sesqui. After dodging the policemen, automobiles and other traffic we reached the Sesqui at 10 A. M. After we went thru the main building the girls had a tough dinner at the Paris Cafe, while we boys took a rest. We spent some time on the Gladway till our funds got low, then we started for home.

Somehow or other the rest of the party got separated from me, and I found myself outside the subway on Market Street. After a very short time, my teacher appeared on the scene and again attached me to the rest of the party. We reached home at midnight and called it a day.—Joseph S. Shelby (X), Lehigh County, Pa.

Dear Cousin Ruth and Forum Friends:—I want to tell you about the time I pretty nearly drowned. We have a lake on our farm and my chum and I were playing along the shore and caught a live fish. I wanted to put this fish in the spring and somehow I fell in. It was some minutes before he pulled me out but when he did pull me out I was dripping wet. Maybe I wasn't thankful.

How many of you friends had the whooping cough? I had the whooping cough before Christmas.—Edward R. Williams, (X), Luzerne County, Pa.

Dear Cousin Ruth and Forum Friends:—I am in fifth grade and have seven books. My favorite study is history. Sport is my pet dog. He goes with me trapping. I caught three skunks, one muskrat and two opossums. I raise ducks and when I go to school my sister feeds them. —Raymond M. Walker, twelve, Carroll County, Md.

Dear Cousin Ruth:—I have three pet pigeons. I had five but two got away. I was trapping this winter. I caught six muskrats, three skunks and one raccoon. I have stopped trapping now. I like to go out in the snow sleigh riding. We go down a big hill where it is all icy. I go to school. It is about 2½ miles away and a bus comes and takes us over. We have lots of fun playing hockey on the ice at school.—Clare Mengee, ten (X), Lehigh County, Pa.

Dear Forum Friends:—I would like to live on a farm for it is a good place to work and play but my father died, now we can't.

We have a car, about 100 chickens and one cow. I tend them every morning and evening. I find about 50 eggs a day.

Last Saturday it snowed and the wind blew so that at some places it is about three feet deep and some places the bare ground shows. I have a sled. It is broken and so I can't go sleighing. I set traps and I caught two muskrats and a squirrel. Trapping is not so good here.—Martin Weber, thirteen (X), Lancaster County, Pa.

Dear Cousin Ruth:—At night when I get home from school I help my mother, water my pony and the black horse. Then I take my sled and ride down hill. I have a pet dog. Her name is Spot. She likes to follow me everywhere.

When my father goes to the creamery I ride to school with him. I drive the horses sometimes. They go pretty fast for me to drive.—Dorothy Varney, (X), Bradford County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—We all like birthday parties and this week we're having one in honor of a very great and famous man. I'm sure Teacher has been telling you something about him or, if she hasn't, she probably will soon. On the little row of candles at the bottom of the page you are to place the letters which spell his name. You will find the letters sticking out here and there in the little story that follows. Just take out the letters that do not belong in the words of the story and place them, in the order in which they come in the story, on the candles, and you will find the name of the man whose birthday we are celebrating today. Maybe you had better take a piece of scrap paper first and put the letters down because you might miss some the first time you read the story and not have your answer right. The first word with an extra letter is "moarning," so the first letter must be "A."

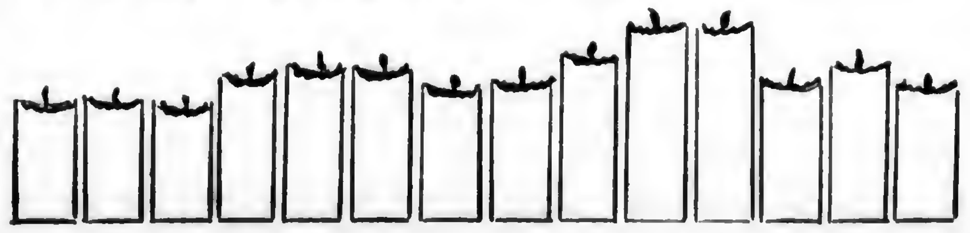
When you have all the letters in the correct order and know whose birthday we are celebrating, send me the name on a postcard or in a letter so that it reaches me by February 19th. BE SURE TO SAY HOW OLD YOU ARE and please tell me the name of the county in which you live and when your own birthday comes. The prizes go to the ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to the Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

Letters for the Candles

One bright winter moarning abbout the second weerk in February a little boay named Georghe went to towan with his mother. When they marrived they went to a restauranit and had an oysteir stew. Then George and his mother wennt shopping. They finisched late in the afternoon and started for home. Dad was veroy glad to seel them, but George felt sleepy and went to bend soon after supper.

The answer to the puzzle in the January 22 issue of Pennsylvania Farmer (the one about the familiar saying which you found by following the letters around in the square) is: BIRDS OF A FEATHER FLOCK TOGETHER.

Many of the answers were very good indeed. The best ten were sent in by the following prize winners: Joseph Ashton, age 10, Woodstown, N. J.; Harry Hamilton, age 13, Fairchance, Pa.; Margaret Hartge, age 9, Parnassus, Pa.; Helen E. Hicks, age 10, Montoursville, Pa.; Pearl Landis, age 10, New Windsor, Md.; Leonard E. McGrady, age 10, Rising Sun, Md.; Avena Parenti, age 13, Donora, Pa.; George Shillady, age 9, Glen Moore, Pa.; Virginia Stouffer, age 10, Smithsburg, Md.; Esther Adele Wolfe, age 13, Radnor, Pa.



Lincoln

THERE is a very vivid picture in my mind of the boy Lincoln stretched at full length, chin propped in palms, industriously reading one of the few books he could get hold of by the flickering flames of the open fire. Flickering flames aren't very good things to read by, electricity is a lot better, but I wonder whether we're as eager to find the worth while secrets Lincoln hunted for in his few good books, the secrets that he remembered and which helped to make him famous when he grew up.

Perhaps we think that it's the person with money who counts for most. Probably Lincoln thought the same things sometimes. Rich mill owners of the North and slaveholders of the South must to him have seemed more prosperous than he of a log cabin and few possessions could ever become. Just the same it was the little boy who knew how to work on the farm, who knew how to read and remember the worth while things he read who will be remembered long after most of those mill owners and slaveholders are forgotten.

JANETT RITTER, Perry County, Pa.
FAE ANDRE, Columbiana County, Ohio.

Those of us who are lucky enough to live in the country have about us every day of our lives thousands of open pages waiting to be read. I don't know the birds and flowers and trees, and I should. Do you? Make it a bird a day, a flower a day, a tree a day, make friends with your pets and with the people about you, and tho it is unlikely that a statue will ever be erected to your memory you will be ready to do well whatever there is to do now and when you grow up. You'll have a job keeping up with the country boy, Abraham Lincoln, but it's a job worth trying.

COUSIN RUTH.
Care of Pennsylvania Farmer,
261 S. 3rd St., Phila., Pa.

Health Measures Taken in Time Ward Off That Distress Signal Mothers Dread to Hear

Editor's Note:—Four mothers who are well known to you have sent us the benefit of their experience, and I am sure you will benefit by the measures they each emphasize, and strive to maintain a higher health standard by better living.

MOTHERS should be alert to the symptoms and treatment of all the minor ailments. It has proven a good plan, too, to secure the services of a reliable doctor for the year round. Then cooperate with him and help him get to you and your neighbor in the bad weather. Here in our neighborhood, the men get out and clear the roads, using teams and scrapers. If folks will pay their doctors more promptly, doctors will be encouraged to make the terrible trips.—Mrs. E. A. Kern, Pennsylvania.

* * *

HERE are a few things that have helped me thru thirty years of winter mud and a big family.

1.—Keep cool when sickness comes. If you are always studying the health question, you will not be so afraid.

2.—Guard everything that enters the bodies of your family. That means, take care of food and ventilation, the mouth and nostrils.

3.—Feed your family with regard to health. Use more milk, whole-cooked cereals, fruits and vegetables; use less meat and fewer sweets.

4.—More colds result from over-eating than from exposure. Persons who have proper eating habits may get a cold that is "going the rounds," but will quickly throw it off.

5.—Get a clinical thermometer and learn to use it. Put folks with temperature of 100 or over to bed.

6.—Sleep enough in well-ventilated rooms. Exercise enough in the fresh air and sunshine.

7.—Dry no clothes around the living room stoves.

8.—Study each member of the family and guard him according to needs.

9.—Pay your doctor bills promptly, showing appreciation of real service.

10. Cooperate with your neighbors and secure a good doctor, paying him a yearly salary—then you can always have service.—Peggy Short, Pa.

* * *

LET me pass on some of the things that I learned by experience. First, it is good policy to promote health to prevent disease. In other words it is good policy in the summer when roads are good to pay doctors for trying to keep us well.

But there are many things we ourselves can do.

The children need the right diet—I believe that lettuce in winter is cheaper than doctor bills, and according to Dr. McCollum is an insurance against disease.

The children need plenty of sleep. My boy, who just celebrated his eighth birthday, sleeps the clock around. And we are sure to know if he fails to get eleven and a half to twelve hours sleep.

Of course the window should be wide open even in winter. And the children must have plenty of baths. Our rule is a bath every other night. I believe this is a preventative against taking colds which lead to so many other ills of the human body.

I am touching wood when I speak of it, but neither of my children has had a cold so far this winter.

No two children are alike and can stand the same care. I believe as a general thing we dress our children too warmly.

We have had the rounds of children's contagious diseases. We have not called a doctor for any of these. None of them was so bad. Even scarlet fever seemed no worse, aside from the quarantine, than a hard cold. Of course I kept the children in bed as long as they had fever and watched them closely.

I have come to the conclusion that I know my children better than any doctor could possibly know them, and I can do more for them than any doctor that we could call in an emergency. Of course I grant that emergencies do come, and then the advice and help of the physician is needed, but my big job is to keep my children well, and not have these health wrecks (the doctor is the wrecking crew) any oftener than necessary.—Mrs. May H. Mumaw, Ohio.

* * *

WE LIVE on a party telephone line. At night it is not uncommon to hear that long insistent ring that echoes so alarmingly in the silent house. "Someone wants the doctor!" Every country mother knows the anxiety that leaps at that knowledge, especially on a wintry night!

We have very poor medical service. Twenty-five years ago there were eight general practitioners where there are now three elderly doctors indifferently trying to serve the same territory. The young men will not come out here to the country practice; they prefer the city. There is no gainsaying the seriousness of the situation. And I have no solution to offer. But I do know that there is truth in the old adage that "an ounce of prevention is worth a pound of cure."

Epidemic May Be Relieved by Care

No mother can forestall all sickness in her family. No one can foresee the epidemic of grippe or measles that comes sweeping over the country—usually during the season of bad roads! But we can do something—oftentimes very much—to relieve the situation.

Let's learn all we can, first of all, about healthful diet; it is surprising how many housewives have not yet awakened to the importance of right habits of eating. Let's learn how to feed the sick; many a patient has been set back on his road to recovery by the injudicious food given him by a loving wife or mother!

Let's learn what to do for the more common forms of sickness—grippe, measles, common colds, mumps, fevers and the like. Let's learn the outstanding rules of good nursing; any doctor will tell you of the disheartening experiences he encounters where his rules are not accurately followed.

Let's learn how to keep our house in a healthful condition—the right amount of heat, of humidity, of fresh air, of sunshine, of freedom from dust and dampness.

Let's learn about the best way to clothe our family so as to keep them dry and warm without unnecessary weight and restriction.

Let's plan and plant our garden with a view to good health for the family.

Let's make an unalterable rule that summer or early fall will see all minor physical defects of the family remedied to the best of our ability. Teeth filled and cleaned. Throat and eyes examined. That tendency to coughing looked into by a reliable physician.

One cannot honestly blame an overworked doctor for feeling peeved at being called out ten miles over an almost impassable road in the middle of the night to attend a case that ought to have been prevented months before!

Prevention Easier Than Cure

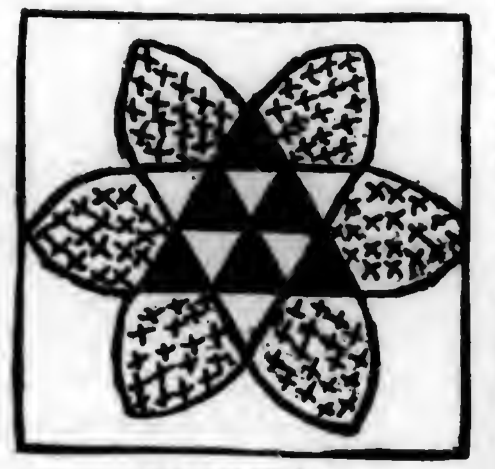
Keeping well is easier and a hundred times better than getting well. Prevention is the best weapon with which to fight those minor ills that presently become chronic and the cause of much suffering and ill-health.

Let's learn these things. We can if we will. Such forearming will not bring the doctor any nearer, but it will greatly diminish the number of times when we need him.

We may not be able to make the country practice seem desirable to the young physicians. We cannot make the drifted or rutted road any better or shorter. But we can, a great many times, prevent that heart-rending "call in the night."—Alice Margaret Ashton.

Quilt Blocks Brighten Corners

THIS week I am showing you two of the delightful old quilt patterns that are especially adapted for use as pillow covers for the window seat or favorite chairs. Fashion dictates quilt blocks for many uses besides bed quilts, and the bright patches of silk that often follow in the trail of winter sewing are very nice in quilted pillows. Velvets, and many other materials, lend themselves to this attractive piecework.



Shield and Star
A twelve-inch block in three colors.

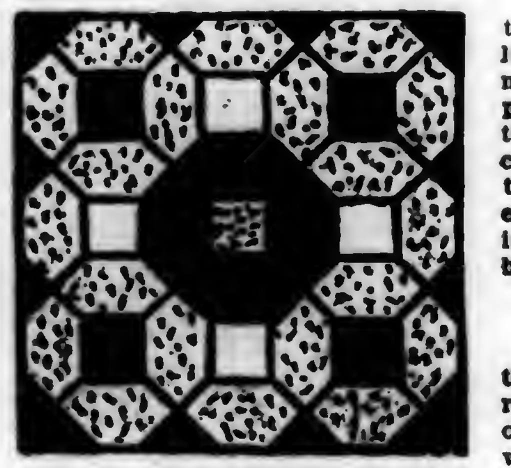
Shield and Star

Altho this pattern is arranged in quilt block size twelve inches square, the outside dimensions are very easily extended to fit any sofa pillow you have around the house that needs freshening. You can to good advantage use three colors in the piecing and another for the background if desired. The general color scheme of the room is developed, adding touches of color most appropriate. A pretty one in my neighborhood has a background of old blue with figured blue of deeper shade in the outer star points, dull gold and bronze for the center triangles. The harmony fits the spring season's trend perfectly.

The Pacific Queen

Should you like this pattern for a pillow cover, the outer edge can be extended like a frame of any desired width, but I personally would use this design only with square pillows, while the Shield and Star can be adapted to any shape. This pattern is a splendid one for small pieces which are bound to accumulate where family sewing is a big industry.

Both patterns are unusual and charming in quilts and you will notice are good in size. To secure patterns, send your orders to Quilt Pattern Service, Pennsylvania Farmer, 261 South Third St., Philadelphia, Pa., enclosing 15 cents for each pattern, and a self-addressed envelope. Please address your envelope with care. I have on my desk several orders returned and marked unknown.—Gertrude S. Stewart.



The Pacific Queen
A ten-inch block in three colors.

Adapted to a Variety of Uses

BOUND buttonholes are easier to make than many people think and the same process that is used in making them may be followed in making pockets, slashes thru which belts are slipped, etc.

The starting place for any use of the bound buttonhole is a straight line marked on the wrong side of the material to indicate the length and position of the finished binding. For the binding, a strip of the material cut on a true bias or straight with the threads of the material is needed. This should be cut to extend an inch or more beyond either side and beyond the ends of the marked line.

Place Right Sides Together

The strip should be basted with the right side of the strip to the right side of the material, directly over the line of marking. On the wrong side, a rectangle is stitched around the mark as far from the line on either side as the desired width of the finished binding. The buttonhole or slash is then cut thru both thicknesses of material, almost to each end, and from these points it is cut diagonally into the four corners of the stitched rectangle. The binding strip is then turned thru the hole to the wrong side of the material.

To keep the binding in position it

Society of Farm Women Express Stand in Resolutions Adopted

THE state convention of the Society of Farm Women of Pennsylvania was held Wednesday and Thursday of the Mid-winter Show Week at Harrisburg and was well attended. At the first session, Wednesday morning, an address of welcome was given by Hon. George A. Haverter, mayor of Harrisburg. He said he was not familiar with our object but it must be something worth while to draw such a large group of women into the opening meeting of our convention. Mrs. Chas. Knepper, of Somerset County, responded to this welcome.

Attorney Alvin Sherbine traveled from Johnstown to deliver an address before the convention on "Rural Sociology." In part he said that the state and nation should be thankful that there is a steady stream of stout-hearted, home-loving, ambitious, patriotic hearts moving cityward. "The state's one great worry," he said, "should be that the day may come when the call of the city will allure the youth of the country. The propaganda should not be to keep the country youth away from the city, but rather a call to the teeming millions of the cities to go out under the open blue skies and learn that the divine injunction 'By the sweat of his brow man shall eat bread' is still in force. The country boys and girls who go to the great cities carry with them a deep-seated Americanism and a respect for the laws of the country that help produce the clean, law-abiding citizenry of the large cities." With the appointment of committees and the singing of old time songs led by Mrs. Jane Nolt, of Lancaster County, this concluded the morning session.

Wednesday afternoon's session was given prominence by a very able address on "Child Rights," by Prof. H. K. Ober, president of Elizabethtown College. In part, he said: 'Every child has a right to be well born, to grow up in a good Christian home, to have its motives understood, to be taught to be neat, prompt, accurate, and to keep its word." Children should be taught Nature's laws by simple illustrations and in being so taught they should learn that their parents are the best confidants. A child is entitled to an apology when mistakes are made by the parents.

Introduced Labor Savers into Homes

Mrs. G. G. Strosnider, of Greene County, told how women's clubs such as ours have benefited the home and the community by helping to bring labor-saving devices into the home, by the advancement of child welfare and the introduction of recreation centers and community houses. Dr. Hannah McKee Lyons, of Lincoln University, told how organized women could move things as they should be moved and block things that should be blocked.

Miss Florence Dibert, of Johnstown, vice president of the National Federation of Women's Clubs, urged the women to support two bills that will come before the legislature this season, one for raising the age when children may be married with the consent of their parents from 12 years for the girl and 14 years for the boy to 16 years for both, and the other providing that no one may be married without a five-day notice to the public.

Wednesday evening the ladies of the Presbyterian Church served dinner to 116 women and a very pleasant social hour was spent following the dinner. Mrs. Neely, president of the Story Tellers' League of Harrisburg, told several stories, and Mrs. Walter E. Davis, president of the Mothers' Reserve Club of Harrisburg, delivered a fine address on "Woman."

Thursday morning's session was taken up with reports and the election of officers. The following officers were elected: Mrs. John F. Hice, of Cambria County, reelected president for third time; Mrs. T. H. McComb, Washington County, vice president; Mrs. A. W. Wolgemuth, of Lancaster County, secretary; Miss Sallie A. Mentzer, of Lancaster County, reelected treasurer for third term. By unanimous vote the organization asked for membership in the Women's Legislative Council of Pennsylvania. Miss Edna K. Feall, of Johnstown, delivered a splendid address on "A Woman's Education."

Principal Resolutions Adopted

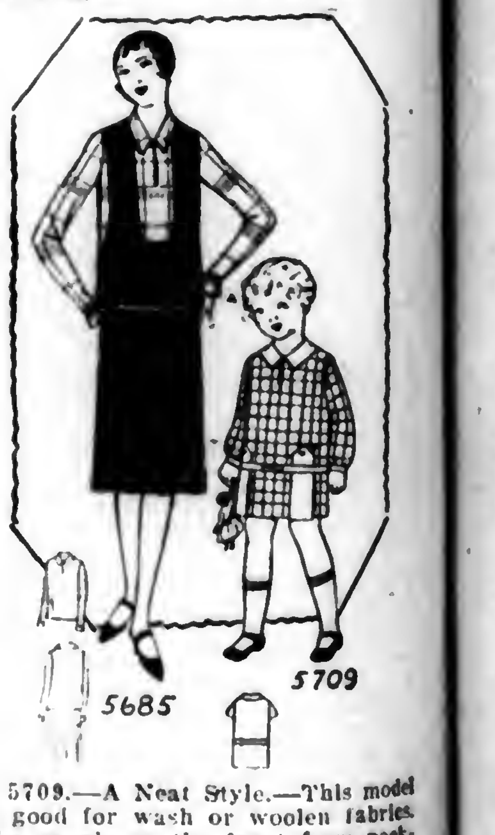
Thursday afternoon's session was given over to a talk on the Federation of Farm Women of America and cooperative marketing by Mrs. Aida Mayo, of Washington, D. C., who is president of the federation. Mrs. Mayo gave many points to the farm women on the benefits of direct marketing. The following resolutions are the principal ones adopted: That we ask that the direct primary election law be maintained; that we cooperate with State College's building program; that proper methods be used in law enforcement; that we ask that the age in the child marriage law be changed from 12 years for a girl and 14 years for a boy to 16 years for both.

All these meetings were interspersed with music and readings. This was the eighth annual convention of the Society of Farm Women of Pennsylvania and I believe the most profitable one.—"One Who Was There."

Jaunty Styles

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5685.—A Youthful Model.—Plaid silk and velvet are here combined. The style is also attractive in crepe satin or in moire with georgette or crepe de chine. Three sizes: 16, 18 and 20 years. An 18-year size will require 1⅛ yard of 40-inch material for the guimpe and 2⅞ yards for the dress if made as illustrated. Pattern, 10 cents.



5709.—A Neat Style.—This model is good for wash or woolen fabrics. The panels on the front form pockets. Three sizes: 2, 4 and 6 years. A 4-year size will require 1⅛ yard of 36-inch material, together with one-quarter yard of contrasting material for panels and facing on collar, cuffs and belt. Pattern, 10c.

Send 10c in silver or stamps for our up-to-date Spring and Summer 1927 Book of Fashons.

Income Tax Tangle Unravelled

(Continued from page 2)

the beginning and end of each taxable year are necessary.

For those reporting on the accrual basis, the gross profits are obtained by adding to the inventory value of livestock and products on hand at the end of the year the amount received from the sale of stock and products and other miscellaneous receipts, for hire of teams, machinery, etc., during the year, and deducting from this sum the inventory value of stock and products on hand at the beginning of the year plus the cost of stock and produce purchased during the year. The farm expenses will be the actual expenses incurred during the year, whether paid or not.

Farmers who keep no books of account or keep their accounts on the cash receipts and disbursement basis are required to file a schedule of farm income and expenses on Form 1040-F, which must be attached to the individual return on Form 1040. With farmers who keep their accounts on the accrual basis, the filing of Form 1040-F is optional.

Certain Deductions Allowed

All necessary expenses paid or incurred during the year 1926 in the operation of a farm as a business enterprise may be deducted from gross income in ascertaining net income, upon which the tax is assessed. These include the expense of harvesting and marketing of crops and the cost of seed and fertilizer used. Amounts expended for the purchase of feed for livestock may be deducted, but the value of a farmer's own products used for such purposes is not a deductible item.

The farmer may deduct the cost of small tools used up in the course of a year or two, wages paid to farm hands (other than domestic servants) and rent paid for farm land and buildings (other than the dwelling) cost of repairs to fences, wagons and machinery, also bills paid for horseshoeing, stock powders, rock salt, veterinary service, insurance (except on the dwelling), gasoline for operating power, and sundry minor expenses.

The value of produce raised on the farm and used in the board of farm laborers may not be deducted as an expense. The farmer may, however, deduct the cost of food purchased for his laborers. The value of the services of the farmer himself, his wife or dependent minor children cannot be deducted unless the amount is reported by the recipients as income on Form 1040.

A Car Is Considered an Investment

The purchase price of an automobile even when used wholly in farm operation may not be deducted, as it is regarded as an investment of capital. The cost of gasoline, repairs and upkeep of an automobile, if used partly in the business and partly for pleasure and convenience of the taxpayer or his family, such cost may be apportioned accordingly, and that proportion of cost attributable to business deducted.

General deductions such as for taxes, losses, interest on indebtedness, bad debts, contributions, etc., are explained in instructions on the forms.

Returns are required of single persons whose net income for 1926 was $1500 or more, or whose gross income was $5000 or more, and from married persons living together whose aggregate net income was $3500 or more, or whose aggregate gross income was $5000 or more. The exemptions are $1500 for single persons, $3500 for married persons and heads of families. In addition, the taxpayer is allowed a credit of $400 for each person dependent upon him or her for chief support, if such person is under 18 years of age, or mentally or physically defective. The terms "mentally or physically defective" means not only cripples and persons mentally defective, but the aged and persons in ill health. A dependent need not live in the taxpayer's household, nor need he be a relative of his benefactor.

With regard to the $400 credit for each dependent, the taxpayer's status as of the last day of the taxable year determines this credit. If, during the year, his support of such dependent ceased, he is not entitled to this credit.

Head of a Family Defined

A single person may be the head of a family, and as such allowed the same personal exemption as a married person, $3500. A head of a family is defined by the revenue act of 1926 as "an individual who actually supports and maintains in one household one or more individuals who are closely connected with him by blood relationship, relationship by marriage, or by adoption, and whose right to exercise family control and provide for these dependents is based upon some moral and legal obligation."

The normal tax rate is 1½ per cent on the first $4000 of net income in excess of the personal exemption, $400 credit for each dependent, etc., 3 per cent on the next $4000 and 5 per cent on the balance. The surtax rates apply to net incomes in excess of $10,000.

Taxpayers are advised, for their own advantage, to note carefully that provision of the revenue act of 1926 which provides for a 25 per cent credit on "earned income." The term "earned income," as defined by Treasury regulations, means "wages, salaries, professional fees, and other amounts received as compensation for personal services actually rendered." However, all net income up to $5000, from whatever source derived, is considered to be earned net income, for the purpose of the 25 per cent credit.

For example, a taxpayer, married, living with his wife and with no dependents, whose net income for 1926 was $4000 would compute his tax as follows:

Net income	$4000	
Less personal exemption	3500	
Balance taxable @ 1½%.	$ 500	
1½% of $500..........		$7.50
Less ¼ of $7.50 earned income credit		1.88
Balance of tax payable.		$5.62

The return, accompanied by at least one-fourth of the amount of tax due, must be filed with the collector of internal revenue for the district in which the taxpayer lives, or has his principal place of business. The filing period for the calendar year 1926 is from January 1 to March 15, 1927.

Adapted to Many Uses

(Continued from page 24)

should be basted together where the opening is to be made and pressed in that position. The amount of finishing required on the back depends upon where the buttonhole is used. Trimming the binding strip on the back to a neat size and tacking it in place may be sufficient. If, however, the material ravels or the back is exposed, it may be necessary to turn under the edges of the binding material and hem them to the garment.—New York State College of Agriculture.

Irate Wife (discovering scofflaw husband on front steps fiddling with doorknob): "What are you doing there, Webster?"

Husband (continuing to turn knob): "Pshh! I'm trying to get Pittsburgh!"

That rhuematism may be only bedspring pains

Sleep with a sagging spine and you must expect aches and pains when you awaken. Strained muscles and sleep-famished nerves are bound to complain. Who Gets the Saving? Do you or Do We?

As I was thinking today of what would interest you as a feeder, our Nutrition Expert came to my office with a new formula for Tioga Dairy Feed. The formula furnished exactly the same standard of nutrition as the one we were using, the same percentage of digestible protein and therms of heat and energy but market changes had enabled him to reproportion the same ingredients and save 43 cents per ton in the cost.

Of course the new formula was adopted for obviously anyone would not care to pay 43 cents more for exactly the same feeding value; it is just good economy for anyone to get the most he can for his money.

And now I will anticipate your question "Who gets the 43 cents?"

That is a very proper question and I am glad to answer it. for if you are a user of Tioga Dairy Feeds, you will make the saving on every ton you use. You can't **see** the saving that was made when you buy the feed any more than you can see the actual amount saved when you buy a good cow at a bargain.

When you buy the cow, you expect to see this saving in the milk pail, and it is in the milk pail also that you get the benefit of the saving in the price of Tioga Dairy Feed.

It is the work of our expert to maintain the nutritive standard and make these savings we pass on to you to help you prosper; that makes you a better customer, we make our regular manufacturing profit and we both benefit.

That's why we think it is good business to do all we can to Help the Feeder.

GLOBE SILOS

A great improvement—a good investment

A GLOBE SILO is a permanent improvement on the farm. It is constructed to last a lifetime. Made of carefully selected Northwest spruce and fir with double splines, sealed joints and adjustable doors, it keeps silage perfectly. *The extension roof, an exclusive feature, reduces the cost per ton capacity to a minimum.* The initial cost of a Globe is soon returned in extra profits from your corn crop. Get all the profit from your farm—get a Globe Silo.

Write for the name of our representative in your community and our catalog; tanks, tubs, ensilage cutters, stanchions, etc.

Garget Makes Lots of Trouble

I have had quite a lot of trouble with garget this winter. Is it contagious from cow to cow and is there any cure for it? E. F. S., Mercer County, Pa.

It is difficult to tell whether the trouble with your cows is from contagious garget or simply from inflammation of the udder, which may be due to causes such as exposure to cold or wet weather, sudden change of temperature, irregular milking, or other disturbance of the animals' health. But the fact that the disease apparently has gone thru your herd of cows this winter would indicate that it probably was infectious garget.

In case of inflammation of the udder from causes other than those given above, it is recommended that a full dose of Epsom salts (1-2 lbs.) be given as soon as the disease is noticed in the animal. This is to be followed by daily doses of saltpetre (1 oz.) and bi-sulphate of soda (2 drams) using one quart of water as a drench.

Frequent milking is desirable. The udder should be completely emptied every two hours if possible, using extreme diligence in the operation, especially if there are blood tinges in the milk. If the udder is very tender, it may be necessary to use the sterile milking tube so as to empty the udder with the least pain twice daily.

Gently Massage Sore Udder

After milking the udder should be bathed for about twenty minutes with water as hot as the hand can bear. Meanwhile, the udder should be gently but firmly massaged in a downward direction so that all the material is brought down into the milk cistern. This manipulation should be stripped out after which the udder should be dried and gently anointed with warm camphorated oil and an ointment composed of fluid extract of bella donna phytolacta, one part each, and lard, eight parts.

In infectious garget beneficial results have been secured from the administration of one-half ounce of sodium salicylate and 2 drams of boric acid in one quart of water morning and night as a drench, and one-half of one ounce of formalin in one quart of milk or oil at noon for several days. Very frequently milking is recommended in the treatment of infectious garget.

A mild but effective antiseptic creosol solution such as 2 per cent solution of carbolic acid or a 1 per cent creosol solution, should be applied to the udder and adjacent parts of the affected cow, also to the hands of the milkers, and to the udders of other animals likely to be exposed in any way to the infection.

Affected animals should be separated from the herd and hand milked last, or better still, by a separate attendant. They should be maintained under sanitary conditions in dry comfortable quarters with frequent change of clean bedding.

The ration should include a sufficient allowance of nutritious roughage such as clover or alfalfa hay. The grain allowance should be reduced and should include laxative feeds such as oats, bran and linseed meal. Clean drinking water should be accessible at all times and should be slightly warmed in cold weather. —A. A. Borland.

Which Shall We Tax?

(Continued from page 3)

tax collection is very evident by comparison of the cost of collecting taxes in Pennsylvania where the local system is in vogue with the cost in Ohio where the county system is in use. The amount of taxes collected by the two states is about equal. Yet it is estimated it costs Pennsylvania five and a half million dollars more.

The national government derives its revenues from tariffs, excise, inheritance and income taxes. In this connection, one thought is uppermost in my mind; that is, in changing national taxes the burden ought not be shifted from those able to bear it by lowering income taxes, and placing it over the general consumer thru the tariff or thru internal revenues such as automobile taxes.

Wise expenditure of tax revenue is just as important as greater equality in shouldering the tax burden. In Pennsylvania, we have established a budget for running the state government and a budget control office is in charge. This has proven a progressive step in the wise expenditure of public funds and has enabled our state to be placed on the pay-as-you-go basis.

Essential considerations for progress in the solution of the tax problems include the following points:

1. Be sure that assessments are equitable. Assessors should be persons qualified for their work by special training.

2. Make certain that all persons and sources of income are taxed upon the ability-to-pay principle, and thereby bring about the more equal distribution of the tax burden.

3. Adopt a plan which will give efficient and economical collection of taxes.

4. Follow a rigid budgetry system of state, county and municipal expenditures.

The above basic lines of improvement should result in the tax burden being equalized as between land and buildings and intangible property.

Four Medals Stand to Her Credit

Penstate's Pogis Hattie—the cow which recently completed the highest 305-day Jersey record ever made in Pennsylvania, by producing, with calf, 13,152 lbs. of milk and 721.86 lbs. of butterfat while on test.

It ends all my Milking Worries

What a satisfaction to go down the line at milking time—every cow without a trace of sore teats or udder. No hard milking; no loss of milk through restlessness and discomfort.

Bag Balm, the great healing ointment is compounded especially to keep in perfect health the delicate tissues of the udder and teats. It shortens the labor of milking by keeping the teats soft, silky, pliable.

For Caked Bag, Bunches, Inflammation, Sore Teats, teats cracked or chapped, stepped on, for any injury or cut, Bag Balm heals quickly. Often the healing is accomplished between milkings. Clean and pleasant to use—cannot taint the milk. Has hundreds of uses on the farm.

Big 10-ounce can, 60c. at feed dealers, general stores and druggists. Sent direct if your dealer is not supplied.

KOW KARE PEOPLE

This answers the question

"What about getting a milking machine?"

You can't tell how fast a horse can trot by judging the speed of a cow. And you can't tell what a milking machine can do for you until you use the Hinman.

Success for 19 Years Straight

There's no question about what *this* machine can do. It *has been* a success on thousands of dairies, *for 19 years straight.* Why? *Dependable. Simple.* Only 2 moving parts. No complicated mechanism to get out of order. Valve chamber *guaranteed for life of machine* and easy to clean as a tumbler. Shortest hose.

Gentle application of vacuum and *complete release* after every suction. Soothing—cows like it. Many prize cows milked with it—made their winning records—including the champion cow of England.

Findings and Facts

(Continued from page 17)

richer but the cows required 8 per cent more feed.

The quantity of water required by a dairy cow depends mainly upon three factors, air temperature, quantity of milk yielded, and amount of succulent material in the ration. In hot weather the cows drank 80 per cent more water than in cold weather. Cows yielding 40 pounds of milk daily will drink at least 50 per cent more water than similar cows yielding one-half as much. The greater the quantity of succulence in the ration the less will be the water drunk.

Water Turns to Milk

Cows watered twice daily drank 13 per cent more water than when watered once daily. Free access to water gave nearly 3 per cent greater milk production than watering twice daily and about 4 per cent more milk than watering once daily.

Sour milk was found to be less palatable than sweet milk but if the milk was not too cold the calves drank it without difficulty. The main trouble with sour milk is the fact that it cannot be warmed without wheying off and forming cottage cheese. It was, therefore, necessary to feed it cold. In the winter time the cold milk chilled the calves and they did not thrive on it so well as those fed sweet milk which could be warmed. However, in the summer time the sour milk gave just as good results as the sweet milk and in no case did it cause scours.

It is, therefore, apparent that in the summer time it is not worth while to go to any expense to keep milk sweet for calf feeding. Sweet milk one day or meal and sour the next was unsatisfactory.

When alfalfa hay was worth $25 per ton a mixture of concentrates was found to be worth on the average of $46 per ton, or in other words, one pound of a grain mixture, composed of 150 pounds hominy chops, 150 pounds of wheat bran, 50 pounds of linseed meal and 100 pounds of cottonseed meal was worth 1.85 pounds of No. 1 alfalfa hay.

New Vitamin Aids Conception

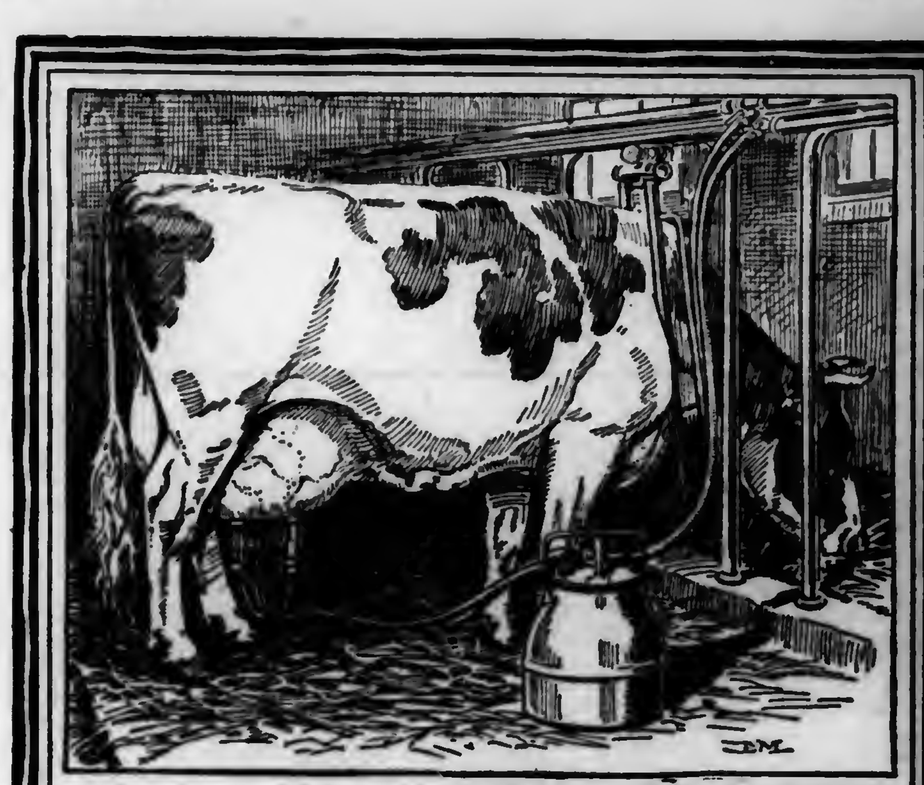
The idea in feeding sprouted oats is to add vitamin E, or the so-called reproductive vitamin, to the ration of female animals that are slow in conceiving. No claim is made that such feeding is likely to change any pathological conditions of the genital organs. Ofttimes, however, cows fail to conceive when there is nothing wrong apparently with the genital organs that can be detected by examination. It was thought that these animals would be the ones most likely to be benefited from the feeding of sprouted oats.

So far 16 animals fed sprouted oats became pregnant. Three animals with pathological conditions in genital organs sufficient to be considered hopeless became pregnant after feeding sprouted oats. Two similar animals did not become pregnant.

The average length of time that sprouted oats was fed was 68 days. The amount fed varies from 2½ to 5 pounds of the dry oats per cow per day.—A. A. Borland.

THE total digestible nutrients in ground buckwheat are worth about the same as those in oats or wheat bran, providing the buckwheat is properly mixed with other feeds, according to the Department of Animal Husbandry at the New York State College of Agriculture.

Buckwheat middlings contain 1532 pounds of total digestible nutrients in a ton and more than 24 per cent of digestible protein. This refers only to the middlings from which the hulls have been removed.



Now! More than 650,000 Cows Milked with De Laval Milkers

Proof of the overwhelming superiority of De Laval Milkers is shown in the rapidly increasing numbers which are being put to use by progressive dairymen everywhere. With more than 650,000 cows (including some of the highest producers in the world, and many owned by agricultural colleges, experiment stations, public institutions, producers of Certified, Special and Grade A milk) now milked with De Laval Milkers, the economy and efficiency of De Laval milking is firmly established.

Thousands of De Laval users say that it has made dairying more pleasant and profitable for them, that it milks their cows better and quicker than ever before, and produces more and cleaner milk.

If you are milking five or more cows by hand, a De Laval Milker will soon pay for itself. Your only regret will be that you didn't get one sooner. See your De Laval Agent or send coupon for full information.

Outfits for any size herd. Sold on easy terms.

34 per cent linseed meal.....	51.25@51.75

Millfeed firm, demand steady, supplies limited.

Mild Weather Weakens Feeds

Review of the Week Ending February 5

POTATOES.—The eastern markets continued dull and weak with liberal supplies depressing the demand. Prices showed a wide range on account of the quality and condition of the offerings but in general prices averaged lower. Most shipping points reported a slow demand and limited trading. Pennsylvania round whites were especially hard to move except when the stock was of fancy quality.

LIVESTOCK — The Chicago hog market was steady at the close of the week. Fed steers advanced 25@75c with lightweights and yearlings showing the least advance. Stockers and feeders were about steady while fat cows and heifers were slow. Fat lambs were steady but feeding lambs dropped 25c. Yearling wethers were firm and fat ewes higher.

FEEDS.—The market was irregular due to the milder weather in many sections. Wheat feeds showed a weaker tone. Cottonseed meal was steady and higher in some markets. Linseed meal advanced and gluten feed met a fair demand. Hominy feed was quiet.

GRAIN.—The wheat market held steady with a fair demand. Some wheat was being exported and there was a fair volume of domestic business. Receipts of corn were heavier and prices dropped about 1c per bushel. The oats market was dull except for seed oats and prices were generally ½c per bushel lower. Rye and barley held firm.

HAY.—The market was slightly weaker. Milder weather resulted in heavier receipts and lighter consumption. Receipts of timothy continued light at most points but were sufficient for the demand. Alfalfa hay held steady.

EGGS.—Receipts at New York were heavier and prices declined. The milder weather in producing areas was favorable to production and country costs were lower. Considerable stock is being used by the hatcheries but fairly large supplies are expected this week. Receipts of nearby eggs were fairly liberal but prices were about steady.

POULTRY. — The live poultry market was generally firm under light to moderate supplies. Fowls were in fair demand while chickens were fairly active. Broilers held firm with fancy stock bringing premiums. Dressed poultry was unusually dull and quiet under moderate receipts.

BUTTER.—The markets were generally firm during the week. The demand was fairly active and daily arrivals moved readily. Prices advanced from ½c to 1½c during the week. Most dealers are optimistic toward future conditions.

County News and Comment

Butler County, Pa.—January, a real winter month with snow and ice. Much farm work still undone. Corn in the fields, potatoes undug. No plowing done. Wheat looking very poor. Prices much the same. Eggs, 40c; pork, 15c; wheat, $1.25; potatoes, $2.—F. E. P., January 31.

Cameron County, Pa.—We had unusually cold weather here till 19th when it began to rain and rained four days and four nights. Ice blocked at Huntley, flooded a couple farms, making it so farmers couldn't get to barns to feed livestock for a day or two, and cattle standing in water all that time. Coal hauling and mining pretty slack just now. Not much else doing in this section. Eggs scarce. Butter, 55c.—Q. E. T., Jan. 26.

Fulton County, Pa.—Weather changeable. Alternate freezing and thawing. Very hard on grain and grass which has had no protection this winter. Cloverseed scarce and high. Many farmers had discouraging year in 1926 but nearly all are going at it again with renewed zeal. More certified potatoes will be planted than formerly and much seed corn will have to be bought. Prices: eggs, 31c; butter, 33c; calves, 13c.—T. H. T., January 29.

Lancaster County, Pa.—No snow. Freezing at night, thawing in day. Wheat fields not looking good. Grass fields about normal. Corn all housed, some have fodder still to put up. Butchering and stripping tobacco order of the day. Some have finished stripping and are delivering to packers at 12 to 15 cents for wrappers. Much tobacco is pole burnt in curing. This makes fillers which bring 2 to 3 cents per pound. Some crops are more than one-half fillers. Prices: wheat, $1.30; straw, $10@12; calves, 14c; hogs, 15@18c; chickens, 22@27c, live; dressed and drawn on Lancaster market at from 45c to 55c for capons; eggs, 35c for white at stores, 40@45c on Lancaster market.—C. R. F., February 1.

Lawrence County, Pa.—Cold weather continues. Ice has made travel almost impossible. In many instances at farm homes the most rigid economy in fuel was all that kept the fires going. Grain feed is high. Flour at local stores $2.50@3; timothy hay, $17; clover hay, $24; ear corn, 38c; country butter, 40@60c; fresh eggs, 50c, and more plentiful than a year ago.—M. L. V., January 28.

Lebanon County, Pa.—Wheat fields bare and in poor condition. Some ice stored last month. Public sale of livestock and implements almost daily occurrence. Some corn moldy in cribs. Chickens laying better now, and price of eggs coming down. Some corn to be husked yet. Many farmers hauling manure and cutting wood. Prices: wheat, $1.40; corn, 70c; oats, 50c; hay, $22; straw, $14; butter, 58c; eggs, 39c; milk, $2.65 cwt.—P. L. M., Feb. 2.

McKean County, Pa.—One exhibit at Products Show in Harrisburg was a bull association exhibit from McKean County. Ours is only county in United States containing bull associations of the four major breeds. McKean County dairymen expect next year to make their county the first in Pennsylvania to have 100 per cent purebred dairy sires. The McKean Grange Mutual Fire Insurance Company, which held its annual meeting this month, shows a very healthy growth. Month of January one of coldest months in years. Mercury as low as 25 degrees below zero. Prices: eggs, 50c; apples, $2 bu; potatoes, $1; dressed hogs, 18@20c; beef, 12@14c.—F. J. H., January 29.

Montgomery County, Pa.—A blizzard on January 15 had country roads blocked several days, but at present fields are bare. Fewer farm sales than usual. Dairy cattle still bringing high prices but beef stock bringing only around 6c. Fat hogs still bringing a good price, 13c. Other prices: veal calves, 14c; chickens, 28c; eggs, 38c; wheat, $1.30; oats, 65c; corn, 15c.—C. N. D., February 1.

Northumberland County, Pa.—Severe cold weather prevails with little snow. Have had no thaws since winter set in. Some corn in moldy condition in the crib. Seed corn shows very poor germination tests so many will plant last year's seed. Prices: wheat, $1.30; apples, $1; potatoes, $1.50; pork, 16@18c; chickens, 26c; 3 per cent milk, $2.25.—W. C. G., January 29.

Sullivan County, Pa.—Much snow and cold weather. Roads have been kept open with difficulty. Mail service constantly hampered and often broken up entirely for few days. However, wheat fields have been covered by snow at all times. There has been less timber cut in county this winter than in any previous winter. Ice cutting going on apace. Ice is fine. Eggs, 40c; butter, 50c.—M. G., January 28.

Union County, Pa.—The Lewisburg Local of the Dairymen's League had a very interesting election, a dinner and social time on the 29th. County Agent L. E. Craumer and Miss Harmony Hutchison, the Home Economics worker, with a few others were there as guests, and gave very good talks about cooperation among farmers in the milk business, in politics and in buying for cash by being a patron of a bank which is willing to help farmers who are worthy of credit. An interesting meeting was held in the Court House recently to hear the T. B. eradication question discussed by Drs. Bishop and Brunner of the state force and by the farmers of this county, who are waiting for the second test. Many questions were asked and answered by these two veterinarians, so that there will be less opposition in this second test. Wheat had a snow covering for two months, which was needed. Some crops of wheat and corn are being marketed at $1.30 and 65c a bushel, respectively. Tested seed corn is germinating very poorly. The county school directors' convention will be held on the 18th. Public sales of farm stock will begin during this month, due to a shortage of hay. Much corn is still in the fields to be husked and stover is hauled in only as fast as it is fed. Two carloads of western horses have been sold in the county lately.—J. N. G., Feb. 1.

Children Pay on Time

THE sixth annual report of the Frelinghuysen Fund, which was founded in 1921 by President Joseph S. Frelinghuysen, of the New Jersey State Board of Agriculture, to provide for the purchase of purebred livestock by children, has just been issued.

"During 1926 the total amount loaned was $10,616, which compares with an average for the previous five years of $8950," Mr. Frelinghuysen stated. "While only a little more than $17,000 is now outstanding, the total amount loaned since the fund was established is over $55,000 distributed in 706 loans.

"Response on the part of New Jersey boys and girls to the opportunity offered them to become breeders of livestock is increasing from year to year. Practically all of the young people have proved their worth by the business-like way in which they have paid their notes when due. It is significant that the few difficulties encountered in collection have occurred where the parents or guardians have taken over the animals and have not permitted their children to carry on their undertaking themselves."

Cabbage Sacked Nowadays

THE practice of shipping late cabbage in bulk has been almost a universal practice until this winter. During November three cars of New York State cabbage were received in Philadelphia packed in 100-pound sacks. This stock was bought up quickly at prices considerably higher than bulk stock. During December the number of cars of sacked cabbage increased.

January showed a greater increase and this stock has ranged from $1.20 to $1.50 per sack, which is equivalent to $24 to $30 per ton, while bulk stock moved slowly at $15 to $25. There is a cost to the shipper for sacks and packing, but on the other hand he does not have the shrinkage of the bulk stock to contend with.

The bulk cabbage in Philadelphia is handled at Second and Master streets, while sacked stock is sold at the Market House. The convenience of having cabbage at the latter point, where the jobber buys the majority of his supplies is appreciated and dealers at Second and Master are feeling the competition.

At present the trade is wondering what will happen when warmer weather comes and the cabbage requires trimming. The volume of this sacked stock is likely to increase since it can be handled and unloaded to better advantage.—R.

Mussolini Drinks Alone

SAYS Mussolini, the Italian Dictator, as quoted by the National Dairy Council: "My breakfast simply consists of a glass of milk. . . . This one glass of milk contains enough nourishment to sustain me until the midday meal six hours hence. It is always taken when I am alone, for I am not a great lover of company at table. The greatest honor I can bestow upon anyone is to invite them to lunch. It would even be an honor for my own brother. Cesira, my servant, puts the milk on the table and then withdraws. She is 40 and silent, uncommunicative."

Bankers Entertain

FOR the past three years the banks of Wyoming County have entertained the boy and girl club members at a dinner during the county products show. This year 125 boys and girls were eligible.

As a special feature of the program this year the girls in the sewing clubs exhibited their articles and explained how they were made and the boys reported on the forestry, pig, potato and poultry clubs to which they belong.

Mr. Morgan, program leader, acted as toastmaster at the dinner. He called upon the bankers present, who in short talks, expressed their continued willingness to support the movement which they have undertaken in the interest of the boys and girls.

While visiting the county seat the club members were given a little idea about local government. They were taken to various offices and thru the jail.—J. J. J.

To Formulate Plans

THE following committee has been named to perfect plans for the staging of a big poultry exposition under the auspices of the New Jersey State Poultry Association. Prof. Willard H. Allen, extension specialist in poultry husbandry, New Jersey State Experiment Station; J. I. Lyle, Plainfield; Arthur Eldridge, Mays Landing; John H. Weed, Vineland, and Emil Ankemiller, Egg Harbor.—J. G. P.

New Market Head Appointed

ELBERT MERCKER, Washington, D. C., has been appointed chief of the Bureau of Markets, in New Jersey, with headquarters in Trenton. This fills the position made vacant early last fall by the resignation of A. L. Clark.

Mr. Elbert Mercker

Mr. Mercker comes to New Jersey with a background of marketing experience, which, according to Secretary William Duryee, makes him one of the outstanding marketing experts in the country. He is a former New Jersey boy, graduating from Rutgers College in 1915 after finishing his early education in the public schools of Jersey City. Following his graduation from Rutgers, he became associated with one of the leading commission houses of New York City, which specialized in New Jersey fruit and vegetables, and arose to a position of trust and responsibility in less than three years.

Gathering Fund of Experience

When he resigned, Mr. Mercker became associated with the U. S. Department of Agriculture, doing field inspection work in the Bureau of Markets for four years and serving in all parts of the United States east of the Rocky Mountains. He then further specialized in shipping point inspection in the seaboard states.

While engaged in this work in the Atlantic Coast district, Mr. Mercker performed some outstanding work in the standardization of vegetables and containers. He also has had an active hand in the development of rural credits and the storage and warehouse of farm crops in the South.

Mr. Mercker's experience in the federal field will serve him well when he takes up the problem of marketing the varied lines of farm crops that are grown in New Jersey. New Jersey farmers and growers are highly pleased with the selection of Mr. Mercker to fill this important marketing position.—A. K.

Your banker knows what a garden is worth

Planet Jr.

HE KNOWS that the farm which raises its own food is a self-sufficient farm. He knows that a good home garden is the best paying crop on the place. He knows that the cash saved by a garden is a big step to financial independence.

Just think, too, of crispy, juicy lettuce; tender, melting peas; smoking, buttered corn! That's what a garden gives you. And for so little work when you plant and hoe with Planet Jr. They make gardening so easy, they save so much time, they cost so little and last so long, there's no excuse for paying big prices for inferior vegetables.

Write for some seed catalogs—and the Planet Jr. catalog of garden drills, wheel and horse hoes. Free with our useful booklet, "Home Gardens—How to 'Grow What You Eat'".

Your Old "Acme" Deserves New Coulters

IF you have an "Acme" Coulter Harrow made any time since 1890, it probably needs only a new set of Coulters to put it into first-class condition. Ask your dealer for them.

"ACME" Coulter Harrow

Is built for use with large Tractors and with Garden Tractors, also for one horse, two, three and four horse (or mule) teams. Use it for making seed beds and for tilling orchards.

Write us for interesting folders.

Wear the Brooks Appliance, the modern scientific invention which gives rupture sufferers immediate relief. It has no obnoxious springs or pads. Automatic Air Cushions bind and draw together the broken parts. No salves or plasters. Durable. Cheap. Sent on trial to prove its worth. Beware of imitations. Look for trade-mark bearing portrait and signature of C. E. Brooks which appears on every Appliance. None other genuine. Full information and booklet sent free in plain, sealed envelope.

Mr. C. E. Brooks

Brooks Appliance Co., 307 State St., Marshall, Mich.

Doctor Lipman's Weekly Talk on Soil Fertility Problems

Conditions Warrant Educational Work

ONE of the agricultural educators interested in agricultural extension teaching in the East has raised a question of more or less general interest. He writes:

"I was privileged to hear your enlightening and inspiring address on the potato fertilizer situation. Particularly illuminating and timely was the part dealing with the introduction of the high-analysis mixed fertilizers. This is a subject of which, so far as I know, there appears to be some difference of opinion among fertilizer authorities. . . .

"Your explanations before the Potato Association have cleared the matter up for me in a general way. There are still, however, some uncertainties of a practical consideration. If we are to recommend such fertilizers, what are we to tell our farmers with regard to securing the proper distribution of such concentrated materials? Assuming that the use of these fertilizers is to be encouraged in the localities where they are being favored, would you advise us to attempt to introduce them in the localities where they are not at present in vogue?

"I realize, of course, that the subject demands an investigation of prevailing prices and other conditions in the particular locality under consideration and it is my intention that we should take these things into consideration, but I am quite sure that an expression of your opinion on this matter would be of great value to us."

Progressive farmers find no difficulty in distributing and safely using the so-called concentrated fertilizers. Tests made at the New Jersey Experiment Station and elsewhere show that some of the more efficient types of fertilizer distributing machinery will uniformly apply as little as 50 or 60 pounds of fertilizer per acre. Then there is always the possibility of mixing the concentrated chemicals with such materials as sifted loam soil, fine sawdust, finely divided peat, finely ground corn cobs or such relatively cheap products as garbage tankage, dried activated sludge, castor pomace and a number of other materials.

Altogether, we must face the situation as it exists in the fertilizer market today. The fertilizer industry is being compelled to make economies both in manufacturing and selling fertilizers. Concentrated fertilizers, because of the lower costs of handling and transportation, offer promise of displacing more or less rapidly the less concentrated products.

We already have on the market mixed fertilizers containing well above 25 units of plantfood. There is no reason why the progressive farmer could not adapt himself to the use of concentrated fertilizers carrying 40 to 50 units of plantfood. Educational work on the subject would be warranted and all extension agricultural organizations should prepare themselves to be able to give to the farmers accurate and helpful information concerning concentrated fertilizers.—J. G. Lipman.

A Million Dollars a Day

THE steady increase in state, county and municipal debt is the greatest handicap to prosperity, according to William P. Helm, Jr., a standard authority on public finance. In a recently-published article he says:

"At the present time, local taxpayers are spending not less than $1,000,000 a day for interest on their borrowings. This sum is greater, by a double handful of millions, than the entire revenue obtained by all the states from direct property taxation. It is increasing at the rate, it is estimated, of about $40,000,000 a year, or more than $100,000 a day."

Taken from the Week's News

IT REQUIRES a million men to produce the two billion dollars worth of food being consumed by insect pests in the United States alone, according to estimates of the Crop Improvement Bureau.

§ § §

JESSE M. HUFFINGTON, since 1924 county agent of Anne Arundel County, Maryland, has joined the extension staff of the Pennsylvania State College as vegetable gardening specialist. Mr. Huffington has had extensive experience in the gardening business in Maryland.

§ § §

THE PENN STATE EARLIANA tomato, a variety developed by Dr. C. E. Myers, of the Pennsylvania State College, averaged 49,440 pounds, or practically 25 tons of tomatoes per acre, in the gardens of the Iowa State College.

§ § §

NEW JERSEY has adopted United States Standard Grades for apples, peaches, white and sweet potatoes. Their adoption by growers is not compulsory but anyone who undertakes to sell by these grades must be sure that his products conform to the requirements of the U. S. Standard.

§ § §

A HEARING is being held in Washington on February 8 to determine whether it is advisable that New Jersey and Connecticut should be included in the European corn borer quarantine area. If quarantined the movement of corn, broomcorn, sorghums and sudan grass from these states will be prohibited or restricted. In Connecticut several vegetable crops and flowers may also be included in the regulations, due to the different habits of the borer in New England.

§ § §

VIRGINIA shipped 1697 carloads of cattle to the Lancaster, Pa., stockyards in 1926. Nearly 1200 carloads came from St. Paul, Minnesota. Total carlot receipts were 5977 carloads, containing 166,516 head.

§ § §

FEDERAL Japanese beetle quarantine regulations will prevent South Jersey growers from shipping their canhouse tomatoes to Baltimore this year.

§ § §

CORNELL UNIVERSITY, Ithaca, N. Y., will hold a Poultry and Egg Marketing School the week of February 28 to March 5th. The "tuition" fee is $5.00, and that includes a banquet ticket. Monday and Tuesday will be devoted to the preparation and selling of market poultry. The next three days egg quality, packing, grading, shipping and selling will be the subjects studied.

§ § §

FIFTY COW TESTING associations have been in operation in 39 counties of Pennsylvania during the last year. There were 1175 members and about 18,200 cows were tested.

Corn Cob Supplies Overdose of Fiber

I have fifty pigs weighing from 50 to 100 pounds. Am feeding corn-cob meal and ground oats. Please tell me how to make a good ration by using tankage or meat meal.—C. R. G., Lancaster County, Pa.

The grain ration which is now being used is lacking in protein and has too much crude fiber. The corn cob has no feeding value and has a tendency to provide too much bulk for a desirable ration. It would be more desirable to feed the corn as shelled corn or corn meal with the cob eliminated. In case that is not convenient it is better to feed the corn as ear corn and mix the oats and tankage or fish meal.

A desirable combination for these pigs can be made up of 70 pounds of shelled or ground corn, 20 pounds of ground oats and 10 pounds of tankage. The tankage is preferable to the meat meal. In case the ear corn is used it can be used in approximately the same amount to the oats and tankage or the oats and tankage can be supplied in a self-feeder where the pigs can eat as much of the oats and tankage as they need in addition to the corn.

A very desirable and simple mineral mixture is made as follows: 20 pounds salt, 4 pounds steam bone meal and 40 pounds ground limestone. This should be put in a box or some place where the pigs can eat as much as they desire.—W. H. T.

Special Treatment Is Apt to Defeat Purpose

PUTTING cattle on the market in the best possible condition with the least shrinkage in weight between the feed lot and market is the concern of every feeder. Numerous suggestions of special feed and special handling have been made, but as a rule very little is gained by giving cattle this "special treatment."

The best results are usually secured by avoiding unusual or abrupt changes in the ration of the cattle just prior to shipping. Marked changes have a tendency to throw some of the cattle off feed with the result that they will not take a normal fill when they reach the market and will appear out of condition. Cattle that take an abnormal "fill" when they reach the market are easily detected by the buyer and are discounted.

Just Before They're Loaded

Highly laxative feed or succulent feed should be withheld a day or two previous to loading. Heavy grain allowance is also undesirable. Allow the cattle all the hay they will consume. If the animals must be driven some distance to the loading point it is well to allow plenty of time, so that they can be driven slowly. If hurried they are likely to become overheated and some will begin to scour. This will result in a heavy loss in weight while in transit.

Cattle should be allowed to rest and to cool off for several hours before being loaded. The cars that are used should be well bedded and some hay put in for the cattle to consume while in transit. It is desirable to have the cattle reach the market without unloading for feed and water if the shipment can be made in less than thirty-six hours.

Cattle handled in this way should reach the market in good condition, take on a normal fill and sell to the satisfaction of the shipper.—W. H. T.

A BANK, a dairy manufacturing company and the county agent cooperated to enable eight Sullivan County farm boys to attend this winter's short courses in agriculture at State College. The bank and the dairy concern furnished the money, $800, and the county agent found the boys. They have agreed to farm in the county for at least a year after completing the course.

Texas Judged Champion of All

STATE FARM PRODUCTS SHOW
BABY BEEF EXHIB
"TEXAS"
GRAND CHAMPION BABY BEEF AT STATE FARM SHOW HARRISBURG
RAISED BY RALPH WILLIAMS YORK SPRINGS PA.

Texas, the fifteen-month-old baby beef raised by Ralph Williams, York Springs, Pa., was judged the Grand Champion at the State Farm Products Show. When the 282 baby beeves were sold at auction Texas brought $402.75. Tears were much in evidence in the eyes of the boys and girls as their pets were put under the hammer of the auctioneer.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

HORSE HAS BROKEN BONE.—I have a mare that weighs 1600 pounds, that fell on the ice and broke the bone in her hip, the ilium. Is there any use in trying to doctor her up? Is there any chance of it getting better?—J. U., Metal, Pa. It is doubtful whether this animal will recover with a broken ilium. The heavy muscles tend to draw the ends apart and prevent proper union. Would advise you to follow the suggestion of your veterinarian as he is able to make an examination to determine the relation of the broken ends.

DOG SCRATCHES.—I have a police dog. She is always scratching. Awhile ago she had sores. Now they are healed, but she continues to scratch.—F. J., Dover, N. J. Examine the dog for fleas or lice. Wash the dog in warm water containing 2 per cent of creolin, then dry carefully. Repeat in seven days. Burn bedding and litter in kennel and spray kennel with a stronger solution of antiseptic. Repeat if necessary.

COW GIVES THICK MILK.—I bought a young T. B. tested cow about 3 months ago. Lately she has been giving thick milk, sometimes out of one teat and other times out of another. Do you think she can be cured?—J. V. H., New Brunswick, N. J. This may be due to an infection. Milk the affected parts every hour. The streams of milk should be run into a pail containing an antiseptic solution. Application of heat to the part is desirable. The diet should be cut down until a dry ration is fed. The internal medication will depend on the condition of the animal and should be carried out under the direction of your local veterinarian.

SHEEP PULL WOOL.—I would like to know why sheep pull wool off each other.—T. E. A., Stewartstown, Pa. Examine these sheep carefully for ticks, lice or scab mites. Dipping will control the condition. The kind of dip to be used will be determined by the kind of parasite. After examination to determine the condition you may write us for additional data.

PROBABLY PARASITES.—The other day when my nine-week-old pigs came to eat they took a taste, went backwards and stiffened out. After I worked with them awhile they came again. Two died since. Seemed to choke to death. One veterinarian said they had worms.—H. O. H., Grove City, Pa. The symptoms indicate parasites. Rotation of the hog lots and worming of the pigs will prevent this difficulty.

RUNNING FITS OR HYSTERIA.—Have a pup two or three months old that takes fits. Have given him worm medicine but never found any worms.—L. B., New Castle, Pa. This condition is probably due to faulty diet. The causes of this condition are parasites, a dietary deficiency, such as excessive feeding of corn meal, a meatless or nearly meatless diet and an excessive allowance of carbohydrates such as potatoes, white bread or macaroni, over-loaded stomach, indigestible material, foreign bodies in the stomach or intestines and constipation. Dogs need meat, as that forms an essential part of the diet if dog is allowed choice of feed. Your veterinarian should be consulted and an attempt made to determine the cause of the trouble. If it is due to faulty diet this can be changed. If due to parasites these can be controlled by the use of proper worm medicines.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

One Million Farmers Buy From Brown

For 38 years my Direct-From-Factory Freight Paid plan of dealing has enabled my customers to save money. I give them bigger, better values than they can get elsewhere; that's why my business has grown year after year until today am serving over a Million satisfied customers. Read the letters which are typical of thousands I get every year.

Saved 20c a Rod	Saved $13.00 on Roofing	Saved 1/3 on Paint
"I received my 40 rods of fence and it was far better than I expected. My neighbors all say it is the best fence they have ever seen. I saved 20c a rod by sending my order to you. I will never use any other wire but Jim Brown's."—W. G. VANCLEAVE, WOODS BEND, KY.	*"The roofing I bought from you is the best I ever laid. It lays as smooth as a planed board. I saved at least $13.00 besides the freight by ordering from you."—THOS. SHULL, WOODSTOWN, N. J.*	*"I will say that you put out a first class paint. The building on which I used it looks 75% better since it is painted. I saved about 33⅓% on the price of the paint, and am well pleased."—FRED. C. FIETSAM, MARION, ILLINOIS.*

Now just a word about QUALITY. Low prices don't mean a thing unless the quality is right. That's the point I to emphasize. I believe I make and furnish my customers with the BEST QUALITY Fence, Gates, Steel Posts, Barb Wi Furnaces, Roofing and Paint that it is possible to produce. That's why everything you buy from my factory carries own personal guarantee — a guarantee that insures you quality and satisfaction. Not only do I give better quality at lower prices, but

I ALSO PAY THE FREIGHT

That's another big saving. My low rock bottom prices are all you pay—I pay the freight charges to your railroad station. Orders are shipped within 24 hours from my three big factories at Cleveland, Ohio, Adrian, Michigan, Memphis, Tenn. — also from warehouses at Kansas City, Mo., and Davenport, Iowa. Fill out and mail coupon below—get my Bargain Cut Price Catalog and see for yourself the money you can save.

THE PROUD DISTINCTION OF FOLLOWING COLLEGE LEADERSHIP

AMCO FEED MIXING SERVICE is proud to follow the leadership of the colleges of agriculture and thousands of experienced home mixers. In doing this it brings to the users of its dairy feeds the results of the experiments on 48 experimental farms in the United States, and what the best practical feeders know about the game.

College experimental work is slow but sound. Recommendations based on such findings are safe. Amco Feed Mixing Service formulas are these experimental results in usable form.

All the feeding principles followed today are the results of college experiments *made sound through practice*. No Amco Feed Mixing Service formula is ever used until it has been carefully studied and checked by several agricultural college representatives in different states and its suitability for its purpose determined.

The College Feed Conference Board has worked out and adopted two principles. First, the Board has adopted certain formulas that will remain unchanged except in the light of new knowledge brought out by careful, sound experiment work. Such formulas are available through Amco Feed Mixing Service in Amco 24% Universal Dairy Feed and Amco 20% National Dairy Feed.

In conformance with the second principle of the College Feed Conference Board, Amco Feed Mixing Service offers Amco 24% Dairy, Amco 20% Dairy, and Amco 32% Supplement. These are MARKET FEEDS. The formulas of these feeds reflect the market for ingredients and may change as often as once each month if the supply and price of ingredients suggest a change.

Such a change, however, can never be dangerous because it is always subject to the approval of experts who check to see that the completed feed meets the requirements of the practical feeder. WHEN A CHANGE IS MADE IT IS MADE PUBLICLY. THE NEW FORMULA IS IMMEDIATELY PRINTED ON THE TAG. No feeder need then use it unless *he himself* is convinced that it is what he wants. These safeguards make the market feeds as safe and sound as the feeds with fixed formulas.

The market feeds are always cheaper per pound of digestible feed because expensive ingredients available only in small quantities are left out. They are cheaper because the ingredients which are cheapest in any one month are used a little more freely and the others reduced. The guarantee is not changed. Very rarely are the ingredients themselves changed, instead a shift is made in the quantities of ingredients to make the feed a better buy. The total digestibility is changed only within narrow limits.

This is Amco Feed Mixing Service: unique, safe, sound, and distinctive. Make it your own. The formulas are public, and protected.

The distributing service of Amco Feeds is as unique as the mixing service. The feeds move as directly as possible from manufacturer to consumer. Manufacturing costs and distributing costs go down with volume.

Amco Feed Mixing Service also manufactures and distributes a full line of Poultry Feeds, made according to the recommendations of the Colleges of Agriculture, a 12% Fitting Ration, a Calf Meal, a Horse Feed, a 28% Supplement Hog Meal, and "June Pasture."

If you haven't an Amco Feed Mixing Service Agent in your town, write to the Division Office, Municipal Building, Muncy, Pa.

Ready Answers to Everyday Questions

The Holiday Markets

LEGAL AND HEBREW HOLIDAYS FOR THE YEAR 1927

with a list of poultry, etc., in demand and the best market days preceding the holidays.

NEW YEAR ....January 1
Best Market Days........December 27-31
MOST IN DEMAND—Live turkeys, geese, fowls, capons, guinea hens, rabbits, goat kids, squabs and pigeons.

PURIM ....March 18
Best Market Days..........March 15-17
MOST IN DEMAND—Live fowls, hen turkeys, squabs and pigeons.

PASSOVER ....April 17-18
Best Market Days............April 11-15
MOST IN DEMAND—Live turkeys, fat fowls, ducks and geese.

EASTER ....April 17
Best Market Days ....April 11-15
MOST IN DEMAND—Live fowls, capons, ducks, geese, rabbits, squabs, pigeons and baby bunnies; also goat kids for the Italian trade.

LAST PASSOVER..............April 23-24
Best Market Days..............April 19-21
MOST IN DEMAND—Prime quality of live poultry of all kinds; also squabs and pigeons.

DECORATION DAY..............May 30
Best Market Days..............May 26-27
MOST IN DEMAND—Live broilers and prime stock of all kinds, including squabs and pigeons.

FEAST OF WEEKS..............June 6-7
Best Market Days ....June 1-2
MOST IN DEMAND—Very little extra live poultry for this holiday.

INDEPENDENCE DAY...........July 4
Best Market Days...............July 1-2
MOST IN DEMAND—Live broilers squabs and pigeons.

JEWISH NEW YEAR.. September 27-28
Best Market Days .....September 22-24
MOST IN DEMAND—Live fat fowls, turkeys, ducks, geese, squabs and pigeons.

DAY OF ATONEMENT..........October 6
Best Market Days..........October 3-4
MOST IN DEMAND—All prime livestock, especially White Leghorn chickens, roosters, squabs and pigeons.

FEAST OF TABERNACLES...Oct. 11-12
Best Market Days...........October 7-8
MOST IN DEMAND—Live ducks, fowls, fat geese, squabs and pigeons.

COLUMBUS DAY..............October 12
Best Market Days ....October 7-8
MOST IN DEMAND—Live chickens, fowls, rabbits, squabs and pigeons.

FEAST OF LAW..............October 19
Best Market Days.........October 14-15
MOST IN DEMAND—Prime quality live poultry of all kinds.

THANKSGIVING DAY.....November 24
Best Market Days.......November 21-23
MOST IN DEMAND—Live turkeys, geese, fowls, capons, guinea hens, rabbits, squabs and pigeons.

CHRISTMAS DAY..........December 25
Best Market Days........December 20-21
MOST IN DEMAND—Live turkeys, geese, fowls, capons, guinea hens, rabbits, goat kids; also squabs and pigeons.

Shippers should note these changes carefully and time shipments so as to reach market on the best market days.

Swine Sanitation System

"THE McLean County System of Swine Sanitation" to raise pigs free from disease and worms, devised by specialists of the U. S. Bureau of Animal Industry, was first tried out in McLean County, Illinois, hence its name. Wherever carried out thoroly it has proven successful.

The McLean County System as successfully demonstrated is most simple and inexpensive. There are just four steps in the plan and none is difficult.

1. Clean and scrub the farrowing quarters thoroly with boiling water to which has been added lye at the rate of one pound to 30 gallons of water. The hot water kills the worm eggs, the lye loosening the dirt and insuring penetration. After cleaning, spray with a good coal tar disinfectant, one pint to four gallons of warm water, to destroy all disease germs.

2. Wash the sow's sides and udder with soap and warm water before putting her in the cleaned farrowing pen. This removes worm eggs from the sow so the little pigs cannot get them when they suck.

3. Hauling (not driving) the sow and pigs to pasture where no hogs have run for at least a year. Preferably this pasture should be a field which has been cultivated since last used by hogs. The sow and pigs should not be driven as they would be pretty sure to pick up infection from the old runs.

4. Confine the pigs to clean pasture for at least four months. After four months pigs are seldom injured to any extent by exposure to worm contamination.

Prices, Yields and Exports of Wheat

WHEAT PRODUCTION IN THE UNITED STATES BY FIVE-YEAR PERIODS

Five-year Period	Average annual yields, bushels.	Average farm price	Av. yield per acre.	Per cent exported.
1901-1905	700,219,000	$0.72¼	14	19.3
1906-1910	671,600,000	.86½	14.7	17.3
1911-1915	862,161,000	.86¾	15.4	18.5
1916-1920	819,083,000	1.85	13.7	30.1
1921-1925	802,175,000	1.11¼	14	25.1

An examination of the above table will show that farmers have not extended their wheat acreage, as is sometimes claimed. In fact, the production per capita is less now than it was twenty-five years ago. It will be noticed also that the average acre-yield has not risen in that time. The figures are 5-year averages, a better basis of comparison than the year-to-year method.

Corn Borer Control

THE European Corn Borer is the most destructive insect pest of corn in Pennsylvania, and everything possible should be done to keep it under control.

1.—Do not look for borers before corn is in tassel. They first burrow in the tassel, which weakens and falls. **FALLEN TASSEL IS USUALLY THE FIRST SIGN OF INFESTATION.**

2.—The borer is dirty yellowish or brownish white, with dark brown or black head. Naked in appearance, with four tiny dark dots across the back of each joint. One inch long when full grown in fall. Found from late summer until spring in tunnels in stalk, stubble and cob. **NOT FOUND BELOW GROUND.**

HOW TO CONTROL CORN BORER

3.—To kill borers the corn plant must be used completely or **ABSOLUTELY DESTROYED. EVERYBODY SHOULD DO THIS.**

4.—**CUT SWEET CORN TWO INCHES FROM GROUND WITHIN TWO WEEKS AFTER EARS ARE OFF.** Feed direct to livestock if possible. Otherwise see that it is shredded, ensiled, or burned immediately.

5.—Cut field corn, with binder or by hand, to a **SIX-INCH STUBBLE OR LESS.** A sharpened hoe with short handle is superior to the corn knife for low cutting.

6.—**THE SILO IS YOUR BEST WEAPON AGAINST THE BORER.** Many are killed in cutting—the rest die in the silage.

7.—**SHRED ALL DRY FODDER.** This practice more than pays for itself in other ways than borer control.

8.—If impossible to arrange for shredding of dry fodder, **KEEP UNEATEN PORTIONS OUT OF MANURE,** dry them and burn.

9.—**PLOW STUBBLE LAND CLEANLY AND DEEPLY** in fall or spring. Throw stubble to bottom of furrow using chain to cover all debris. Cultivate with disc harrow to prevent dragging up.

10.—**POLE DOWN TOPPED CORN AND STANDING STALKS** when brittle with frost. Rake into windrows and burn when dry. Plow cleanly following this treatment.

11.—In spring burn all unused whole fodder, refuse stalks about barnyard, neglected shocks or standing corn by May 15.

12.—**SHELL** all corn and **BURN COBS** by May 15th.—G. F. MacLeod, Pennsylvania State College.

Care of Wood Surfaces

To Remove Paint or Varnish from Floor

1 lb. potash (lye) to 6 qts. cold water, or
1 lb. washing soda to 5 qts. boiling water

To Bleach Floor

½ lb. oxalic acid crystals (poison)
½ gallon water (hot)

Apply with old broom. Let stand on floor an hour, then wash with clean water.

To Make Wax

⅛ lb. beeswax and
⅛ lb. hardwax (parowax or paraffine)
1 pt. turpentine

Shave wax into a pint jar. Set jar in pan of water. Heat until wax is soft. Remove from fire and stir into this jar only what turpentine it will hold. Stir until like thick batter, then set in cool place.

To Clean Soiled Wax Floor

Spots removed with soft woolen cloth moistened with turpentine.

A Wood Filler

1 part boiled linseed oil
1 part Japan
1 part benzine
Best whiting (enough to make a paste)

(Benzine inflammable. Do not mix where there is a fire.)

Color the above with burnt umber and sienna for walnut; add a little Venetian red for mahogany; use yellow ochre and a trace of burnt umber for oak. Apply with cloth, brush or sponge. Rub off the surplus and allow to dry.

Crack and Crevice Filler

1 part turpentine
3 parts linseed oil
Enough whiting to make a paste the consistency of cold cream

Color as directed above. Clean all dust out of the crack. With a small brush apply varnish to the sides of flooring. Pack filler into crack. Smooth surface while filler is soft, using spatula or other tool.

To Stain Floor or Wicker Furniture

1 oz. potassium permanganate crystals
1 qt. cold water

Apply with a sponge or clean paint brush. This makes a brown stain.

To Polish Furniture

1 cup turpentine
1 cup linseed oil
1 teaspoon vinegar

To Clean and Polish Table Tops

Rottenstone and linseed oil

For removal of white spots from varnished surfaces, pour on some oil. Put rottenstone in oil. Rub with circular motion, adding more oil if necessary.

For Damp Dustcloth for Woodwork and Leather

3 tablespoons linseed oil
1 tablespoon turpentine
1 quart very hot water

Stir well and let cool. Wring clean, soft cloth out of this, shake cool, and go over woodwork. In ten minutes wipe dry. An excellent floor cleaner.

Sticky Chairs

The cause of chairs becoming sticky is due to either poor varnish or paint, or to the article having been kept in a close, damp place where there is little or no ventilation. Sometimes the trouble comes from revarnishing or repainting over a greasy surface. In any case, where the varnish or paint is sticky, remove the varnish or paint. Clean the wood thoroly by washing with alcohol or benzine (inflammable). Allow it to dry and refinish.—Home Economics Department, New Jersey College of Agriculture.

Oat Seed Treatment

Formaldehyde Treatment for Smut

Consisting of 1 pint formalin (40 per cent formaldehyde) to 40 gallons of water. Soak the seed in this for 10 minutes, stirring thoroly or sprinkling seed with solution after spreading on a clean floor. Shovel the grain over several times during the sprinkling so all seed is moistened, shovel into a pile, cover with sacks for 2 to 6 hours and spread out to dry or sow at once. Forty gallons solution will treat from 40 to 50 bushels seed.

If you want extra traction and long tread wear in addition to balloon tire comfort, be sure you get this quiet-running *new type* Goodyear All-Weather Tread

Are you overlooking *something?*

Maybe you're missing one of the biggest factors in tire economy without knowing it.

You are if you're denying yourself the benefits of the service performed by your local Goodyear dealer.

He sells the world's greatest tires. His prices are low. He knows the right size and type of tire for you.

He will mount your new tire on the rim for you, fill it with air, and afterward help you care for it so it will deliver you its maximum performance.

If you've been sending away for tires you've been overlooking something worth having.

Prove it, next time, by giving your home town tire merchant a chance.

See how much it means to you in dollars and trouble saved to enjoy the quality and service advantages of the Goodyear policy.

This policy is: *to build the greatest possible value into Goodyear products, and to provide facilities so that users can get all this inbuilt value out.*

Goodyear makes a tire to suit *you*—whether you want the incomparable All-Weather Tread Goodyear, the most famous tire in the world, or the lower-priced Goodyear standard quality Pathfinder

Goodyear Means Good Wear

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS.

BY R. P. KESTER

I WAS sitting at home quietly reading the other Sunday afternoon when the telephone rang. I took down the receiver and heard a telegram read, stating that father had died two hours before. It was like a bolt out of the clear sky. I would not have been surprised had it been about mother, because I had been out home four weeks before to see her and was prepared for bad news. But father—he who was always well; he whom we had always taken for granted! The fact that he had lived more than four score and five years—hale, hearty, and always active—did not prepare us for the news.

◆ ◆ ◆

MY INTEREST in the magazine I was reading was gone. As I sat in the gathering twilight of the quiet Sunday evening, a thousand memories came to life—things I had not thought of for many, many years. I could see him as I first remember him quietly and persistently busy, working early and late, trying to carve a home for his little family out of a long-neglected and run-down place. I could see him plowing among the big pine stumps, and gathering the meager crops a half century ago; see him cutting firewood in the wood yard; see him when we lived in the old story-and-a-half house as after supper he sat reading with the only light, a candle, held between his face and his paper; see him when, as eight o'clock came, he rose, wound the clock and went to bed.

◆ ◆ ◆

I WAS old enough when we moved into the new house to realize the joy he and mother felt at having enough room; of having a place to go to bed that was not directly under the shingles; of having a cellar instead of pits in the garden in which to keep fruit and potatoes. The new house was a wonderful acquisition; but it meant debt—a heavy, grinding load of debt. Even greater than the joy of having a new house was the joy that was felt when the debt was paid off, years later.

AS I sat in the twilight I could realize more fully than I could then the load he and mother carried when we were little folks. Those who can recall the hardness of the pioneer places during the the 70's, the 80's, and the times when there was no the family purse for weeks al when a few pounds of butter few dozen eggs traded at the try store were the only necessary supplies. Then ca picture of those harrowing a half century ago when a hood scourge of diphtheria home, adding to the already load, and took three little one

◆ ◆ ◆

BUT the former condi doubt seem harder to us w since become used to bette than they did to our parents days. Those experiences we common lot and were tak granted. During the last years so much has been make life easier, that we we could not have endured mer times. But are the ments and luxuries of the time all to the good? I sometimes whether the conditions of today are d the same rugged character same ability to overcome whether our shorter days, shorter nights also, are, a adding so much as we think. Will I be able and to pick apples from a tw ladder when (and if) I reac eighty-fifth birthday?

◆ ◆ ◆

THE next morning, wife started for the old homestead hundred miles away. As we into the old home that ev was struck with the fact th was the first time I did not father's warm, tho repressed, come. But I felt glad as I over the home and over the far he had lived to see and enjoy of the newer things in his years—electricity in place of dles and lamps, hot and cold and a bath room, a radio, and the last few months a concrete thru the place instead of the impassable dirt road which traveled for fifty-eight years well, father; and may I be as ful to my light as you were to

---

The Cheerful Plowma

Teaching Calves Again

"I'VE taught these calves to drink at last, but O, what grief mine' Upon my face the trial is cast in wrinkle, seam, and A stubborn bunch? Yes, land of shades, it is the truth, I think, Solomon and all his maids could not teach them to drink! For days with tender heart I tried the way of love, I said, "Please those gums apart, come bossie, turtle dove!"

Then I tried reason, logic, sense, I said, "Now, calves, see you do not know the recompense of drinking milk, I fear. This has calories of heat, it has protein and starch, it's equal to ten po of wheat, 'twould warm your soul in March!

Then strategy was duly tried, I said, "Well, I don't care; the are squealing far and wide for what they call their share; so, Holsteins that you are, just go your stubborn way until you and cross the bar in suicidal gray; the porkers shall have every my how I love those pigs! Go on, and starve, grow weak, and flop I'd trade you off for figs!"

O! Jealous were they? Not a bit! They tossed their heads bawled! I had exhausted all my wit, and still was balked and sta They yielded only when at last 'twas hopeless to resist; they ne broke their stubborn fast while they could kick or twist! They're drinking now all they can get and bawling loud for more, but Oh, to get their noses wet was sure a heavy chore!—J. Edw. Tufft.

NEW IDEA

INVENTIONS — NOT IMITATIONS

Better Husking—Better Shredding! The NEW IDEA Husker and Shredder husks clean—Very little shelling—Easy feeding. Big capacity. All metal. Hardened Steel Gears running in enclosed dust-proof oil cases. Can be operated at good capacity by small tractor. It's a NEW IDEA—the sensation in the Shredder field. Fully covered by patents.

QUICKER, SURER PLANTING— Better Crops—Bigger Profits!

NEW IDEA Transplanter pays for itself on 3 acres of transplantable plants set 6 inches or further apart on level land or ridges, thru lower labor costs, minimum loss of plants, and increased crop. Full line of attachments including potato planting and wire check. It is a NEW IDEA—fully covered by patents.

The 23-acre factory back of NEW IDEA Farm Equipment. The largest independent spreader factory in the world—not in any trust or combination. 4000 agencies. More than 60 factory branches and transfer points for parts and service.

The *Safety* Value of Leadership

You naturally prefer an ***original*** article to the best imitation that can be made. Imitation is so frequently blind—it follows without equalling. Twenty-eight years ago NEW IDEA showed the way with the ***first*** successful wide-spread spreader—an ***invention,*** not an ***imitation.*** And step by step, NEW IDEA continues to lead the field with its constant policy of inventive development and improvement.

Today the value to you of NEW IDEA leadership is greater than ever. It means that when you purchase a NEW IDEA machine from a dealer, you know he is giving you the utmost in reliability and performance; the best yet produced in efficiency, in durability and in ease of handling. Any NEW IDEA machine is a ***safe*** machine for you to buy.

Be sure to look over a NEW IDEA catalog before you buy and you will insist on getting the ***genuine***—not merely a machine that ***looks*** like it or ***is said*** to be as good.

MODEL 8 NEW IDEA, with many improvements covered by patents, represents the most advanced mechanical construction ever seen on a spreader. The use of high-strength structural automobile steel and modern rust— and acid-resisting materials is a distinct contribution to long wear and light draft. Send the coupon for complete information.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

It is much easier to be critical than to be correct.
—Disraeli.

Pessimistic "Ifs"

IF THE farmers of the United States plant as many potatoes this spring as the United States Department of Agriculture fears they intend to,—about 13 per cent more than last year,—and if the average yield per acre equals the 1924 yield, then the cows and pigs will be eating potatoes next fall. Overproduction and low prices are predicted by professional forecasters. They point to a large carry-over of old potatoes which will help depress the market if there should be a large acreage and a favorable season this year.

A Good But Belated Law

THE President has signed the bill which makes it unlawful to send pistols, revolvers and other firearms which can be concealed on the person thru the mails. This will put out of business the mail order trade in these dangerous things, and incidentally cut off some of the revenue of publications which profited by carrying the advertisements of pocket firearms. Now if the states will pass laws registering and restricting direct sales, life will be made safer for everybody. The law makes it difficult to buy deadly poisons any place, yet most of the murders are committed by the use of deadly weapons and the purchase of these implements has, so far, been as unrestricted as the purchase of lead pencils.

What's Back of It?

IN A SPEECH which has been called a "political balloon," Dr. Nicholas Murray Butler, President of Columbia University, made two statements which have been challenged by many leading men all over the country. The first was that President Coolidge would not be a candidate in 1928 because he would not go against the settled sentiment of the country about third terms. The second, that no man could be elected President who was not known to be against the Eighteenth Amendment and the Volstead Act. Since Dr. Butler is one of the most vociferous spokesmen of the "wets" it may be assumed that he has thus purposely raised these questions at this time to create public opinion which would be in sympathy with the propositions he lays down. However, President Coolidge has not yet spoken, nor has the great American public, and when they do, Doctor Butler may find, while he is a good propagandist, he is a poor prophet.

Stick to Your Line

IT MAY sound like a paradox to say that a shifting farmer is usually a shiftless farmer, yet observation indicates it to be true. The farmer who is always changing his line of farming because of the changing market is almost always out of luck. In the first place, by the time he gets his new products on the market price relationships have changed and he finds the things he has are low, while the things he dropped have risen. In the second place, he never learns the best methods of producing them. The farmers who have done best are those who have adopted a given line of products and stuck to them thru thick and thin, always, of course, studying their business and making necessary improvements in practice. "Let the shoemaker stick to his last," is an old saw, but it is as good advice today as it ever was.

The Cost of Fertility

THE figures show that if all the fertilizer used in the United States was equally distributed over all the acres farmed, each acre would receive a little less than six and one-half pounds,—not enough to make any appreciable difference in yields. Compare this amount with the applications in other countries and we find a striking difference. On the same basis Holland uses 647 pounds, Belgium 513 pounds, Germany 200 pounds and Italy 50 pounds. "But," some will say, "our land is naturally richer and does not require such heavy applications." But will it be richer when it has been cropped as long as some of the European land? The chances are that it will not. American farmers are drawing on their reserve capital and should charge against their crops a sum equal to the cost of fertilizer necessary to maintain the fertility of their land. The European farmers are supplying plant food thru their pocketbooks, while the American farmers are drawing it out of their soil. The cost is the same either way.

Some Proposed Laws

AMONG the several hundred good, bad, and indifferent bills presented to the Pennsylvania legislature, we cull the following:

Providing for the appointment of a commission to investigate the Blue Laws of 1794.

Repealing the primary election laws.

Requiring that merchants, pawnbrokers and others selling revolvers or other arms must register with the state, and providing that before anyone can purchase a gun or revolver he must apply to the chief of police, sheriff or police superintendent in his community for a permit which must be presented before buying firearms, and giving to reputable persons the right to carry pistols concealed on their persons.

Authorizing county commissioners to put male prisoners to work in county jails.

Imposing an annual voting tax for school purposes.

Reducing the fine for overloading motor vehicles to $10.

Discontinuing the tax on horses and cattle over four years of age.

Prohibiting the issuance of marriage licenses except upon a five-day's writte tice to the clerk of the Orphans' Court.

Providing fines and jail sentences months to persons who sell or give int ing liquors to minors.

Providing for the taking of a refer vote on the question of modifying the Amendment.

Providing for the repeal of the Arm Snyder prohibition laws of 1923 and 19

Exempting dealers, hotels and resta from the state license on oleomargarine.

Making it compulsory for all motor hicle owners to be financially able to damages.

If you are interested in passing or de ing any of these bills, write or see your lators.

Planning for a State Fair

THE Agricultural Committee of the P sylvania State Chamber of Comm was directed to collect information co ing the desirability of a state fair in state. After a careful study of the dif successful state fairs in this country and ada the committee made a report of its ings and judgment to the Chamber of C merce in which conclusive arguments given showing why such a fair and expo would be of value to the agriculture, merce and industry of this state.

The study of the financing of state tions which the committee made shows the most successful are those that have organized by business men, financed pr ly, and managed by those financially in ed. A number thus organized are cited the comment is made that in every in they are financially successful and are standing in their stimulation of good fa and better business.

In such an organization, the state have no authority over the fair except regulatory powers are reserved in the cha and articles of corporation. This kind of agement would keep it out of politics, thing which is always desirable. It also it possible to build a real fair without to the legislature for money. The plan of State Chamber of Commerce is to enlist interest of every business organization, every organization of farmers so that classes interested may have a chance to their influence and their means towards creation of such a fair and exposition as state of Pennsylvania may and should hav

Editorial Sidelights

THIS Reference Issue wasn't intended to complete. Long ago we learned the of the saying that the more a person know less he thinks he knows. We realize that farmers and their wives must have access constantly increasing volume of information. more efficient they are the more they depend reliable sources for useful facts and figur and they will want facts not to be found in issue.

We have tried this week to present in venient form a few of these useful facts figures. Any reader who doesn't find here information he wants is invited to make know his needs. As the boys say, "There is where this came from."

WE HAVE SOME interesting things in for next week. The world is moving so rapid that it is hard to keep up with the times. Th particularly true in the field of agricultural gineering, where new seeds are constantly be met by new inventions.

The combine harvester and the new corn bor implements are some of the modern mechani developments that will be discussed in the issue. The women have an interest in mod power machinery, too, and that is part of week's story.

DEBATE RELIEF PLAN

Senators Oppose and Defend McNary-Haugen Bill—Compensation for Borer Clean-up Assured.

Washington, D. C.

THE debate on the McNary-Haugen bill in the Senate was long and full of interest. Many sidelights on the probable effect on the proposed legislation were brought out.

It was contended by Senator Curtis of Kansas that the equalization fee is a tax that is unconstitutional, while Senate McMaster of South Dakota defended its constitutionality by defining it as a service charge to which the producer thru his representatives would agree.

It would give the Government power to fix prices by giving the Farm Board the authority to say at what price a processor, a miller, or a packer, for example, could sell any commodity, said Senator Fess of Ohio. "If you ever get into price fixing then prices will be an issue in every campaign and remember that for every producer of wheat there are at least six consumers of bread, so that if you get into government price-fixing then the consumer will take care of the producers."

Fears Effect on Co-ops

It was the contention of Senator Fess that instead of being an assistance to the present existing cooperatives it will destroy them. The determination rests with the government instrumentality as to whether it chooses to employ a corporation other than a cooperative, as it is free to do so under the McNary-Haugen bill.

Senator McNary in opening the debate declared that the measure was necessary to economically equalize agriculture with industry. "Congress has aided every human occupation but agriculture, and it is now time something was done for the farmer."

The McNary-Haugen bill and the Pepper-McFadden branch banking bill were given the right of way in the Senate by a trade between leaders of the two bills. This is said to be the first instance on record of an alliance between the farm interests and the banking interests to further legislation in Congress.

Senate Passes Borer Bill

The corn borer bill providing an appropriation of $10,000,000 to be expended by the Secretary of Agriculture in cooperation with the states to prevent the spread of the European corn borer has passed the Senate, having passed the House several days ago.

This appropriation will be largely utilized to compensate farmers for the work involved in making the clean-up. More than 1000 men will be added to the present staff undef the direction of L. H. Worthley, administrator of corn borer control. Mr. Worthley is now stationed at Boston, but will move his headquarters to Toledo, Ohio.

The States of Indiana, Michigan, Ohio and Pennsylvania have definitely indicated that they will undertake the control work in cooperation with the Federal Government. County agents, farm bureaus, granges and other organizations will cooperate in the corn borer eradication campaign, with the government authorities.

Aims at Foreign Milk

The Lenroot-Taber bill to regulate the importation of milk and cream into the United States has passed the Senate. If the bill becomes a law, all importers of milk or cream will be required to obtain a permit from the Secretary of Agriculture. The requirements include inspection of the herds, tuberculin testing, satisfactory sanitary conditions, bacterial content standards varying with the different grades of milk, and a maximum temperature of 50 degrees at the time of importation. An amendment to the bill which passed the house, authorizes the Secretary of Agriculture to suspend or revoke any permit for the shipment of milk or cream into the United States when he shall find that the holder thereof has failed to comply with the provisions.

Senate Must Act Soon

Unless the Senate confirms the three members of the United States Tariff Commission named by President Coolidge, the result will be the loss of all agricultural representation of the commission. Sherman J. Lowell, past master of the National Grange, is one of the three men not yet confirmed by the Senate. He will automatically leave the commission on March 4, unless the Senate acts on his appointment.
